from the Tuileries in Paris as occupants of a car suspended beneath a hydrogen balloon twenty-seven feet in diameter. They rose very gently, attained a height of about 2,000 feet, and after a journey of two hours, more or less, landed at the little town of Nesle, twenty-seven miles from the city. Here M. Robert left the car, and M. Charles continued the voyage alone, remaining in the upper air about half an hour, and landing three miles further on. M. Charles, in addition to being the first to propose a hydrogen balloon, was the inventor of the network enclosure for the gas receptacle, the hoop on which the cords of the network are concentrated and from which the car is suspended, and the valve in the top of the balloon to permit the release of gas. All these features were embodied in his first aerostat.

Nothing of progress in aeronautics would be included in the story of the rapid spread of the craze for balloon ascensions which was a result of the two great experiments here recorded. It extended to the principal European countries and to the United States. There were many noteworthy adventures incidental thereto, and some disasters. Of the latter it is fitting that at least one should be mentioned, for it resulted in the death of Pilatre de Rozier, the brave young pioneer of the air. Two years subsequent to his first ascension he lost his life in an attempt to cross the English Channel by balloon. This was on June 15, 1785, and the event is worthy of mention, both on account of M. de Rozier's connection with the inception of aerial travel, and because the facts connected with his fatal adventure show him to have been a man of progressive ideas upon the subject. He had devised an aerostat, consisting of a fire balloon, ten feet in diameter, suspended beneath a gas balloon thirty-seven feet in diameter, the idea being that by increasing or diminishing the fire in the smaller one it might be possible to rise or descend without waste of gas. Boulogne was the point of departure and England the destination. M. de Rozier was accompanied by M. P. A. Romain, and the voyage had been auspiciously begun when, within half an hour after the ascension, the balloons, then at a height of something like 3,000 feet, were seen to burst into flame. In their fall Rozier was killed at once and Romain received injuries which proved fatal ten minutes later.

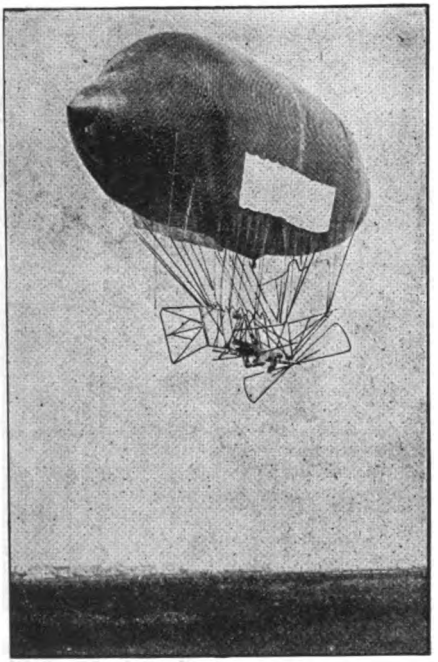
In the subsequent history of balloons hydrogen figures more and more exclusively as the ascensional element, for the principal reasons that longer journeys are possible with it than can be made with fire balloons, even if supplies for maintaining the heat of the enclosed air are carried by the latter; and because the carrying of fire involves additional danger. Coal gas was first substituted by Charles Green, a famous English aeronaut, on July 19, 1821, but this was not really a progressive step in aeronautics, inasmuch as coal gas

Digitized by Google

is very much heavier than hydrogen. It inflates more rapidly, but in this it is excelled by hot air; and while it is cheaper than hydrogen, volume for volume, it is no more economical, measured by the work to be done, and in the lifting of a given weight it exposes to the action of the wind a greater area of balloon surface than either the hot air or the hydrogen balloon. An actual improvement made was the adoption of the guide rope, or, as American aeronauts call it, the dragrope, due to a Mr. Welsh, who made ascensions for scientific purposes. This is a rope 1,000 feet or more in length, hanging from the ring to which the network and the car of the balloon are attached, as already described. Its original purpose was to minimize the waste of gas and ballast in travelling near the earth or water. As it trailed on or in the one or the other it lightened by some of its own weight the burden carried by the balloon, and thus enabled the aeronaut to maintain something of an even altitude without releasing gas or throwing out sand. It is esteemed by some aeronauts as a means of giving steadiness to the balloon, especially when the rope is hanging clear of the ground.

None of the many who constructed and used balloons during the next seventy-five or one hundred years made any essential improvement upon them, other than those here noted, and the balloon of to-day, unless we consider the airship a balloon, is practically just what it was in 1783. The hot air balloon, because of the ease and rapidity with which it can be inflated, continues in use, serving the ends of those who, for exhibition purposes, make ascensions in order to drop from a great height by the aid of a parachute. The fact that this is frequently done, with but few accidents occurring, is worthy of attention because the principle involved in the parachute enters into another feature of aeronautics than that of the balloon, namely, the use of the aeroplane in flying machines.

While the invention of the balloon conferred upon man the power of rising into the air and sustaining himself there, it left him at the mercy of the air currents, and his journeying by its aid has always been necessarily in the direction of the wind. Whatever attempts have been made to secure dirigibility for the balloon in its original form have been failures. In fact the proposition is an impracticable one, owing to danger which lies in subjecting the great surface of so frail a construction to any extraordinary pressure upon only a portion thereof. And so it is to be recorded that the only progress made in aeronautics during nearly a century subsequent to the invention of the balloon was in the limited adaptation of that bulky contrivance to practical purposes, involved in ascensions for scientific observation, for reconnaissance in military operations, and, as during the siege of Paris in the Franco-Prussian war, for escape from beleaguered places. It has proved itself remarkably useful in each of these several kinds of service, and has given results of permanent value in the use made of it by men of science. To enter into a detailed account of ascensions made in prosecution of scientific investigation would be to exceed the scope of this article. It is sufficient to state that the first was made in 1804 under the auspices of the Academy of Sciences at St. Petersburg; and that among the eminent men who sought and derived advantage from the studies they or their co-laborers might make by this means were such as Laplace, Sir David Brewster, Sir J. Herschel, Dr. Tyndall, Flammarion, the late Duke of Argyle, and members of various learned bodies in Europe and America. A number of valuable discoveries have been made and much important data gathered. For war purposes the United States Government was practically the first to employ the balloon, a corps of aeronauts being attached to the Union Army during the war of 1861-1865. The use made of balloons during the siege of Paris in 1870 has already been referred to. The French Government has been very active in the creation of special military services in aerostation, and the majority of other European nations have followed the example. Such a service was used advantageously by the British in the Transvaal war. Germany and Russia are interested in the matter, and in both of these countries the military balloons are at command of recognized scientists for such use as they desire to make of them.



Stevens's Airship Over Coney Island.

During the year 1901 aeronautic experiments, which had taken on especial activity within the preceding score of years, reached a most interesting point in the achievements of M. Alberto Santos-Dumont with his airship, or dirigible balloon. On July 12, in that year, M. Santos-Dumont made a successful trip through the air from the Longechamps race course, near Paris, France, to the Eiffel Tower, some miles distant, passing around it and returning to the point of departure. There have been several repetitions of this experimental trip, and M. Santos-Dumont has satisfactorily demonstrated that his aerostat can be steered and managed generally, so as to pursue any specified course and to land at any designated point, under ordinary weather conditions. He has not given to the world, however, a veritable novelty in the type of aerostat which he employs. Dirigible balloons of a similar type were devised and constructed fully a quarter of a century ago, and the writer, who has been practically interested in aeronautics since 1865, saw one in 1877, which was successfully exhibited in a large hall in Boston. The envelope containing the gas was of the cylinderical form, pointed at each end, which is a feature in the Santos-Dumont, Zeppelin and other aerostats of recent date. A light but strong rod was suspended beneath this, and to the rod were attached the revolving fans for raising and propelling the machine, and the saddle for the aeronaut, who operated the fans by pedals, just as a bicycle is driven. This machine was tried but once in the open air, the experiment resulting in its destruction, as it was impossible to control it in a breeze. Dr. F. A. Barton, of Beckenham, England, who is working upon the problem of a dirigible balloon for the British War Office, claims to have experimented with a machine almost identical with that of M. Santos-Dumont at Dover, England, in 1883. The fact stands, however, that Santos-Dumont is the first who has ever succeeded in making a safe and uninterrupted aerial flight involving the features of turning and landing at given points. Count Zeppelin's experiments on the Lake of Geneva were failures, and so far as results are concerned the Santos-Dumont airship appears to illustrate in their practical application the most advanced ideas connected with effecting and controlling the flight of such machines. It is, therefore, scarcely necessary to devote space here to consideration or description of any of its rivals. Plans and specifications for aerostats which their inventors claim or hope will accomplish wonders could be given to an almost unlimited extent, but until some one of them demonstrates its absolute merit none of them can be regarded as actual indications of progress in aeronautics. Mention must be made, however, of the airship constructed at Sheepshead Bay, New York, during the Summer of 1902, by Leo Stevens, a performing aeronaut and parachute adventurer. Mr. Stevens adopted the Santos-Dumont ideas to a considerable extent, one difference being in the substitution of a small hot air balloon within the gas balloon for the envelope which Santos-Dumont inflates with cold air when necessary to compensate for any loss of gas which may occur. Mr. Stevens made a successful trip of several miles on September 30, taking several turns. At the same time

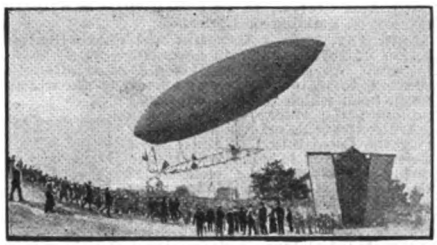
Digitized by Google

Mr. Edward C. Boice made an equally successful trip with one of Santos-Dumont's airships, which had been on exhibition at Manhattan Beach, near the shed occupied by the Stevens aerostat. The two airships were in the upper atmosphere coincidentally, and the affair partook somewhat the nature of a contest.

A more successful aerial flight than any yet made, measured by the distance covered, was accomplished on September 19, 1902, by Stanley Spencer, a practical aeronaut, with a machine differing somewhat from that of Santos-Dumont, though not in any essential point. One chief difference was that the propelling fan was placed forward instead of aft. Mr. Spencer made a trip over London and its suburbs, thirty miles in extent, his aerostat being under perfect control at all times, and taking any direction desired.

It was long ago accepted as a demonstrated fact by most of the men of science that a solution of the problem of aerial travel cannot be expected from any use which can be made of the gas balloon. Such of them as believed the problem still capable of solution looked in the direction of mechanics, and there came to their side the students of bird flight, and of the capabilities of the aeroplane. Something of the principles of mechanics and of the aeroplane, it must be observed here, enter into the success of the Santos-Dumont airship. The inventor of that aerostat does not depend altogether upon the buoyancy of his craft for rising into the air, but by the shifting of weight longitudinally along the light framework under his balloon he secures upon the under surface of it that action of atmosphere or wind which operates upon such an aeroplane as the kite, for instance. The difference is, that while the kite is held against the wind by a string, and thus is made to rise, the Santos-Dumont airship is forced against the air or wind by its propelling machinery, and the element thus opposing its progress, striking it obliquely from beneath, forces it to rise. This principle appears also in the Stevens and Spencer airships.

Various attempts have been made to construct flying machines modelled after the wings of birds, but these have never, in any instance achieved success. The employment of the aeroplane has been essayed by some inventors, and in this direction surprising work has been done by Dr. S. P. Langley, of the Smithsonian Institution at Washington, D. C. His aerodrome has made actual flights over considerable distances and at great speed, the first one being effected over a portion of the Potomac River and its shores, about thirty miles below Washington, on May 6, 1896. Dr. Langley had pursued investigation and experiment, together with the study of the physical laws affecting the problem of aerial flight, for many years prior to the construction of his flying machine, which is a mechanism with aeroplanes extending on either side like wings and driven by revolving fans operated by a small steam engine. It weighs many times more than the volume of atmosphere which it displaces, but sails through the air like a soaring bird, and has attained a speed of from twenty to thirty miles an hour. In its weight as related to that of the atmosphere it is far heavier than a ship of solid lead would be in the water, and it owes its support in the air to the rapidity with which it runs over the air beneath it, the force of this air on the under side of the aeroplanes, as developed by the high rate of speed, serving to maintain it. For the initial development of speed and its resultant force it is necessary to project the machine into the air from a launching device, which imparts to it the motion thereafter maintained by its own machinery. The aerodrome consists of a hull formed of steel tubing, which contains a tubular steam boiler and a steam engine of one or one and a half horse power. The boiler and firegrate weigh a little more than five pounds, and the engine and machinery about twenty-six ounces. The hull is attached longitudinally to a rod, which carries also a peculiar kind of rudder at one end, and a buoy or float at the other. A framework similar to the outrigger of a racing boat extends from each side of the hull supporting one of the propellers, of which there are two. Four wings, two on each side, extend outward and upward from the longitudinal rod toward its ends, the hull hanging beneath the space between the two pairs of wings, and the propellers occupying a position amidships. The wings are each slightly curved, and spread twelve or thirteen feet from tip to tip. The propellers are between three and four feet in diameter. It is possible to steer the machine either vertically or horizontally by means of its curious rudder. The entire length of the machine is about sixteen feet, and the weight is nearly thirty pounds. With the supply of water and fuel which can be carried the duration of its flight is about five minutes.



Santos-Dumont Alighting.

In the Santos-Dumont, the Stevens and the Spencer airships and in Dr. Langley's aerodrome we have the ultimate of progress in aeronautics up to the present time. Neither of them holds within itself all the promise of that ability to traverse the upper atmosphere at will and with advantage, for which mankind is longing. Santos-Dumont and others working along the lines which he is following propose to continue their experiments. Dr. Langley is prosecuting the series of studies and experiments which have resulted thus far so promisingly. Dr. F. A. Barton, on the other side of the ocean, hopes to combine the balloon and the aeroplane in an aerostat which will excel all others. These things, however, are all in the category of promise, and are not yet to be chronicled as progress. They may figure more largely in the next issue of this annual.

Afghanistan.

Capital:
CABUL.

Afghanistan is a country of Central Asia lying between parallels 30° and 38°20′ of north latitude, and between 60°30′ and 74°30′ of east longitude. Habibullah Khan, the reigning Amir, came to the throne in October, 1901, upon the death of his father, Abdur Rahman Khan. Under the hereditary prince are the four Nakims, or Governors, of Kabul, Turkestan, Herat and Kandahar, the four provinces which make up the monarchy.

With slight exceptions the four millions of population are Mohammedans, with the sovereign at the head of the Church. The revenue of the state is variable. It was recently estimated at over $3,500,000. The Amir receives a small subsidy from the Indian Government.

Amir of Afghanistan.

Recently the Khans have attempted, with little success, to organize an army. However, there is an arsenal at Kabul, which, operating under English officers in the service of the Amir, can turn out 20,000 cartridges and fifteen rifles daily, and two field pieces weekly. Afghanistan's entire trade is by pack, across trade routes. Although unestimated, it is believed to be considerable, the commodities dealt in being metals, both base and precious; silks, felts, camel's hair, dye stuffs, sheepskins, carpets, rosaries and vast quantities of assofoetida—a strange mixture.

Although there have been repeated rumors of disturbances within the Kingdom, and of unfriendly manoeuvers by both Great Britain and Russia against it, none of these things have yet materialized.

The country is about 500 miles wide, from north to south, and about 600 miles long, having an area estimated at 270,000 square miles. It is generally rugged and mountainous, the elevation being, with few exceptions, 4,000 feet and more above the sea level. The climate is severe, being very cold in Winter and very hot in Summer. The trade with India is estimated at about $4,000,000 annually, but is restricted by the late Amir's oppressive trade policy.

Alabama.

—

Capital:
MONTGOMERY.

Alabama was formerly a part of Georgia, and was made a part of the Territory of Mississippi during the war of 1812, when it became necessary for the United States to establish military posts along the Gulf of Mexico. In 1817 Mississippi was admitted as a State and Alabama set off as a territory, being admitted to Statehood two years later. In 1813-14 the Creek Indians rebelled against the influx of white settlers, and, after a war lasting nearly two years, the nation was subdued and the settlement of the territory begun in earnest. The name, "Alabama," is from the Choctaw and means "vegetable gatherers," and not "Here we rest," as it has been usually translated.

The State of Alabama has an area of 52,250 square miles, and in June, 1901, an estimated population of 1,862,000. Though primarily an agricultural State, manufacturing and mechanical industries have steadily increased during the past decade, due largely to the development of the extensive deposits of iron, coal, limestone and dolomite found in unusual proximity and quality in the Birmingham district. The products of iron and steel amounted, in 1900, to $17,392,483, or 21 per cent of the total value of all the products of the State.

Related to the iron and steel industry is the manufacture of foundry and machine shop products and correlated with these is the manufacture of cast iron pipe, stoves, car wheels, boilers, engines, etc. Six railroads centre at Birmingham and large car shops are located there. In the manufacture of coke Alabama has the rank of second in the United States; the product in this industry in 1900 amounted to $3,726,433.

Lumber and timber manufacturing come second in importance in the industries of Alabama, and related to these is the production of turpentine and resin. In the production of cotton this State stands third in the United States. In 1901 there were forty-nine cotton mills in operation and nineteen more either in the process of building or projected.

In May, 1901, a Constitutional Convention met in Montgomery to revise or, rather, rewrite the Constitution of 1875, which, in accordance with the direction of Congress, guaranteed the negro specified right to vote. As a result of this old constitution, made during reconstruction days, intimidation and ballot stuffing, to maintain the supremacy of the whites, was extensively practised. The Democratic State platform, upon which the Constitutional Convention of 1901 was elected, promised the voters to secure the legal supremacy of the whites without disenfranchising any white man except for crime, and without violating the Constitution of the United States. There was less antagonistic race feeling in Alabama than in any other of the Southern States, owing largely to the educational work of Tuskegee Institute, and the tact and ability of its president, Booker T. Washington.

Gov. William D. Jelks.

Shortly after the convention opened, a memorial, understood to have been drafted by Mr. Washington, was presented, recounting the homely virtues of the negro, his fidelity to his masters and the mistakes that had been made, and asking for laws that would discriminate justly between good and bad citizenship.

The convention adopted a suffrage plan, modelled something after that of North Carolina, containing a "grandfather clause," but one less displeasing to the negroes. The new Constitution provides a double electoral qualification, so that all white persons may register unless debarred for statutory reasons, and all other persons whose qualifications make them desirable citizens.

It provides that at any time until December 20, 1902, the following may register as life electors: All persons who have served in the armies of the United States or the Confederate States, and all descendants of such persons, and all persons who are of good character and who understand the duties and obligations of citizenship under a republican form of government. Of this good character and duties of citizenship, a board of three registers appointed in each county are to be judges, though appeals may be taken to the State Courts.

After January 1, 1903, all those not previously registered as life electors may vote who are qualified as follows: Those who can read or write any article of the Constitution, and who, unless physically disabled, have been engaged in some lawful occupation or calling for the greater part of twelve months preceding the time they desire to register, or those who are either bona fide owners of forty acres of land in the State or owners of real estate or personal property whose assessed value is $300 or more.

The clause prescribing that the voter must have been engaged in some lawful occupation was stated to have been aimed against the negroes of the younger generation who were sufficiently well educated not to be debarred by an educational qualification, but who, being nevertheless too lazy to work, were undesirable citizens generally and apt to be politically corrupt.

The constitution also provides for quadrennial instead of biennial elections and sessions of the Legislature, for an advisory Board of Pardons, consisting of the Secretary of State, the Attorney General and the State Auditor, to advise with the Governor as to all petitions for pardons, but that the Governor may act either in accordance with or contrary to their recommendations. It provides that if a prisoner escape from a sheriff through the latter's fault, and suffers death or bodily harm, the sheriff may be impeached and removed from office and shall not be eligible to other office during the time for which he had been elected as sheriff. It prohibits the Legislature from ever passing an act authorizing or legalizing marriage between a white person and a negro or the descendent of a negro.

The election for the ratification or rejection of this Constitution was held November 11, 1901, and the vote cast was 108,613 for adoption and 81,734 for rejection. The total vote, 190,347, was larger than the vote for Governor in 1900, when it was 162,319. This was probably due to the fact that the full strength of the negro vote was brought out. According to the census of 1900, a little more than 59.5 of the male negroes of voting age in Alabama are illiterate. An increase of the minimum school appropriation to $1,100,000 makes more and better schools possible and the negroes of the better class accept this as a sign of a larger negro vote in the future.

Not only the Alabama Democrats favored the suffrage system of the new Constitution, but the white Republicans adopted it without extensive opposition. The State Republican Committee, at a meeting held August 4, 1902, adopted the following resolution: "That only those shall be permitted to participate in the State and County convention who are duly qualified voters under the new Constitution of Alabama." At the convention held September 16 this resolution was adopted by the delegates.

The Republican State Convention met at Birmingham September 17, and the platform, adopted after much discussion, expressed faith in the Republican Administration and especially in President Roosevelt, and favored his nomination for President in 1904.

In Birmingham on September 18, during a speech by Booker T. Washington, in Shiloh Baptist Church, a cry of "fight" was mistaken for "fire," and in the stampede which followed nearly 100 persons were suffocated or trampled to death, all of them negroes, though several whites who were present were injured.

Alaska.

Capital:
SITKA.

Alaska, the northernmost territory of the United States, was purchased from Russia in 1867 for $7,200,000. It has an area of 590,844 square miles and an estimated population, in 1901, of 63,592, of which 25,536 are natives. Alaska is only a district, like the District of Columbia, and is directly under the control of Congress. It is a judicial district, with three divisions and three courts. It has a Governor and a Surveyor-General, who is ex-officio secretary, a collector, and many deputies. It has no delegate in Congress nor has it a local Legislature. Situated between the 50th and 70th parallels of latitude, it lies partly within the Arctic zone, and has a climate varying from temperate in midsummer in the southern portion to arctic in the northern part. The principal industry at present is mining gold, copper, and most recently Bessemer iron ore, which has been found on the islands along the coast. Since the purchase in 1867 it has brought the Government nearly $9,000,000,000 in revenue.

Alaska is well supplied with volcanoes, either active or "fossilized." Among the best known are Mount Wrangell, which is usually smoking, Mount Blackburn, Mount Redoubt, Mount Illiamna and Mount Augustine. In May, 1902, Mount Redoubt became violently eruptive, and on May 3 there was a heavy eruption, ashes being carried for a distance of 90 miles and covering the ground for dozens of square miles in extent. Mount Blackburn also became active during 1902, and while the eruption was not intense, the earthquakes which accompanied it broke up the surface of the famous Muir glacier and caused the lower end to become disrupted.

There has been some discussion in Alaskan newspapers on the subject of a territorial form of government, and some agitation on the part of a few people. Owners of taxable property, however, are said to be opposed to a change at present on account of the expense of official salaries. There are but few who call Alaska home, and but comparatively few resident owners of land. Were the lands surveyed and opened for settlement, says the Governor in his annual report for 1901, there would be a large increase of population, especially of Finlanders, who are anxious to settle in Alaska if they can be assured of holding property with safe titles. Congress usually appropriates the sum of $30,000 for public schools, though in 1901 the appropriation was cut down by the Committee on Appropriations. In-

Gov. John G. Brady.

corporated towns support their own schools. There is no penitentiary in Alaska, and criminals who are not confined in the jails are sent to McNeil's Island, Washington. In sane persons are cared for at the Oregon State Insane Asylum, and from January 1 to October 1, 1901. nine persons had been committed. During the past year smallpox, consumption, la grippe and pneumonia have made their appearance among the natives, but to no alarming ex tent.

The mining industry in Alaska was vigorously prosecuted during the season of 1901 and 1902, and it is estimated that the output in the region of Nome for the two seasons was $13,000,000. Placer mining is the most common, for it needs but few tools and little capital. Some deposits of gold-bearing quartz have been discovered and worked, though as a general thing the ore body is of a low grade and in many cases does not average more than $2 a ton. Silver and platinum have been found in paying quantities, and discoveries of tin and cinnibar have been reported. Copper mines have been opened along the southern shore and rich deposits of iron have been found. During 1901 mines at the head waters of the Koyukuk River attracted much attention, and mining camps there were established as far north as latitude 67 degrees.

On January 6, 1902, the Federal officers who conspired with Alexander McKenzie, to take possession of the most valuable mines at Nome, were sentenced at the United States Court in San Francisco. Judge Noyes was fined $1,000 for contempt, District-Attorney Joseph K. Wood and his assistant, C. A. S. Frost, were sentenced to four months and one year, respectively. McKenzie received a sentence of one year's imprisonment and a fine in February, 1901, and was pardoned by President McKinley in four months on account of failing health. McKenzie was president of the East Alaska Gold Company, formed to get possession of all mining claims at Nome through fake processes of law. Noyes, Wood and Frost aiding him. They defied the summonses of the higher court and ran things with a high hand until reached by United States marshals and arrested.

It was reported during 1902 that diamonds had been discovered near Cape Nome and that they were of large caret and good quality. Henry Hanks, former State geologist of California, says that he discovered microscopic diamonds in the sands at Nome, but no large specimens.

During the past two years attempts have been made at raising hardy vegetables and cereals and have been generally successful. The cabbages raised near Skagway are large and solid and bring about $80 a ton. Potatoes do well near Dyea, though irrigation is necessary. Barley and oats are sown for hay, which is packed in silos, there being too little sunshine to cure it properly. Attempts at raising fruit have not been very successful. Wild crab apples grow in southeast Alaska, and it is expected that these can be grafted and a hardy apple cultivated. This kind of work is being carried on at experiment stations.

Up to the present time there is but one railway line completed in Alaska, the White Pass & Yukon. Projected railways are the Valdes Eagle Railway, along the Valdes Copper River, to be 400 miles in length, and the Klondike Mines Railway, through the Bonanza Creek district, from Dawson to Stewart River, a distance of 82 miles. The Trans-Alaska Company and the Trans-Alaska Railway Company are asking for rights in the Illiamna Bay country, along one route. The Governor in his annual report for 1901 puts forth the needs of a railway from Valdez to the Tarana and Yukon rivers.

The question of the boundary between Alaska and Canada stands at present on a temporary compromise between the two countries. To Great Britain the United Staes has ceded certain rights in the disputed territory and has been given other rights claimed by Canada. In 1824 agreements were adopted by Russia and the United States and by Russia and Great Britain, Russia relinquishing claims to maritime jurisdiction and agreeing not to establish any trading posts south of north latitude 54 degrees 40 minutes, and the United States not to establish any posts north of this latitude. This left the question of the boundary south of this latitude to be settled by the United States and Great Britain. In 1839 Russia gave a lease of the greater part of Alaska, including most of the disputed territory, to the Hudson Bay Company, a British corporation. In 1867 Russia conveyed to the United States all her rights in Alaska. The conveyance was by treaty, and the boundary line was the one defined by Russia in her treaty with Great Britain in 1825.

This boundary was set out as follows: From the southernmost point of Prince of Wales Island, at 55 degrees and 40 minutes north latitude and between 131 and 133 degrees west longitude, the line was to extend north to 50 degrees north latitude on the continent. Then it was to follow the summit of the mountains parallel to the coast to the point of intersection of the 141st meridian, and from this point and along this meridian to the frozen sea. Prince of Wales Island was to belong to Russia. Whenever the summits of the mountains were more than 10 marine leagues from the coast, the line was to be parallel to the windings of the coast, not more than 10 marine leagues distant.

Digitized by Google

There was no dispute regarding this boundary until a few years ago. Since the discovery of gold in Alaska Canada made claim to a large portion of the mainland, alleging that the true meaning of the boundary of 1825 is that the line should not follow the windings of the coast, but should extend interiorly from a line intersecting headlands and promontories along the coast.

The provisional boundary agreed upon by Secretary John Hay and Victor Herbert, British Charge d'Affaires, in October, 1899, in the modus vivendi which now stands, is a line indicated by monuments at White Pass, Chilcoot Pass and along the Klehini River and Porcupine Creek. This places in American territory the towns of Dyea and Skaguay, and the head of Lynn Canal and Pyramid Harbor. The agreement calls for free passage for persons going to or from Porcupine Creek along the trail between the creek and the junction of the Klehini and Chilkat rivers, subject to customs regulations. By this agreement Canada conceded to the United Staes about 100 miles of disputed territory and Canada received from the United States concessions to about 10 miles.

In April, 1902, considerable agitation was caused in Washington and in Canada by a report that a boundary monument set by Russia had been removed by a Canadian surveyor. The Canadian Government denied the entire affair, and an investigation was begun by Captain W. H. Richardson, of the Eighth U. S. Cavalry. Captain Richardson reported finding nothing suspicious, but a surveyor, J. P. Cummings, claimed to have torn down the monument under the impression that it was built to hide surveyor's field notes. On August 18, 1902, Lieutenant George Emmons, U. S. A., reported having found boundary monuments and a Russian stone house on the summit of Mount Chilkat, placing the entire Porcupine mining district and the placer gold and copper camp of Rainy Hollow within the American territory. A military post has been established at Haine's Mission, near the disputed territory.

Though the flow of fortune hunters continues in the direction of Alaska, reports seem to show that the country is beginnig to lose many of its attractions. Placers are being worked dry of gold, and but few new discoveries have been made in the past year. It has been estimated by Assistant Canadian Gold Commissioner Senkler that the output of gold for the whole territory for 1902 will be not more than $14,000,000, against $21,000,000 for 1901.

Summarizing the needs of Alaska, the Governor, in his report for 1901, says that the district wants land laws in their fullness, land surveyed for immediate settlement, a delegate in Congress and a worthy representative at the St. Louis Exposition in 1903.

In the Yukon territory gold dust is generally used to liquidate debts, and merchantable gold dust, thoroughly cleaned, is worth on an average $16 an ounce. The ordinary commercial dust, mixed with black sand and crushed white quartz, is worth from $14 to $15 an ounce. By the new order regarding a royalty of 2½ per cent without exemption on exported dust the merchant is obliged to lose the discount on dust at $16 an ounce and pay export tax as well. In order to protect themselves and establish the territory on a currency basis, the merchants have decided to accept merchantable dust at $15 an ounce and pay the 2½ per cent export tax.

Anarchy and Nihilism.

Among the important matters of legislation which occupied the attention of the Congress of the United States during the session of 1901-2 was that of protecting the life of the President. Especial attention had been directed to this subject by the assassination of President McKinley in September, 1901. The fact that Mr. McKinley was made a sacrifice to anarchical fanaticism caused the proposed legislation to include measures for the suppression of anarchism. In relation to the question of anarchism the Government of the United States, like that of Great Britain, has declined all overtures of other governments to unite in some form of repressive action. This declination was based on the unwillingness of these two governments to open a possible way for the extradition of political offenders. While that position is still adhered to, it is not considered that it would be affected by the adoption of laws to suppress the movement and all of its manifestations within our own country.

Accordingly the Senate passed a bill which fixed death as the penalty for any attempt, successful or unsuccessful, to take the life of the President, his possible successor, or any representative of a foreign government visiting the United States. Aiding, abetting, advising or counselling such an attempt was to be punished by imprisonment for twenty years, and threatening by written, printed, or spoken words the life of any such person was to be punishable by ten years' imprisonment. On June 9 the House of Representatives passed a substitute bill, which not only contemplated the punishment of crimes against the President, his possible successor, and against the heads and representatives of foreign governments, but also legislated to some extent against the general profession or teaching of Anarchy. The two branches of Congress were unable to come to an agreement upon legislation covering the ground, and the bills here described got no further than to be referred to a committee of conference, representing the two Houses. The necessity for some law in the line of the measures proposed will inevitably bring the question again before the national legislators.

The Legislature of the State of New York, acting upon the suggestion of Governor Odell, made in his annual message on the opening of the session of 1902, considered the question of Anarchy, with the result that a bill was passed and approved. Governor Odell, in his message, referred to the assassination of President McKinley, and declared that "those whose utterances have a tendency to incite to disorder or murder should be punished." The law enacted, which is now Chapter 371 of the Laws of 1902, defines "criminal Anarchy" thus: "Criminal Anarchy is the doctrine that organized government should be overthrown by force or violence, or by the assassination of the executive head, or of any of the executive officials of government, or by any unlawful means. The advocacy of such doctrine, either by word of mouth or writing, is a felony."

Anarchism and Nihilism are two movements of a socio-political character which many people confuse as one and the same thing. While they are closely related they differ in origin, in character and in aim. The one is international, while the other centres its interest upon a single country; the one aims at general revolution, while the aim of the other is to effect a revolution of conditions in Russia alone. Of the two, therefore, the first, which is Anarchism, claims the larger degree of attention, because its principles and the actions resulting therefrom affect the entire world.

A concise definition of Anarchism is that one given by E. V. Zenker in a monograph upon the subject wherein he says: "Anarchy means in its ideal sense, the perfect, unfettered self-government of the individual, and, consequently, the absence of any kind of external government." This is the theory, held merely as a philosophy by some who would secure its application by the process of general education and peaceful revolution; but held by others as an incentive to and justification of action, developing even into violence, whereby its application can be forced upon the world. Thus it is that among Anarchists there are various classes, from the philosophic thinkers, possessed of Utopian ideas of what his philosophy would bring to pass, down to those restless and impetuous enemies of organized order who band themselves together in a pact for assassination. And it is because those last mentioned derive their inspiration to crime from the thought evolved by the former that law-creating and law-abiding society has begun to regard even the utterance of the thought as a crime.

It is not necessary to trace the genesis of Anarchism farther than to the writings of Pierre Joseph Proudhon, a native of Besancon, France, the birthplace of the celebrated Socialist, Fourier. Proudhon, born in humble circumstances in 1809, was naturally a student, and obtained educational advantages unusual for one of his station, by dint of his own perseverance, self-denial and ability to excel in contests for such academic prizes as enabled him to devote time to collegiate life. In his philosophy he became first a Socialist, and then, under the influence of Karl Marx, an Anarchist. His famous declaration that "property is theft" was an aphoristic expression of his view that service pays service, a day's labor balancing a day's labor, and the duration of labor constituting the just measure of value. He regarded property and capital as the power of claiming the results of labor without giving an equivalent, taking possession of these

Digitized by Google

results in the form of rent and interest. The new social organization which he desired to see established, but by the peaceful process of education, was one based on collective principles—a free association which would take account of the division of labor, and which would maintain the personality both of the man and the citizen. His view of Anarchy was that through man's ethical progress government should become unnecessary. "Government of man by man," he held, "is oppression. The highest perfection of society is found in order and Anarchy."

The revolutions of 1848 mark the beginning of the violent application of this philosophy, proclaimed only eight years previous. Michael Bakunin, a Russian, and the founder in his own country of Nihilism in its existing form, led with Karl Marx and other would-be social reformers in establishing and carrying on the propaganda of the International Association, and for some years Socialism and Anarchism went hand in hand. A conference of the association, held at The Hague in 1872, resulted in the drawing of a line upon one side of which were the Socialists proper, who believed in orderly reform, under existing governmental systems, while on the other were the extremists, who held another conference the same year at Saint-Imier, in Switzerland.

Prior to this, in 1865, Karl Marx had organized in London, with Bakunin and others, the International Association of Workingmen, which was Anarchistic in its spirit. Bakunin, in 1868, founded the Social Democratic Alliance at Geneva, Switzerland, this body having a more advanced spirit of Anarchism than the other, with which it amalgamated in 1869. The association included a large conservative element in its membership, and this, with such sympathizers as were brought to it by the amalgamation, exerted a restraining influence, which was, as already stated, thrown off by the extremists in The Hague conference. The resultant conference of the latter element at Saint-Imier was the birth of that Anarchism wherein there is represented by its apostles such extremes of intelligence, social position and general character as appear in the association of such men as Professor Elisee Reclus, Prince Kropotkin, Michael Bakunin, Count Malatesta and Johann Most. The Congress of Berne, following the death of Bakunin in 1876, was under the leadership of Count Malatesta, representing the ultra Anarchistic sentiment of the Italian revolutionists, the most powerful group in Europe, and it pronounced in favor of insurrectional methods. The convention held at Fribourg, Switzerland, in 1878, going still further, placed itself unanimously upon the platform of the "collective appropriation of social riches; the abolition of the state under all its forms; insurrectional and revolutionary action, and against the use of the ballot, a mischievous instrument incapable of realizing the sovereignty of the people."

Thus the movement openly presented grounds of justification for such repressive measures as governments had taken or contemplated. It spread nevertheless, allying itself with Nihilism in Russia, and displaying especial vigor in Italy, France and Spain, eventually making the United States a place of refuge for leaders to whom Europe became unsafe, and also making this country one of the centres for demonstrations

FOUR VICTIMS OF ANARCHY.

of its policy and power. It was at this stage that Johann Most became an influential factor in the movement. Expelled from Germany in 1879, he went to London and organized among the extremists of all nations gathered there a secret propagandist club, to carry on international revolutionary agitation and prepare directly for general revolution. Its plan was to form groups in every country, whose activity was to be united in the Central Committee in London.

Long before Anarchy had thus stultified itself by organization, a proceeding in direct antagonism to its own tenets, the propaganda of violence had asserted itself in various attempts at assassination of those in authority. The culmination of these was the killing of Czar Alexander II., at St. Petersburg, by a bomb thrown in the way of his carriage. This was the deed of a Nihilist. Nihilism, as already stated, bears sympathetic relation to Anarchism, but is indigenous to Russia, and concentrates its aim upon the institutions of that country. Nihilism in its first stage was a speculative and anti-religious tendency, antagonistic to every conventionality of society, and especially to customs enjoined by the Church. Its growth was among the educated classes, stimulated by the Socialistic ideas imbibed by young Russian students of both sexes in Western Europe. After these students were recalled by an Imperial ukase in 1873, there was a period of Socialist propaganda, which developed into violence under the merciless repressive measures of the Government; and from 1878 until the assassination of Alexander II., on March 13, 1881, there was a continuous duel between the Nihilists and the authorities, with no mercy shown on either side. Nihilism, as already stated, had become allied in 1876 with the Anarchistic movement in other parts of Europe.

Through the influence of Johann Most and the well-known Nihilist, Leo Hartmann, an International Revolutionary Congress was held in London in July, 1881, its sessions continuing from the 14th to the 19th. About forty delegates were present, representing several hundred groups, and the principles there formulated, constituting Anarchism as it exists to-day, are embodied in the following:

"The revolutionaries of all countries are uniting into an 'International Revolutionary Working Men's Association,' for the purpose of a social revolution. The headquarters of the association is at London, and sub-committees are formed in Paris, Geneva and New York. In every place where like-minded supporters exist, sections and an Executive Committee of three persons are to be formed. The committees of a country are to keep up with one another and with the General Committee regular communication by means of continual reports and information, and have to collect money for the purchase of poison and weapons, as well as to find places suitable for laying mines, and so on. To attain the proposed end, the annihilation of all rulers, ministers of state, nobility, the clergy, the most prominent capitalists, and other exploiters, any means are permissible, and, therefore, great attention should be given specially to the study of chemistry, and the preparation of explosives, as being the most important weapons. Together with the chief committee in London there will also be established an Executive Committee of international composition, and an information bureau, whose duty is to carry out the decisions of the Chief Committee, and to conduct correspondence."

Digitized by Google

While there are Russian Nihilists who, under any circumstances, would be Anarchists, standing squarely upon this platform, it is a fact that organized Nihilism, with its secret codes of communication, its underground methods of correspondence, and its readiness to resort to violence, is not in full sympathy with Anarchism as here presented. Many of the leaders would be satisfied with constitutionalism, as was made evident in the address sent to Alexander III., after the assassination of his father, wherein the Executive Committee of the revolutionary party offered to submit unconditionally to a National Assembly duly elected by the people.

The Anarchists who sought refuge in the United States, not satisfied with the safety and freedom guaranteed under the liberal constitution and laws of the country, included the institutions which they found here in the category of things to be destroyed. Johann Most made his home here when London became too hot for him in 1883. New York and Chicago became centres of Anarchistic activity, a large group being formed in each city. In Chicago, where the utterances at their gatherings were so outspoken as to demand repressive measures, the breaking up of one of their meetings in Haymarket Square by the police on May 4, 1886, was made memorable by the throwing of a bomb which killed seven policemen and injured a large number of people. Seven of the ringleaders were captured, tried and convicted, four of them being hanged, and the other three sent to prison—two for life and one for fifteen years. These three were pardoned by Governor Altgeld, of Illinois, in 1893. During the World's Fair in Chicago that year, a convention of avowed Anarchists was held in Chicago, but no new doctrines were promulgated. What remains to be told of the doings of Anarchists is epitomized in the following catalogue of crimes committed by them in this and other countries:

George Darboy, Archbishop of Paris, was assassinated by Communists on May 24, 1871. While the Commune of Paris was not actually Anarchistic, there were doubtless many Anarchists among its controlling spirits.

William I., of Prussia and Germany, was the object of three different attempts at assassination, namely, Oscar Becker's, on July 14, 1861; Hodel's, on May 11, 1878, and Dr. Nobiling's, on June 2, 1878.

Alexander II., of Russia, was killed at St. Petersburg, on March 13, 1881, by the explosion of a bomb thrown by a man who also was killed. Previous attempts upon the Czar's life had been made by Karakozon, at St. Petersburg, April 16, 1866; by Berezowski, at Paris, June 6, 1867; by Alexander Solovieff, April 14, 1879; by the undermining of a railway train, December 1, 1879, and by an explosion in the Winter Palace, St. Petersburg, February 17, 1880. While these crimes were perpetrated by Nihilists, it is to be remembered that there is an alliance between Nihilism and Anarchism.

An attempt was made on September 28, 1883, to explode a dynamite bomb at the unveiling of the Niederwald Monument in Germany, at which Emperor William, the Crown Prince and other eminent personages were present. The fuse failed to burn. Remsdorf, Rupsch and Kuchler, Anarchists, were tried in Leipsic the following year, convicted of the attempted crime and sentenced to death.

FOUR PROMINENT ANARCHISTS.

Jules Ferry, ex-Premier of France, was shot at on December 10, 1887.

Seven persons were wounded by the explosion of a bomb in the Rue Clichy, Paris, France, on March 27, 1892. Ravachol and one of his accomplices in the crime were sentenced to life imprisonment.

Meunier, an Anarchist, on April 25, 1892, threw a bomb into the Cafe Vers, in Paris, France, and six persons were wounded by its explosion. Meunier was sentenced to penal servitude for life.

An Anarchist threw a bomb into a crowded church in Warsaw, Russian Poland, on September 7, 1892, but was himself the only person killed by the explosion.

In March, 1893, a Belgian Anarchist named Joseph Pauwels, planned to throw a bomb into the Church of the Madeleine, in Paris, France, during a service, but a swinging door struck his arm, causing him to drop the bomb, which killed him in its explosion. No one else was injured.

Twenty persons were wounded at Grenoble, France, on March 21, 1893, by an Anarchist bomb exploded at the entrance of a church.

An attempt was made on September 24, 1893, to kill General Campos in Spain by means of a bomb.

A bomb thrown by Anarchists in the Lyceum Theatre, Barcelona, Spain, on November 8, 1893, exploded and killed thirty people, injuring eighty others.

On December 9, 1893, Auguste Vaillant, an Anarchist, threw a bomb into the Chamber of Deputies in Paris, France, and seven Deputies were wounded by its explosion. Vaillant was guillotined February 5, 1894.

Emile Henry, an Anarchist, on February 12, 1894, threw a bomb into the cafe of the Hotel Terminus, in Paris, France. Twenty persons were wounded. Henry was guillotined May 20, 1894.

In Rome, Italy, on March 8, 1894, eight persons were injured by the explosion of a bomb thrown in front of the Chamber of Deputies.

On May 3, 1894, several persons were wounded by a dynamite explosion in Liege, Belgium, for which crime two Anarchists were subsequently given life sentences.

Premier Crispi, of Italy, was shot at on June 16, 1894.

Marie Francois Carnot, President of the French Republic, was mortally stabbed at Lyons, by Cesare Santo, an Anarchist, on Sunday, June 24, 1894.

On June 7, 1896, a bomb thrown into a religious procession in Barcelona, Spain, exploded, killing eleven persons and severely wounding forty others. More than three hundred Anarchists were arrested, and thirty-one of them were given death sentences, many others being deported.

President Faure, of the French Republic, was shot at on June 13, 1897.

Antonio Canovas del Castillo, Prime Minister of Spain, was shot to death by Michael Angolillo, alias Golli, an Italian Anarchist, at Santa Agueda, Spain, on August 8, 1897.

King George I., and Princess Marie of Greece, were shot at on February 26, 1898.

Empress Elizabeth of Austria was stabbed to the heart by Luccheni, a Franco-Italian Anarchist, on September 10, 1898, while going from a hotel at Geneva, Switzerland, to a boat.

Digitized by Google

King Humbert of Italy was shot to death at Monza, on July 29, 1900, by Angelo Bresci, an Italian Anarchist, who went from Paterson, N. J., where the murder was planned, to Italy, where it was executed.

William II., the German Emperor, was struck and wounded in the face by a missile thrown at him, on March 6, 1901.

Privy Councillor Pobiedonosteff, Chief Procurator of the Holy Synod, was fired at four times on March 22, 1901, while writing in his study, at St. Petersburg. The assassin was out of doors, and two of his bullets came through a window, narrowly missing their aim. The others did not enter the room.

An Italian boy, named Sipido, attempted to kill the Prince of Wales (now King of England), shooting at him as he was about to enter a train at Brussels.

William McKinley, President of the United States, was shot at the Pan-American Exposition, in Buffalo, N. Y., on September 6, 1901, by Leon Czolgosz, an Anarchist, during a public reception. Mr. McKinley died from the effect of his wound on September 14.

Andorra.

Andorra, which is a miniature republic in the Pyrenees, is under the joint suzerainty of France and Spain. Its area does not exceed 175 square miles, and its population is less than 6,000. It is governed by a Council of twenty-four members, elected by the heads of families, and this Council in turn elects the first and second syndic, who preside for four years over the affairs of the little nation. Joseph Calva and Calvo Jaumina are the present syndics.

The executive power is vested in the first syndic, while the judicial power is exercised by a civil judge and two magistrates. France and the Bishop of Urgel appoint each a magistrate and a civil judge alternately a permanent delegate. The Prefect of the Pyrenees Orientates, moreover, has charge of the interests of France.

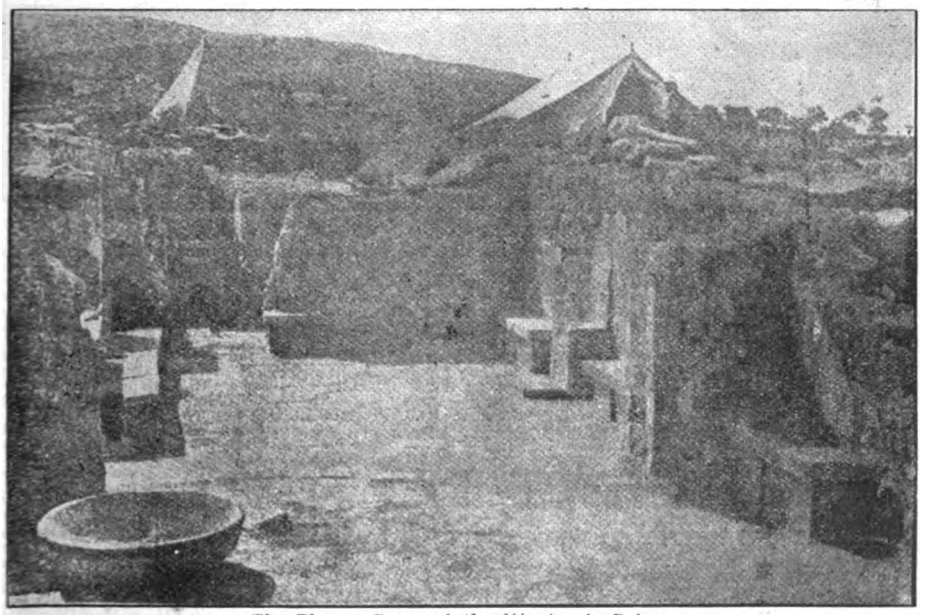
The Andorrans, having assisted Charlemagne against the Moors, were awarded with the privilege of self-government. The Count of Foix and subsequently Henry IV. reasserted these claims, but they were relinquished during the French Revolution, and restored in 1806 at the request of the people of Andorra. They are illiterate and so uncommunicative that in Catalonia to assume ignorance is called "to play the Andorran." The chief products are grapes, tobacco and timber, and there is some traffic in wood, iron and wool, though the principal industry is cattle raising. Game abounds. The language used is a Catalonian dialect. The people are kindly and hospitable, and marry chiefly among themselves.

Archaeology, the Science of Ancient Things.

HORACE GREEN,
Fellow of the American Museum of Natural History.

Archaeology, the science of ancient things, has become through incessant worldwide labors, a vast department of knowledge, including such widely separated subjects as the remains of earliest prehistoric man, which some scientists place as far as 200,000 years ago; the dwelling places of Abraham and the biblical patriarchs; the ancient civilizations of Assyria, Egypt, Greece and Rome, and, by a liberal interpretation the monuments of the Middle Ages. It is a subject the importance of which cannot be exaggerated, for one thing which creditably distinguishes the civilized man of to-day from the most highly civilized men of any past age is the copious knowledge which the modern possesses of his predecessors.

The House of the Minotaur.—The most fascinating of all recent archaeological discoveries have been those made on the island of Crete in the Mediterranean. Here the very cradle of Greek civilization has been found. Here Zeus or Jupiter, the father of



The Throne Room of the Minotaur's Palace.

the Greek gods, was born. On this island at the very dawn of history was laid the seed of that civilization which afterward became known as Greek and which still profoundly influences the world to-day. In the

Digitized by Google

cave of Dikte an altar has been found which was worshiped as the birthplace of Zeus. And most probably it was his birthplace, for all the evidence goes to show that the Greek gods were originally mortal heroes.

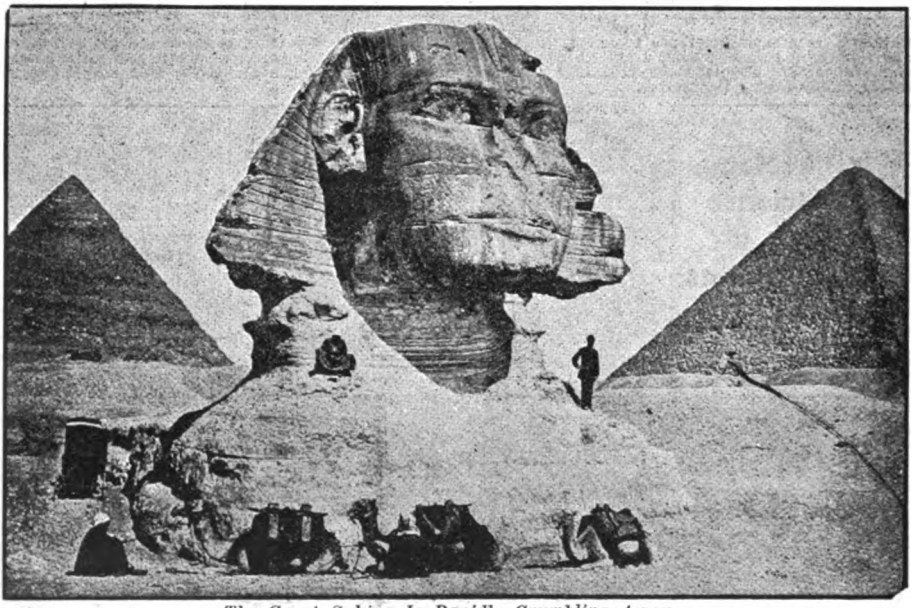
The archaeological work in Crete is very extensive, and has been divided among several nations. Of most thrilling interest are the discoveries made at Knossos by the English scholars, Messrs. D. G. Hogarth and A. J. Evans.

Here are the remains of the palace of King Minos, father of the Minotaur, and of the famous labyrinth in which the monster slew his young Athenian victims.

Everybody who knows anything about Greek history remembers the legend of Theseus, the Minotaur and the Labyrinth. The Athenians were compelled to pay the terrible Minos, King of Crete, an annual tribute of seven youths and seven maidens, who were sent each year to be devoured by the Minotaur, a monster with a bull's body and a human head. It was exceedingly strong and fierce, and was kept in a labyrinth so artfully contrived that whoever was enclosed in it could by no means find his way out without assistance. Here the Minotaur was fed with human victims. Theseus, the Athenian, resolved to deliver the country from the monster or die in the attempt. When the time to send tribute came, and youths and maidens were, according to custom, drawn by lot, he offered himself as one of the victims. The ship departed with black sails as usual, which Theseus promised his father to change for white in case he returned victorious. When they arrived in Crete the youths and maidens were exhibited before the King, Minos. Ariadne, the beautiful daughter of the King, who was present, became deeply enamored of Theseus. She furnished him with a sword with which to fight the Minotaur, and with a clue of thread by which he might find his way out of the Labyrinth. He was successful, slew the Minotaur, escaped from the Labyrinth and, taking Ariadne with him, sailed with his rescued companions for Athens. On the way they stopped at the island of Naxos, where, sad to say, Theseus abandoned poor Ariadne, leaving her asleep.

It is the palace of King Minos with its Labyrinth that has been discovered by the archaeologists at Knossos in Crete, and each fresh discovery made tends to show that every part of the legend is substantially based on fact. The symbols of the Minotaur appear constantly on the ruins.

The ruins have now been covered over with a roof to preserve them from the weather. In order to support the roof it was necessary to place some kind of pillars in the position formerly occupied by the Myce-



The Great Sphinx Is Rapidly Crumbling Away.

naean (Cretan) columns, the burnt remains of which were found fixed in the sockets of the stone bench opposite the throne.

Accordingly pillars of Mycenaean designs were erected and the whole roofed over.

One of the results of the excavation is the inkling it gives to the great extent of the palace, which seems, in fact, to have not only covered the whole of the knoll on which it stands, but to have descended in a series of several storied hills and towers down the eastern side of the hill to the bank of the stream which runs below.

On the left is seen one of the most sensational of Knossian discoveries, the quadruple staircase which descended from the Central Court of the Hall of the Colonnades. At the point of the staircase the palace was certainly three and probably four stories high; in fact, three flights of steps still remain. The excavation of the lowest flight was of extraordinary difficulty owing to the constant danger of bringing down the staircase above. It was altogether miner's work, necessitating a constant succession of wooden arches.

The earlier part of this palace was built about 1700 B. C. or 3,600 years ago. This was proved by the discovery immediately under the foundations of the lid of an Egyptian alabastron upon which was engraved the name of King Thyan of the Hyksos dynasty of Egypt, who reigned between 1800 and 1700 B. C.

A vast quantity of objects, including paintings, tablets and carved stones, have been found which illustrate the life of early Cretan times. Among the pictures the most startling is a fresco painting showing female toreadors in the act of tackling infuriated bulls. The women are of graceful form and handsomely dressed and are evidently trained for the bloody work of the bull ring. They afford, according to Mr. Evans, the clearest evidence that the Lords of Knossos glutted their eyes with shows in which maidens as well as youths were trained to grapple with what was then regarded as the king of animals. The sports of the amphitheatre, which have never lost their hold on the Mediterranean world, may thus in Crete at least be traced back to prehistoric times. And before the days when enslaved barbarians were butchered to make a Roman holiday captives perhaps of gentle blood shared the same fate within sight of the house of Minos. The legends of the Athenian prisoners devoured by Minotaur were obviously connected with these cruel sports. That there was one special monster known as the Minotaur will probably be discovered in the course of the examination of the inscriptions. Beneath the floor of the palace is the labyrinth and a series of deep walled pits, in which the victims were kept. "In these deep pits," says Mr. Evans, "with slippery, cemented sides, the captives would be as secure as those 'beneath the leads of Venice.' The groans of

Digitized by Google

Zapotecan Funeral Urn.

these Minoan dungeons may well have found an echo in the tale of Theseus." It may be recalled that the artist, Watts, painted a remarkable picture of the horrible Minotaur leaning over the high battlements of Knossos, looking out to sea and awaiting the coming of his prey. This was before the ruins of the palace had actually been discovered.

The Villa of Hadrian.—The Forum and the other great sites of ancient Rome are continually and minutely raked over by the excavators, but no discovery of extreme interest to the general public has been made in the city since the lapis niger, or black stone, marking the burial place of Romulus, the founder of Rome, was unearthed.

The Italian Government is excavating the ruins of the villa of the Emperor Hadrian at Tivoli, fifteen miles from Rome, in a region beloved by Horace. This was probably the most stupendous dwelling place ever erected by man. It covered four square miles. It was built by Hadrian, who died A. D. 138, as a souvenir of his travels. To each part he gave the name of a celebrated building or locality. During the Middle Ages its ruins were plundered for various purposes. The Venus de Medici, now at Florence, and the beautiful Marble Faun, now in the Capitoline Museum, came from here.

The entrance building, or Porticus, is 600 feet long. One of the notable features of the villa is the Marine Theatre, so-called from a splendid mosaic pavement representing maritime monsters. In the centre of the theatre is an island approached by two swinging bridges. To the east of the theatre is the Emperor's great library. The baths occupy a space of four acres.

The Cupbearer Fresco.

The Crumbling of Ancient Monuments.—The heart of the whole world was grieved by the fall of the great Campanile, standing before the Basilica of St. Mark in Venice. This was the most stupendous if not the most beautiful of Venetian monuments. It stood 323 feet high by forty-two feet on each side. Almost in an instant it crumbled to a shapeless mass of bricks. It was built in 902 A. D.

The fall of the Campanile brought the distressing discovery that the whole of Venice, the most beautiful and fascinating city in the world, was in danger of collapse. The city is built on wooden piles driven in the mud, and these have been subject to the decay and the ravages of time and nature for a thousand years. The deepening of the Grand Canal and the Giudecca and the use of the steamboat hastened the process.

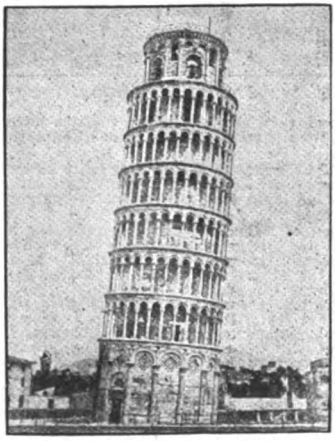
Soon after the fall of the Campanile the great window in the Dominican Church of SS. Giovanni and Paolo (St. John and St. Paul) crashed to the ground. The famous Campanile of San Stefano was seen to be moving out of line. Some steps have been taken to avert the disaster. The 300,000 volumes of the Ducal Library, including the Grimani Breviary, the most beautifully illuminated manuscript in the world, have been removed.

At the same time it is found that other great monuments of mediaeval Europe are suffering from "the falling sickness." The belfry of Bruges, containing the celebrated chime of bells, is crumbling. The ceiling of the Church of St. John Lateran, in Rome, "the mother and head of all the churches," begun by the Emperor Constantine in 896, is beginning to crack and fall. The Campanile of Giotto, at Florence, the most exquisite work of its kind, is tottering. The Leaning Tower of Pisa connot continue to lean much longer. A great stone has fallen from the south front of the Parthenon, at Athens. Even St. Paul's Cathedral, in London, is beginning to crack and shake to its foundations, owing to the contsruction of the underground roads.

Egypt—The Founders of Egyptian Civilization.—In Egypt Professor W. M. Flinders Petrie has unearthed the last resting place of the founders of Egyptian civilization, who lived about 7000 B. C., or 8,902 years ago. This wonderful archaeologist has gone over sites which other men supposed they had swept clean, and has made greater discoveries than all his predecessors put together.

As a result of the labors of Egyptologists Professor Petrie says we now know more of the details of life in Egypt 5,000 years before Christ than we do of Anglo-Saxon times, which were only a thousand years ago.

Civilized life began in Egypt about 7000 B. C., when the first cultivable soil was deposited by the Nile. Professor Petrie has just unearthed at Hierakonpolis the cemetery of the kings of this period. The palace furniture, consisting of pottery, carved slate pictographs, funeral panels and various offerings were found in each king's tomb. The carv ings are interesting because they show many species of animals now extinct in the world. One picture, carved on slate, shows a bound captive being eaten by a lion by orders of the king, while other captives are devoured by vultures.



The Leaning Tower of Pisa.

These pictures should be in teresting to those who think that the ancient Egyptians were evolved from negroes and that negroes may again rise in the same way. The pictures show that 9,000 years ago the Egyp tians were a distinct race and negroes appear as their slaves.

The Decay of the Sphinx.—Of more concern than any new discovery is the news that the great Sphinx, the oldest and most colossal statue in the world, is rapidly crumbling away. It has stood for sixty centuries, and now it is vanishing at the breath of modern civilization. The great irrigation works recently carried out in Egypt have radically changed the exceedingly dry climate which made the astonish ing longevity of Egyptian stone monuments possible. Under old conditions these might be expected to last practically forever. Formerly there were only a few hours' rain during the year, now there are from fifteen to eighteen days of heavy rainfall.

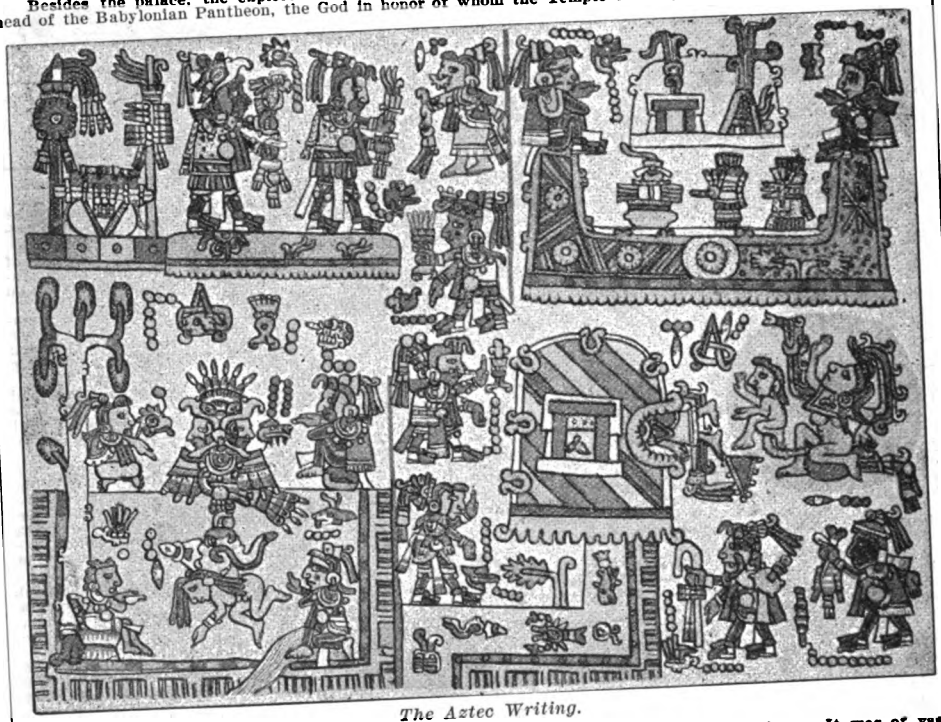
Digitized by Google

The increased humidity is rapidly disintegrating the stone of the Sphinx. So large a quantity has peeled off within the last two years that at the same rate the features will become indistinguishable in ten years at the most. But before then it is feared that the alarming thinning of the neck will cause the great head to fall. So modern science will bring about the destruction of that great figure whose mysterious face has witnessed the rise and fall of the Pharoahs and the Ptolemwies, of Greek civilization, of the Roman Empire, of Mohammed and his fanatics, of the Crusaders, of Napoleon Bonaparte. The Sphinx was already hoary with antiquity when Moses led the children of Israel out of Egypt. According to one authority, the German Archaeologist Brugsch, it is more than sixty centuries old. The Great Pyramid was built by King Cheops, or Khufu, of the Fourth Dynasty, about 3709 B. C. That is about fifty-seven centuries ago. The Sphinx is admitted to be older than the Pyramid, and if it is only three centuries older, it would be sixty centuries old.

The Sphinx stands at Gizeh about a quarter of a mile southeast of the Great Pyramid. It consists of an enormous figure of a crouching sphinx of the Egyptian type with the head of a human being and the body of a lion, hewn from the natural rock, with the flaws and cavities filled in with masonry. The body is 140 feet long; the head measures about 30 feet from the top of the forehead to the chin, and is 14 feet wide. The face, despite the mutilation of eyes and nose by Mohammedan fanatics, impresses by its calm and awful dignity. The Sphinx was probably a personification of the Sun God.

Nebuchadnezzar's Palace and the Tower of Babel.—The German explorers, headed by R. N. R. Koldewey, investigating the ruins of ancient Babylon, have discovered the site of the great palace begun by Nabopolassar, the father of Nebuchadnezzar, and completed by the latter. It is this palace to which the author of the Book of Daniel refers in his account of the mysterious handwriting on the wall that foretold the downfall of the great city. In it the Emperor Cyrus, on his conquest of Babylon, in the year 538 B. C., took up his residence, and the same building two centuries later witnessed the death scene of Alexander the Great.

Besides the palace, the explorers have discovered the site of the great temple of Marduk or Bel, the head of the Babylonian Pantheon, the God in honor of whom the Temple of Babylon was raised. The Tower



The Aztec Writing.

itself was situated in the precincts of this temple, and its remains have been found there. It was of vast size, eight stories in height, formed by a series of stages one above the other, with a balustrade running around the Tower to the top.

The city of Babylon was probably the most splendid ever built in ancient or modern times. The solidity of its walls and palaces and the magnificence of its gardens have never been approached. Unfortunately these walls were of brick, which made it an easy matter for the neighboring inhabitants to carry them off piecemeal after the city was deserted.

Babylon was largely the creation of Nebuchadnezzar, as indicated by his words in Daniel, chapter iv., verse 30, where the King says: "Is not this great Babylon which I have built for the royal dwelling place by the might of my power, and for the glory of my majesty?" Shortly before his time, in 689 B. C., Babylon was burnt by Sennacherib, the Assyrian King, but in 606 B. C., Assyria, with its capital, Nineveh, fell while Babylon rose to greater glory than ever.

The remains of Nebuchadnezzar's palace form a mound 2,100 feet square, and remaining walls and piers rise in parts to a height of seventy-five feet. Dr. Koldewey has laid bare the street built by Nebuchadnezzar for the annual procession of the Babylonians to Borsippa, a suburb of Babylon, when they carried the God Marduk on a visit to the God Nebo. An inscription on a paving stone tells all about it. The street was decorated with beautifully glazed clay tiles in brilliant colors, with very artistically designed lions and other objects.

A New Civilized Race Discovered in America.—Archaeological investigations in America have now reached very extensive proportions, and they will shortly give us a complete history of the ancient civilized races of this continent, doing for America just what the archaeologists have done for Egypt. It seems that the civilization of Central America reached its climax about 10,000 years ago. From this region it spread over the whole continent. It deteriorated with centuries and with the degree of re-

Digitized by Google

moteness from its place of origin. In the time of the Spanish discovery it still possessed a respectable development in Mexico, as we all know.

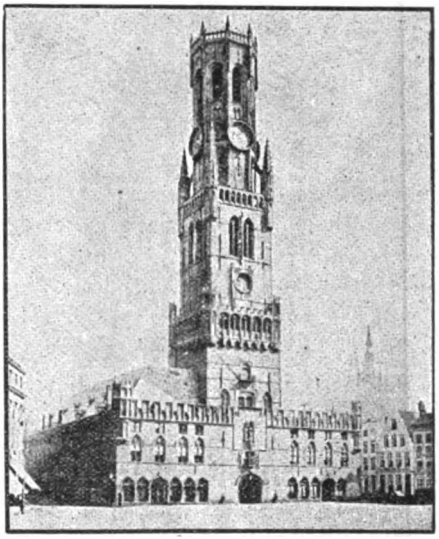
One of the most interesting of recent discoveries concerns the Zapotecans, a race of pre-historic Americans differing from the Aztecs and the Mayas. Professor Marshall H. Saville, of the American Museum of Natural History, recently made these discoveries in the State of Oaxaca, Mexico.

With the spade Mr. Saville has brought to light from beneath the surface of huge mounds, many of them covered with forest trees, a number of massive subterranean tombs, having mural paintings and hieroglyphics, revealing an entirely new form of writing from that previously known in Mexico. One remarkable feature of these burial chambers consisted of votive offerings in the shape of beautiful jadeite ornaments, surpassing anything heretofore found. The specimens were exquisitely carved and were shaped into necklaces, beads, earrings, idols and breastplates. These in themselves are rare and priceless finds, as they strikingly illustrate the culture and the art of sculpture of this ancient race.

The Mexican explorations just now completed began in 1897 on the concessions granted by the Mexican Government. Two years were spent in making researches in the vicinity of the famous ruins of Nitla. The greatest discovery arising from this work was the unearthing of the great cruciform chamber, the most imposing and elaborate burial place yet found in the New World. The next two Winters excavations were carried on in the State of Oaxaca.

The principal work was conducted near the town of Oaxaca. Southwest from the city, not more than a few miles distant, is a range of hills, on which are the remains of the great fortified city known as Monte Alban, which was probably the ancient capital of the Zapotecan Empire. This entire region is filled with groups of mounds, showing a thickly populated province in former times. For centuries these mounds have remained unexplored by the Mexican Government, and from time to time a few objects of ancient art have been found by local collectors. In the Valley of Zachila, near the small village of Xonocotlan, a group of mounds known as the Mogotes of Xoxo were opened up.

A peculiar feature found in the excavations were cement floors, sometimes one above the other, and about a foot apart, indicating a structure on top of the burial vaults. A flight of stone steps led upward from the floors of the tomb to the platform floors above. Three of the principal tombs were unearthed at Xoxo. The first tomb was found to be in the shape of a stone chamber about fifteen feet from the top of the mound, and was covered from the upper part of the roof upward by adobe constructions. When the floor of the tomb was reached, fragments of human skeletons and pieces of human crania, covered with vermillion, were found, together with a number of perforated incense burners.



The Belfry of Bruges.

Reading the Aztec Writing.—An important event to American archaeology was the first complete deciphering of an ancient Aztec Codex, by Mrs. Zelia Nuttall, an American scholar. This work opens the way to the reading of all the Aztec inscriptions in Central America. The Codex throws a great amount of light on the history of civilized Mexico just previous to and during the first invasion of Cortez. It deals with the period from 1468 to 1519. There were a vast number of these codices, but all save a very few were destroyed by the Spaniards as works of the devil. The Nuttall Codex, one of the few that escaped, found its way, many hundreds of years ago to the great library of the Monastery of San Marco, at Florence. During the religious disturbances of thirty years ago the library was scattered, and the Codex has just been rediscovered in England.

The Codex contains eighty-four pages, and consists of pictures accompanied by hieroglyphic signs explaining them. It is curiously and beautifully painted on deerskin, in purple, red, brown and black. The translation of the Codex enables us to learn a great deal about the life of the ancient Aztecs, whose civilization was ruthlessly destroyed by the Spaniards. It shows us how they dressed, how they ate, their social customs, their marriage customs. It proves that divorce was common among these ancient Americans.

Architecture.

FRANCIS L. ELLINGWOOD.

The story of architecture is a story of evolution.

Its inception was coincident with the first effort at symmetrical and ornate construction in man's habitation, fortification, or other building, and it has developed precisely as has his higher intelligence, refinement and aesthetic impulse.

As evolution is largely a matter of environment, so also has been and is the development of architectural styles. Almost without exception, wherever higher civilization is known to have existed each distinctive locality and epoch has produced a style more or less characteristic and distinctive of itself, and this has been the case because each locality and community has been compelled in its own way to solve the ever recurring problem of how, under the requirements of use or purpose and under the conditions of climate and immediate surroundings, to best utilize the space to be occupied, the material substances available from which to construct, and the amount of purely decorative labor and material which might be applied.

Styles of architecture have, therefore, been the outgrowth of those conditions, modified by the, at times, tendency to adopt from other localities that which may have been the most pleasing or seemingly applicable, both of constructive forms and details, and to apply or unite what was so adopted to or with whatever may have been the more common usage—a distinctive style being evolved only when, through time, the more marked characteristics of the elements so united were more or less lost by the modification of each and gradual bringing into harmony of what had preceded and what had been introduced.

Perhaps the most potent factors regulating and controlling architectural design have been and is first, materials at hand from which to build, and second, space to be occupied. This is evidenced throughout its history, as, for instance, the Greeks, with ample quarries, built with large stones and on broad lines, while the Roman, with greater limitations in the matter of materials, built with bricks or rubble, with stone facings, and employed the arch instead of the lintel, as much from convenience, perhaps, as from choice.

Of structural forms, vertical supporting members of the most primitive type doubtless gave place and led to more carefully considered and decorated posts, piers, and columns, and the stone lintel was the most simple transition from a primitive wooden beam, while the stroeobate was simply an extended foundation to

Digitized by Google

form suitable pavement surface—but the origin of the arch cannot be so well thought out, and doubtless suggested itself much later than either of the other forms and when construction methods were well advanced and better understood. Of its origin comparatively little is known. Ferguson says: "In the age of Psammeticus we have several stone arches in the neighborhood of the Pyramids," and that "one of the most instructive is that in a tomb discovered by Colonel Campbell showing a very primitive form of an arch composed of three stones only, and above which is another arch of regular construction in four courses."

The same author illustrates a primitive arch used in constructing vaulted drains and chambers at Nimroud, and built perhaps eight or nine hundred years before our era, which were "built, apparently, with great care and attention to the principles of the arch." And again, writing of the city gateway at Khorsabad, the same author says: "Other arches have been found in these Assyrian excavations, but none of such extent as these and none which show more completely how well the Assyrians, in the time of Sargon (721 B. C.), understood not only the construction of the arch, but also its use as a decorative architectural feature."

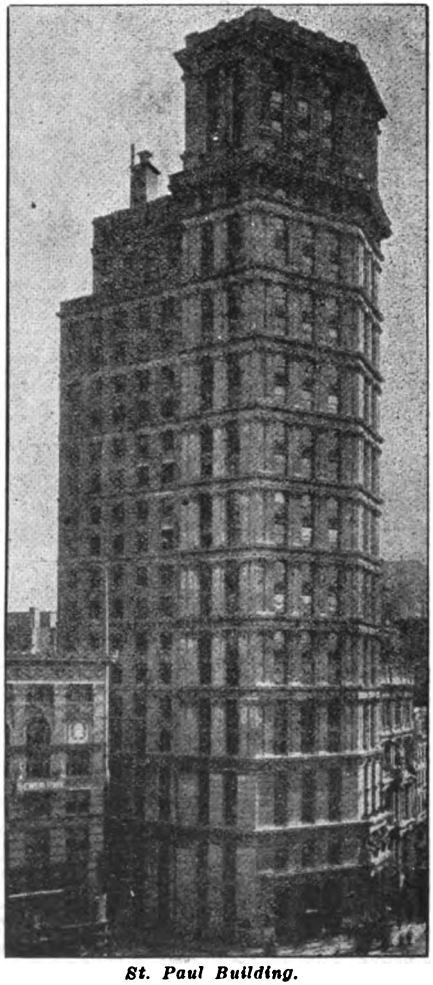
Other authorities point to the fact that the Arabs employed the pointed arch for construction purposes certainly as early as the eighth century B. C., and that it was also used in constructing the sewers of Babylon.

In the analysis of style, starting for convenience

Washington Life Building.

with the architecture of ancient Greece, which, without dispute, showed an intellectual beauty, an exquisite sense of proportion and refinement of detail that has never since been exceeded, there may be formed therein marked suggestions from the still earlier Egyptian architecture, while later the Romans, in their architecture, adopted Grecian details, applying them to their arched and vaulted structures of less heavy and unwieldy materials. In the Byzantine architecture (that of the Byzantine Empire) may be traced the transition from the classic Roman architecture to the Romanesque, and it may be followed into the architecture of Russia, where it is still employed in ecclesiastical design. Also from the Byzantine may be traced the Moslem styles.

The Romanesque—pre-eminently the architecture of the round arch and the vault—may be traced in somewhat different lines of development in Italy, France and Germany, and in the eleventh century into England, where modifications and development gave to it the name of Norman. Still later it found its way into the Scandinavian countries.



St. Paul Building.

Moslem architecture everywhere found its basic principles in preceding Christian work, and found its development as to structural form, in the pointed dome and the square and polygonal minaret, and developed in its ornamental detail stalactite like and geometric forms peculiarly its own. Gothic architecture followed, and, in some ways, developed from the Romanesque, and local influences gave to it somewhat

Digitized by Google

varied forms in each of the Christian countries in which it was employed. Thus its development in England was from the Norman Romanesque into the early English or purely Gothic forms, thence into the decorative period, and finally into the perpendicular, when it was supplanted by the Tudor styles, which introduced marked Italian Renaissance influences until, in Elizabeth's time, Tudor work showed very strong predilection for classic details.

Of each of the other styles of western architecture it may be said that it was or is, directly or indirectly, the result of a following along or building up from one of the fundamental styles already mentioned, or having its origin in a classic or Gothic revival became a development of each in part. In the architecture of the present day a new problem of how best to use the materials at hand and space to be occupied has presented itself. Many of the greatest architectural works must obviously be erected in the municipalities and with limited ground areas, with structural shapes in steel at so low a cost, and with ready means of rapid ascent and descent, there is no choice but to construct high buildings.

Flatiron Building.

To meet these conditions and produce satisfying results almost every style of architecture has, in manner, more or less pronounced, been employed, and several theories of design applied, with the result that while many high buildings have been produced, that are more or less pleasing in effect, no one of them so far seems to have been entirely satisfying.

As typical structures, illustrations showing three of these are given. Each is distinctive in its form and composition, and more or less so in its detail, and in each the design is based upon a different theory. In one, horizontal lines throughout are given marked prominence. In another the mass is divided into three distinctively accentuated parts, one of which—including the roof—is made most prominent, and in the third, less vigorous distinctions are made in the parts of its facades than either of the others, and the skyline formed by a continuous cornice and parapet. In this latter building it would seem, too, that intentional prominence is given in some places to vertical lines.

Of that which shows a triangular plan, it is admittedly doubtful that a materially better result could have been produced, considering its ground area and conformation, together with its height and purpose, but great municipalities should find some means to prevent the construction of lasting edifices such as that in question, where it would seem that no future development of the immediate surroundings can shut off or lessen its appearance of disturbing instability.

Such buildings can only incite interest and admiration because of the ingenuity of their construction.

The inception of the so-called "skeleton steel frame" probably first took shape in or about 1884, in a Western American city, where that form of construction was employed in the erection of what was three high mercantile or office buildings. It was shortly thereafter adopted by other American cities, notably those along the Atlantic seaboard, for similar structures, and its use has increased until at the present writing it is not unusual to find it in buildings no higher than were formerly built with solid masonry walls.

The term, "skeleton steel frame" is applied generally to that form of construction in which all supporting vertical and horizontal members are built of shapes rolled from steel, and in which the walls are supported or carried for the most part from floor to floor by the steel frame itself.

To what extent the use in the future of this form of construction may be carried is problematic, for there would seem to be no structure of any considerable magnitude in which it may not be successfully used, and its more general use is now limited only by greater economy through the use of solid masonry in low structures. That the influence of this form of construction has largely effected design in architecture may be seen by the three examples shown, any one of which would have been impossible without it, and how far-reaching this influence may yet prove, may only be surmised.

For the greater part, where it was used in lower structures, designers seem to prefer to conceal its use, but it is not improbable that in time the disposition will change, and in a manner to make all buildings so constructed appear more as a frank avowal of their structural composition, and this should lead to the abandonment of the prevailing disposition to design almost entirely from foreign models, and to give to America something more distinctively her own.

Architecture should not be considered as primarily constructional work.

It is, of the great arts, the last to which man turns his attention. Instinctively he turns first to sound, color and animate form, or in other words, to music, painting and sculpture, but it is not until the wealth of the individual or community has become considerable and its tradition more or less fixed, or until wealth has produced its inevitable result of aesthetic effort, that his architecture becomes pronounced, and at once an indication of the extent to which his art instinct has led him.

Of the history, and of the intelligent criticism of architecture volumes have been written enough in itself to form libraries, but it is the fact, nevertheless, that there is no science or art known to the world today less studied and understood by those to whom its practice is not a vocation, so little taught in educational institutions, and, therefore, so beyond the average intelligent criticism, and this is only because its importance escapes, as a rule, popular attention. A poor song may remain unsung, a bad picture may be faced to the wall, an inferior sculptured figure hid in a loft, but a badly designed building is a blot upon the face of the earth, and may only pass from it by dismantlement, and this fact alone should lead to its broader study of and most careful compliance with its essential principles.

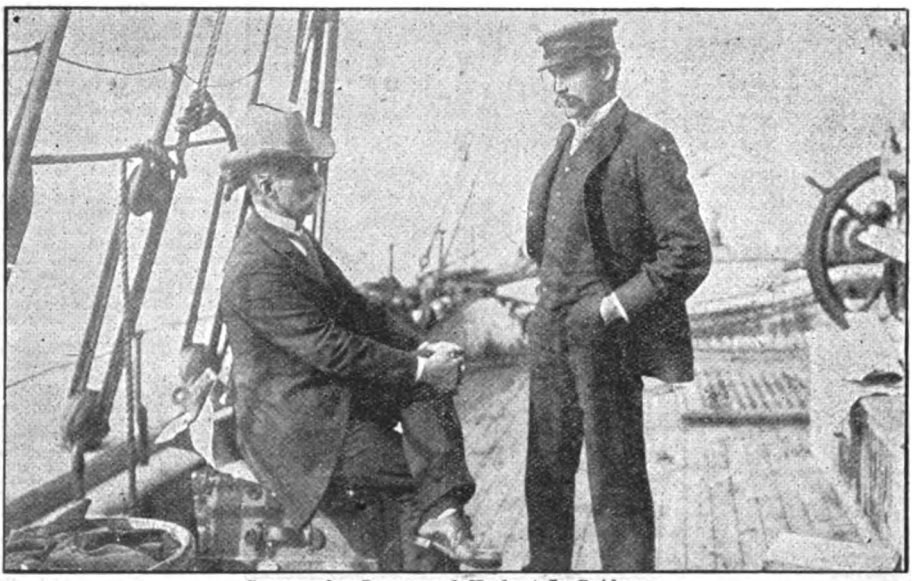
Arctic and Antarctic Exploration.

In the history of Arctic and Antarctic exploration the year 1902 is marked by the return of three expeditions from the north polar region, and the departure of a new expedition for the Antarctic seas. The first of the returning explorers was Evelyn B. Baldwin, of the Baldwin-Ziegler expedition, who reached Honningsvaag, Norway, on August 1. Mr. Baldwin fitted out at the port of New York early in 1901, and through the munificence of William Ziegler, a wealthy resident of that city, was provided with the most elaborate equipment ever made for polar research. His ship was a big steam whaler, named America, which carried everything deemed of possible use in such an expedition, including a number of small balloons and the necessary apparatus for their inflation. Mr. Baldwin was given carte blanche in the matter of expense, and great hope was entertained as to the results of the expedition. It left Tromsoe, Norway, for the higher latitudes on July 16, 1901. The most important work accomplished was the establishing of large depots of condensed food at three points as bases of supply for a future dash toward the North Pole. The severity attending his operations in the field resulted in such destruction of sledges and depletion of the supply of food for ponies and dogs that the return of the expedition at the end of a year's effort was made imperative. The depots established comprise one in Prince Rudolf Land, within sight of the Italian expedition headquarters; another in latitude 81° 33′, and a third at Kane Lodge, Greely Island. Besides these he left houses and stores at his headquarters, Camp Ziegler, established on a level beach off the southwest coast of Alger Island, Franz Josef Land, in latitude 80° 24′.

Another of the returned expeditions is that of Commander Robert E. Peary, U. S. N., who has led several noteworthy polar expeditions. The latest was under the auspices of the Peary Arctic Club, which was organized in 1898, with Morris K. Jessup as president; Henry W. Cannon, treasurer, and Herbert L. Bridgman, secretary. The steamer Windward was fitted out, and the departure was made in 1898. During the Winter of 1898-1899 the Windward was frozen in in Allman Bay, on the west side of Smith Sound. In his march to Fort Conger Commander Peary suffered greatly from the severity of the weather, and his feet



Commander Peary and Herbert L. Bridgman.

were so frozen that he lost seven of his toes. His work in Grinnell Land was of marked importance, and made a material readjustment of the coast map. During April and May, 1901, Peary rounded the northern coast of Greenland, establishing the fact that Greenland is an island. He was obliged to return to Fort Conger in June, and made his headquarters there during the Winter of 1900-1901. In March, 1901, he made another attempt to go north by way of Cape Hecla, but was unable to make any noteworthy advance, and returned to Cape Sabine, where he spent the Winter of 1901-1902. In April, 1902, he started the second time for a northward trip by way of Cape Hecla, and succeeded in reaching the latitude of 84° 17′ N., at a point west of Cape Hecla and north of Grinnell Land, 343 miles from the North Pole. This was the farthest north he has succeeded in making. Higher latitudes had been reached by Nansen in 1895, and by Captain Cagni, of the Duke d'Abruzzi's expedition, in 1900, but Commander Peary regards the results of his four years' work as very satisfactory, and they have added greatly to geographical knowledge. An unfortunate incident of the expedition was the action of Dr. Dedrick, surgeon of the party, who resigned early in 1901, withdrawing his resignation only to tender it again in August of that year. Dr. Dedrick refused to return home, as ordered, and spent the Winter of 1901-1902 among the Esquimaux, returning finally on the Windward, which reached Sydney, N. S., with the entire expedition on board, on September 18, 1902. The matter occasioned much surprise and discussion, but neither Commander Peary nor Dr. Dedrick has told exactly what was the trouble. Dr. Dedrick has made charges of a somewhat indefinite character concerning the treatment accorded to him by Commander Peary, but has declared that he will not specify them except under compulsion. Friends of the latter, however, claim that the explorer neither made nor entered into any quarrel with Dr. Dedrick, and it is not thought that he will permit himself to be drawn into one. A pleasanter incident was involved in the fact that Commander Peary, on his return to Cape Sabine, after his last dash to the extreme north, found his wife and little daughter, Marie, waiting there to accompany him homeward. The little girl was born on shipboard off the coast of Greenland about nine years ago, Mrs. Peary having accompanied the explorer on the expedition in which he was then engaged. She was in the far north again with her mother in 1900, and the little family spent the Winter together at Cape Sabine, the mother and child returning in 1901 on the steamer Erik, which had gone to Peary's relief, under command of Secretary Bridgman of the Peary Arctic Club.

Digitized by Google

William Ziegler.

Evelyn B. Baldwin.

Simultaneously with the return of the Peary expedition to America, Captain Otto Sverdrup arrived on the coast of Norway with the steamer Fram, arriving at Stavanger on September 19. Captain Sverdrup, who had commanded the Fram in the Nansen expedition of 1895, was himself the leader of this later venture. The Norwegian Government, which owns the vessel, provided him with means for fitting her out, and he left Christiania on June 24, 1898. Geographically, his expedition was of remarkable interest, as he succeeded in mapping 1,700 miles or more of the west coast of Grinnell Land, which hitherto had been a blank on the maps.

In the matter of reaching the North Pole, the record of the year 1902 has been unmarked by advance, and the highest latitudes reached as yet are 86° 14', which was Dr. Nansen's northing in 1895; 86° 33', attained by the Abruzzi expedition in 1900. Commander Peary, however, has returned feeling confident that the Pole can be reached by any man with a proper outfit, who can make his Winter headquarters in a latitude of 83°, north. He estimates that the sum of $200,000 would cover the expense. For this sum, he says, he could keep a party north ten years, if necessary, and follow his original plan for reaching the pole by stages. He feels confident that there is no land at the pole. As to how the objective point is to be reached he believes that under favorable conditions it can be done from Franz Josef's Land and also from Grant Land. He holds that the fact of having Winter headquarters so far north does not in reality add to the difficulty of maintaining existence through the Winter's cold; but that with proper preparations for the local conditions one can live at Hecla as well as in South Greenland, at Labrador or even in New York. Game is plenty in the shape of musk oxen and Arctic hares, the flesh of the latter being very palatable.

It is by no means improbable that Commander Peary may lead another expedition in search of the North Pole during the year 1904. William Ziegler, undismayed by the Baldwin-Ziegler expedition, has planned a new expedition for the Spring of that year, and there is a strong sentiment among members of the Peary Arctic Club to follow up its own successful work in that direction. The organization is well pleased with the report made to it by Commander Peary, and if it should decide to continue the work an effort will undoubtedly be made to have him follow up what he has thus far accomplished. Of incidental interest in connection with his last expedition the club possesses relics of one of the many former expeditions in the shape of a written record and self-registering thermometer brought by Mr. Peary from a cairn on Lockwood Island,

Surgeon Dedrick's Quarters in Greenland.

built in 1882 by Colonel D. L. Brainerd and Lieutenant J. B. Lockwood. This cairn was for thirteen years the mark of the world's "farthest north." Although the record and thermometer had been in the cairn nearly a score of years, both are in perfect condition. In regard to the general estimate of value placed upon Mr. Peary's explorations it may be noted that Sir Clements Markham, president of the Royal Geographical Society of England, in a letter written to the Peary Arctic Club, described him as standing in the first rank of Arctic explorers.

Antarctic Expeditions.—There are at the present time four expeditions exploring the Antarctic region. The latest to sail was under the lead of W. S. Bruce, F. R. S. S., and sailed from the Clyde, in Scotland, on November 4, 1902, on the steamship Scotia. Mr. Bruce, who is accompanied by a large staff of scientific men as assistants, has already been on four similar expeditions, visiting the Arctic as well as the Antarctic circle. In his present voyage it is the intention to proceed south as far as possible without being frozen in the ice. The aim is to investigate oceanography and meteorology. Mr. Bruce's intention was to go straight for the Falkland Islands; thence 1,000 miles east from Port Stanley, touching the Sandwich group, and then steering due south.

Commander Peary's Daughter Marie.

There is a German party, under Drygalski, engaged in exploring south of the Indian Ocean, with a view to reaching the South Pole. Dr. Nordenskjold's Swedish expedition, on the steamer Antarctic, sailed from Gothenburg, Sweden, on October 17, 1901. A British Antarctic expedition was organized in 1901 by the Royal Geographical Society and the Royal Society of Great Britain, the British Government co-operating, with a subsidy of $225,000. A steamer named The Discovery was especially built for the voyage, and sailed in August, 1901, under command of Commander Robert Scott, R. N. Owing to The Discovery becoming disabled a relief party was sent out on the steamer Morgenen, in August, 1902, under command of Lieutenant William Colbeck, R. N. R.

Exploration of the south polar region has been made at intervals during more than a century and a quarter past, but less is known concerning them than has been learned in relation to those adjacent to the North Pole. Captain Cook visited them in 1772 and 1773, and of subsequent Antarctic explorers the most famous was Admiral Sir James Clark Ross, nephew of Sir John Ross, another great Arctic explorer, under whom he had sailed, but whose fame he eclipsed by reaching the latitude of 78° 10′ South, during his expedition of 1839-43. This remained the farthest point south ever reached until the year 1900, when Captain Egeberg Borchgrevink, a Norwegian, in command of an expedition sent out by Sir George Newnes, of London, England, succeeded in pushing farther south more than half a degree, making the latitude of 78° 50′ south. Captain Borchgrevink claimed to have located the south magnetic pole, an honor which, in relation to the north magnetic pole, is generally credited to Sir James Clark Ross.

Antarctic exploration is attended by difficulties which are not encountered in the north polar regions, the conditions at the two extremes of the earth's axis being very different. Captain Borchgrevink, for instance, was able to advance only about seventeen statute miles south from his ship at the time when he made his "farthest south," owing to the glaciated volcanic mountains of the region, which rise from 5,000 to 14,000 feet above the sea level and are so steep that ascent with sledges was well nigh impossible. The experience of all expeditions has been that the land, or supposed land, surrounding the South Pole is practically unexplorable, because of the precipitous nature of the shores. Most of them have returned with the theory that there is a vast Antarctic continent, but exploration of lands, or supposed lands, discovered and at first regarded as forming part of such a continent, has shown them to be islands. So far as the existence of waterways may lead to a "farther south" than has yet been reached, Ross's Bay is the deepest indentation discovered in the mass of land or ice which explorers encounter. This bay, according to Captain Borchgrevink's record, extends to latitude 78° 32′ south, and his "farthest south" was made from that point by means of sledges. His advance brought him within 770½ miles of the South Pole.

The story of Antarctic exploration dates back to the year 1598, and the first one to discover land there was Dirk Gerritz, who was carried to the far southern latitudes by a storm. It is supposed that the land which he discovered was what is now known as the South Shetland, at latitude 64°, south. The famous Captain Cook was in the Antarctic region on two voyages of exploration, and discovered many islands. His "farthest north" was 71° 10′. During one of his voyages he made a complete circuit of the globe in the high southern latitudes. Bellinghausen, commanding a Russian expedition in 1819-21, discovered the two islands named for Peter I. and Alexander I. John Biscoe discovered Enderly Land in 1831; and in 1841 Sir James Ross discovered Victoria Land. This last discovery was made during the same voyage, which was made notable by the advance of the explorer to latitude 78° 11′, south, the "farthest south" reached until Borchgrevinck's exploration of 1898-1900. Lieutenant Charles Wilkes, U. S. N., who subsequently became a rear admiral, commanded an Antarctic expedition in 1838-42, and it is upon his claim of discovery that the theory of an Antarctic continent was based. No later explorer, however, has found any confirmation for the Wilkes theory. Later expeditions have made valuable observations and added considerable to geographical knowledge. Among the facts established is that certain lands, supposed to be continental, are actually insular, thus bringing the theory of an Antarctic continent into doubt.

The theory of Wilkes concerning the existence of an Antarctic continent may have been an original conception in his mind, based upon his observation of conditions at the southern extreme of the globe, so far as he was able to advance in that direction. Yet it is possible that it was an acceptance of that very ancient theory, held by geopraphers as early as the time of the Greek Ptolemy, who believed that there is a continent near the South Pole, and extending to a great distance around it. This theory held with geographers through many centuries, and up to the middle of the eighteenth century nearly all maps presented the supposed continent vaguely outlined, and designated as Terra Australis Incognita. Captain Cook was the first to throw practical doubt upon this theory, his second voyage failing to reveal any land in the high southern latitudes. There are some facts which would seem to indicate that no such large bodies of land as have been discovered in the Arctic regions exist at the Antarctic circle. For instance, no mammals are known to inhabit the islands of the far south, which thus afford a strong contrast to the north polar regions, where large animals have been observed in great numbers almost as far north as the explorers have gone.

How an Esquimau Eats.

Argentine Republic.

Capital:
BUENOS AIRES.

In 1516, twenty-four years after Columbus made his first landing at San Salvador, Juan Diaz de Solis, pilot-in-chief of the King of Spain, discovered the Rio de la Plata (River of Silver). Nineteen years elapsed before a colony was established where Buenos Aires now stands. But it was sixty-four years later, in 1580, that Buenos Aires was definitely founded by Don Juan de Guaray, with sixty followers, who were left there to form the nucleus of a European settlement, and of a population which now numbers over 600,000. In 1661 the King of Spain established a High Court at Buenos Aires, with a Governor for the Provinces of the Rio de la Plata. In 1773 these colonies were raised to the rank of a vice-royalty and the first viceroy Don Pedro de Cavallas, was appointed. In 1816, England, then at war with Spain, decided to take possession of Buenos Aires, and for this purpose sent a small army of 2,000 or 3,000, under command of Lord Beresford. The city, having then some 40,000 inhabitants without military experience, was easily taken, but was not so easily kept. Two months later Beresford was compelled to give up the town, with a loss of about half his men, by General Siniers, who commanded the natives. This was the first step toward independence. In 1808 England sent an army of 10,000 men to retake the city, but they were completely routed. It was about this time that the natives began to whisper about ridding themselves of the Spanish, as they had done of the English, and on the 25th day of May, 1810, the first cry of independence was raised. The people demanded and obtained the resignation of the viceroy, who was replaced by a junta of nine members. The task of achieving independence was, however, not an easy one. The Junta found itself surrounded by enemies, and with small means of defence at its disposal. Up to 1817 several battles were fought with the Spanish, nearly all of which resulted in victories for the latter. But in 1814 the Spanish citadel of Montevideo was taken by the Argentines, and this important capture inspired the people with confidence. A new General-in-Chief, Don Jose de San Martin, was appointed, from whom great things were expected. Although born in the Argentine he was educated in Spain, where he joined the army and distinguished himself. He conceived the idea of crossing the Andes and liberating Chili and Peru from the Spanish yoke. In this, with an army of only 5,000, he was completely successful. In Santiago, Chili, and Lima, Peru, statues have been erected in his honor. Then bgan a series of wars and internal troubles, which lasted nearly thirty years. In 1850 the existing Constitution of the Republic, which is substantially the same as that of the United States, was promulgated, and since then, with one exception, the country has lived in peace and prosperity. During this time material development has received a great impetus. Railroads have been opened in all directions, and vast acres of land opened to population.

The President holds office for six years, and cannot be successively re-elected. All his decrees must be countersigned by a Cabinet Minister or they are valueless. Senators hold office for nine years and Representatives for four.

The Republic has an area of 1,118,000 square miles and a population of about 5,000,000. Except for the northern and Andrine provinces, which are mountainous, the country is an unbroken plain, extending from the foot of the Andes to the Atlantic. The Rio de la Plata and its chief tributaries are navigable in all their courses. Many other streams of less importance run through the different sections, constituting a natural system of irrigation.

The educational facilities are excellent, there being one school for every thousand inhabitants. There are two universities, and there are also a military and a naval academy.

There are in round numbers 100,000,000 sheep and 30,000,000 cattle in the Argentine. In 1891 the "saladeros" of the River Platte slaughtered 1,521,100 head of cattle, of which 369,300 were used to make extract of beef and 1,151,100 to make jerked beef, which was exported to Spain, Cuba and Brazil.

At the last report there were 8,200,000 acres of land under cultivation, the principal products being sugar cane and cereals.

The commerce for the port of Buenos Aires for the first six months of 1902 amounted to 52,243,230 gold pesos of imports and 105,203,721 of exports, compared with 56,619,775 and 97,776,764, respectively, for a like period of 1901. France received the largest amount in exports both years, and the United States stood sixth. A company was organized in May, 1902, with a capital of $1,500,000 gold, for the purpose of engaging in the business of frozen meats. The company will also traffic in live cattle and will establish a large slaughter house. In November, 1901, a final treaty was entered into between Argentine and Japan for the interests of amity, commerce and navigation between the two countries.

Within the limits of the city of Buenos Aires alone there are 7,619 industrial establishments, the most important being those for preparing hides, for timber and for spinning.

The shipment of wheat from the Argentine Republic has decreased rapidly in the last few years, the acreage of wheat also showing a decrease in the early part of 1902. In the week ending January 5, 1902, 520,000 bushels were shipped, against 760,000 bushels for the corresponding week of 1901. The dairy industry has increased in several provinces, and a new butter factory, erected in 1901, has a capacity of 30 tons a day. In a relatively short time the production of cattle has increased about 33 per cent.

The first railroad line was laid in 1857, and there are now something like 10,000 miles of railway in operation. There are also lines of steamships in operation to principal ports of other countries.

The imports of the Republic for 1901 were valued at $109,971,158, and the exports $161,846,038. There was a notable increase in the value of imports from the United States.

In 1901 there were 125,951 immigrants, the greater number of whom were Italians, their occupations being mostly agricultural.

The Argentine Republic is essentially an agricultural and cattle raising country. Its extensive plains, the fertility of its soil, and its moderate climate, favorable to the raising of cereals and cattle, offer to the labor of the colonist and farmer exceptionally advantageous conditions and cause the Argentine to stand among the larger grain and meat exporting countries of the world. Argentine crops of wheat and Indian corn represent a per capita production of 42.33 bushels, against 42 for the United States and Denmark, 30 for Canada, 23 for Sweden, 20 for Russia, 19 for France and 8 for Great Britain.

The standing army consists of 190 superior officers and 1,150 subaltern officers, while the rank and file numbers 7,297. The total effective army, according to a statement presented to the Argentine Congress, should be about 29,500 officers and men. There are about 800,000 in the National Guard, the majority of whom receive military training, those twenty years of age being mobilized every year and given two months' drill in camp. The others of the guard are drilled every Sunday for two months. In 1901 an act was passed making military service obligatory.

The navy consists of four coast defence armorclads, five armored cruisers, three second-class cruisers and seven modern smaller cruisers and gunboats, with a number of older vessels, together with four destroyers, 12 first-class and 10 second-class torpedo boats. There are 327 executive and 295 engineer officers, 34 torpedo, electrical and other officers, with 7,760 seamen, a battalion of marine infantry and a battalion of four batteries of artillery, included in the navy.

One of the most remarkable newspaper plants in the world is located at Buenos Aires. Besides the facilities for publishing an excellent paper, La Prensa, the establishment contains many public apartments for the benefit of the people.

The President of the Republic is Julio A. Roca, and his Cabinet is composed of the following, instituted in September, 1902: Minister of Interior, Dr. Joaquin V. Gonzales; Minister of Foreign Relations and Worship, Dr. Luis M. Drago; Minister of Hacienda, Marco Avellaneda; Minister of Justice and Public Instruction, Dr. Juan A. Fernandez; Minister of War, Colonel Pablo Riccheri; Minister of Marine, Captain Onofre Betbeder; Minister of Public Works, Dr. Emilo Civit; Minister of Agriculture, Dr. Wenceslao Escalante.

Arizona.

—

Capital: PHOENIX.

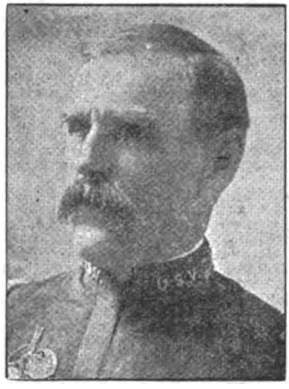
Arizona is a Territory of the United States, organized as such February 24, 1863, and having an area of 112,290 square miles. Its population was estimated in 1901 to be 127,000, and by the census of 1900 it was 122,212. Of these 92,480 were white, 26,480 Indians, 1,848 negroes, 1,419 Chinese and 264 Japanese. About one-third of the white population were foreign born. The idea that the foreign population of Arizona is chiefly Mexican is erroneous, for in the mining region there is a large number of Irish and Cornish miners, and many of the settlers in the farming lands are Swedes, Germans and Italians. The Mexicans number not more than one-half of the foreign population.

Up to the last few years Arizona has been considered chiefly as a mining territory, but since the extension of irrigation it is beginning to take rank as an agricultural country. Copper smelting and refining may be considered the chief industry, the census of 1900 giving the total value of the copper industry as $17,286,517, or nearly one-half of the total industrial value of the Territory. Other lines of manufacture are handicapped by the high price of coal, though the Governor in his report for 1901 speaks hopefully of the possibility of oil discoveries in some sections of the country. It is probable that in the near future beet sugar and fruit canning factories will be established.

During the past two years railroad building has been especially active. The Arizona & Southeastern Railway Company has made long extensions toward the south and several shorter lines have been projected and built.

Rapid strides have been made in the construction of irrigation canals and storage reservoirs, and in 1901, 4,210 of the 5,809 farms in the Territory and Indian reservation were under irrigation. These irrigated farms average 175 acres and the total number of acres is about 558,821. The work of irrigation has been handicapped by lack of encouragement to capital and appropriations on the part of Congress.

There are relatively but two river systems in Arizona—the Colorado and the Gila, the Salt River being included in the Gila. The Colorado flows through deeply erroded canyons, and the river and its branches are rarely available for irrigation purposes except in the southern portions of the water shed. Within the area of the Gila water shed lie the principal irrigated portions of Arizona, and this section resembles Southern California more than does any other portion of the United States. The precipitation of rains takes place during two plainly marked rainy seasons, in December and in July, August and September. But few reservoirs have been built, and the storage supply is inadequate even for the canals in the dry seasons. Those basins which are being established are being made sufficiently extensive to provide water that will last through temporary droughts, and are provided with enormous wasteways to care for the not unusual torrential rains storms of the Summer.



Gov. Alex. O. Brodie.

The storage problem involves the increasing of the present water supply for such canal systems as now carry a deficient supply during dry seasons and establishing a supply sufficiently large and constant to warrant the reclaiming of large areas of so-called desert lands, or public domains. The returns from agriculture under the present irrigation are so remunerative that much capital has been invested in canals and settlers have acquired land under the canals from the Government, in spite of the fact that the water supply is still inadequate and much of the land must remain uncultivated for some time to come.

Another method of irrigation that has been attempted in some small sections depends upon artesian wells. These wells have been sunk in some parts of the desert and the water pumped into the canals by electricity, generated by mountain streams too far away to be of use themselves. There are evidences that irrigation was practised by the prehistoric inhabitants of Arizona, who vanished before the advent of the white man. Present canals and ditches in many cases follow the lines laid down centuries ago. When the country was settled by white men they found the agricultural Indians practising irrigation on a small scale.

The staple crops of the territory are alfalfa, corn, wheat, barley, root crops and vegetables and fruits. Experimental work on sugar beet cultivation was discontinued by the experiment station in 1901, the results of the work showing conclusively that sugar beets could be raised to advantage in the irrigated sections of Arizona. The per cent of sugar is nearly as high as that found in the beets of the coast and the possibility of irrigation makes the crop more sure. The cultivation of the date palm has been tried in Southern Arizona, but the experiments have not been carried far enough to make a statement of the results possible. Trees planted in 1900 are expected to bear in 1904, and three imported trees at the experiment station ten years old bore over 500 pounds of dates in 1901.

Stock raising has been entirely successful during 1901 and 1902, heavy rains making the grazing better than ever before. The health of the cattle has been generally good and contagious diseases common in other countries are seldom met with.

Arizona claims one of the best public school systems in the United States. The attendance is compulsory and the standard of education as high as that of any State in the country. The Indian Office has been generous in appropriations for the Indian schools and there are now a number of excellent institutions for these people, including the Phoenix Indian School for Industrial Training. In 1901 there were 2,340 Indians in the day schools.

According to the report of the Governor the most pressing need of Arizona is for Statehood. It is claimed that the material interests of the country are placed at a disadvantage by the present territorial form of government, that capital for the development of the natural resources will not come to Arizona so long as the people are not assured of the self-government Statehood gives.

A bill to admit Arizona, Oklahoma and New Mexico to Statehood was taken up by the National House of Representatives in May, 1902, and was passed. Delegate Mark Smith, of Arizona, made the concluding speech of the debate, which was one of the warmest of the session in the House, and at the end was stricken with apoplexy. When the bill went to the Senate it was shelved for the session.

At the last meeting of the Territorial Legislature acts were passed authorizing the appointment of a water storage commission and exempting from taxation for ten years all railroads, the construction of which shall be begun within one year. Thirty-five thousand dollars were appropriated to cover the expenses of a representative at the St. Louis Exposition in 1903.

Major Alexander O. Brodie, the new Governor of Arizona, who was installed in office in July, 1902, is a man well versed in affairs of the Territory. He became distinguished in the war with the Apaches and served for several years at Fort Walla Walla, Washington. From 1878 to 1882 he engaged in the cattle trade in Kansas, and from 1882 to 1887 in mining operations in Dakota and Arizona. During the war with Spain he enlisted with the Rough Riders, was made major, and was wounded in the advance on Santiago.

Arkansas.

—

Capital:
LITTLE ROCK.

Arkansas was colonized by the French in the seventeenth century, but without success, and in 1720 Louis XV. made a grant of land on the Arkansas River to John Law. No results followed from this, and in 1763 the territory was given over to Spain. In 1800 it was returned to France, and in 1803 was purchased by the United States as part of the territory of Louisiana. The territory of Alabama, containing 35,042 square miles, was organized March 2, 1819, and admitted as a State June 15, 1836. In 1901 its estimated population was 1,331,000.

Though predominantly an agricultural State, Arkansas has shown a steady growth in manufacturing and mechanical industries during the past decade, and especially during the past two years. The chief industry is the manufacture of lumber and timber, the value of these products in 1900 being $23,959,983. In the southern portion of the State the wood is largely pine, in the eastern section there are extensive cypress swamps, and oak, walnut, hickory and ash are found in large quantities in the north.

Flour and grist milling ranks second in importance among the industries of the State, the value of the products of these amounting, in 1900, to $3,708,709. The cotton production of the State is 7.5 per cent of the whole production of the country, and dependent upon this are the ginning and cottonseed oil and cake industries, the latter having grown with tremendous strides in the last few years. Important railroad construction and repair shops are established in some of the larger towns. In the cotton mill industry Arkansas has not kept up with most of the other Southern States, the census of 1900 giving the capital invested in textile industries in the State as less than $10 to the square mile.

Among the acts passed by the Arkansas Legislature of 1901 were a number worthy of note. Congress was applied to under article V of the Constitution to propose an amendment authorizing the election of United States Senators by direct vote of the people. Banks were prohibited from receiving deposits when insolvent, and the violation of this act was made a felony, punishable by from three to five years imprisonment. Cities of over 2,500 inhabitants were authorized to establish and maintain public libraries.

The Pension law for Confederate soldiers was made more liberal, and for this purpose the pension tax was raised from 1-4 to 3-4 a mill on all taxable property. The pension of widows of Confederate soldiers was raised from $25 to $100 a year, provided they did not own more than $400 worth of property.

A Collateral Inheritance Tax of 3 per cent was imposed upon all property, real and personal, bequeathed to any one except a mother, father, husband, wife, lineal descendant, adopted child or descendant of an adopted child. A law regarding dentistry provided that in the future any one desiring to practise dentistry must present a certificate of graduation from an authorized dental school or must pass an examination showing he was reasonably well qualified for his profession. The law was rather curious in that no time limit of study or specifications of what were reasonable qualifications were incorporated in it.

Gov. Jeff Davis.

The law making executions for crime private was modified so that executions for criminal assault should be public, it being believed that this would act as a deterrent to "negro crime."

An act was passed prohibiting secret fraternities in the University of Arkansas, which caused a great deal of comment among fraternity men all over the country. After September 1, 1901, no student of the university who was a member of a secret fraternity should receive any class honors or compete for any prizes or honors offered by the university, unless he filed with the president of the university a renunciation of his society and an agreement to have nothing further to do with it during his attendance at the university. No teacher was to be employed by the university unless he also filed a renunciation of the secret college fraternity to which he belonged. An act somewhat similar to this was passed by the South Carolina Legislature in 1897, abolishing fraternities in all State colleges.

It was made unlawful for any person selling liquors where the sale was legal to solicit orders in places where the sale was unlawful. Congress was petitioned to pass such legislation as would prevent the issuance of a United States revenue license for the manufacture or sale of alcoholic liquors in prohibited districts. It was felt that people who had but little fear of breaking the State laws would think twice before infringing on a Federal statute. A bill designating the place where liquor is delivered as the place of the sale of liquor, and making carriers legal agents of liquor dealers, was passed, but vetoed by the Covernor on the grounds that the measure violated the Interstate Commerce law.

An act made it unlawful for a corporation to pay its laborers in any form of script or token of indebtedness that was not redeemable in lawful money on pay day, or for any company to coerce its employes to trade at a "company store." If a company charged for merchandise at its store more than a reasonable rate or the current market rate, the employe might recover damages to twice the amount of his injury.

Bills introduced into the Legislature upon the Governor's recommendation, looking to the taxing of insurance policies and franchises and making more stringent regulations concerning trusts failed of passage.

The powers of municipalities were enlarged so that they might construct, acquire and operate municipal lighting plants.

At the Democratic State Convention, held June 10, 1902, the Kansas City platform was indorsed as the declaration of the National Democracy. On the question of trusts the State platform declares: "We denounce the trusts and all illegal combinations in restraint of trade. We pledge the Democratic party to the passage of such laws as will effectually prohibit the operation of all such combinations in the State of Arkansas."

After nearly 100 years of undisputed possession of the Government reservation at Hot Springs, the United States has now been called upon to defend its title against more than a score of heirs of a French soldier named Villiot, who, it is alleged, received from Louis XVI. a grant of one square league of territory, which was afterward transferred to the United States in the Louisiana purchase of 1803. A suit was filed in the Federal Court at Little Rock in September, 1902, by a large number of alleged heirs, many of them citizens of the United States and not bearing French names, who declare that by virtue of the grant to their ancestor they are entitled to the Hot Springs property.

In a recent report on the Hot Springs, issued in 1902 by the Government, the question as to the life of these springs was discussed. It has been found that since 1804 there has been a decrease in the temperature of the water, as much as 17 degrees in the case of one spring, and this fact has led to the supposition that the source of the heat is becoming gradually extinct, and that the life of the springs is but a question of time. By the same report the only tenable hypothesis as to the cause of the heat is shown to be that of still hot igneous rocks which were intruded in the earth's crust by volcanic agency.

The mineral wealth of Arkansas is as yet practically undeveloped. The State abounds in cannel, anthracite and bituminous coal, while iron ore of good quality has been found in the Ozark Mountains. Zinc is found extensively, and there is also galena, manganese and gypsum, with small quantities of gold.

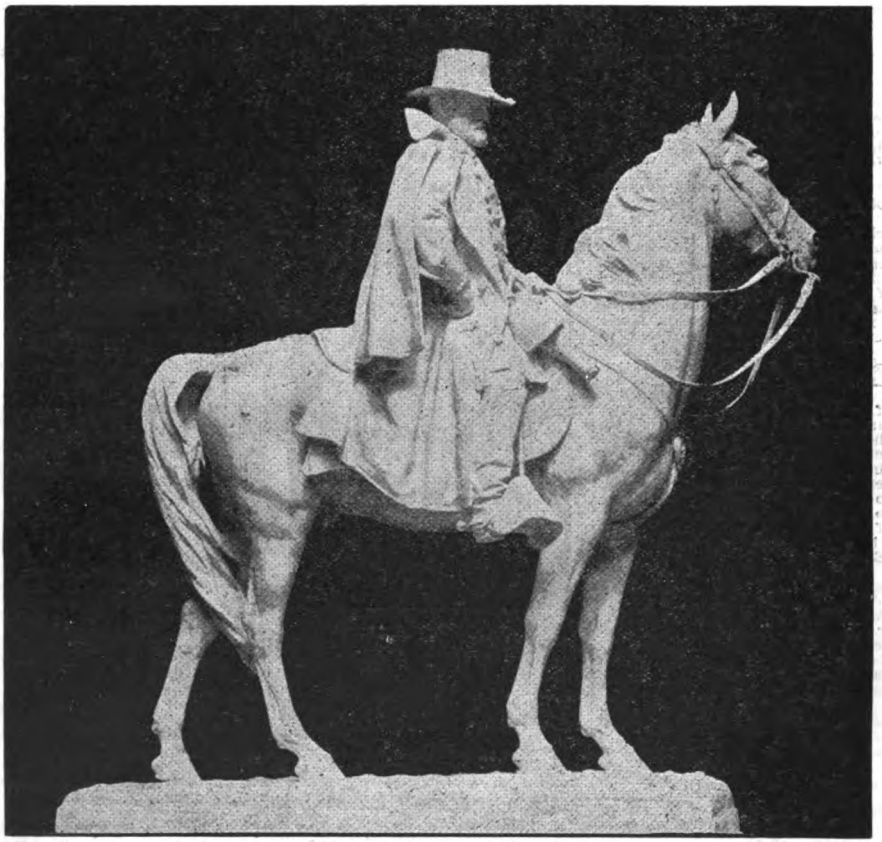
Art in 1902.

HENRI PENE DU BOIS.

Art in the United States was admirably shown at the Pan-American Fair. It was gathered there by an artist. One who studied it there learned it well. There were works of Reid, Ward, Lucas, Davis, Barnard, Blashfield, Sewell, MacMonnies, Fuller, Coffin, Bartlett, Isham, Saint Gaudens, Millet, Shrady, Vedder, Whistler, Cassatt, Burroughs, Alexander, McEwen, Vail, Weeks, Melchers, Pearce, Stewart, La Farge, Sargent, Homer, Abbey, Brush, Tryon, Walker.

There were works of others. In all the artistic quality was insistent and precise. They were not pictures and statues made to tell tales, facts of history, maxims of morality, but to express the beauty of lines and colors in subtle harmonies. In other countries than the United States it might have been impossible to form a collection of works of so many artists animated by a devotion so exclusive to the ideal of art that modern criticism exacts. The American national trait was expressed there as it is in the industries. It was an essentially modern expression.

The American love of nature that is racial had its reflection at the Fair in admirable landscapes. But if one commented on this, one had an air of accenting the work in landscapes as if the work in portraits



Shrady's Statue of Grant.

and in marine views had not excellence also, with Homer, Whistler and Sargent as its leaders. In all the capitals of Europe the American artists had in the Winter the triumphs that have come to them annually for a decade. Munich's Academy of Fine Arts added to the list of its honorary members Abbey and Sargent. The King of England appointed Abbey to be the official painter of the Coronation. The Luxemburg Gallery at Paris bought more paintings by Americans.

Millionaires of the United States continued to buy ancient and modern paintings of Europe. B. Altman bought Hoppner's portrait of Louisa, Countess of Dysart, which had brought by auction in June, 1901, $77,500. J. Pierpont Morgan bought panels painted by Fragonard for Madame du Barry's house at Louveciennes, art objects of the Renaissance, bronzes, Greek figurines, and made public his determination not to import them because of his decision not to pay the tax that the tariff imposes on works of art imported. Harry Walters bought in Rome the Massaranti collection for $1,000,000 and imported it. The Metropolitan Museum of Art almost lost the Garland collection of Chinese vases. It would have been sold abroad if Mr. Morgan had not bought and left it in the Museum as a loan collection still.

Samuel Putnam Avery gave his collection of prints to the New York Public Library. It is formed of 17,775 etchings and lithographs by 978 artists, the glory of the nineteenth century, the wealth of an age. James Henry Smith gave to the Metropolitan Museum of Art Rubens's "Holy Family," sold for $50,000 at the auction sale of the gallery formed by F. O. Matthiessen. George Vanderbilt lent to the same

John W. Alexander.

Henry Merwin Shrady.

John La Farge.

William M. Chase.

museum the collection of pictures formed by his father William H. Vanderbilt, valuably expressive of the taste for paintings of the Romanticists and of delicate workmen like Meissonier, that reigned twenty-five years ago. The American artists worked with admirable fervor.

John La Farge showed a mosaic in glass, in the magically colored glass that he invented, of "Wisdom Enthroned." Her red gown is in the folds of an ideal drapery. Her right elbow rests on a globe blue and pearl. The hand is at her cheek. Peaceful and grave, her brown eyes reflecting an infinite serenity, she is more terribly beautiful than an army in line of battle. In front of her, on each side of her throne, is a nude figure. One is a youth crowned with the laurel of athletes.

He is in the dress of knights and rests his hand on the hilt of a tall sword, the blade of which is as blue as the sky. His arm is armored with gold. His head is reverent and his dark eyes think. The other figure is of old age, with one hand at the breast and the other at the folds of the gown. Between the columns is reflected the magnificence of precious stones. The work, made in memory of Oakes Angier Ames and Oliver Ames, is in the Unitarian Church at North Easton, Mass.

The Water Color Club's show at the Fine Arts Society was of the pictures, discreet and elegant, that hush or appease. They were light and captivating. John La Farge, Ben Foster, Clara T. McChesney, Charles Warren Eaton, M. H. Squire, Genjiro Yeto, George R. Barse, Jr., Albert Herter, Maurice B. Pendergrast, had fine examples of their art there. The water colorists were not in the disposition to tell the plays of lights and colors that the painters in oils reveal so enchantingly.

The social clubs gave their periodical art shows, that are made either of paintings owned by the club's members or of new works by young artists. These art shows of clubs are a distinction of Manhattan's manners in the Winter. The Union League Club made famous a Californian, Amedee Joullin. His paintings were of Mexican scenes and figures. They showed the landscapes of the Rio Grande, the Medicine Man, the American Indian Weaver, the goldenrod fields of New Mexico, the Pueblo, Mexican

E. A. Abbey.

J. S. Sargent.

James McNeal Whistler.

Frederick Dielman.

courtyards, the pottery makers of Laguna at their vases, a carver of hieroglyphics at his task, the light and the lore of the land of the Aztecs.

Robert Reid made a historical painting with an originality. He painted for the State House at Boston, a large mural picture of "James Otis making his famous argument against the writs of assistance in the old Town House in Boston, in February, 1761." In it are five judges with Lieutenant-Governor Hutchinson as chief, listening to Otis, and a public. A fire burns in the grate. Around it are the judges seated in a semi-circle. The glare of the grate is on the scarlet broadcloth and the cambric bands of their robes, the silvery white of their long, curly wigs.

The outlines of the personages tinted with red make complimentary reflections of green in the shadows. Through the unique, narrow window a cold blue light enters. The public is in a line under the window. The speaker, James Otis, has the gesture of the Revolution in his attitude. His shadow is silhouetted in blue on the wall. He says vividly in the admirable lines and colors of the figure the words that have made him great, "I will to my dying day oppose with all the powers and faculties God has given me all such instruments of slavery on the one hand and villainy on the other, as this Writ of Assistance is."

Edwin Austin Abbey showed in the American Art Galleries the last series of his panels of "The Quest of the Holy Grail," painted for Boston's Public Library. A brilliant work in archaeological exactness, in magnificence of colors, in nobility of drawing, it conveys vividly the poetic impression of the Celtic legend that is the favorite epic of England's modern artists. Sir Galahad in his red mantle passes in the panels through the chivalrous phases of the epic, admirable in his faith. He is athletic, ascetic, unconquerable. The end of the work is an apotheosis of the Grail ascending to Heaven in gold and azure.

In this work Abbey painted the first marine that art lovers had seen from his brush. It represents Sir Galahad guided by the angel with the invisible Grail in a bark that the waves toss. The colors and the lines of the painting are realistic and beautiful. Abbey's art is illustrative, for he has trained

Digitized by Google

his ability to this almost perfectly. Pennell can say of him without exaggeration, "Abbey is the greatest living illustrator." The fault of this quality is in the panels of the "Holy Grail." They are images of a chronicle, not the tales that the stones tell, as the pictures on the walls of the Pantheon painted by Puvis de Chavannes are.

The art of mural decoration found elevated expression in many other buildings, public and private, of the United States. Dielman, president of the National Academy of Design; Simmons, Turner, Blashfield, gave admirable evidences of the national aptitude in it and, more than ever, municipalities and art committees appreciated the value of it.

Abbey's illustrations for "The Deserted Village" of Oliver Goldsmith, Pennell's drawings in pen-and-ink, etchings and lithographs of scenes of Philadelphia, New Orleans, Italy, London, Normandy; Henry Wolf's portrait of Thomas Jefferson engraved on wood; the water colors of Sarka, the nomad; pictures in books and magazines by Parrish, Yahn, Du Mond, Pyle and others accented the impression of Americanism in art.

The National Academy of Design made admirable its annual exhibition with works of Schofield, Foster, Couse, Du Mond, Alexander, Eakins, Beckwith, Bell, Clark, Harrison, Wiles. Funk showed in twenty-nine portraits painted by him twenty-nine ideas of art of painting portraits. William V. Schwill showed, in portraits also, the inestimable value of Lenbach's teaching. Blaski's talent as a landscape painter was revealed at one of the Lotos Club's shows.

William M. Chase went to Sargent's studio at London to pose for the portrait that Chase's pupils are to present to the Metropolitan Museum of Art. Charles Melville Dewey showed twenty-one paintings in his frank, patient, inspired art. They seemed to reveal the inert soul of nature, its latent life. The sculptors achieved tasks gigantic or exquisite.

Henry Merwin Shrady, indebted for his ability only to the models that are in nature, won the competition for the monument to General Grant at Washington. It is a brilliant, unexpected, essentially national work of art. Partridge's "Homer," shown at the Arts' Club, had the graceful merit of Tanagra figurines. J. Q. A. Ward modelled admirable figures for the pediment of the New York Stock Exchange. Karl Bitter made the Hubbard and Villard memorials and two symbolical figures for the doorway of the New York Chamber of Commerce.

French's equestrian statue of George Washington—the horse is by Potter—was presented to France; Niehaus, Hartley, Martiny, Ruckstuhl, Grey, Barnard, Bartlett, Proctor, Enid Yandell, Borglum, made statues and statuettes of signal merit. Their show at the Madison Square Garden in alliance with that of the florists, was captivating. The art of reuniting statues with flowers was encouraged there.

The American Water Color Society filled the American Art Galleries with 475 paintings of the sea, the land and the animals. Brown, Hassam, Edwards, Keller, Mora, Shell, Chapman were brilliantly represented there.

The Society of American Artists had, as is its habit, a triumph of modernity. Whistler, Sargent, Cecilia Beaux, whom Sargent guides imperiously; Alexander, Chase, Homer, Eakins, Murphy, Mrs. MacMonnies, Crane, Lathrop renewed their successes there. Blakelock's "Still Night," owned by Carolina Lambert, was a revelation of that fantastic artist's real charm. Lockwood with a portrait of La Farge, Fromkes with "An Arrangement in Grays" and Walcott with "Gossip" won artistic recognition.

The Ten American Painters—Dewing, Simmons Twachtman, Reid, Tarbell, Benson, De Camp, Weir, Hassam, Metcalf—showed pictures painted as the shepherds of the Anthology sang, for the Muses and themselves, with love of air, of light, of beautiful forms in reflected colors. Auction sales of art objects were interesting and brought large prices.

The American Art Association sold the paintings of the Cox collection, those of Mrs. P. C. Hanford, of Chicago, including Rembrandt's "Head of the Accountant," E. F. Milliken's gallery of all the schools in twenty-six paintings, including admirable examples of Titian and Manet; the collection of Boussod, Valladon & Co.'s shop, including Regnault's "Automedon," Isabey's "Smugglers" and Corot's "Pool;" the F. O. Matthiessen collection, including a Troyon, a Rembrandt and the Rubens that James Henry Smith gave to the Metropolitan Museum of Art; the old masters of Blakeslee's shop. John Fell O'Brien sold an admirable collection of American paintings, ancient and modern, at the Waldorf-Astoria.

Popular appreciation of the value of art that is the test of a nation's elevation gained in intensity.

Astronomy, Its Advance in 1902.

GARRETT P. SERVISS.

The year 1903 finds astronomy facing some of the most absorbing problems that have ever been presented to the human mind. The progress made at the opening of the new century, a progress in which the United States may fairly be said to have taken and held the lead, has opened out new avenues in various directions and widened the whole horizon.

A glance at some of the things that have been done will serve to indicate the character of the work and the possibilities of discovery during the coming year.

Beginning with our own dwelling place in the Universe, the isolated Solar System, which is driving through open space at an immense remove from the crowded ring of the Milky Way encircling it, we find that the centre and governor of that System, the Sun, is the object of investigations leading to a knowledge, that promises to become intimate, of the nature and sources of the radiant energy which maintains life upon the earth.

The old view of the sun regarded it merely as the hearth of the System, from which light and heat were genially poured into surrounding space. But the studies of Professor Langley, and others, have shown us that light and heat form only a part of the sun's radiation, and have led us to see in the orb of day a far more wonderful thing than a mere warming and illuminating centre. It appears, instead, as an organism of astonishing complexity, sending forth forms of radiation that may affect us in ways as yet hardly dreamed of.

We begin dimly to perceive that there come from the sun energies which in our present state of ignorance, or half-knowledge, appear mysterious and almost inexplicable. Arrhenius, and other investigators, have shown that even the familiar phenomenon of light has heretofore been but half understood. According to these investigations the light waves drive off from the sun electrified corpuscles which reach the earth and the other planets, affect the electrical condition of our atmosphere, cause strange luminous appearances in the upper air, and about the terrestrial magnetic poles, and produce other effects, the nature and extent of which remain to be studied.

The electro-magnetic influence of the sun, and the existence of obscure forms in its radiation, recalling the phenomena of the X-rays and Kathode rays are among the problems now under investigation. In the study of the sun Professor George E. Hale and his assistants at the Yerkes Observatory hold a leading place.

Of course, in a brief article, it is impossible to cover the whole ground of so extensive a subject. Only a few indications, here and there, can be given.

Progress is being made in the knowledge of our own earth, considered as a celestial body. During the past year some further irregularities in its axial rotation have been detected. In brief, the earth wobbles, just a trifle, as it swiftly turns upon its axis, and in its wobbling, which is so slight that only the most refined and patient methods of observation can reveal it, a number of different elements are concerned, the precise origin and meaning of which remain unknown. But, although it may be somewhat startling to be told that the axle of our huge whirling globe is not perfectly steady in position, yet there is really no known reason to be alarmed. The position of the poles is not shifted more than thirty or forty feet at the most,

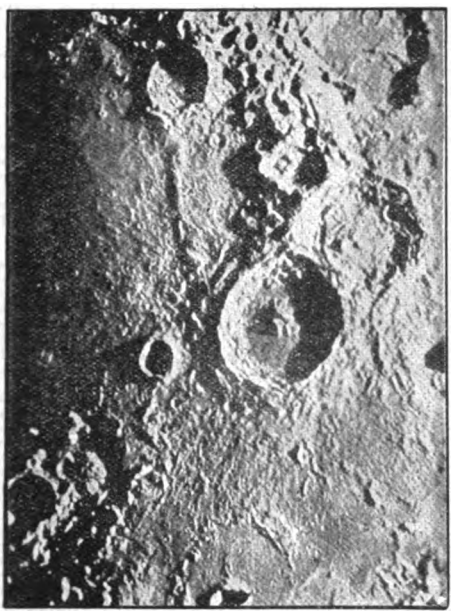
Digitized by Google

and when we consider that the earth is a body 25,000 miles in circumference, the ability to detect so slight a variation is a great tribute to the accuracy of science.

The moon has recently been the object of renewed scrutiny, and almost a revolution has been effected in the heretofore popular view that the earth's satellite is an absolutely dead and inert body. Professor William H. Pickering, of the Harvard Observatory, has shown that changes take place on the face of the moon which, to say the least of them, are strangely suggestive not only of the play of mechanical energies, but also of the existence of life, probably in the form of vegetation. During the total eclipse of the moon in October last, Professor Pickering satisfied himself that the whitish patch visible around a little crater-like depression in the great plain called the Mare Serenitatis, or Sea of Serenity, was distinctly enlarged, while the face of the moon was covered by the cool shadow of the earth, and this, he argues, could only have resulted from the deposition of snow or hoar frost, caused probably by vapors issuing from the crater. Professor Pickering has shown other reasons for thinking that there are places on the moon where volcanic activity is as great as anywhere upon the earth.

We reproduce a wonderful photograph of a very rugged portion of the moon, including the great craters, or ring mountains, known as Theophilus, Cyrillus and Catharina, made with the huge Yerkes telescope by Mr. Ritchey. In connection with this, attention may be called to the other photograph here shown, also made by Mr. Ritchey, with the same instrument, of a strange nebula in the constellation Cygnus. These photographs in themselves constitute an advance. They are, in many respects, the finest ever taken of any object in the heavens, and they were made by a new method of Mr. Ritchey's invention. Instead of using a separate photographic object glass, he simply introduced in the great telescope a screen of yellowish glass, the effect of which was to cut out the rays of light inimical to photography. The results are better than any hitherto attained.

One other investigation within the solar system must be mentioned, that relating to the curious asteroid Eros, discovered a few years ago, and which at times approaches the earth nearer than any other heavenly body except the moon. Eros is the object of most careful study because, on account of its close approaches, it offers a means of measuring actual distances in the Solar System more accurately than has hitherto been possible. From the known distance of Eros that of the sun and all the other planets can be deduced. Another peculiarity of Eros is its surprising changes of light, which lead to the supposition that it is not a



Lunar Crater Theophilus.

The Great Nebula in Cygnus.

globular body, but an irregularly shaped mass, and this fact, in turn, revives the theory that the asteroids are all fragments of a greater planet which was blown to pieces many ages ago. If they did not originate in that way, any other explanation of their origin must prove almost equally interesting.

Beyond our little system astronomy, reaching out into fathomless space, grasps many strange and wonderful things. Perhaps the most significant of recent, and as yet uncompleted, discoveries in the stellar heavens, is indicated in the photograph, above referred to, of a most singular nebula in the constellation Cygnus. It is hardly too much to say that the discovery of such objects as this have dumbfounded even astronomers. Photography possesses an almost magical power of detecting things which the eye cannot fully see even when aided by the greatest telescopes. This is particularly true of the nebulae, which apparently consist of matter in a very tenuous, gaseous or dust-like state, and many of which seem to be undergoing transformation into suns and worlds.

But some of the photographs recently made at the Yerkes and the Lick observatories have presented us with objects so nearly inexplicable in shape that they can hardly be fitted into any existing theory of the nebular origin of the stars. Just what these things are it is hard to say. Their enormous, almost incredible, size, and the wonderful way in which they are scattered over, or among, or perhaps in some cases behind, the stars, like glimmering backgrounds, serve to confound the beholder and to make him hesitate in drawing any conclusions concerning them. Some of them might be likened to vast filmy, half-luminous jelly fishes floating among the star points that glitter in the ocean of space. Many others, however, possess a definite shape, which seems clearly to indicate motion about centres of attraction. But the shape revealed is usually that of a spiral, and this is inconsistent with the Daplacean conception of a series of circular or elliptical rings surrounding a central mass and capable of being condensed into planets.

There is no more promising field of future exploration in astronomy than that which concerns the nebulae, and in this American astronomers are ahead of all others.

But a few of the fascinating problems before us have been mentioned; enough, however, to show that astronomy in 1903 is likely to hold the attention of mankind.

Austria-Hungary.

Capital: VIENNA.

The imperial and royal family of Austria descends from Rudolf von Hapsburg, a German Count, who was born in 1218, and who was elected Emperor of Germany in 1273. The last representative of the male line was Emperor Karl VI., who died in 1740. His daughter, in 1736, became the wife of Duke Franz of Lorraine and Tuscany, who, as Kaiser Franz I. of Germany became the founder of the new house of Hapsburg-Lorraine.

The present Emperor, Franz Josef I., was born August 18, 1830, and is the son of Archduke Franz Karl, the second son of the late Emperor Franz I. of Austria and Archduchess Sophie, Princess of Bavaria. After the abdication of his uncle, Ferdinand I. of Austria, and the renunciation of the crown by his father he was proclaimed Emperor of Austria Dec. 2, 1848. On Jan. 8, 1867, he was crowned King of Hungary.

Franz Josef was married April 24, 1854, to Elizabeth, daughter of Duke Maximilian of Bavaria. She was born December 24, 1837, and was assassinated at Geneva September 10, 1898. Their issue was:

Name.	Born.	Died.	Married.	Born.	Date of Marriage.	Issue.
1. Archduchess Gisela (for children see Bavaria)	1856	....	Prince Leopold of Bavaria	1846	1873	
2. Archduke Rudolph	1858	1889	Princess Stephanie of Belgium*	1864	1881	1
(1.) Archduchess Elizabeth	1883	....	Prince Otto zu Windischgratz	....	1902	
3. Archduchess Marie Valerie	1868	....	Archduke Francis Salvator of Austria	....	1890	

*Princess Stephanie, widow of Crown Prince Rudolph, was remarried to Count Elemer Lonyay March 22 1900.

THE MINISTRY FOR THE WHOLE MONARCHY.

Office.	Name.	Appointed.
Minister of Foreign Affairs	Count Agenos Maria Adam Golouchowski	May, 16, 1895.
Minister of War	General Edmund Frh. v. Krieghammer	Sept. 23, 1893.
Minister of Finance	Benjamin Kallay de Nagy-Kallo	June 2, 1882.

HEIR PRESUMPTIVE.—The heir presumptive to the throne is Archduke Franz Ferdinand, who succeeded to the right of succession on the death of his father, Archduke Karl Ludwig, the brother of the Emperor, 1896. The Archduke was born December 18, 1863, his mother being Princess Annunciata, daughter of the late King Ferdinando II. of Naples. On July 1, 1900, he morganatically married Countess Sophie Choteh, having renounced the right of his future children to succeed to the thrones of Austria and Hungary.

Emperor of Austria.

The Ministry is constituted as follows:

Ministry for Austria.—President of the Interior, Dr. Ernest von dent of the Council and Minister fence, Count Zeno von Welser Koerber; Minister of National Defence, Ritter von Wittek; Minister of Jus sheimb; Minister for Railways, Dr. tice, Baron Spens-Booden; Minister of Public Worship and Instruction, Dr. W. Ritter von Hartel; Minister of Finance, Dr. H. Ritter Bohm von Baweck; Minister of Commerce, Baron Call zu Rosenburg; Minister of Agriculture, Baron de Giovanelli, and without portfolio, Dr. Anton Rezek and Professor Leonhard Pietak.

Ministry for Hungary.—President Szell; Minister of Finance, Dr. Lad dent of the Council, Coloman de Szell; Minister of National Defence, vary; Minister ad latus, Count General Baron Geza Fejer Interior, Coloman de Szell; Minister anuel Szechenyi; Minister of the Dr. Julius de Wlassics; Minister of Education and Public Worship, Minister of Industry and Commerce, of Justice, Dr. Alexander Plosz; Agriculture, Dr. Ignatius de Dar- Alexander de Hegedus; Minister of Slavonia, Ervin de Cseb. any, and Minister for Croatia and

THE NATION.—The Austrian Empire and the Kingdom of Hungary unite under the treaty of 1867 to form a constitutional monarchy known as Austria-Hungary. The eration is renewable every ten fed years, and was so renewed in 1877 and 1887, but not in 1897, the pres- ent tie being the personal one of the common ruler. The two States are independent, but act jointly in for eign affairs, military and naval affairs and affairs of common fin ance. The Turkish provinces of Bosnia and Herzegovina are also included in the administration, although not formally incorporated.

Religious liberty is enjoyed in both countries. Although the Church and the State are independent, the Emperor must be a Roman Catholic. This religion largely predominates, in Austria over 75 per cent and in Hungary over 50 per cent of the population belonging to this church.

Public instruction in Hungary is compulsory for children from six to twelve years, with repetitive courses from twelve to sixteen years. Law provides courses for apprentices, and provides for infant instruction in kindergartens maintained in each commune or parish. The State maintains three universities. The same general scheme holds in Austria, except that compulsory attendance usually ends with the fourteenth year, and there are eight State universities.

In Austria the Department of Justice includes the Supreme Court and Court of Cassation, 9 higher provincial, 71 provincial district and 940 county courts. In Hungary there is a Royal and a Supreme Court, 12 Royal Tables (appeal), 76 county, 457 district courts and 15 jury courts for press offences.

Finance.—Common expenses of the monarchy are borne jointly, Hungary paying 34.4 per cent. The floating debt is guaranteed by joint bills. Hungary pays yearly on account of previous debt 30,312,920 florins.

Lying in the heart of Europe, the monarchy has a strongly fortified frontier, while Pola, the chief naval port, is most strongly protected. The navy, while small, is highly efficient.

Productions are chiefly grain, beet root and wine, in which latter Austria-Hungary comes next to France, Italy and Spain. The States share great mineral wealth and large exports of gold, silver and iron. Manufacture is nearly confined to Austria, which exports ironware, woollens, cottons and linens, Bohemian glass and Vienna and Pilsner beer.

LIECHTENSTEIN.—The principality of Liechtenstein, lying between the Rhine and the Province of Tyrol, practically forms part of the empire. Incorporated by no treaty, the hereditary Prince nominally reigns, but the direction of affairs is by an elective commission at Vienna. There is no public debt, and its inhabitants pay no direct taxes and are exempt from military service.

The reigning family of Liechenstein traces its descent to the twelfth century. In 1608 its barons became Princes of Liechtenstein, and the principality as it now exists has been established since 1719. The

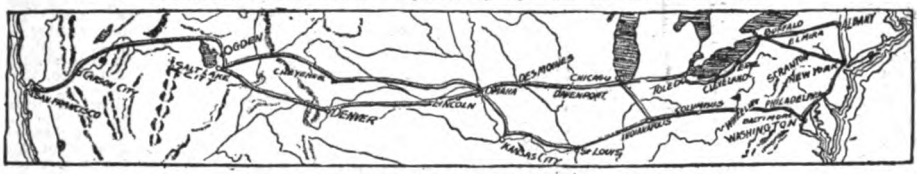
Trans-Continental Road Proposed by Cyclists and Automobilists.

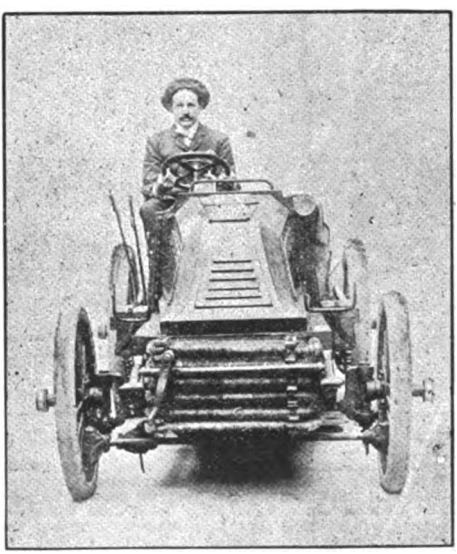


Drawn by George M. Schell, Chairman L. A. W. National Touring Committee.

Automobiles in America and Abroad.

SAMUEL M. BUTLER,
Secretary A. A. of A.

Years of experiment preceded the introduction of the automobile as a practical vehicle. The idea of a self-propelled carriage for use upon the ordinary highway was entertained by inventors as early as during the middle of the nineteenth century. Occasionally the result of their study and experiment made its appearance in the form of a horseless vehicle which excited popular curiosity for a short time, only to disappear from view forever. The problem involved in the production of such an addition to the conveniences for local transportation and private travel was not attended by any serious difficulties, however, and the wonder is that the world has waited so long for a machine which has become, within little more than a decade, not only a source of keen enjoyment to those who are able to employ it for pleasure purposes alone, but a valuable adjunct to the facilities of business enterprises which require quick delivery of merchandise or rapid movement of superintending officials from point to point of territory covered by their operations. It is to the pleasure seeker that is due *the impetus* which has led to the development of the automobile up to its present degree of excellence; and it is from this class of people that invention and business enterprise derive as yet by far the greater stimulus in continued improvement and production. Already an immense number of self-propelling carriages is in use in every portion of the civilized world, including many powerful racing machines, but vastly many more *adapted* to and used for the purposes of touring, pleasure-riding and the ordinary running about for which the family horses and vehicles are employed. Many physicians have adopted them with satisfactory results; and in the broad field of general utility they are making their way rapidly into use as public conveyances, as trucks for the trans- delivery wagons and even In fact, the development portation of heavy goods, ly utilitarian lines has of the machine along strict fire engines have been gone so far that steam ble plan, and have been fected upon the automo fire departments in several put into the equipment of American cities. of the most progressive ited with the inception of France is to be cred the automobile, and the prevailing interest in country have originated manufacturers in that the new vehicle, including some excellent forms of volturette and others. the motor tricycle, the restrictive laws which England was hampered by passage of the Light Loped progress until the since which time much has comotives act in 1896, been done in that country.



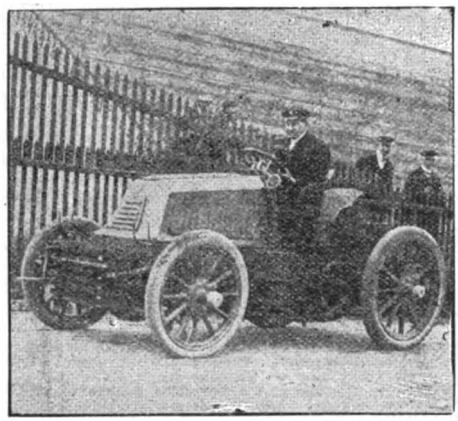
Henri Fournier and His Racing Machine.

America has been so quick to perceive opportunity that her manufac turers vie with those of France in supplying the English demand for the most up-to-date automo biles. Germany also has manifested much progres siveness in this direction, the Daimler motor, a Ger man invention, being one of the evidences. Ameri can manufacturers, while they have yielded where it was wise to the influence of French designs, have shown characteristic originality, and in working out their own problems have evolved new and valuable ideas. M. Henri Fournier, easily the fore most automobilist in the world, regards America as the country from which the development of the immediate future is most likely to come, and he sees the indications of this in Thomas A. Edison's new storage battery and the number of young engineers in this country who are interesting them selves in the problems of manufacture. Already, in M. Fournier's opinion, although America yet stands in th's matter about where France stood five or six years ago, she has made a couple of years as great an advance as France made in a decade. The direction wherein America is really ahead of France, notwithstanding M. Fournier's opinion that we are still somewhat in the rear, is in the manufacture of automobiles reasonable in price, and so constructed that they can be operated by people of ordinary intelligence. The French build largely to order, and do not increase their capacity in keeping with the demand. They produce special machines, powerful and costly, each a type by itself in some respects, and expensive to keep in repair, as every part which it becomes necessary to replace must be made to order. American manufacturers developing a good type, de-

Digitized by Google

vise special machinery for the production of its parts, which are interchangeable and can be readily and inexpensively replaced. With less comparative cost for a good machine, the demand is fostered, the product increased, and the manufacture improved by the lessons of large experience. At the present time there are in the United States about 150 concerns engaged in the manufacture of automobiles and parts. Of these nearly fifty were represented in the successful reliability run of 500 miles, from New York to Boston and return, which took place October 9-15, 1902. In this run there were 75 starters and 68 finished.

It would be impossible to state with any approach to accuracy the number of self-propelling vehicles in use in the United States. It is estimated that in New York City alone there are about 4,000 automobiles, of which fully half are driven by steam, about 600 by electricity and more than 300 by gasoline. Throughout the country the gasoline and steam motors are the most largely used, and try the type mate of the number in 5,000 is not an overestibeen brought to a high degree of perfection in this country, and the facilities for manufacture are being constantly improved. Each type has its advantages, and each has its advocates. It would appear that M. Henri Fournier regards electricity as opening the way to the greatest development in automobile mechanism, This development will go forward on that line when lighter storage batteries than any yet produced are available, and Mr. Edison's experiments in this direction have been attended by promising results. But in addition to lighter storage batteries there will be needed, in order to give the electric automobile its full advantage, the installation of charging plants in all directions. Until these conveniences are supplied the gasoline and steam automobiles will naturally be most favored by tourists who are disposed to try unfrequented roads.



Side View of Fournier's Racer.

The racing of automobiles is a sport which attracts many who have the means to buy and operate powerful machines, designed for speed. Such contests are countenanced by leading automobile clubs, which have devised rules and regulations for governing them, also offering trophies and prizes to be contended for. Speed is not so great a desideratum with the average automobilist as is endurance, and what is probably the most interesting, as it certainly is the most valuable of the sports conducted under the auspices of the automobile clubs, is the long distance runs which are arranged with a view to testing this quality in all the machines. In these runs speed counts only up to a certain limit, and the points scored by a contestant are made up from those elements of safety, reliability, etc., which enter into the character of any conveyance intended for extended journeys.

The Automobile Club of America.—The Automobile Club of America was incorporated in 1899 under the membership corporation law of the State of New York as an organization composed in whole or in part of persons owning self-propelled pleasure vehicles for personal or private use. Its objects, as stated in the certificate of incorporation, are as follows: "To furnish a means of recording the experience of members and others using motor vehicles or automobiles. To promote original investigation in the mechanical development of motor carriages by members and others. To arrange for pleasure runs and to encourage road contests of all kinds among owners of automobiles. To co-operate in securing rational legislation and rules governing and regulating the use of automobiles in city and country. To maintain the rights and privileges of all forms of self-propelled pleasure vehicles whenever and wherever such rights and privileges are menaced. To encourage the construction of good roads and the improvement of the public highways. And generally to maintain a social club devoted to the sport of automobilism throughout the country." The membership is divided into four classes, namely, "honorary," "life," "active" and "associate members." Active members are limited in number to 400, but no limit is placed upon the number of life or of associate members. Only twenty-five honorary memberships are provided for and of this number the President of the United States, the Governor of the State of New York, the Mayor of the City of New York and the Director of United States Road Inquiry are ex-officio honorary members. The present list includes, in addition to these, Lieut.-Gen. Nelson A. Miles, U. S. A.; Thomas A. Edison, Professor Elihu Thompson, Professor R. H. Thurston, of Cornell University, and the heads of seven leading automobile clubs in Europe which this club represents in this country, and which represent it abroad. These are Mr. Roger W. Wallace, K. C., chairman of the Automobile Club of Great Britain and Ireland, London; Baron de Zuylen de Nyevelt, president of the Automobile Club de France,

Paris: Count Gustave Potting Persing, president of the Oesterreichische Automobile Club, Vienna; Count Francois van der Straten-Ponthoz, president of the Automobile Club de Belgique, Brussels; S. D. Horzog Victor von Ratibor, president of the Deutscher Automobil Club, Berlin; Count Biscaretti di Ruffia, president of the Automobile d'Italie, Turin, and Alois Naville de Fontenex, president of the Automobile Club de Suisse, Geneva. The Automobile Club of America is owned and controlled by its life and active members, the associate members being entitled to all the privileges of the club, but having no proprietorship in it nor voice in its control. The total membership of the club is 380, of whom 314 are active and 66 are associate. There are 430 automobiles owned by members of the club and 115 under order. The house of the club is at 753 Fifth avenue, New York City, and the officers are as follows: President, Albert R. Shattuck; first vice-president, Gen. George Moore Smith; second vice-president, Edwin Gould; third vice-president, Harry Payne Whitney; treasurer, Jefferson Seligman; secretary, S. M. Butler. The Board of Governors consists of the president, first vice-president and treasurer, ex-officio, and nine other members, of whom three retire each year, the vacancies being filled at the annual election of that year. Among the several standing committees is one designated the Technical Committee, composed at present of Dr. Schuyler Skaats Wheeler, chairman; Peter Cooper Hewitt, Lewis Nixon, Louis Duncan, L. T. Gibbs, E. T. Birdsall, A. L. Riker and Prof. Elihu Thompson.

Federation of American Clubs.—During the year 1902 several of the leading clubs in the United States formed the American Automobile Association, which is designed to be a federation of all clubs of this character, with a view to securing proper attention to automobilism in its national relations. It will relieve local clubs of work and responsibilities which do not properly belong to any one of them; and its aim will be to develop and serve general interest throughout the country in the automobile as a vehicle for pleasure and sport. The clubs enrolled in the association at the present time are the Automobile Club of America, New York; Chicago Automobile Club, Chicago, Ill.; Long Island Automobile Club, Brooklyn, N. Y.; Automobile Club of Philadelphia, Philadelphia, Pa.; Rhode Island Automobile Club, Providence, R. I.; Automobile Club of New Jersey, Newark, N. J.; Automobile Club of Utica, Utica, N. Y., and Grand Rapids Automobile Club, Grand Rapids, Mich. Following is a list of the officials and the clubs to which they respectively belong:

President, Winthrop E. Scarritt, Automobile Club of America; First Vice-President, F. C. Donald, Chicago Automobile Club; Second Vice-President, W. W. Grant, Long Island Automobile Club; Third Vice-President, H. G. Morris, Automobile Club of Philadelphia; Treasurer, Jefferson Seligman, Automobile Club of America; Secretary, S. M. Butler, Automobile Club of America, 753 Fifth avenue, New York City.

Start of the Automobile Race from Paris to Berlin.

Directors—Frank G. Webb, Long Island Automobile Club; A. R. Shattuck, Automobile Club of America; Dr. Julian A. Chase, Rhode Island Automobile Club; W. J. Stewart, Automobile Club of New Jersey; Frank C. Lewin, Automobile Club of Philadelphia; C. S. Mott, Automobile Club of Utica; A. R. Pardington, Long Island Automobile Club.

Chairmen of Committees—Racing Committee, W. J. Stewart, New Jersey Automobile Club; Legislative Committee, Jefferson Seligman, Automobile Club of America; Technical Committee, Dr. Julian A. Chase, Rhode Island Automobile Club; Membership Committee, F. C. Donald, Chicago Automobile Club; Highways Committee, Frank G. Webb, Long Island Automobile Club; Auditing Committee, Frank C. Lewin, Automobile Club of Philadelphia.

AUTOMOBILE CLUBS AND ASSOCIATIONS.—The following is a complete list of Automobile Clubs and Associations in the United States:

New York.—American Automobile Association. Secretary, S. M. Butler, 753 Fifth avenue, New York City.
Automobile Club of America. Secretary, S. M. Butler, No. 753 Fifth avenue, New York City.
Columbia University Automobile Club. Secretary, R. C. Gaige, Columbia University, New York City.

Pennsylvania Automobile Club. Secretary, H. J. Johnson, 138 North Broad street, Philadelphia, Pa.
Bloomsburg Automobile Club. C. W. Funston, Bloomsburg, Pa.
Maryland.—Automobile Club of Maryland. Secretary, C. W. Stork, Baltimore, Md.
Ohio.—Columbus Automobile Club. Secretary, C. M. Chittenden, Broad street, Columbus, Ohio.
Automobile Club of Cincinnati. Secretary, Rutherford H. Cox, 30 West Seventh street, Cincinnati, Ohio.
Dayton Automobile Club. Secretary, E. Frank Platt, Dayton, Ohio.
Cleveland Automobile Club. Secretary, L. H. Rogers, 357 Amesbury avenue, Cleveland, Ohio.
Illinois.—Chicago Automobile Club. Secretary, H. M. Brinkerhoff, Steinway Hall, Chicago, Ill.
Indiana.—Indiana Automobile Club. Secretary C. G. Fisher, Cyclorama Place, Indianapolis, Ind.
Michigan.—Detroit Automobile Racing Association. W. E. Metzger, 254 Jefferson avenue, Detroit, Mich.
California.—Automobile Club of California. Secretary, R. R. L'Hommedieu, San Francisco, Cal.
District of Columbia.—National Capitol Automobile Club. Secretary, Winfred J. Foss, 819 Fourteenth street, N. W., Washington, D. C.

FOREIGN CLUBS AND ASSOCIATIONS.—As nearly as can be ascertained the following list comprises all the automobile clubs and associations in other countries than the United States:

AUSTRIA—Budapest.—Magyar Automobil Club, 37 Museum Korul.
Innsbruck.—Tiroler Automobil Club, Restaurant Maximilian.
Prague.—Prager Automobil Club.
Vienna.—Oesterreichische Automobil Club, Karnthnerging 10. President, Le Comte Gustave Potting Persing.

BELGIUM—Antwerp.—Automobile Club Anversois, 34 r. Longue de l'Hopital. President, Baron de Bieberstein.
Moto-Club Anversois Grand Cafe, av. Dekerper. President, M. P. Dupont.
Brussels.—Automobile Club de Belgique, 5 pl. Royale. President, M. le Comte Francois van der Straten-Ponthoz.
Moto-Club de Belgique, 152 Boul. du Nord. President, M. Leon Deharit.
Touring Club de Belgique, 11 r. der Vauniers. President, M. Gaston Belrlaen.
Charleroi.—Automobile Club de Charleroi, 18 Quai de Brabant. President, M. Edward Dewandre.
Ghent.—Automobile Club de Flandres. President, M. Hemptinne.
Liege.—Automobile Club Liegeois, 2 r. Hamal. President, M. A. Dawans-Preudhomme.

FRANCE—Amiens.—Automobile Club de Picardie, 36 r. de la Hotoir. President, M. Albert Jumel.
Avignon.—Automobile Club d'Avignon, Cafe des Negociants. President, M. Joseph Pernod.
Beziers.—Automobile Club Bitterois, Allee Paul-Riquet. President, M. Ch. Viennet.
Moto-Club Bitterrois. President, M. G. Prat.
Bordeaux.—Automobile Club Bordelais, 42 Allees d'Orleans. President, M. le Dr. Creuzan.
Brest.—Automobile Club Brestois.
Dijon.—Automobile Club Bourguignon, Cafe Americaine, 5, r. Lomonnoye. President, M. Gaston Liegeard.
Clermont-Ferrand.—Automobile Club du Centre, 34, r. St. Genes.
Grenoble.—Automobile Club Dauphinois, pl. Grenette. President, M. le Dr. A. Pegoud.
Lyon.—Bicycle et Automobile Club de Lyon, 12, r. du Bat-d'Argent. President, M. J. Clozel.
Moto-Club de Lyon, 14, quai de l'Est. President, M. Collin.
Marseilles.—Automobile Club de Marseilles, 61, r. St. Fereol. President, M. H. de Farconnet.
Automobile Club de Provence, 23, r. Cannebiere.
Federation Des Automobile Club du Sud-Est, 61, r. St. Fereol. President, M. H. de Farconnet.
Nancy.—Automobile Club Lorrain, Res. 12, Stanislas pl. President, M. Schott.
Nice.—Automobile Velo. Club de Nice, 16, r. Chauvain. President, M. Jacques Goudoin.
Paris.—Automobile Club de France, 6, pl. de la Concorde. President, Baron de Zuylen de Nyevelt.
Chambre Syndicate de L'Automobile Et Des Industries Qui S'y Rattachent, 6, Place de la Concorde. President, M. le Comte de Dion.
Chambre Syndicate Des Carrossiers, 3, Cite' et r. de Euece.
Federation Des Mechaniciens Et Chauffeurs Francais, 7, pl. de l'Hotel-de-Ville.
Touring Club De France, 5, r. Coq-Heron. President, M. A. Ballif.
Societe Amicle Des Conducteurs-Mecaniciens D'Automobiles, 70, Avenue de la Grande-Armee.
Union Automobile De France, 4, r. Meyerbeer. President, M. Leon Serpollet.
Pau.—Automobile Club, Bearnais, av. de la Pare. President, M. W. K. Thorn.
Periguex.—Veloce Club Perigourdin, Hotel de Commerce, pl. President, M. le Count de Fayolle.
Rouen.—Automobile Club Normand, 4, boul. d'Orleans. President, M. Bridoux.
Salon.—Automobile Club de Salon, Cercle des Arts et Metiers, pl. de la Grippe. President, M. Fernand Bertin.
Toulouse—Automobile Club Toulousain, 6, r. Darquier. President, M. le Baron de Sambucy de Sorgues.

GERMANY—Aachenn.—(Aix la Chapell). Westdeutscher Automobil Club, Hotel Grand Monarque. President, F. Kupper.
Berlin.—Mitteleuropaischer Motor Wagen-Verein, 1, Universitat-strasse. Herr A. Klose.
Deutscher Automobil Club, 4a. Sommerstrasse. President, S. D. Horzog Victor von Ratibor.
Deutscher Automobil-Verbando. President, Victor Horzog von Ratibor.
Dresden.—Radfahrer und Automobilisten-Vereinigung Dresdener Touren Club. President, Herr F. Leyde.
Eisenhach.—Mitteldeutscher Automobil Club.
Motorfahrer Club, Eisenhach.
Frankfort Am Main.—Frankfurter Automobil-Club, Restaurant Kaiserhoff, Goeteplatz. Presidents, J. B. Muller-Herfurth and W. Opel.
Heidelberg.—Alldeutscher Automobil-Club (Federation of the Chief German Automobile Clubs).
Koln a Rh.—(Cologne). Kolner Automobil-Club. Presidents, C. H. Weber and R. Schaeben.
Mannheim.—Rheinischer Automobil-Club. Presidents, E. Benz and A. von Harden.
Munich.—Bayrische Automobil-Club, 33 Findlingstrasse. Presidents, H. Enders and A. Kienle.
Nuremburg.—Frankischer Automobil-Club. Presidents, G. Barth and L. Shutte.
Stettin.—Erster Stettiner Bicycle and Automobil-Club, Restaurant Neubauer, Konigsthor. President, R. Maletzky.
Strassburg.—Strassburger Automobil-Club.
Automobil-Club von Elsass-Lothringen. President, M. Schutzenberger.

Digitized by Google

Stuttgart.—Suddeutscher Automobil-Club.
Wurtembergischer Automobil-Club. President, A. Pfautsch.

GREAT BRITAIN—Dublin.—The Irish Automobile Club.
Edinburgh.—The Scottish Automobile Club, 4A St. Andrew Square. President, the Rt. Hon. Sir J. H. A. Macdonald.
Liverpool.—The Liverpool Self-Propelled Traffic Association, Royal Institution, Colquitt street. President, the Earl of Derby, K. G.
London.—Automobile Club of Great Britain and Ireland, 4 Whitehall Court, S. W. Chairman, Mr. Roger W. Wallace, K. C.; Secretary, Mr. C. Johnson.
Motor Car Club, 40 Holborn Viaduct, E. C. President, Mr. Henry J. Lawson.
Leeds.—Yorkshire Automobile Club. President, Lord St. Oswald.
Leicester.—Leicester and County Automobile Club, being the Leicester Branch of the A. C. G. B. I. Secretary, Mr. J. H. Petersen.
Manchester.—The Manchester Automobile Club, 37 Cross street.
Nottingham.—Nottingham and District Automobile Club, The Black Bay Hotel. President, R. M. Knowles, Esq., J. P.
Reading.—Reading Automobile Club, 1 Minster street. President, Mr. Alfred Harmsworth.

HOLLAND—Nimegue.—Nederlandsche Automobile Club. President, M. Backx.

ITALY—Bologna.—Automobile Club, Elmlaina.
Ferrara.—Automobile Club.
Firenze.—C. A. I. Firenze.
Mestre.—C. A. I. Venezia.
Milan.—Automobile Club di Milano.
Padova.—Automobile Club Vaneto. President, M. Conessa E. ja Albrezzi.
Turin.—Automobile d'Italia, Palazzena del Parco del Valentino. President, Count Biscaretti di Ruffia.

RUSSIA—Moscow.—Moskauer Automobile Club, Petrowka, Hans Roschnow.
St. Petersburg.—Automobile Club de Russe. President, M. Deborme.

SPAIN.—Madrid.—Automobile Club de Madrid.

SWITZERLAND—Geneva.—Automobile Club de Swisse, 2 rue de Hesse. President, M. Alois Naville de Fontenex.

Belgium.

—

Capital:
BRUSSELS.

Prior to 1830 the Kingdom of Belgium was a part of the Netherlands, and the secession on October 4 was the result of a revolution at Brussels. At the National Congress, which was held on June 4, 1831, Prince Leopold of Saxe-Coburg was elected King of the Belgians. He accepted the office on July 12, and on July 21 ascended the throne. In accordance with the Constitution of 1831 the royal succession is in direct male line in the order of primogeniture.

King Leopold, son of the first King Leopold and Princess Louise, daughter of the late King Louis Philippe of France, succeeded to the throne on the death of his father, December 10, 1865. On August 22, 1853, he married Archduchess Marie Henrietta, born August 23, 1836, daughter of the late Archduke Joseph of Austria. Their children are:

Name.	Born.	Died.	Married.	Born.	Date of Marriage.	Issue.
1. Princess Louise	1858	....	Prince Philip of Saxe-Coburg-Gotha	1844	1875	2
(1.) Prince Leopold	1878	....				
(2.) Princess Dorothy	1881	....				
2. Princess Stephanie	1864	....	Archduke Rudolph of Austria and Count Elemer Lonyay	1858	1881 1900	1 ....
3. Princess Clementine	1872	....				

The Heir Apparent.—Naturally the heir apparent would be the King's brother, Prince Philippe, Count of Flanders, who was born March 24, 1837, and who married Princess Marie of Hohenzollern April 25, 1867. As he has renounced his right of succession, however, his son, Prince Albert, is now heir apparent to the throne of Belgium. He was born April 8, 1875, and on October 2, 1900, was married to Duchess Eliza beth of Bavaria. They have one child, Prince Leopold, born Novem ber 3, 1901.

King Leopold.

THE MINISTRY.—Premier and Minister of Finance and Public Works, M. de Smet de Nayer; Minis ter of Foreign Affairs, M. Paul de Favereau; Minister of the Interior and Public Instruction, M. De Troos; Minister of Agriculture, Baron van der Bruggen; Minister of Industry and Labor, M. Gustave Francotte; Minister of Railways, Posts and Telegraphs, M. Liebaert, and Minister of War, General Cousebant Heuvel; Minister of Railways, Posts and Alkemade.

THE NATION.—Belgium is a constitutional monarchy, hereditary and representative, with the legis lative power vested in the King, the Senate and the Chamber of Representatives, and the executive vested in the heads of eight Minis ters. The Senate consists of mem bers proportioned according to popu lation and elected for eight years. The Chamber of Representatives consists of members elected for four years, their number also being pro portioned on population.

Religious liberty is guaranteed by the Constitution. Nearly the entire population profess the Roman Catholic religion, about 15,000 be ing Protestants and Jews.

Each commune is required by law to support at least one public school. There is no national compul sory education. The four large uni versities are surrounded by special schools of an advanced class.

Judges are appointed for life by the King from Senate and court nominations. The judiciary includes one Court of Cassation, three of ap peal, assize courts and twenty-six district courts. Each commune must furnish relief to its paupers.

Belgium has 806 miles of land and 42 of water frontier. An ex tensive scheme of land fortification is being carried out, Antwerp being the chief arsenal. The navy is incon siderable. In each province there is an agricultural commission, and only 53¾ per cent of the total area of Belgium is cultivated. There is also a special department of industry and labor to care for the extensive mining and metal industries.

During the month of April, 1902, Brussels was the scene of violent riots and socialistic demonstrations, which arose at times to the fury of pitched battles with the soldiery. The trouble came from the agitation of the suffrage question. In Belgium a man may have from one to three votes, according to certain qualifications. The poorer classes claim that in the exercise of this law they are discriminated against, and so there has been a persistent demand for universal suffrage. It was while laws insuring such suffrage (necessitating a constitutional amendment for adoption) were being considered (in one of the stormiest sessions the Legislature of the little kingdom has ever known) that the demonstrations and subsequent rioting took place. It was only after the people had been finally persuaded that the Government would stand firmly by the old law, and not a little blood had been shed, that the people returned to their more peaceful vocations.

Bhutan.

—

Capital:
PUNAKHA.

The little independent State of Bhutan is hidden in the Eastern Himalayas, between latitudes 26°45′ and 28°. North, and longitudes 89° and 92° East. The head of the Government is two-fold, Deb Raja being the secular head, and the Dharm Raja the spiritual head. On condition of good behavior the Indian Government pays a small sum for their expenses each year. Although nominally Buddhists, the people of Bhutan find their chief religious exercises in reading the Thibetan Bible and exorcising evil spirits. The principal products are cereals, cloths, musk, ponies, silk, finely tempered swords and muzzle-loading guns. The trade is chiefly with India.

The country has an area of about 16,800 square miles, and its population has been estimated at 20,000. The original inhabitants of the country, the Tephus, were subjugated about two centuries ago by a band of military colonists from Thibet. In 1774 the East India country concluded a treaty with the ruler of Bhutan, but repeated outrages upon British subjects by the Bhutan hill men led to punative expeditions, each of which usually ended in the annexation of a part of the territory to the British Empire. The Indian government now has effective control over the country, and holds two strong posts at Baxa and Diwangiri, within a few miles of the frontier. Beyond the guards for the defence of the several castles, there is no military organization. Muzzle-loading guns and swords of highly tempered steel are manufactured. In 1902 the Dheb Raja was Pam Sangey Daji, and the Dharm Raja was Jik Mechhogyal.

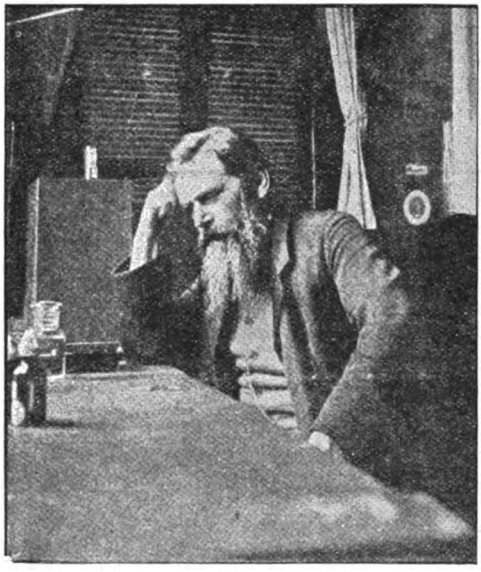
Biology; the Science of Life.

Any other discoveries or developments in biology made during 1902 are entirely overshadowed by the startling theory of Dr. Jacques Loeb, of the University of Chicago, who announced at the annual meeting of the American Psychological Society, held in Chicago December 31, 1901, that he had discovered the true "basic principle" of life. So surely did his words ring, and so well directed had been his experiments, that when he said in unequivocal language that he believed electricity to be the direct cause of all organic processes, there was not a note of incredulity raised in the assembly. Dr. Loeb's assertions were supplemented by the statements of Dr. Alfred F. Mathews, also of the University of Chicago, who worked in conjunction with Dr. Loeb, confining himself to nerve action, however. His discoveries, as he announced then, coincided generally with those of his colleague, and he, too, received the praise due to his efforts. A member of the society and a world-renowned physiologist, in speaking of Dr. Loeb's theory, said that it opened a new heaven and earth for physiology, and the destruction of the very basic principle of the science would necessitate the revision of all its text books.

Dr. Loeb's theory began to develop when he commenced experiments to observe what effect electricity, the most universal known and effective stimulus, had upon protoplasm, the substance of which all organic cells consists. He found that a positive charge of electricity brought into contact with protoplasm had the effect of retarding the life processes, while negative charges stimulated contraction. He argued, therefore, that if electricity in the form of currents would have this effect, then like results might be expected from electrically charged atoms or groups of atoms, called ions. The atoms of the metal salts are known to be ions, and it could be readily determined whether their charges were positive or negative.



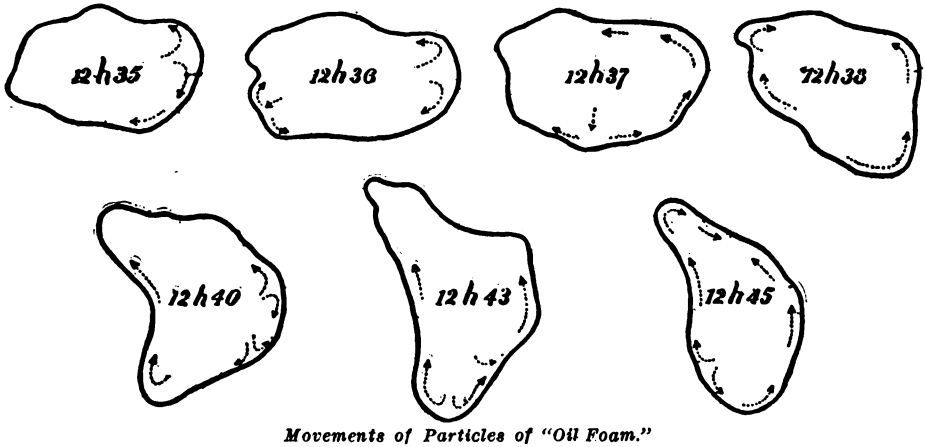
Dr. Buetschli in His Study.

During the Summer of 1901, at the biological laboratory at Wood's Holl, Mass., he carried on experiments along this line, trying the effects of various salts upon the eggs of the sea urchin, an animal of the lower order found plentifully along the Atlantic coast. He discovered that one salt would act as a poison to the eggs while another would have the effect of stimulating their development. He inferred, then, that the different effects were due to the manner in which the atoms composing the eggs are electrically charged.

It was while experimenting in this direction that he discovered a means of producing artificial parthenogenesis. He found that the unfertilized eggs of the sea urchin would live in sea water, but would not develop. The addition of a minute quantity of a calcium salt caused the eggs to develop exactly as when naturally fertilized. When Dr. Loeb announced this discovery, it was seized upon by the press, and it was announced for him, it was seized upon as material for innumerable stories, and the facts were so distorted and exaggerated that Dr. Loeb was placed in a most peculiar light before men of science. He is interested in artificial parthenogenesis only so far as it relates to his great-er work, and he does not claim to have been the first to discover a means of artificial fertilization of living eggs. In fact, the chief result of his work was the discovery that parthenogenesis was brought about by positively charged ions only.

It might be well to call attention to the fact that the elixir of life has not been discovered to be common salt, in spite of the fact that the statements that it was and that a free use of salt would sustain life indefinitely and might even bring life back to apparently dead bodies were credited to Dr. Loeb without reason, because some of the results of his experiments with saline solutions had been announced prematurely.

Having determind that electrically charged atoms of saline salts affect protoplasm, Dr. Loeb set about



Movements of Particles of "Oil Foam."

Digitized by Google

to find out which were toxic and which anti-toxic, which were poisons and which helped to sustain life. After a series of experiments he found that when one salt proved to be toxic, the addition of other salts, of opposite electrical charges, would counteract the toxic effect of the first. It could be readily and safely inferred, then, that to preserve the best life conditions it is necessary that the positive and negative charges balance nicely. The phenomena of life, he decided, are due to the play between th different charges of electricity within the molecules; to a constant differing of electric potential. Death is due to an oversupply of either positive or negative ions.

Two conclusions were reached by Dr. Loeb and announced at the meeting in Chicago. The first is that rhythmic contraction—life—occurs only in the presence of electrically charged substances, and the second that the efficiency of these charges depends upon the number of charges in the ions. Professor Mathews arrived at a third conclusion, that only positively charged ions would produce contractions.

Dr. Mathews, as a result of the experiments conducted by himself, declared that not only is life due to electricity, but that the basis of all nerve action is electricity. A nerve is a gelatinous substance, the atoms of which are electrically charged. A current of nerve force is set in motion when the atoms communicate their charges to one another. A theory something to this effect, dealing with brain action, was announced by Professor Ramon y Cajal, of the University of Madrid, several years ago, but it had for its basis mechanical rather than electrical action.

Dr. Mathews explains the action of anaesthetics by the fact that these, being fat solvents, dissolve the collodial particles that compose nerves and prevent their "jellying," and so long as the nerves can be kept diluted no stimulus can be carried along them. The thinning of the nerve substance acts as resistance to the passage of the stimulus, just as the glass insulators on telegraph poles prevent the passage of the current from the wire to the ground, by offering a resistance that the electricly cannot overcome.

It is too soon after the announcement to say what effect Dr. Loeb's and Dr. Mathews's work will have on science. Scientists are not ready to accept as true any statement that has not been thoroughly proven, and until much more work has been done along the lines started by these two savants physiologists will be careful about speculating. One thing seems certain, however, that if Dr. Loeb and Dr. Mathews have not been overpowered by the fever of discovery and led to aceept as conclusions what are really no more than means toward some other end, their theory will settle once for all the question of the nutritive value of foods. Heretofore men have been able to discriminate as to the relative importance of foods only by actual experience. Now, knowing the chemical constituents of foods, their electrical properties may be easily determined and consequently their capacity for sustaining life.

Speculation, however, has no value in modern science, except that it may lead to an end objectively

Gathering Biological Specimens.

provable. That Dr. Loeb's theory, if true either in part or in its entirety, will bring about a marked change in the economic life of the race cannot be denied. It is taking from heat and giving to electricity the first place in the problem of vitality, and it is showing how the very depths of the secret of production and existence can be probed and results determined about which there can be no shadow of doubt.

Dr. Buetschli, a German savant, carried on a series of experiments in 1901 and 1902 which, while not arriving at the same results as those of Dr. Loeb, nor attempting to touch upon exactly the same phases of the science of life, were nevertheless of a somewhat similar nature, and would have attracted as much popular attention had not Dr. Loeb's work offered such excellent grounds for speculation. Dr. Buetschli's experiments were carried on with the intention of discovering, if possible, in just what life consists. He wished to determine whether life were a real "essence," whether there were a true "vital spark" that entered the body at birth and left it at death, or whether what is called life were not simply the result of conditions. He discovered that something which nearly resembled life could be induced in what is generally thought to be dead matter. He succeeded after many experiments in making what he called "oil foam," consisting of particles of soapsuds enveloped in particles of olive oil. These particles of "oil foam" showed under the microscope a power of motion, apparently independent of external influences, and acted in all ways like some of the unicellular animalculae. There was noticed something like the throwing out of pseudopida or "false feet," a power especially prominent in some forms of amoeba. The phenomenon of reproduction by division seemed to take place, and there was certainly the congregating of the individuals and the attractiveness of certain foreign substances which are so distinctly noticeable in many of the animalculae.

Scientists have not been so ready to accept Dr. Buetschli's theory that apparent life can be developed in inanimate substances as they were to accord credulity to Dr. Loeb. They feel that he may have been led to conclusions unjustified by the experiments, and further work by him is awaited before he is accepted or rejected.

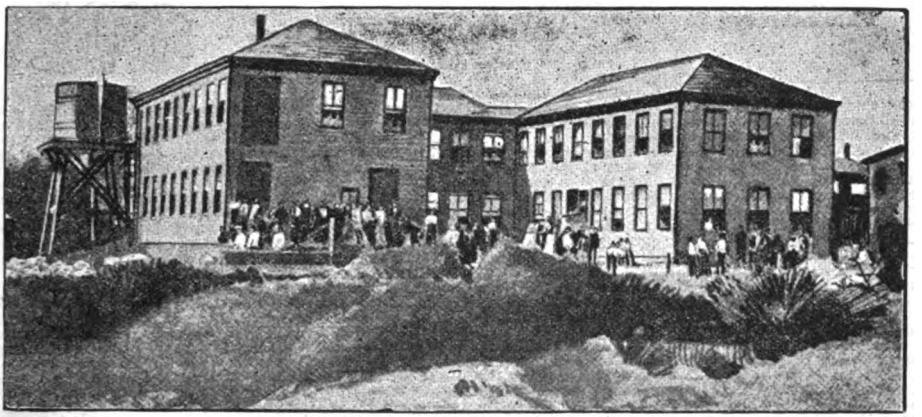
There is soon to be opened at Sharon, Mass., a few miles from Boston, a novel scientific undertaking to be called the Sharon Biological Laboratory. The object of this institution will be to take up experimental work in biology largely in its relation to social economics. The director, George W. Fields, of the Massachusetts Institute of Technology, is its founder, and it is receiving the support of scientists all over the country.

The observatory is meant to serve a twofold purpose. First, it will prove a Mecca for educational pil-

Digitized by Google

grimages of students and teachers interested in the science, and, second, it will offer an opportunity for all men interested in modern economic problems, such as the purification of sewage and the disposal of garbage in cities and the development of agricultural pursuits in the country, to experiment under the best possible conditions and with the advice and instruction of technical biologists. The work was begun on a small scale in 1902, and by the Summer of 1903 it will be pushed with much vigor. A great deal of field work will be done, and especial attention will be given, during the first years, to the fixation of atmospheric nitrogen by bacteria.

Hugo de Vries, of Amsterdam, carried on a work in 1901 along the line of the evolution of species. He showed by experiments with the ordinary evening primrose that new species may occur suddenly, by mutation, and not by the process of progressive variation. Professor E. B. Wilson, of Columbia University, in



Biological Laboratory at Woods Holl, Mass.

the same year carried on a series of investigations on the centrosomes of eggs that had been developed by artificial parthenogenesis.

As might be expected, the study of the life processes arouses a great deal of opposition on the part of those who seem to think such study may tend to a breaking down of old beliefs regarding creation and immortality. But the idea of the study of life is not to find a means of throwing God out of the universe, no more than the study of geology has for its object the destruction of the idea of creation. Both try to get at the substratum of truth that lies at the base of nature. Science cannot exist without religion, says Dr. G. Stanley Hall, for religion, either of "credo" or "non credo," is as necessary to man as hope or love or ambition.

The opposition to the work of biologists such as Dr. Loeb and Dr. Mathews is due to the same prejudices that imprisoned Galileo and scorned Copernicus.

Bolivia.

—

Capital:
LA PAZ.

The total area of Bolivia is 597,271 square miles. Its population is about 2,500,000, in the following proportions: Whites, 600,000; mixed whites and Indians, 700,000; domesticated Indians, 960,000; savage Indians, 240,000.

For the purposes of public administration Bolivia is divided as follows: First, political and military, 52 provinces; second, judicial, 7 districts; third, ecclesiastical, the whole Republic forming an ecclesiastical province, the religion being Roman Catholic, composed of an archdiocese and three dioceses; fourth, university, 5 districts.

The government is democratic and representative in form, the exercise of the sovereign powers being delegated to the legislative, executive and judicial departments.

Public instruction is divided into three general departments; the primary, which constitutes the free school system of the country; the secondary, which embraces the colleges and lyceums, and the superior, which includes the universities.

Bolivia posesses two distinct regions—the Sierra, or mountainous region of the western half, where the principal settlements are located, and the Montana, a vast, low plain, embracing the tropical forests and sparsely settled districts of the eastern part. In the Sierra, at a mean level of 12,488 feet above the sea, is Lake Titicaca, the most elevated sheet of fresh water in the world. This lake is 120 miles long and from 30 to 50 miles wide, and has an average depth of about 100 fathoms. Two hundred and eighty miles south of this is Lake Poopi, which is approximately 30 by 50 miles, and is of sufficient depth for steam navigation at all times of the year. The Montana is the region of the great tropical forests and navigable rivers of the country. These low plains inclose vast territories of prodigious fertility and endless forests of valuable timber.

The natural wealth of Bolivia is far greater than is generally supposed. The country is not only rich in gold and silver, but has an abundance of copper and tin of a superior quality. Precious stones, chiefly emeralds and opals, are also found in the maritime province of Atacoma, and vast deposits of nitrate of soda and guano. This vast natural wealth is, however, still largely unavailable, owing to the difficulty of transportation. The country is slowly but certainly awakening to the great possibilities of its mines, and the investment of foreign capital in this field is steadily increasing, while vastly better facilities for mining the ores and extracting the metal are being supplied in certain of its mining centres.

There are no better farming lands in the world than those of Eastern Bolivia and the warm valleys of the mountain regions, but until better means of transportation are provided she cannot hope to take prominent rank among the agricultural regions of America.

The last report of foreign commerce, issued in September, 1902, gives the imports for the preceding year at $16,953,223, and the exports at $37,578,219.

In 1900, a treaty of extradition with the United States was signed, and a convention for the exchange of money orders between the two countries has also been arranged.

THE EXECUTIVE CABINET.—Secretary of Foreign Affairs, M. Eliodoro Villazon; Secretary of the Interior, M. Jose Carrasco; Secretary of the Treasury, M. Ignacio Calderon; Secretary of Public Instruction, M. Andres S. Munos; Secretary of War, M. Ismael Montes.

Brazil.

—

Capital:
RIO JANEIRO.

In 1500 Pedro Alvares Cabral was sent out by the King of Portugal to follow up the brilliant discoveries of Vasco de Gama in the East Indies. His fleet was carried by adverse currents and winds far to the westward of the intended course, and on April 22, Cabral unexpectedly found himself in sight of land. On the 25th anchor was cast in a commodious harbor, which the Spaniards named Porto Seguro. Cabral immediately took possession of the country in the name of his King, calling it Vera Cruz, a name afterward changed to Santa Cruz, which in turn gave place to the present one of Brazil. Upon arrival in Portugal of the news of the new discovery, a second fleet was fitted out under command of Americus Vespucci to visit and explore the new country, and this navigator, on his return to Portugal, published a map which bore the name of America. He carried home with him samples of dye woods, whole forests of which he reported as existing in the newly-found territory. These dye woods immediately became the object of an extensive and lucrative traffic on the part of speculators, and merchants of other nations became engaged in the trade. Colonies were established, and in 1549, a Governor was appointed, vested with unlimited jurisdiction, both civil and criminal. The town of San Salvador de Bahia was founded and became the capital of Brazil. In 1555 a colony of French Protestants was founded on an island in the present bay of Rio Janeiro, but internal dissensions marred its success, and ten years later the colony was expelled from the island. In 1567 the city of San Sebastian was founded, and later called Rio Janeiro. The coast towns suffered much from the inroads of the French, English and Dutch, though none of these nations obtained a permanent foothold in the country.

In 1640 Brazil was erected into a principality, and the title of Prince of Brazil was conferred upon the Portuguese heir apparent, and Rio Janeiro was constituted the capital. In 1807, when Napoleon drove John VI. from Portugal, Brazil became the home of the Portuguese royal family, and on the fall of Napoleon in 1815, it was raised to the rank of a kingdom, John assuming the title of "King of Portugal, Algarve and Brazil." As a precautionary step against a revolution, a constitution was proclaimed February 26, 1821, and soon after John returned to Portugal, leaving his son, Prince Pedro, as regent. The expected revolution took place in April, 1821, and in October Brazil was proclaimed an independent Empire, with Pedro as Emperor. In 1826, upon the death of his father, Pedro became King of Portugal, but resigned the crown to his infant daughter, Donna Maria da Gloria. In 1831 he abdicated, leaving the throne to his son, Pedro II., then six years of age, and the country was governed by a regency until 1841. Wars with neighboring States occupied much of the history of Brazil until 1889, when, by a revolution, Pedro II. was deposed and exiled, and the country declared a Republic under the title of the United States of Brazil. General Deodoro Fonseca was the first President. In November, 1891, he resigned, and Vice-President Peixoto took his place. Dissatisfaction led to a rising in Rio Grande do Sul, and a naval revolt in the Bay of Rio Janeiro, and these were terminated, the first in 1893, and the second in 1894. In 1902 Dr. Francisco de Paule Alves assumed the office of President.

According to the Constitution, adopted in 1891, when the Republic was formed, each State must be organized under the republican form of government, and must have its administrative, judiciary and legislative authorities distinct and independent. The Federal Executive cannot intervene directly in the local government of the States, but in case of obstinate infringement of the Federal Constitution by State authorities, appeal may be made to the Supreme Tribunal of the Federal District. The Federal Legislative power is invested in a National Congress, consisting of a Senate and a Chamber of Deputies. The Chamber of Deputies consists of 212 members, elected for three years by direct vote. The Senators, 63 in number, are also chosen by direct vote, and the Senate is renewed to the extent of one-third every three years. The Vice-President of the Republic is President of the Senate. Elections for President are held on the 1st of March in the last year of each Presidential period. No candidate must be related by blood or marriage, in the first or second degree, to the actual President or Vice-President. The franchise extends to all citizens not under twenty-one years of age, duly enrolled, except beggars, "illiterates," soldiers actually serving, and members of monastic orders under vows of obedience. In 1885 a bill was passed for the gradual extinction of slavery, and in 1888 slavery was absolutely abolished. The area of Brazil is 3,218,130 square miles, and at the last accepted census, made in 1890, the population was 14,333,983.

Bulgaria.

—

Capital:
SOFIA.

The Principality of Bulgaria was created by the Treaty of Berlin, which was signed July 13, 1878. In accordance with its provisions, Bulgaria became an autonomous and tributary principality, under the suzerainty of the Sultan of Turkey, with a Christian govern-

Ferdinand, the youngest son of the late Prince Augustus of Saxe-Coburg and Gotha, and Princess Clementine, of Bourbon-Orleans, the daughter of King Louis Philippe, was unanimously elected Prince of Bulgaria, July 7, 1887, and, on August 14, 1887, assumed the reins of government. In May, 1893, the Grand Sobranje bestowed the hereditary title of "Royal Highness" upon the Prince, and this title has since been recognized by both the Porte and Russia.

Prince Ferdinand was born February 26, 1861, and was married April 20, 1893, to Princess Marie Louise, the eldest daughter of Duke Robert of Parma. She died January 31, 1899. They had issue:

Name.	Born.	Died.	Married.	Born.	Date of Marriage.	Issue.
1. Prince Boris	1894	....				
2. Prince Cyril	1895	....				
3. Princess Eudoxie	1898	....				
4. Princess Nadejda	1899	....				

THE MINISTRY.—President of the Council and Minister of Finance, Karaveloff; Minister of Foreign Affairs and Public Worship, Daneff; Minister of the Interior, Sarafoff; Minister of War, General Paprikof; Minister of Public Works, Ways and Communications, Belinoff; Minister of Commerce and Agriculture, Ludskanoff; Minister of Justice, Radeff.

The estimated area of the Principality of Bulgaria proper is about 24,380 square miles, and of South Bulgaria, or Eastern Roumelia, 13,700 square miles. By a census taken in December, 1900, the population of the whole principality was found to be 3,733,180, including the population of Eastern Roumelia, which was 1,091,854. The population is made up of Bulgarians, Turks, Greeks, Roumanians, Gypsies, Spanish-speaking Jews, Tartars, Armenians, Germans and Austrians, Albanians, Russians, *Czecks, Servians and others. The national faith is that of the Orthodox Greek Church, though in 1870 the Bulgarian Church was declared to be outside the Orthodox communion. The church is governed by a synod of bishops, which chooses

Digitized by Google

the ecclesiastical officers. The clergy is paid by the State, and receives fees for marriages, burials, etc. Besides members of the Greek Church, there are Mohammedans, Jews, Roman Catholics, Armenian Gregorians and Protestants in Bulgaria.

Eastern Roumelia was created to remain under the direct political tan, under conditions of admin tember 18, 1885, the Government and the union of the province with was agreed that the government fided to the Prince of Bulgaria as now, for all purposes, forms a part tion at Sofia, which is now the popolis being merely the centre of a National Bulgarian Bank is at free public library is located there.

schools, 45 special and technical schools, 17 gymnasia and 1 univer- nally obligatory for a period of For education the State grants a for half the cost, the remainder palities and villages by the com-

retically the owner of the land, lease descending to heirs, and pay- year by way of rent. The com- land in perpetuity and pay no rent. tion is engaged in agriculture, etors and holding farms of from agricultural product is wheat, minerals by law belong to the silver, lead and manganese are service is obligatory from the age of twenty to forty-five, but Moslems are exempt on the payment of a tax. The navy consists of one torpedo boat, several small steamers and two armored vessels now building for the defence of the Danube.

The ruling Prince of Bulgaria is chosen by a National Assembly, which is elected by popular vote, but the Porte has final decision over elections. Political conditions always keep the state in turmoil. A desire to annex the neighboring parts of European Turkey, inhabited by Slavs, especially Macedonia, is widely cherished, and there is always more or less tension with Servia, Greece and Austria. The elections held in March, 1902, increased the membership of the opposition party, though the Government still has the ma- jority in the Assembly. In October Turkey made a rather emphatic demand upon Bulgaria to prevent the passing of revolutionists across her boundaries into Macedonia.

California.

Capital:
SACRAMENTO.

The romantic name of California came from a jest of the great Cortez. When the conqueror went to Mexico Montalvo's romance of "Sargas de Esplandian, Son of Amadis of Gaul," was breaking the booksellers' records of Spain; and in this work (published at Seville in 1510), occurs a description of the Island of California, peopled with Amazons and rich with gold and jewels, and stocked with griffins and other monsters. After the spoil of Mexico had ceased to satisfy Cortez, he sent out an expedition to discover new lands to conquer. Instead of another Mexico the expedition discovered the desolate and forbidding peninsula that hangs from the western coast, and in derision at the contrast between high hopes and poor reality, the new land was given the name of California.

American California—the Alta California of the Spaniard—was not discovered until 1542, when Juan Cabrillo sailed up the coast as far as Cape Mendocino. There was no thought of colonization of this land. Expeditions occasionally sought for gold, but found nothing but poverty-stricken Indians. Sir Francis Drake landed on the coast from his voyage of plunder and discovery in 1578, and refitted his ship, probably in what is now known as Drake's Bay. It was not until 1769 that the first settlement was made in Alta California. The inspiring cause was the religious zeal of the Francescan Fathers. They established themselves at San Diego in 1769, and within fifty years had founded twenty-one missions along the coast from twenty to thirty miles apart, reaching as far north as San Francisco and Sonoma, brought a large part of the Indian population into the church, and had established the great herds of cattle, which were the wealth of early California.

The history of California divides itself naturally into three periods: 1. The Spanish period, 1769-1822, in which the development was mainly through ecclesiastics, the civil government being conducted in general for the support and protection of the missions. 2. The Mexican period, distinguished by the secularization of the missions, and the settlement of the country by Mexican landowners developing a pastoral civilization rich in horses and cattle. 3. The American period, from the Mexican war of 1846, distinguished by the discovery of gold and the sudden rise of California into a rich and populous American State.

Gold was discovered January 19, 1848, at Coloma, by James W. Marshall. The news spread rapidly, and within two years more than 100,000 men had rushed to California. A State government was formed, and a Constitution adopted (November 13, 1849), and California was moted from a military district to a pro State, September 9, 1850, without passing through the intermediate stage of a Territory. The growth of the State continued at a rapid rate. The mines reached their maximum productiveness in 1853, when $66,000,000 in gold was taken from them, but as they declined it was found that the State possessed soil of marvellous productiveness, and the chief production of the State shifted to grain and fruits. The farm products of 1900 were reported at $131,690,606, while the gold product had sunk to $15,730,000.

Gov. George C. Pardee.

California has been the laboratory of some interesting experiments in government. The Constitution of 1879 was adopted under the impulse of the workingmen's movement of 1878-80, and shocked the constitutional students by dealing with details that in the older States had been left to the Legislature. The innovation worked more smoothly than had been expected, and had the unforseen result of developing a system of legislation by popular vote, under the guise of constitutional amendments. Every Legislature submits to the voters from six to a dozen laws in the form of constitutional amendments. Every Legislature submits to the voters from six to a dozen laws in the form of constitutional amendments, and the voters display sound judgment in deciding upon them. In this manner the State has worked out a system of home rule for cities, every city of more than 3,500 inhabitants being authorized to draw its own charter and conduct its municipal affairs without interference by the State Legislature. All of the important cities of the State have taken advantage of the privilege.

California has 155,980 square miles of land surface, which makes it the second State in size in the Union, and reaches some 700 miles from north to south. In the extreme north the country is rugged, and this portion of the State, in common with the high Sierras, is subject to severe winters. Below the mountainous region the climate is mild, the soil of great fertility, and the range of vegetable products greater than in any other part of the United States. The population of California was 1,485,053 in 1901.

The year of 1902 brought a considerable access of business prosperity to California. Except for a deficient and badly distributed rainfall in Southern California, the weather proved favorable, and large crops have been harvested in all lines except prunes, and the early deciduous fruits. The grain crop is larger than any of recent years, and the midsummer and Autumn fruit crops proved to be beyond the capacity of the labor supply to handle.

The most conspicuous disaster of the year was the sinking of the steamship Walla Walla (3,069 tons), in the early morning hours of January 2, off Cape Mendocino. The Walla Walla, sailing from San Francisco for Puget Sound ports with 62 passengers and a crew of 79, was run down by the French bark Max, and 39 lives were lost. The principal crime of the year was the murder of Nora Fuller, a sixteen-year-old girl, who disappeared January 11, and was found dead in an unfurnished house at No. 2211 Sutter street, San Francisco, on February 8. The house had been rented on January 8 by a man who gave his name as C. B. Hawkins. The following day he bought some cheap bedding and inserted an advertisement for a girl to care for a baby. Nora Fuller answered the advertisement, and received a reply asking her to meet him at a public restaurant. The girl was not afterward seen until her dead body was discovered, and no trace of the murderer has yet been found.

On the 8th of January the Union Labor administration of Mayor Schmitz, elected the previous November, took office.

The year has been marked by a strong movement to unionize the trades of San Francisco, and the larger cities of the coast. Few trades are to be found that are not now organized. The most spectacular event in this movement was the unionization of the street car men. A nucleus of organization was formed early in the year, but under the system of espionage, established by the Market Street Railway, which controlled the greater part of the lines, the organizers of the union were discharged as fast as they could be discovered. The organization progressed so far that on April 19 a strike was declared, and within three hours the lines of the city were tied up, with the exception of the California street and Union street roads. The men met, signed the rolls of the union, and made demands on the company for a ten-hour day, to be completed within fourteen hours, a minimum pay of 25 cents an hour, and a recognition of the union. The demands of the carmen were supported by public sentiment, and the people walked or rode in express wagons with unfailing good humor. The United Railroads Company, to which the roads had been transferred a few days before the strike, proved unable to operate its lines, and after a week of negotiation acceded substantially to the demands of the men and the roads resumed operations April 26.

Digitized by Google

Two notable gatherings took place in San Francisco during the year—the annual conclave of the Nobles of the Mystic Shrine, June 9 to 14; and the annual encampment of the Knights of Pythias, Aug. 11 to 20. Many thousands of visitors were brought to the coast, and the electric decorations of San Francisco were the most elaborate ever seen outside the great fairs.

Labor Day was celebrated with much enthusiasm in all the California cities on September 1. The parade in San Francisco called out 40,000 men, all belonging to unionized trades.

The primary elections under the new primary law were held in the cities of the State on August 12. The law worked smoothly, and about half the total vote was brought out. The Republican State convention met in Sacramento, August 25-27, and after a hot struggle named George C. Pardee as candidate for Governor. The Democratic convention was in session at Sacramento September 2 and 3, and headed its State ticket with the name of Franklin K. Lane. A Socialist convention met in San Francisco September 9 and named a ticket headed by G. S. Brower. The Union Labor party voted not to put a State ticket in the field, but named candidates for the State Legislature, and put forward candidates for Congress in the 4th and 5th districts—E. J. Livernash in the former, W. J. Wynn in the latter. These nominations were indorsed by the Democrats.

The Democratic State convention adopted a platform denouncing a protective tariff and the trusts as inimical to the best interests of the people; favoring the complete exclusion from all American territory of Chinese; demanding the enactment of laws, State and Federal, prohibiting the issuance of injunctions in labor disputes, infringing upon the rights of free speech, free assemblages and freedom to organize. The platform indorsed the construction of the Isthmian canal and favored legislation looking to its early completion, favored an eight-hour day for all government employes and the construction of government vessels in navy yards.

The platform adopted by the Republican State convention condemned trusts, advocated the interoceanic canal, urged the building of government ships in navy yards and opposed all reciprocity treaties. It gave the heartiest indorsement of the national administration, as well as the administration of Governor Gage.

Cables; Submarine.

The submarine telegraphs of the world number 1,750. Their aggregate length is nearly 200,000 miles; their total cost is estimated at $275,000,000, and the number of messages annually transmitted over them at more than 6,000,000. All the grand divisions of the earth are now connected by their wires, and from country to country and island to island the thoughts and words of mankind are instantaneously transmitted. Beneath all oceans save the Pacific the universal language which this system has created flows uninterruptedly, and man talks as face to face with his fellow man at the antipodes. Darkest Africa now converses daily with enlightened Europe or America, and the great events of the morning are known in the evening throughout the inhabited world. Adding to the submarine lines the land telegraph systems, by which they are connected and through which they bring interior points of the various continents into instantaneous communication, the total length of telegraph lines of the world is 1,180,000 miles, the length of their single wires, as conductors, 3,800,000 miles, and the total number of messages annually sent over them about 400,000,000, or an average of more than 1,000,000 messages each day.

Nearly a score of wires have been laid across the Atlantic, of which no less than thirteen now successfully operate between the United States and Europe, while three others span the comparatively short distance between South America and the African and south European coast lines. Throughout the Indian Ocean, lines connect the Far East with Europe and America by way of the Red Sea, the Mediterranean, the western coast of Europe, and the great trans-Atlantic lines. The Mediterranean is crossed and recrossed in its entire length and breadth by numerous cable lines, and the "Mediterranean of America"—the Gulf of Mexico and the Caribbean Sea—is traversed in all directions by lines which bring its islands and colonies into speaking relations with each other and with South America, Central America the United States, and thence with Europe, Africa, Asia—the whole world. Along the eastern coast of Asia cable lines loop from port to port and island to island, receiving messages overland from eastern Europe by way of the Russia-Siberian land lines and forwarding them to Japan, China, Australia, New Zealand, the Straits Settlements, Hongkong and the Philippines, and receiving others in return. South America is skirted with cable lines along its entire border save the extreme south, where they are brought into intercommunication by land lines. Along the entire coast of Africa cables loop from place to place and from colony to colony, stretching along the entire circumference and penetrating the interior by land lines at various points.

Every body of water lying between the inhabited portions of the earth, with the single exception of the Pacific ocean, has been crossed and recrossed by submarine telegraph lines, but now even this vast expanse of water is to be spanned by electric wires. Already the work of laying the Commercial Pacific cable between San Francisco and Honolulu is well under way, and it will not be many months before messages may be sent by direct communication from any part of the United States to Hawaii, while from that point it is only a matter of time before the company's wires will extend by way of the Midway Islands and the Islands of Guam and Luzon to some point on the coast of China.

The chief obstacle in the past to the construction of a grand trans-Pacific cable was found in the fact that mid-ocean resting places could not be satisfactorily obtained or arranged for, no single government controlling a sufficient number of suitable landing places to make this seem practicable, in view of the belief that the distance through which messages could be sent and cables controlled was limited. With such landing places as Hawaii, Wake Island, Guam and the Philippines, which the United States now possess, no section of a cable stretching from America to Asia and touching at these points would have a length equal to that now in daily operation between France and the United States. The length of the French cable from Brest, France, to Cape Cod, Mass., is 3,250 miles, while the greatest distance from land to land on the proposed Pacific route would be that from San Francisco to Hawaii, 2,089 miles, that from Hawaii to Wake Island being 2,040 miles, from Wake Island to Guam 1,290 miles, from Guam to Manila 1,520 miles, and from Manila to the Asiatic coast 630 miles. While the depth of the Pacific is somewhat greater than that at which any cable has been laid, the difference between its depth and the greatest reached by cables in the Atlantic would be very slight, the cable recently laid from Haiti to the Windward Islands being in 18,000 feet of water, while the greatest depth between San Francisco and Hawaii is 18,300 feet, and the greatest depth between Hawaii and Manila is estimated at 19,600 feet, though this estimate is yet to be verified by detailed soundings. The recent survey for a cable between the Pacific coast and Manila justifies the belief that a route can be selected in which the depth will not exceed 20,000 feet, and may not exceed 18,000 feet.

The size of the strand which will connect the two continents will be one inch in diameter nearly its entire length, for while it will be necessary to make use of a 2½-inch cable near shore, in order to offset any possible danger from accidental strain, it will never exceed that thickness, and will quickly taper off to the diameter of one inch, which will be the regular deep-sea size. The cable, which is being made, is of English manufacture, no long cables having yet been made in any other country, but the insulating cover by which it is protected was manufactured in the United States. In many respects it is similar to the Atlantic cable, although the wire used has 500 pounds of copper to the knot, as against a weight of 200 pounds in the Atlantic strand.

The announcement that the negotiation between the government and the Pacific Cable Company has reached a satisfactory conclusion was made by President Roosevelt at Oyster Bay, N. Y., August 9, 1902. The terms of the agreement provided:

(1) That the company has not received any exclusive concession, such as would exclude any other company formed in the United States from obtaining the privilege of landing its cable on the coasts of China, or connecting with other cable lines, and said company will not become associated with a concern having any such exclusive concession. (2) That the company's cable shall touch at no other than American terri

Digitized by Google

tory on the way to the Chinese Empire. The line from the Philippines to China shall be constructed and operated independently of all foreign companies. (3) That the charge shall not exceed 50 cents per word between San Francisco and Honolulu and $1 per word between San Francisco and China. That the rate to Honolulu shall be reduced to 35 cents per word within two years, and that no more than half-rate shall ever be charged for governmental messages. (4) That the United States Government or its agents shall have priority in the transmission of cablegrams. (5) That the United States shall at all times have the right to purchase the cable lines, property and effects of the company at an appraised value, to be ascertained by disinterested persons, two to be selected by the Postmaster-General, two by the company or concern interested, and the fifth by the four previously selected. (6) That the Government of the United States shall have authority to assume full control of the said cable when at war or when war is threatened. (7) That all contracts entered into by the said company with foreign governments for the transmission of messages by the said cable shall be void when the United States is engaged in war. (8) That the United States shall have authority to sever, at its discretion, all branches which may be connected with the main cable line during war or threatened war. (9) That the operators and employes of said company (above the grade of laborer), after said cable shall have been laid, shall be exclusively American citizens. (10) That citizens of the United States shall stand on an equal footing as regards the transmission of messages over said company's lines with citizens or subjects of any other country with which said cable may connect. (11) That the company shall agree to maintain an effective speed of transmission over the main cable route from California to Luzon of not less than twenty-five words per minute. (12) That the cable laid shall be of the best manufacture. (13) That ample repair service shall be maintained. (14) That the line shall be kept open for daily business, and all messages in the order of priority be transmitted according to the time of receipt. (15) That no liability shall be assumed by the Government of the United States by virtue of any control or censorship which it may exercise over said line in event of war or disturbance. (16) The United States Government does not insure the company against any landing rights claimed by any company in respect to the insular possessions. (17) That the consent hereby granted shall be subject to any future action by Congress or by the President.

The following table embraces the entire system of submarine cables of the world:

CABLES IN PRIVATE OWNERSHIP.

Canals of the World.

Commerce owes its birth to maritime peoples, and its mighty development in modern times is due, more than to any other agency, to the facilities for transportation of goods offered by the oceans and seas which cover so large a proportion of the surface of the globe, and the waterways which extend inland from their shores. So valuable is this agency that private business enterprise and government policies have been marked by the evolution and execution of plans for supplementing and extending the work of nature in the creation of such highways for the ever-increasing commerce of the world. Before the days of the railroad the canal was the most important factor in both domestic and foreign trade relations, and its influence in the creation of new towns and the development of old ones was proportionately as great as that of the railroad is in these later times. The marvellous growth of this country in the region of the lakes had been well begun through the commercial facilities afforded by canals before a rail had been laid, and even before the locomotive had advanced beyond the experimental stage. As early as the year 1822 the State of New York had completed an artificial waterway from Lake Champlain to the head waters of the Hudson River, and this, with the other canals constructed and owned by the State, has been one of the great sources of the growth and prosperity of the Empire State. The commercial value of the Great Lakes is very largely enhanced by the benefit their shipping interests derive from canal navigation.

Of the many canals which have been constructed in the United States more than a score are ship canals, several of them existing for the purpose of making more available certain natural waterways of which they are extensions. The greater number, however, are designed for boats, barges and other light craft, and of this number some have not been in use during recent years. It is by no means certain that these last mentioned will be finally abandoned altogether, although it is not deemed possible to operate them profitably under present conditions of canal navigation. With improved methods of propulsion and a possibility of navigating them with larger boats their enlargement and rehabilitation might be undertaken.

THE GREAT SHIP CANALS OF THE WORLD.

(The selection is that of the United States Treasury Department.)

THE ISTHMIAN CANAL.

The project of creating a waterway between the Atlantic and Pacific oceans, obviating the necessity for the long voyage around South America, is to be carried out by the United States Government, and a dream of centuries has been made certain of realization. On June 28, 1902, President Roosevelt placed his approving signature upon a bill which assures the construction of an American canal. The bill, now a law, charges the President to cause to be constructed a canal to extend from ocean to ocean by what is known as the Panama route. It further charges that if the President cannot satisfy himself as to the title of the new Panama Canal Company and as to concessions and rights from the Government of Colombia, he shall cause a canal to be constructed by the Nicaragua route.

For nearly four hundred years the project of making a short cut between the Atlantic and Pacific oceans by means of a ship canal across the isthmus connecting North and South America has been almost constantly agitated. The existence of the Pacific was discovered in 1513 by Vasco Munez de Balboa, governor of a Spanish province in Darien, who crossed the isthmus with that result. Frequent exploration was made from that period in efforts to discover a natural water connection between the two oceans and the hope of finding it, abandoned within the sixteenth century, was temporarily revived as late as 1771 by statements, which proved delusive, that a river had been found flowing from one to the other. When during the earlier period of this history it became evident that no natural waterway existed, there immediately followed the suggestion of an artificial channel. Meanwhile a land route from ocean to ocean was laid out across the isthmus, some time between 1517 and 1520, the first settlement at the site of the old town of Panama, destroyed by Morgan's buccaneers early in 1671, being made in the year 1517. This old town, which became a city in 1521, by decree of the Spanish king, was the terminal port of the land route at the Pacific end. The Atlantic port was established first at Nombre de Dios, that point being abandoned for Porto Bello, a more westerly point, in 1597. During the century the growth of the isthmian commerce was such that Panama, at that time located six or seven miles easterly from the site of the present city of that name, became a place of great mercantile importance and was regarded as the toll-gate between western Europe and eastern Asia. The desirability of a water route from sea to sea became more and more apparent in view of this commercial development, and Charles V. of Spain is credited with having directed, as early as 1520, that a survey should be made to ascertain the feasibility of an artificial waterway across the isthmus of Panama. In 1534 a royal decree was issued authorizing a careful examination by experienced men, with such a project in view, but the King's ardor in this direction was dampened by an unfavorable report from Pascual Andagoya, the Governor, who suggested that the opening of a canal through the Isthmus would be "in opposition to the will of the Almighty, who had placed this barrier in the way of navigation between the two oceans." Temporarily abandoned at that time, the project of an interoceanic canal was repeatedly revived during the centuries that followed. In 1779 a survey was made to determine the practicability of a canal route by way of Lake Nicaragua, but the report made thereon was not of a favorable character.

The idea of a canal across the Isthmus by the Panama route took its most practical form in 1876, with the organization in Paris of the Societe Civile Internationale du Canal Interoceanique, for which surveys and explorations looking to the construction of a ship canal were made by Lieutenant L. N. B. Wyse, of the French navy, who obtained for his country in 1878 a concession from the Government of Colombia, under which the construction of an interoceanic canal could be undertaken along the Panama route. Ferdinand de Lesseps, who had achieved fame by his work in connection with the Suez Canal, was interested in this project, and became president of the new company formed in 1879 under the name of the Compagnie

Digitized by Google

Universelle du Canal Interoceanique, which purchased the Wyse concession from the earlier company, with the purpose of constructing and operating the canal. The amount paid for the Wyse concession was 10,000,000 francs (about $2,000,000), and after a set-back in a first attempt to finance the company, its 600,000 shares, par value 500 francs each, were sold in December, 1880. Examinations, surveys and other preliminary work delayed the beginning of operations upon a large scale until 1883. The company prosecuted its work until 1889, when bankruptcy terminated its existence, although the operations were continued by the liquidator, or receiver, for some time longer, being finally suspended on May 15, 1889. While the canal was in the hands of the liquidator the period allowed under the concession for the completion of the canal neared its expiration, and one of the things accomplished by him was the securing of an extension of ten years, granted by Colombia on December 26, 1890. It was conditioned upon the formation of a new company and the resumption of work not later than February 28, 1893. Failure in the latter item was followed by the obtaining of a second extension, which provided that the ten years granted might begin to run at any time not later than October 31, 1894. A final extension, the validity of which has been questioned, sets October 31, 1910, as the date by which the canal must be completed.

The third in the series of Panama canal companies, and the one with which the United States Government has now to deal, was formed on October 20, 1894, and one of the matters it had to deal with, aside from that of canal construction, was to obtain control of the Panama Railroad Company, which holds a concession from the Colombian Government, giving it rights prior to those of the Wyse concession, the value of the latter depending upon the attitude of the railroad company. This was effected, the new Panama Canal Company, as it is commonly called, having resumed in the meantime the active work upon the canal. The acquisition of the Panama Railroad is included, of course, in that which the United States Government has to accomplish in constructing the canal on the Panama route.

Since the Government took up the matter of securing to the commercial world a ship canal between the two oceans the Nicaraguan route has been as persistently and ably urged as the one which now has, officially, the first choice. In preliminary investigation of the entire subject, including explorations and surveys, the Government has given impartial attention to both routes. One of the strong claims in favor of the Nicaragua route is that the existence of Lake Nicaragua itself, with its large navigable extent upon the line of the proposed canal, would almost indicate this as the most natural route. One of the reasons why many Americans prefer it is that it should be chosen in order that the United States alone might engineer and construct it. This will be the case, however, in the engineering, construction and operation of any ship canal to be carried across the Isthmus, as such is the intent of the bill which became law in 1902.

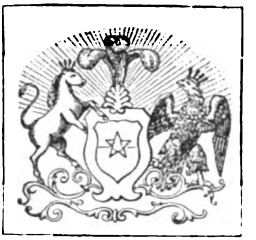
Chili.

—

Capital:
SANTIAGO.



Twenty-three provinces and one territory compose the Republic of Chili, which has an area of about 266,652 square miles. It is bounded on the north by Bolivia, on the east by the Argentine Republic, and on the south and west by the Pacific Ocean.

Shut off by the Andes from easy communication with the countries lying to the east, this Republic depends upon the western coast for its imports and exports and receives much of its culture from that direction. Allegiance to the crown of Spain was thrown off September 18, 1810, by a declaration of independence, which became final in 1818. In 1833 a constitution was formed which is still in force, though amendments have since been added. By this constitution three powers were established in the State—the Legislative, Executive and Judicial. The Legislative power is vested in the National Congress, consisting of two assemblies, called the Senate and the Chamber of Deputies, the former being composed of members popularly elected by the provinces for the term of six years, in the proportion of one Senator for every three Deputies, while the members of the Chamber of Deputies are chosen directly by the departments for a period of three years. This body consists of one representative for every 30,000 of the population or a fraction not less than 15,000. Electors must be twenty-one years of age and able to read and write. The executive is exercised by the President of the Republic, elected for a term of five years, by an indirect vote, the people nominating by ballot, delegates who choose the President. A retiring President is not eligible to re-election. He has a modified veto power, but a bill returned with the President's objections may be passed over his veto by a two-thirds vote of the members of both legislative bodies. The election day is June 25, and the inauguration takes place on September 18, of the same year. The present executive head of the Republic is Senor German Riesco, elected in 1901.

Prior to 1450 the territory of Chili was inhabited entirely by the ancestors of the Indians now found there, who called themselves Alapuche. In 1450, Yupanqui, the reigning Iona of Peru, formed a project to gain this country for himself, and sent a lieutenant with 10,000 men to subdue the native owners of the land. Adopting a tactful policy, his lieutenant set about winning rather than conquering the rude and warlike tribes, and within six years nearly every tribe north of the Rapel River had declared allegiance to Peru. There the Peruvian received a check, and so fiercely was his advance contested that he wisely resolved to forbear offensive warfare and be content with what he had already obtained. Some eighty years later, when the Spanish had overthrown the Incas, the Chilians were found to be owing a sort of nominal allegiance to Peru. The Spanish thereupon set about to subjugate this country also, and Diego Almagro, after both glory and gold, led an army across the Andes, and when he reached Copiapo, a quarter of his Spanish troops and three-eighths of his Indian allies had perished from cold, fatigue and starvation. This expedition was compelled to retrace its steps. Another was sent out under Valdivia, who succeeded in penetrating further into the country than had either the Peruvians or his predecessors. He, too, was compelled to return to Peru without conquering the country. Spain never succeeded in getting a firm foothold in Chili, except near the coast. In 1810 began the revolution that ended in the independence of the country. In July of that year Governor Carrasco was deposed and a junta formed with the secret design of severing the connection with the mother country. The Spanish authorities attempted to overawe the patriots with a show of force, and the royal troops were drawn up in the square at Santiago. These were at once attacked by the rebels and defeated with considerable loss on both sides, and from this time until 1818 the Royalists and Republicans were in constant opposition. Since that time, though less revolutionary than most South American Republics, Chili has passed through several attempted forcible changes of government.

The Republic at present is divided into 23 provinces, subdivided into 74 departments and 1 territory, and these are further subdivided into 865 sub-delegations and 3,068 districts. In 1884 the Province of Antofagasta was ceded to Chili by Bolivia, and those of Tarapaca and Tacna by Peru. The cession of Tacna was originally for 10 years, at the end of which period a plebiscite of the province would decide to which country it should belong. Owing to troubles with Peru the decision was deferred, and a convention for the purpose of carrying out the plebiscite, signed at Santiago, April 16, 1898, was, two years later, rejected by the Chilian Congress. Boundary disputes which arose between Chili and the Argentine Republic were referred to the decision of the British Government, and a Tribunal of Arbitration was appointed to hear the question. On May 28, 1902, a general treaty of arbitration was entered into by these two countries. The contracting parties bound themselves to submit to arbitration all questions of whatever nature which might arise between them, in so far as they should not affect the provisions of the constitution of either country, provided always that they could not be settled by direct negotiations. The Government of Great Britain was selected to act as arbitrator, and in case either country should sever its friendly relations with the English Government, the Government of Switzerland should be selected. In the convention on naval armaments both countries renounced the acquisition of the war vessels they then had under construction, and agreed to treat until they should arrive at an agreement to effect a perfect equilibrium between the fleets.

In his message to Congress, read June 1, 1902, President Riesco touched on the question of the compact with the Argentine Republic, and spoke of the advisability of reaching some similar agreement relating to disputed questions between Chili and Peru and Chili and Bolivia. He demanded reforms in the administration of justice in the petty courts, and referred briefly to criminality and prisons. The insecurity of the jails in general and the necessity of erecting new and modern penal institutions were insisted upon. At present there are, in addition to a High Courrt of Justice in the capital, six Courts of Appeal, Courts of First Instance in the Departmental capitals, and subordinate courts in the districts.

Military service was made obligatory by a law of 1900. Every Chilian from twenty to forty-five years of age and capable of bearing arms, is liable to serve. In 1901 the total number enrolled as liable for service was 400,397, and the active army that year was limited to 17,385. The Chilian fleet consists of five armorclads, two second and two third class cruisers, eleven gun vessels and gunboats, four destroyers, fifteen first-class and four second-class torpedo boats.

The Roman Catholic Church is maintained by the State, but, according to the constitution, all religious forms are respected and protected. Civil marriage is the only form acknowledged by law. Education is gratuitous and at the cost of the State, but is not compulsory. Professional and secondary instruction is provided in the universities, of which there are two, one belonging to the State and the other a private institution. There are besides several colleges maintained by the Government, and at the seats of bishops there are seminaries under ecclesiastics, where instruction is given similar to that in the Government colleges.

The nitrate fields of Chili have long furnished fertilizer for the world, and are still being worked with much profit. The fields are estimated to cover 89,177 hectares and to contain 2,318 million of metric quintals of the nitrate of commerce.

In 1900 there were, in Chili, 14,128 miles of public road, 7,980 miles of vicinal road and 970 miles of navigable rivers. Chili was the first South American country to construct railroads, and in 1900 the total length of lines open for traffic was 2,880 English miles, of which 1,355 belonged to the State. Of the trans-Andine railway, from Santa Rosa to Mendoza, 18 miles of the Chilian section and 88 of the Argentine section are open; 46 miles of line still being needed to unite the sections. In 1900 there were 14,592 miles of telegraph line; the Chili Telephone Company has 5,804 miles of line and the National Telephone Company 6,120 miles. At the beginning of 1901 there were about 110 miles of electric railway in the Republic and about 365 miles of horse railway. During 1900 42,067,242 passengers were carried on all the tram lines. A

plan has been approved by the Chilian Government for an elevated railroad for passenger and freight service between Juncal, Chili, and Paramillo de las Cuevas, Argentine Republic. A part of this passage is always difficult and often impassable, on account of the heavy snowstorms, and it is expected that an elevated road would prove practicable in any weather. The road is to be formed of two steel cables, to serve as rails for the support of the trains, and of two steel traction cables, for motive power. The nominal capital of the company exploiting this road is $2,500,000.

The Chilian Ministers of State are: Barros Luco, Prime Minister and Minister of Interior; Elidoro Yanes, Minister of Foreign Affairs and Colonization; Manuel El Ballesteros, Minister of Justice and Public Instruction; Manuel Magallanes, Minister of Finances; Robert Montt, Minister of War; Carlos Estevez, Minister of Marine; Daniel Riquelme, Minister of Industry.

China.

Capital:
PEKIN.

The present sovereign, reigning under the style of Kwangen, is the ninth Emperor of China, of the Manch dynasty of Tsing, which overthrew the native dynasty of Mingi in the year 1644. There exists no law of hereditary succession to the throne, but it is left to each sovereign to appoint his successor from among the members of his family of a younger generation than his own. The late Emperor, dying suddenly in the eighteenth year of his age, did not designate a successor, and it was in consequence of arrangements directed by the Empress Dowager, Tszu-Hszi (born November 17, 1834), widow of the Emperor Hien-Feng, predecessor and father of Tung-Chi, in concert with Prince Chinu, that the infant son of the latter was made the nominal occupant of the throne.

Having become of age, the young Emperor nominally assumed government in March, 1887. In February, 188 he undertook the full control, but on September 22, 1898, an Imperial edict was issued announcing hat the Emperor had resigned power to the Empress Dowager, who has since retained the direction of affairs. On January 24, 1900, it was declared by decree that Kuk Wei (whose official name is Pu Tsing), son of the Prince of Tuan, was successor to Tung Chi.

THE MINISTRY.—Civil Administration (Lipon), Soun-Chia-Wai; Finance (Houpon), Choung-Li; Religion and Ceremonies (Lipon), Shih-hsu; War (Pingpon), Yu-te; Justice (Hsing-pon), Kouei-heng; Foreign Office (Li-fan-yuan), Koung-hang and A-Ko-tan; Censors (Ton-tcha-youen), Pon-Ziang; Imperial Academy (Han-lin-youan), Koun-kang; Railroads and Mines, Wang-wew-shao; Counsellors of the Empire (Cheng-won-chou), Ching, Young-Zou, Koun-Kang, Wang-Wen-shao, Lou-Chouan-Zin, Chu-houng-chi, Chan-chih-fung, Liou-koun-yi.

THE NATION.—The laws of the Empire are laid down in the Ta-ts-ing-hever-tien, or "Collected Regulations of the Tsing dynasty," which prescribe the government of the State to be based upon the government of its family. The supreme direction of the Empire is vested in the Chun Chi Chu, the Privy Council or Grand Council. The administration is under the supreme direction of the Nei-Ko, or Cabinet, comprising four members, two of Manchu and two of Chinese origin, besides two assistants from the Han-Zon, or Great College, who have to see that nothing is done contrary to the civil and religious laws of the Empire contained in the Ta-ts-ing-hwei-tien and in the sacred books of Confucius. These members are denominated Ta-hsio-shill, or Ministers of State, under their orders are the Chi-pu, or Seven Boards of Government, each of which is presided over by a Manchu and a Chinese. These Boards are: (1.) The Board of Civil Appointments, which takes cognizance of the conduct and administration of all civil officers; (2.) The Board of Revenues, regulating all financial affairs; (3.) The Board of Rites and Ceremonies, which enforces the laws and customs to be observed by the people; (4.) The Military Board; (5.) The Board of Public Works; (6.) The High Tribunal of Criminal Jurisdiction, and (7.) The Admiralty Board tsin, established in 1885. Independent of the Government, and theoretically above the central administration, is the Pu-cha-yuan, or Board of Public Censors. It consists of from forty to fifty members, two presidents, the one of Manchu and the other of Chinese birth. By the ancient custom of the Empire, all the members of this board are privileged to present any remonstrance to the sovereign. One Censor must be present at the meetings of each of the Government Boards. The Tsungli-Yamen, or Foreign Office, created by a decree of January 19, 1861, was in July, 1902, superseded by the formation of a new Foreign Office, called the Wai-wu-pu, with Prince Cheng as President and four secretaries, and with precedence before all other boards.

Emperor of China.

Three religions are acknowledged by the Chinese as indigenous and adopted, viz.: Confucianism, Buddhism and Tauis-in. Large numbers of the Chinese in Middle and Southern China profess and practise all three religions. The bulk of the people, however, are Buddhists. There are about 30,000,000 Mohamedans, chiefly in the northeast and southwest. Roman Catholicism has long had a footing in China, and it is estimated to have about 1,000,000 adherents, with twenty-five bishoprics, besides those of Manchuria, Tibet, Mongolia and Corea. Other Christian societies have stations in many parts of the country, the number of Protestant adherents being estimated at 50,000.

Education of a certain type is very general, but still there are vast masses of adult countrymen in China who can neither read nor write. There is a special literary class who alone know the literature of their country, to the study of which they devote their lives. In 1887, for the first time, mathematics were admitted with the Chinese classics among the subjects of examination, and schools for the propagation of Western science and literature are now on the increase. Ten Chinese newspapers are published in Shanghai, and the success they have achieved has led to the establishment of others at some of the other treaty ports.

No general statement of the revenue and expenditure of China is made public, and such estimates as have been formed by Europeans are founded on financial reports of provincial governors published in the Pekin Gazette. An estimate taken from a report by Consul Jamieson, of Shanghai, and based on figures for the three years preceding the Japanese war, shows the sums accounted for by the provincial authorities to have amounted to 88,979,000 taels. The collection of the revenue on the Chinese foreign trade and the administration of lights on the coast are under the management of the Imperial Custom Department, the head of which is an Englishman, under whom is a large staff of European, American and Chinese subordinates. Debts contracted since the beginning of 1894 amount to $8,175,000, at 7 per cent interest; $35,000,000 at 6 per cent; $91,500,000 at 5 per cent, and $479,100,000 at 4 per cent. On May 29, 1901, China agreed to pay to the Powers an indemnity amounting to $320,000,000 for injuries inflicted by the Boxers. This indemnity is to constitute a gold debt, repayable in thirty-nine annual instalments, due on January 1 of each year up to 1941, interest at 4 per cent payable half yearly.

The total land army of China, on a peace footing, is put at 300,000 men, and on a war footing at about 1,000,000, but the army as a whole has no unity or cohesion; there is no proper discipline; the drill is a mere

Digitized by Google

physical exercise; the weapons are long since obsolete, and there is no transport commissariat or medical service. The Chinese Navy, during the war with Japan, disappointed those who regarded it as an effective fighting force. The bluejacket is as good as any in the world, and, properly officered, would give the nation a creditable and efficient service.

China is essentially an agricultural country, and the land is all freehold, held by families on the payment of an annual tax. The holdings are, in general, small; the farm animals are oxen and buffalos; the implements used are primitive; irrigation is common. Horticulture is a favorite pursuit, and fruit trees are grown in great variety. Tea is cultivated exclusively in the west and south, and the culture of silk is equally important with that of tea. An important feature in the development of Chinese industries is the erection of cotton mills. Two native mills were started in 1890, and recently four foreign companies have been successfully floated. All the eighteen provinces contain coal, and China may be regarded as one of the first coal countries of the world. Iron and copper ore are abundant in certain sections, and in others tin, lead and silver are found.

The commercial intercourse of China is mainly with the United Kingdom and the British colonies. It has, besides, an extensive coasting trade. During the year 1900, 69,230 vessels of 40,807,242 tons, of which 57,576 were steamers, with a tonnage of 39,555,768, entered and cleared at Chinese ports.

China is traversed in all directions by numerous roads, and though none are paved or metalled, and all are badly kept, a vast internal trade is carried on, partly over them, but chiefly by means of numerous canals and navigable rivers. In February, 1898, the Government agreed that all internal waterways should be open both to foreign and native steamers. In the north of China a considerable extent of railway has been constructed and is open for traffic. The Imperial Chinese Telegraphs are being rapidly extended all over the Empire. The postal work of the Empire is carried on under the Minister of War by means of post carts and runners.

The effects of the anti-missionary or Boxer riots of 1900 and 1901 were felt somewhat in 1902. The well-known antipathy of the Chinese to foreigners could not be easily quelled, and in spite of assurances of safety by their rulers, massacres continued to be reported from various points. In March several hundred people, some reports putting the number as high as a thousand, were killed in religious riots in Tamung-Fu, the southernmost principal town of the Province of Chi-Li. In April the charge that Catholic missionaries had gouged out a boy's eyes caused an outbreak at Ning-Po, and British and German warships were sent to the scene.

The occupation of Manchuria by Russia has naturally created much interest, and her final intentions in regard to that territory seem still in doubt. On the one hand Count Cassini, the Russian Ambassador, has said that it has been returned to China in accordance with Russia's original promises and programme, while on the other hand the Grand Duke Boris, cousin of the Czar, has said that Russia regards Manchuria now as a part of its own territory and government. He further said: "Great danger was threatened for a time if outside reports could have been taken as any criterion, but to us in Russia there was little real apprehension."

In the Fall of 1902 there was a further outbreak of Boxers in the province of Sze Chuen, to which they had fled in 1900. The Viceroy took no steps to suppress them, and they also found a friend in the treasurer of the province. They attacked a Methodist Episcopal chapel, brutally murdering the native preacher and six others and burning the houses of those living in the neighborhood. It was only by mere chance that the foreign missionaries living in that vicinity escaped the same fate. In consequence of complaints by the American and British officials the Viceroy of the province was removed, but the Empress Dowager almost immediately appointed him Tartar General of the province, which "saved his face" and gave him added powers. The causes of popular revolt are said to be everywhere the same. The natives said they were being fleeced by their rulers. Their indignation was made anti-Christian because the officials announced in their proclamations that the extra taxes had been made necessary by her foreign indemnities. There had also been a drought in the province, and millions of people were hungry. Fortunately, the poor natives lacked fire arms and so were incapable of doing their work.

Christian Science.

W. D. M'CRACKAN
and
WILLARD S. MATTOX.

Christian Science is a system of religion, based upon the Bible. Its Discoverer and Founder is the Rev. Mary Baker G. Eddy, who is the author of its text-book, "Science and Health with Key to the Scriptures." Christian Science was discovered in 1866 and its text-book was published in 1875. Popularly defined, Christian Science may be said to be that religious denomination, or church organization which holds to and practises the teachings of Christianity, as interpreted by the Christian Science text-book. A broader and less conventional definition is given by Mrs. Eddy, who describes it as "the law of God, the law of Good, interpreting and demonstrating the Principle and rule of universal harmony" (Rudimental Divine Science). That feature which distinguishes Christian Science from other religious bodies, in the public mind, is the healing of sickness, without resort to drugs or medicines. This part of its teaching has been unwarrantably emphasized, for, in the estimation of Christian Scientists, the curative arts are secondary to the worship of God, and the healing of sin is more greatly to be desired than the healing of physical disorders. These two functions, however, according to Christian Science, are conjoined, because they are both operations of the One Mind, which is God. Mrs. Eddy summarizes the teachings of Christian Science as follows:

"The fundamental propositions of Christian Science are summarized in the four following, to me, self-evident propositions. Even if reversed, these propositions will be found to agree in statement and proof, showing mathematically their exact relation to Truth. De Quincy says mathematics has not a foot to stand upon which is not purely metaphysical:

"1. God is All in all.
"2. God is good. Good is Mind.
"3. God, Spirit, being all, nothing is matter.

Digitized by Google

"4. Life, God, omnipotent Good, deny death, evil, sin, disease. Disease, sin, evil, death, deny Good, omnipotent God, Life." (Science and Health, page 113.)

Christian Science is not a revelation, in any supernatural sense, but as a statement of pure Truth, in contradistinction to mere human opinion, it is distinctively a revelation; namely, of God's omnipotence over evil of every sort. This revelation was reached by logical steps consistent with clear reasoning, and is, therefore, strictly scientific in the proper sense of the word. The Discoverer of Christian Science investigated and observed many methods before she reached the spiritual understanding of what she denominated Christian Science. In her autobiography "Retrospection and Introspection," Mrs. Eddy relates the circumstances surrounding her discovery:

Mrs. Mary Baker G. Eddy.

"The discovery came to pass in this way. During 20 years prior to my discovery I had been trying to trace all physical effects to a mental cause; and in the latter part of 1866 I gained the Scientific certainty that all causation was Mind, and every effect a mental phenomenon.

"My immediate recovery from the effects of an injury caused by an accident, an injury that neither medicine nor surgery could reach, was the falling apple that led me to the discovery how to be well myself, and how to make others so.

"Even the Homœopathic physician who attended me, and rejoiced in my recovery, I could not then explain the modus of my relief. I could only assure him that the divine Spirit had wrought the miracle—a miracle which later I found to be in perfect Scientific accord with the divine law."

After the discovery that divine Spirit had healed her, Mrs. Eddy began her search for the modus operandi of this healing. She writes on page 109 of "Science and Health":

"For three years after my discovery I sought the solution of this problem of Mind-healing; searched the Scriptures, read little else; kept aloof from society, and devoted time and energies to discovering a positive rule. The search was sweet, calm and buoyant with hope, not selfish nor depressing. I knew the Principle of all harmonious Mind-action to be God, and that cures were produced, in primitive Christian healing, by holy, uplifting faith; but I must know its Science, and I won my way to absolute conclusions, through divine revelation, reason, and demonstration."

Finally, after the discovery of the healing Principle of Christian Science, came her application to existing conditions. On page 111 we read:

"I submitted my metaphysical system of treating disease to the broadest practical tests. Since then this system has gradually gained ground and has proved itself, whenever scientifically employed, to be the most effective curative agent in medical practice."

Thus it will be seen that in the discovery of Christian Science both the inductive and deductive methods of reasoning were employed. First, facts were ascertained and a conclusion reached by the inductive process. With this conclusion as a basis a practical system of mental, moral and physical regeneration was established by deductive reasoning. In a word, the same general process was followed as in the case of all great discoveries which mankind has made. God being taken as the Divine Premise, Cause and Origin of the universe, including man, all effects are deduced from Him. Thus the logic which leads to a perfect universe and perfect man derived from a perfect God is irresistible. It is the understanding of this perfection in God and His manifestation which heals the sick, by abolishing a false concept or mental state, wherein God's supposed opposites, such as evil, sin, sickness and death are erroneously believed to be actualities. That the logic of Christian Science is faultless, and that perfect God as Premise, and perfect man as conclusion, are unassailable, is demonstrated by the actual cures which have been performed, reaching into the hundreds of thousands, and covering the whole range of diseases known to men.

Mrs. Eddy herself at no time has laid claim to miraculous powers, and her early life was not unusual, except for the remarkable eagerness with which she strove to know spiritual things.

Mrs. Eddy was born at Bow, N. H., and there her childhood was spent.

Of herself Mrs. Eddy thus writes, in "Retrospection and Introspection":

"My ancestors, according to the flesh, were from Scotland and England, my great-grandfather, on my father's side being John McNeil, of Edinburgh. His wife, my great-grandmother, was Marion Moor, and her family is said to have been in some way related to Hannah More, the pious and popular English authoress of a century ago. * * * A relative of my Grandfather Baker was General Henry Knox, of Revolutionary fame. * * * In the line of my Grandmother Baker's family was the late Sir John Macneill, a Scotch knight, who was prominent in British politics, and at one time held the position of ambassador to Persia.

"My grandparents were likewise connected with Captain John Lovewell, of Dunstable, New Hampshire, whose gallant leadership and death in the Indian troubles of 1722-1725 caused that prolonged contest to be known historically as Lovewell's War.

"A cousin of my grandmother was John Macneill, the New Hampshire general, who fought at Lundy's Lane, and won distinction in 1814, at the neighboring battle of Chippewa, toward the close of the War of 1812.

"My childhood's home I remember as one with the open hand. The needy were ever welcome, and to the clergy were accorded special household privileges."

From her brother, the Hon. Albert Baker, once Congressman-elect from New Hampshire, she acquired her knowledge of Hebrew, Greek and Latin. The simplicity of her early life, the religious training of a pure home, and her own sweetness and gentleness, were fitting preparations for the work she afterward was called upon to perform. She is the only woman in history who has founded a great religious organization.

The total number of Christian Science churches and societies, here and abroad, at this writing (November, 1902) is about 700, showing a remarkable increase during the last year. In June, 1902, the total number of members of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., was 24,278, showing a gain of 6,419 in two years. Connected with these churches and societies are free reading rooms, nine in Greater New York alone, and one large one in Chicago, maintained by all the churches in that city. These reading rooms are a distinguishing feature of the denomination. In many of the cities abroad where Christian Science has spread these reading rooms are also to be found.

The First Church of Christ, Scientist, in Boston, Mass., was finished in 1894, and was dedicated in 1895. The cost was over $250,000. It is known as the Mother Church, all the other churches being branches of this one. This was the first Christian Science church to be organized and all the others have, therefore, been built within eight years, a very remarkable growth. Membership in this church is not confined to Christian Scientists residing in Boston. Mrs. Eddy is Pastor Emeritus of this church. Her active literary career has produced, besides the text-book, "Science and Health with Key to the Scriptures," the following lesser works on Christian Science: "People's Idea of God" (1886), "Christian Healing" (1886), "Retrospection and Introspection" (1891), "Unity of Good" (1891), "Rudimental Divine Science" (1891), "No and Yes" (1891), "Manual" (1895), "Miscellaneous Writings" (1888), "Christ and Christmas" (1897), "Christian Science vs. Pantheism" (1898), "Pulpit and Press" (1898), and "Messages to the Mother Church" (1900, 1901, 1902).

Besides these works she has written some poetry, including several hymns.

There is a Christian Science Publishing Society which issues a monthly publication, the Christian Science Journal, and a weekly paper called the Christian Science Sentinel, and a Quarterly, containing the lesson sermons. At the Sunday services of all Christian Science churches there is no personal preaching, but correlated selections are read from the Bible and from Science and Health, by two readers.

Colorado.

—

Capital:
DENVER.

Colorado was organized as a territory February 28, 1861, and admitted to Statehood August 1, 1876. It has an area of 103,645 square miles, and in 1901 its estimated population was 554,000. It was formed from parts of Kansas, Nebraska, New Mexico and Utah, the section north of the Arkansas River and east of the Rocky Mountains being included in the Louisiana purchase of 1803.

Before the beginning of the nineteenth century there is no record of any inhabitants in Colorado, except in the south, where a few Mexicans and Spaniards lived. The real settlement of the territory began with the discovery of gold, in 1852, by a Cherokee cattle trader, and by 1858 a number of mining camps had been established and the population grew with the development of the gold and silver mining.

The chief industries of Colorado are mining, stock raising and agriculture, though manufacturing industries have increased rapidly of late. The actual capital invested in 1900 in mechanical industries was $62,825,472, and the value of manufactured products amounted to $102,830,137, this including the output of the smelting and refining works. Denver is the great railroad centre and distributing point for the Rocky Mountain States and the market for the stock raising districts. The distance from the East and the lack of water facilities have done much toward encouraging the manufacture of those products on which freight rates are high.

Colorado leads in the production of gold and silver ores, and the value of lead smelters and refineries amounts to about 23 per cent of the total value of these products in the United States. The State ranks ninth in the output of coal, and the supply of this fuel makes the coke industry important. Flour milling and the making of malt liquors are on the increase, owing to the extension of irrigation, and fruit canning and beet sugar manufacture are being rapidly developed for the same reason.

The Legislature in 1901 directed several important amendments to the constitution to be submitted to the voters at the next general election. One provided that once in four years the electors of each county might vote to exempt or not exempt personal property and improvements on land from taxation for county, town, school and road purposes, but land exclusive of improvements, and franchises might not be so exempted. The old constitution prohibits a tax for State purposes of more than 6 mills on all classes of property, while the amendment proposes that franchises and unimproved land might pay 6 mills for State purposes, but personal property and improvements on land cannot be taxed more than 4 mills.

An amendment is offered giv ing Denver and other cities of the first and second class home rule. Under the old Constitution the Police and Public Works Board are appointed by the Governor.

By an act of the Legislature the rights of suffrage have been extended to women in Colorado, and among the amendments to the Constitution proposed is one declaring that any man or woman over twenty-one years of age, a citizen of the United States and a resident of Colorado for one year, might vote at any election, provided they were not disenfranchised for statutory cause. This merely acts to make the suffrage contingent upon one year's residence in the State, instead of six months, as at present.

Gov. James H. Peabody.

The State Supreme Court hav ing declared unconstitutional an act of the Legislature limiting the time of labor in mines to eight hours, it is proposed to make this law part of the Constitution.

Besides the proposed Constitu tional Amendments, the Legislature of 1901 passed several important laws in the interests of workmen. A law of 1897 prohibiting blacklisting and boycotting was repealed on the grounds that it had no effect in preventing blacklisting, and was entirely in the favor of the employer.

An act similar to laws passed in several of the Western mining States forbade any private corporation, except railroads and corporations exclusively operating ditches, canals and reservoirs, to pay their employes in token, script or any article of value except money, and declared that wages should be paid semi-monthly. Damages recovered by employes from a corporation should include a reasonable fee for the attorney. The use of the United States flag for advertising purposes was forbidden.

An act of 1897 abolishing the death penalty was repealed. By the law of 1901 juries are authorized to fix either death or imprisonment for life as the penalty for murder in the first degree, but no person under eighteen years of age could be sentenced to death, nor could the sentence of death be fixed on circumstantial evidence alone.

Provisions were made for the teaching in the public schools the humane treatment of animals. Truant schools were authorized in cities of over 25,000 inhabitants. The tax on insurance companies was raised from 2½ to 3 per cent on the gross premiums.

Out of courtesy to the only woman member of the Legislature, Mrs. Heartz, the House passed a rule forbidding the use of tobacco in the chamber. Mrs. Heartz said tobacco made her head ache.

An extra session of the Legislature was called in January, 1902, chiefly on account of the loss of a document of the session of 1901. The document was found shortly after the extra session convened. Acts relating to railways and to tax levies were passed, and a memorial drafted to be sent to the National House of Representatives. This memorial, after recounting the position of the Filipinos, asks that the Government's policy toward these people be outlined clearly and without delay, and that the policy of the United States be along the lines of assisting them to form a stable government, to be their government, the United States to exercise protection over the islands.

The quarto-centennial of the admission of Colorado to Statehood was celebrated August 1, 1901. A statue of Zebulon Pike, discoverer of Pike's Peak, was unveiled at Colorado Springs with appropriate ceremonies, an address being made by Theodore Roosevelt, then Vice-President. On August 12, 1901, W. B. Helker and C. A. Yont, of Denver, drove a steam automobile from Colorado Springs to the summit of Pike's Peak and back, the hardest automobile trip on record.

The November State elections in Colorado in 1902 resulted in what seemed to be almost a hopeless tangle, owing to the closeness of the vote. The greatest interest centred in the legislative vote, which was conceded the day after election to the Republicans. The Democrats carried Arapahoe County, and the Republicans claimed it was by fraud. The latter party prepared to contest the election, asking the Secretary of State to refuse certificates to the Democrats. In case of a refusal to grant this request there were threats of the organization of a rump Legislature pending a decision of the contest. A Republican Legislature would mean the retirement of Senator Teller, and the probable substitution of former Senator Edward O. Wolcott. Mr. Wolcott hurried to Denver as soon as he was informed of the situation, to enter the Senatorial race and also to assist in the several contests. Senator Teller's term ends in the Spring of 1903, he having served 23 years in the Senate.

Colombia.

—

Capital:
BOGOTA.

The Republic of Colombia gained its independence of Spain in 1819, and was officially constituted on December 27 of that year. It split up into Venezuela, Ecuador and the Republic of New Granada February 29, 1832. The constitution of April 1, 1858, changed the Republic into a confederation of eight States, under the name of Confederation Granadina. On September 20, 1861, the convention of Bogota brought out the confederation under the new name of United States of Granada, with nine States. On May 8, 1863, an improved constitution was formed, and the States reverted to the old name Colombia—United States of Colombia. The revolution of 1885 brought about another change, and the National Council of Bogota, composed of three delegates from each State, promulgated the constitution of August 4, 1886. The sovereignty of the nine States was abolished and they became simple departments, with Governors appointed by the President of the Republic, though they have retained some of their old rights, such as the management of their own finances.

The legislative power rests with a Congress of two houses, the Senate and the House of Representatives.

The area of the country is estimated at from 455,000 to 505,000 square miles. The population is about 4,000,000, which includes some 150,000 uncivilized Indians.

The religion is Roman Catholic, but other forms of worship are also permitted.

The strength of the army is fixed by an act of Congress at each session. In 1898 it was 1,000 on a peace footing. In case of war, however, the Executive can raise the army to any strength required by circumstances.

Colombia is rich in minerals and the average annual output of gold and silver is about $4,115,000. Only a small portion of the land is under cultivation.

Under the superintendence of M. de Lesseps a company was formed in 1881 for the construction of a ship canal across the Isthmus of Panama, mainly following the line of the railway. The capital received up to June 30, 1886, was 772,545,412 francs, and it was expected that this would have to be nearly doubled before the work was completed. March 15, 1889, the company was compelled to go into liquidation and suspend all work on the canal. In 1894 a new company was formed, which obtained a concession for ten years, later extended to sixteen, so as to terminate in 1910. In 1902 the company offered to sell to the United States all their rights and property for $40,000,000. In view of this offer the United States Isthmian Canal Commission have recommended the Panama route, estimating that the work can be finished in ten years, and at a cost of $45,000,000 less than by the Nicaragua route. The treaty between Great Britain and the United States, ratified December 16, 1901, provides for the neutralization of the canal by whatever route it may be constructed, and for its use by vessels of all nations on equal terms.

In October, 1902, Secretary Hay complained officially to the Colombian Government of the alleged obstructive tactics of Senor Correba, their Minister to this country, in connection with the negotiations of the treaty. In response Senor Correba claimed that the situation had changed materially since his instructions were given, and until he received additional instructions he would not begin the negotiations. During the recent troubles in Colombia, Commander McLean, of the cruiser Cincinnati, who was the senior American officer at the isthmus, placed guards on all trains running between Colon and Panama, this being in accord with the treaty of 1846, by which the United States agreed to prevent interruption of trans-isthmian traffic at all times. He allowed Colombian troops to cross the isthmus in the trains, but made them give up their arms during transit, agreeing to protect them while in transit from attack by insurgents. When Admiral Casey arrived at the isthmus and took command by virtue of seniority, he declared that when there was danger that the transportation of Colombian troops would lead to attack on their trains by insurgents their embarkation should not be permitted. It was to this stand that Senor Correba objected, as did his Government, and the admiral was directed from Washington to modify his rule, since when the principle laid down by Commander McLean has been followed. But Admiral Casey took another step which caused much ill feeling. When the Colombian gunboat Bogota arrived at Panama, late in October, the Admiral sent an officer aboard to examine her papers and find what right she had to fly the Colombian flag. The Bogota was an American steamer, purchased in Seattle, and was commanded by Captain Marmaduke, formerly of the Confederate Navy. Admiral Casey evidently proceeded on the theory that as an American officer he had a right to know whether the use of the Colombian flag on a vessel having an American registration was a violation of navigation laws. Senor Concha took the ground that Admiral Casey had practically asserted American sovereignty over the isthmus, and he was unwilling to have incorporated in the canal treaty any provision that would not set forth clearly that the United States had no such right in Colombian territory. It is maintained by many that the purchase of the French company's concession will give the United States the right to construct the canal without entering into any treaty arrangement with Colombia to that end.

A revolution was started in Colombia in 1899, of which General Uribe Uribe was a leader. A lawyer by profession, he soon won fame as a fighter and has been called the "Second Simon Bolivar." He has been credited with a desire to restore the great Colombia, as the federation of Colombia, Venezuela and Ecuador was known previous to 1830.

After a year of fighting against the superior forces of the Government the main army of the revolutionists sustained a severe defeat and General Uribe Uribe had to flee. He crossed the border into Venezuela and got a steamer at Caracas for New York. He arrived there in January, 1901, and admitted that the cause of the rebels was in a bad way. Later he received a promise from the Colombian Government to release the prisoners taken if he would issue a proclamation calling on his followers to lay down their arms. He did so, but the fighting did not cease. He accused the Government of breaking its promise and imprisoning the bearer of his proclamation. Uribe Uribe disappeared from New York in June, 1901, and soon appeared on the Colombian border with a newly equipped army to renew the struggle. One story was that the Free Masons in New York and in Europe had contributed $200,000 to aid the rebels against the Conservative Government, which was opposed to the order. Another was that President Castro of Venezuela was behind Uribe Uribe and that the new army had been organized on Venezuelan soil. There were some conflicts on the border between Colombians and Venezuelans and the two countries came close to war.

During the last year Uribe Uribe has led his forces with varying success. In October he attacked Cienaga, in the Department of Magdalena, and was routed after a battle that lasted fourteen hours. It was predicted then that he would flee from the country. He has not engaged in any of the fighting on the Isthmus.

He and Castillo with ten cannon, some 2,000 men, 2,500 rifles and 300,000 rounds of ammunition, surrendered to General Marjarres at Rio Frio, near Santa Marta, late in October.

The revolutionary forces under General Uribe Uribe, which were defeated October 14 at La Cienaga, retreated to Rio Frio and took up positions there. General Marjarres, with 2,000 men, proceeded against the rebels from La Cienaga and engaged the enemy. The Government General succeeded in surrounding the rebels and forcing them to surrender. Heavy casualties on both sides were reported.

The surrender of Uribe Uribe completed the pacification of the departments of Magdalena and Bolivar.

THE MINISTRY is made up as follows: Minister of Foreign Affairs, Dr. Felipe Paul; Minister of the Interior, Don Francisco Mendoza Perez; Minister of War, General Aristides Fernandez; Minister of the Treasury, Don Agustin Uribe; Minister of Finance, Don Jose Ramon Lago; Minister of Public Instruction, Dr. Jose Joaquin Casas.

Commercial Expansion of the United States.*

HON. O. P. AUSTIN,
Chief of the Bureau of Statistics.

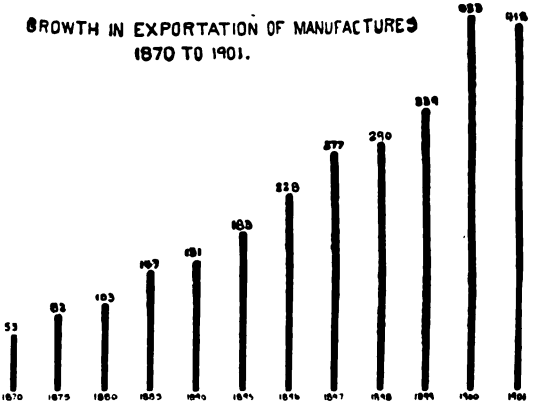
The growth in the foreign commerce of the United States has been a subject of interest and surprise to the whole world. Even our own people, familiar as they are with the wonderful resources which have produced that growth, pause in astonishment in the midst of the absorbing occupations of this strenuous age, and read again and again the figures which mark the marvellous growth of our commerce, and especially that of more recent years.

The year 1870 seems to have marked the beginning of a new order of things in the producing power of the country. With the opening of the transcontinental railway in 1869, and the construction of lateral lines which rapidly followed, the great producing sections of the interior were rapidly developed, and the power not only of production but of bringing together the natural products for manufacture and transportation to the seaboard gave new life and activity to the United States as a producing, manufacturing and exporting nation.

Prior to 1870 we had almost constantly imported more than we exported. From 1790 to 1870 the imports exceeded the exports by nearly $2,000,000,000. In 1874 the exports began to exceed the imports, and have so continued in an almost unbroken record, and the excess of exports over imports from 1870 to 1902 is over $5,000,000,000.

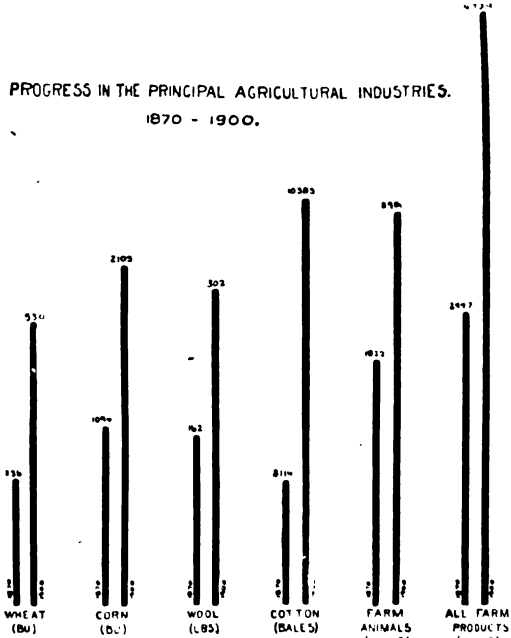
In the brief period since 1870 the production of corn has grown from 1,000,000,000 bushels to over 2,000,000,000 bushels per annum; of wheat, from 235,000,000 bushels to 535,000,000 bushels; of cotton, from 3,000,000 bales to over 10,000,000 bales; the number of animals on farms, from 102,000,000 to 213,000,000, and the value of farm products, from $2,447,000,000 to $4,739,000,000.

The production of petroleum increased from 220,000,000 gallons to 2,660,000,000 gallons; of coal, from 33,000,000 tons to 260,000,000 tons; of pig iron, from less than 2,000,000 tons to over 15,000,000 tons, and of steel, from less than 70,000 tons to over 13,000,000 tons. Meantime the railways of the country have grown from 52,000 miles to practically 200,000 miles, and rail transportation rates from Chicago to New York have fallen from 33 cents per bushel of wheat to 10 cents per bushel, and on other freights there were also large reductions.



At the same time our mines of the precious metals have poured forth their treasures, and the money in circulation in the country has grown from $675,000,000 to $2,260,000,000, and from $17.50 per capita to $28.60 per capita. The effect of these conditions upon manufacturing has been phenomenal, electrifying.

Manufacturing has meantime grown even more rapidly than agriculture. The number of persons engaged in manufacturing has increased from 2,000,000 to over 5,500,000; their earnings from $775,000,000 to $2,735,000,000; the capital employed from a little over $2,000,000,000 to about $10,000,000,000, and the value of manufactures produced, from $4,250,000,000 to $13,000,000,000. And all this, let it be remembered, has happened in a short thirty years, while the population was only increasing 100 per cent.



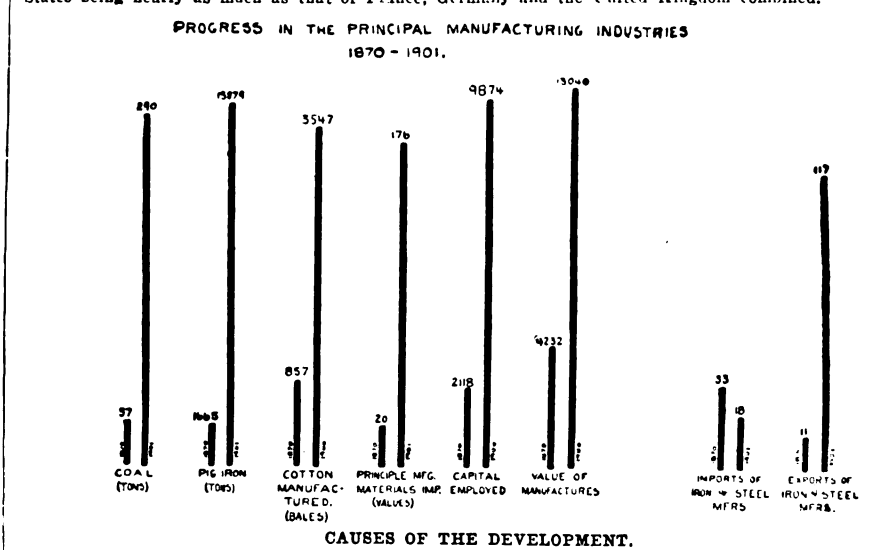
GROWTH IN FOREIGN COMMERCE.

What has been the effect upon our foreign commerce of all this enormous increase in production and manufacturing and the cheapening of the cost of production and transportation? The exports have increased from $9.77 per capita to $18.81 per capita in the same period. The exportation of agricultural products has increased from $293,000,000 to $943,000,000, and that of manufacturers from $55,000,000 to $412,000,000. Europe has increased her purchases of our products from $362,000,000 to $1,122,000,000; North America, from $43,000,000 to $185,000,000; South America, from $14,000,000 to $14,000,000; Asia and Oceania, from $6,500,000 to $84,000,000, and Darkest Africa, from $1,000,000 to $25,000,000.

We have advanced from fourth place in the list of exporting nations to the head of the list. In 1870 England, Germany and France exceeded the United States in their exports. To-day our exportation of domestic products exceeds that of any other nation in the world, and is advancing at a rate which gives assurance that we shall maintain this proud position as the world's greatest producer and exporter. In 1870 the domestic exports of the four great commercial nations of the world were: United Kingdom, $971,000,000; Germany, $552,000,000; France, $541,000,000; United States, $376,000,000. In 1901 the figures of domestic exports stood: United

Digitized by Google

States, $1,460,000,000; United Kingdom, $1,365,000,000; Germany, $1,113,000,000, and France, $804,000,000. Thus during that period France increased her exports of domestic products $263,000,000; the United Kingdom, $394,000,000; Germany, $561,000,000, and the United States, $1,084,000,000, the increase by the United States being nearly as much as that of France, Germany and the United Kingdom combined.



CAUSES OF THE DEVELOPMENT.

The causes of this wonderful development are not difficult to find. The principal requirements of man can be enumerated upon the fingers of one hand—viz.: Food, clothing, heat, light and manufactures. Of all these the United States is the world's greatest producer.

The principal articles of food are breadstuffs and meats. For breadstuffs we produce more wheat than any other country in the world, and more corn than all the other countries of the world combined. For meat, the chief supply is beef and pork, and of each of these we produce more than any other country in the world.

For clothing, the quantity of cotton required by the world far exceeds that of any other material of dress, and of this the United States produces not only more than any other country, but over three-fourths of the world's entire supply. For heating, the chief requirement is coal, and of this we now produce more than any other country, and at a cost far below that in any other coal-producing section. For lighting, petroleum is now the world's chief reliance, and we produce more of this article fit for use in lighting than any other country.

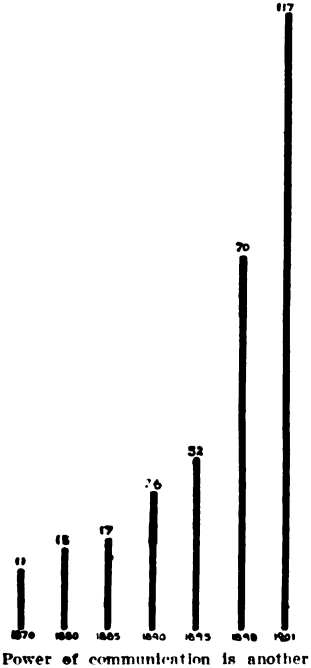
Of manufactures the United States is the world's largest producer. The chief requirements of manufacturing are iron, steel, copper, lead, aluminum, cotton, leather, and wood; and of all these we are the world's largest producer. As a result the United States easily leads the world both in the quantity and value of the manufactures produced, while the fact that we have more of the materials at hand than any other country, coupled with our cheap coal and ingenious machinery, gives us a great advantage in the cost of production. The value of the manufactures of the United States is now nearly double that of the United Kingdom, and about equal to those of Germany, France and Russia combined.

Thus in the five great requirements of man—food, clothing, heat, light and manufactures—the United States is the world's largest producer of their component factors.

While our natural facilities are very great, it will be conceded that their value has been multiplied by the genius of the American inventor. It is to the American inventor of the steam plough, the self-binder, the steam thresher, the cotton gin, and numerous other devices for performing by machinery what was formerly accomplished by hand labor, that our agriculturists have brought themselves to the foremost place in the world in the chief productions of agriculture.

It was the American inventor who gave to the world the telegraph and the telephone, by which business possibilities have been multiplied beyond comprehension, and in the thousands of less notable inventions which enter into the daily requirements of production and manufacture and transportation the genius of the American inventor has enormously increased and will continue to increase our producing capacity and in greater degree than in any other country. The number of patents issued in the United States alone since 1870 is one-half as great as the number issued in all the rest of the world during that period, and the benefit which the American inventor and the American Patent Office has been to our production and commerce is beyond calculation.

EXPORTS OF MANUFACTURES OF IRON AND STEEL
1870 TO 1901



OUR SUPERIOR FACILITIES OF COMMUNICATION.

Power of communication is another factor of equal importance in the world's commerce, and in this the United States leads the world. We have more miles of railway than all Europe put together, six times

Digitized by Google

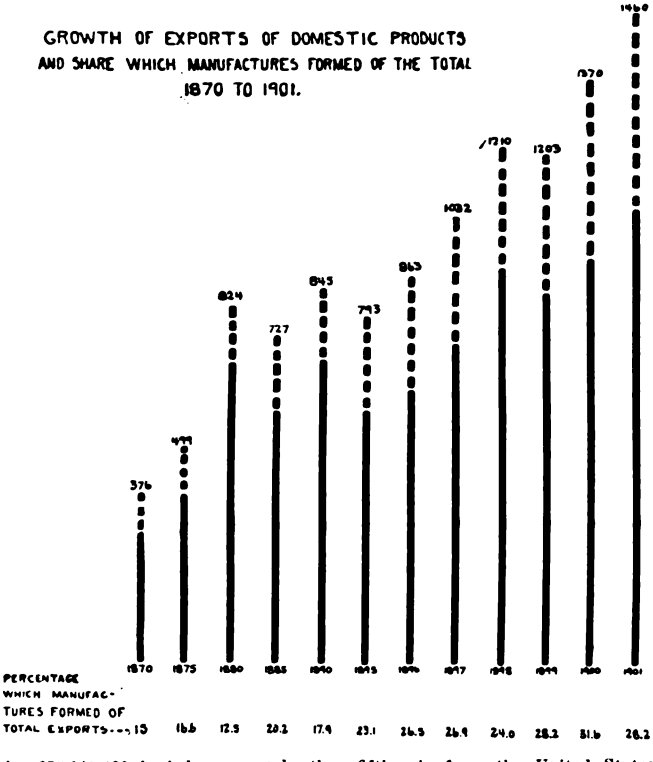
as many miles as any other country, and two-fifths of the mileage of the world. We have twice as many miles of telegraph as any other country of the world, and in the number of telephone messages sent the United States surpasses the total for all Europe combined. Of post offices we have twice as many as any other country of the world, and the number of pieces of mail handled in the United States is greater than in all of Continental Europe. Of newspapers, we have twice as many as any other country and more than one-third those of the entire world.

In transportation the United States easily leads the world. In river and lake transportation by steam vessels our facilities are far greater than those of any other country, and the value of our Great Lakes in the transportation of the great products of the country contiguous to them can scarcely be realized. In railway lines we have, as already indicated, two-fifths of the mileage of the entire world, and more than all Europe put together, while our freight rates have been steadily lowered until they are now about one-third those of 1870, and are lower than in any other country in the world. Add to this the magnificent system of water and rail transportation of the interior, the fact that we have more coast line and more harbors than any other country, and a great ocean on either side to carry our commerce to the waiting world, and the value of this great factor of transportation will be appreciated.

In finance the United States also leads the world. We produce more of the money metals than any other nation. There have been years in which Australia and South Africa have slightly exceeded the United States in gold production, and other years in which Mexico has slightly surpassed us in the production of silver, but in the combined production of gold and silver no country equals the United States. As a result of this, and of our favorable balance of trade, the United States now has more gold and a greater total of money in circulation than any other country of the world. Experts also estimate that somewhat indefinite term "banking power" as being greater in the United States than in any other country, while their estimates of total national wealth also place the United States clearly at the head of the list of nations.

WORLD'S DEPENDENCE UPON UNITED STATES.

My sole purpose in outlining these wonderful conditions is to show the solid foundation upon which our foreign commerce rests, and the assurance which we have that we shall maintain the proud position to which we have attained, and advance to still greater triumphs. For years we have heard of legislation by European countries against American meats, yet our exports of provisions have steadily increased and were 50 per cent greater in 1901 than in 1880, and this year will be the largest in the history of our foreign commerce, and about 80 per cent of our provisions go to Europe. We hear from time to time that certain countries have made laws or rulings adverse to certain of our products, yet the total of our exports to those very countries continues to steadily increase. We have heard in recent years of the prospective boycott of American manufactures by European countries, yet more than one-half of our exports of manufactures last year went to Europe, the greatest manufacturing centre of the world.



It is clear that the millions of purchasers all over the world, or even those of any particular country, are not likely to enter into combinations against American products or manufactures. But are the countries themselves likely to do so? Let us reflect for a moment as to what would be the result of such action. The United States produces one-fifth of the wheat of the world, one-half of the meats which enter into international commerce, about four-fifths of its corn, and three-fourths of its cotton. Of all these Europe must import large quantities. The importation of wheat into Europe from extra-European countries aggregates (including flour in terms of wheat) 265,000,000 bushels per annum, and of this, 150,000,000 bushels, or nearly three-fifths, is from the United States. Europe's importation of corn from other countries is about 200,000,000 bushels, and nearly all of this is from the United States.

What would be the effect of a refusal by Europe to purchase our wheat, or our corn, or meat, or cotton? It would be the exclusion from the world's principal markets of three-fifths of its present importation of wheat, one-half of its importation of meats, three-fourths of its importation of cotton, and nearly all of its present importation of corn. What would be the effect of this exclusion of our supply of these articles? Imagine the effect upon the price of wheat if one-half the amount which enters into international commerce were wiped out of existence to-day! Imagine the effect of the elimination of three-fourths of the corn supply! Think what would be the effect on the price of cotton to-morrow if some vast conflagration should destroy three-fourths of the visible supply of the world! Competition among producers and plentifulness of supply assure low prices, while the elimination of the principal competitor and largest producer would naturally and necessarily cause great advances in the price of the remaining supply of any of these articles.

We may therefore assume that at least in these great articles of general requirement there is no probability that we are to be excluded from the European market.

OUR SHARE IN THE MARKETS OF THE WORLD.

This brings us to a consideration of the existing markets in the various countries, the share which we now supply in them, and the share for which we may still compete. The total imports of the European

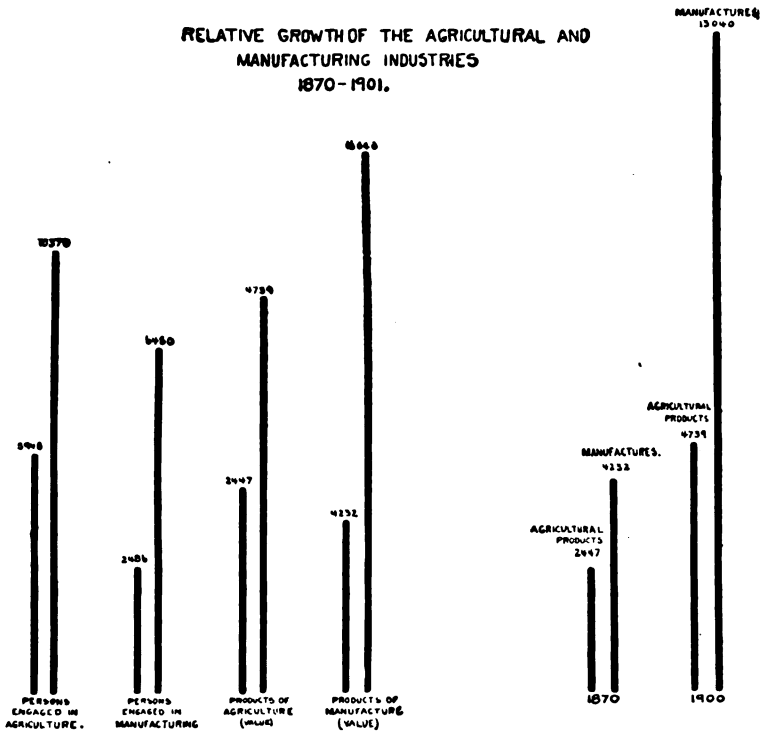
Digitized by Google

countries are over $8,000,000,000, of which we supply about 15 per cent.; those of Asia and Oceania, $1,200,000,000, of which we supply about 10 per cent.; those of South America, $375,000,000, of which we supply about 10 per cent.; those of Africa, $430,000,000, of which we supply 5 per cent.; and those of North America, other than the United States, $400,000,000, of which, by reason of proximity, we supply about 40 per cent. While a considerable share of the commerce of any country is a mere exchange with contiguous or adjacent countries, it may be assumed that as a rule fully one-half of the imports of these grand divisions is of a character for which we may compete, thus indicating that there are still great possibilities for the American producer and manufacturer in all parts of the consuming world, and that with patience, diligence and fair dealing he may expect to make two blades of grass grow where now only one exists.

In the enthusiasm over our growing exports of the past few years we have given little attention to the growth of our imports. While it is true that our per capita of imports has been perceptibly reduced in the last thirty years, it is also true that the grand total of imports is slowly but steadily increasing.

You can count on the fingers of one hand the number of years in which the imports have been as much as $800,000,000, but in the last fiscal year they exceeded $900,000,000, and at this rate of progress bid fair to be a round billion in the near future. What does this mean? Why do our imports continue to grow, despite the increased products of our fields, and forests, and mines, and factories?

The answer is simple. In one great class of products we have been in the past absolutely dependent on other countries. While it is true that we are the world's greatest producer of bread and meat and coal and iron and steel manufactures, we have been in the past entirely dependent upon other parts of the world for tropical products. And it is in these articles that the chief growth in our importations has occurred. Year by year the people consume increased quantities of tropical productions for food and drink. Our im-



ports of sugar have grown from a little more than one billion pounds in 1870, to four and one-half billions in the calendar year 1901; those of coffee, from 235,000,000 pounds to 1,073,000,000; tea, from 47,000,000 pounds to 63,000,000; cocoa, from less than 4,000,000 pounds to over 50,000,000; rice, from 43,000,000 pounds to 139,000,000.

But more important than this is the fact that the great manufacturing interests of the country are making greater and greater demands upon the tropics for their supplies of raw materials. The imports of fibres, chiefly tropical, which in 1870 amounted to less than 44,000 tons, were last calendar year over 256,000 tons; those of rubber have in the same time increased from less than 10,000,000 pounds to over 55,000,000 pounds; tobacco, from 6,000,000 pounds to 28,000,000; silk, from half a million pounds to over 12,000,000 pounds, and cotton, from less than 2,000,000 pounds to over 68,000,000 pounds.

The result is that the value of tropical and sub-tropical products imported has grown from $143,000,000 in 1870 to about $400,000,000 in the calendar year 1901, and the share which they form of our imports has grown from 31 per cent of the total in 1870 to 48 per cent of the total in 1901, and seems likely to form more than 50 per cent in the future. The total of our imports has doubled since 1870, but the imports of tropical and sub-tropical products have practically trebled in the same time. The value of our imports classified as "manufacturers' materials" only a dozen years ago was $265,000,000 and amounted to 33 per cent of the total; in the year about to end the value of manufacturers' materials imported will be about $420,000,000, and will form more than 46 per cent of the grand total.

OUR GROWING DEPENDENCE ON THE TROPICS.

What does this mean? Clearly that we are increasing our dependence upon the tropics. What does it mean to the producers and manufacturers and exporters of the country? Clearly that they should seek to pay in the products of the field and factory for the increasing millions of tropical products which they im-

Digitized by Google

port and must continue to import, and that in the great undeveloped markets of South America and Africa and Asia and Oceania, which supply these tropical products, we should seek to enlarge our sales and encourage mutual interchange of commodities. What does it mean to this nation, which has recently extended its control over three great groups of tropical islands, with an area of 150,000 square miles, a population of 10,000,000 people, and an unmeasured possibility for the production of the very articles which we are now importing in increased quantities and must continue to import in greater quantities? Clearly that much of this great mass of the necessities of life and manufacture which we are now importing can be produced under the American flag, with American capital, and by American citizens. Any one of these islands, Porto Rico, Hawaii, Guam, Tutuila, and the Philippine Islands, is capable of producing a part of the hemp, the jute, the coffee, the cocoa, the tropical fruits, the sugar, the high-grade tobacco, and probably the silk and the tea and the india rubber for which we are now sending hundreds of millions of dollars to other countries. I would not see them take a dollar from the earnings of the American farmer, but until he can produce at home the sugar and high-grade tobacco and silk and rice for which we are now sending our millions abroad, why should we not expend that money in our own islands, and in so doing build up in them a splendid market for our own products?

The Hawaiian Islands have increased their producing power more than twentyfold since we annexed them commercially by the reciprocity treaty of 1876, and have also increased their consumption of our products twentyfold. In the short three years since the actual annexation of those islands their production has enormously increased and our exports to them have more than trebled. In the four years since Porto Rico came under the American flag it has trebled its supply of tropical products in our markets and more than quadrupled its consumption of American goods. In the four short years since the American flag was hoisted at Manila our exports to the Philippine Islands have increased tenfold and those to all Asia and Oceania have doubled.

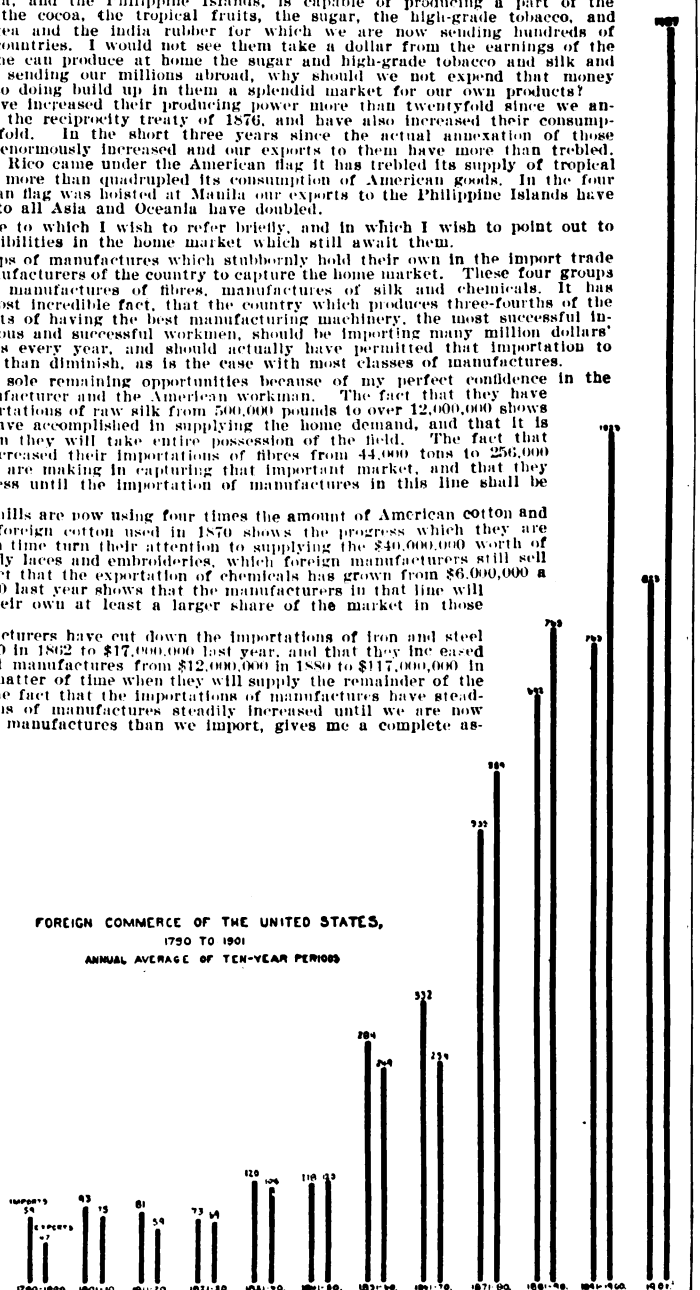
There is one other feature to which I wish to refer briefly, and in which I wish to point out to the manufacturers some possibilities in the home market which still await them.

There are four great groups of manufactures which stubbornly hold their own in the import trade despite the efforts of the manufacturers of the country to capture the home market. These four groups are manufactures of cotton, manufactures of fibres, manufactures of silk and chemicals. It has seemed to me a strange, almost incredible fact, that the country which produces three-fourths of the cotton of the world and boasts of having the best manufacturing machinery, the most successful inventors, and the most ingenious and successful workmen, should be importing many million dollars' worth of cotton manufactures every year, and should actually have permitted that importation to increase year by year rather than diminish, as is the case with most classes of manufactures.

I call attention to these sole remaining opportunities because of my perfect confidence in the ability of the American manufacturer and the American workman. The fact that they have since 1870 increased the importations of raw silk from 500,000 pounds to over 12,000,000 shows the magnificent work they have accomplished in supplying the home demand, and that it is only a question of time when they will take entire possession of the field. The fact that home manufacturers have increased their importations of fibres from 44,000 tons to 256,000 tons shows the progress they are making in capturing that important market, and that they will continue to make progress until the importation of manufactures in this line shall be reduced to a minimum.

The fact that our cotton mills are now using four times the amount of American cotton and thirty times the amount of foreign cotton used in 1870 shows the progress which they are making, and that they will in time turn their attention to supplying the $40,000,000 worth of high-grade cotton goods, chiefly laces and embroideries, which foreign manufacturers still sell in the United States. The fact that the exportation of chemicals has grown from $6,000,000 a decade ago to over $14,000,000 last year shows that the manufacturers in that line will soon be able to claim for their own at least a larger share of the market in those lines than at present.

The fact that the manufacturers have cut down the importations of iron and steel manufactures from $67,000,000 in 1862 to $17,000,000 last year, and that they increased the exports of iron and steel manufactures from $12,000,000 in 1880 to $117,000,000 in 1901, shows that it is but a matter of time when they will supply the remainder of the home market. And finally, the fact that the importations of manufactures have steadily fallen and the exportations of manufactures steadily increased until we are now constantly exporting more of manufactures than we import, gives me a complete assurance, a perfect confidence, that American manufacturers will not only capture this remaining $200,000,000 of the home market still available, but will go steadily forward in the work of capturing foreign markets. True, our imports must continue to grow, but that growth will be in the raw materials which the manufacturer must use, and in the tropical products which our own fields do not produce; and even these will soon be supplied, in large part at least, by the islands which have recently come under our control.

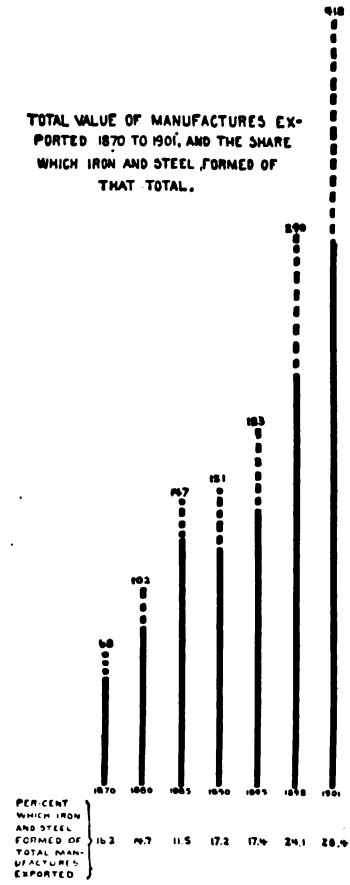


When these two things shall have been accomplished, when the American manufacturer shall supply the high-grade manufactures now imported, but which he will soon be able to produce, and when our new islands shall supply the tropical products which we must have, the United States will occupy the unique position of producing within her own boundaries all of the requirements of her own people and will continue to supply other nations from her growing surplus the natural products and manufactures which they demand and which they will continue to demand in increasing quantities.

Digitized by Google

OUR FAVORABLE TRADE BALANCE NOT A MENACE.

I do not share in the fear which some have expressed that this condition, by which exports are to constantly exceed imports, is likely either to destroy our markets abroad or unsettle international finances. Certainly the experiences of the last thirty years do not sustain either of these theories. In that time our exports have exceeded our imports by the enormous sum of $5,000,000,000. We have been informed that if we persisted in this ruinous course of refusing to redistribute to the world the money which we receive for our products we should so disturb the world's currency balances as to produce some awful financial cataclysm. But has this happened? It is true that we have somewhat bettered our financial condition, that the amount of money in circulation in this country has been increased, and the amount per capita doubled. But is anybody among us complaining of that fact? Has the wonderful business activity which has existed over the entire business world during the past few years sustained the theory that the United States is destroying the prosperity of other countries by selling more than it buys?



If the United States really appropriated to itself an undue share of the world's money by selling $5,000,000,000 worth of merchandise in excess of its purchases from 1874 to 1901, how is it that the currency of the United Kingdom has increased from $10 per capita in 1873 to $17 per capita in 1900; that Germany has increased her currency from $13 per capita to $20 per capita in the same time; that Italy increased her per capita money from $5 to $10; that the money of Belgium increased from $14 per capita to $23 per capita; that of Netherlands from $16 to $26 per capita; Sweden from $3 to $10 per capita, and Australasia from $20 to $31 per capita, and that the other nations of the world have generally increased rather than decreased their circulating medium and their wealth meantime?

We have not been bringing into the country and storing away in our vaults the $5,000,000,000 represented by the excess of our exports during that time. We have been paying our debts abroad —at least a part of them; we have been sending our citizens all over the world to redistribute the money and get the value of it in new information, new ideas, new views of life, new experiences and new health and vigor. We have been investing our money in the securities of other nations, and are beginning to make ourselves, in a very limited way, a creditor nation. And we have been distributing a part of this surplus in paying freights on our products carried in other people's vessels, a custom which I hope will soon terminate nd be substituted by the sight of the American flag in all parts of the world, and the payment to American vessel owners of the large sums paid in the past to those of other countries.

Our foreign indebtedness still amounts to probably $2,000,000,000 and our national debt to $1,000,000,000. Until we are able to pay this great sum of three billions of indebtedness and stand forth before the world as free men, as a nation absolutely free of obligations to other countries or to its own citizens; until we are able to take the rank to which we are entitled as a great creditor nation, supplying to the other countries the funds for which they are constantly seeking in the money markets of the world; until our sails shall whiten every sea and the millions of dollars which we are now paying to foreign shipowners pass to the hands of the owners of our own vessels, let us be content with the present order of things.

FUTURE OF AMERICAN COMMERCE.

What of the future?

In my mind's eye I see a great, a wonderful development, far beyond that before which the world now stands in amazement. I see Niagara and countless smaller waterfalls furnishing electricity to be carried by wire to every city and hamlet and farm, to be used for light and heat and power, in manufacturing, and for transportation on rivers and canals and railways and roads. I see a great canal connecting the two oceans, and putting our eastern and western shores in close water communication and our great ports in direct touch with the markets of the whole world. I see another ship canal connecting the Great Lakes with the Atlantic, with ocean vessels landing at the docks of Cleveland and Chicago and Milwaukee and Duluth, and making that greatest producing section of the whole world a great ocean frontage. I see another canal connecting the lakes with the Mississippi River, and a great system of light draught steamers and barges carrying the products of that great valley to the ocean steamships upon the lakes or the Gulf of Mexico, as convenience of location may determine.

I see an American cable giving us facilities for instant communication with our islands of the Pacific and the Orient, and those islands supplying us with hundreds of millions of dollars' worth of their productions and taking hundreds of millions of dollars' worth of our products in exchange. I see the islands of the Gulf of Mexico, one by one knocking at our doors and coming under the American flag and furnishing us through open doors their tropical products to mingle with those of the islands of the Pacific. I see a great railway line extending from Alaska at the north to Argentina at the south, connecting the railway systems of the two continents and bringing the great markets of that continent into close relation with our own.

I see a steady growth of American influence and a development of closer commercial relations with our neighbors on the north and on the south. I see a magnificent fleet of steamships, controlled by American capital and genius, and many of them flying the American flag, penetrating every sea, carrying American goods to every continent and every clime, and sending them to the interior of every country by American engines, in American cars, and upon American rails. I see the product of the American farm and factory in every land throughout the civilized world, and with this accomplishment, increased prosperity for American producers and manufacturers, and increased happiness among all classes of American citizens.

Note.—When not otherwise specified the calculations that are presented in all the illustrative diagrams are based upon a ratio of millions.

*Revised by the author from an address delivered at Pittsburg, Pa., July 4, 1902. The diagrams were also prepared by Mr. Austin.

Connecticut.

—

Capital:
HARTFORD.

Connecticut, one of the thirteen original States, has an area of 4,990 square miles, there being but two smaller States in the Union, and in 1901 it had an estimated population of 927,000. The Connecticut River and the seacoast adjacent to its mouth were first explored by the Dutch, who claimed the territory. A counter claim was made by England, based on the patent of Connecticut granted in 1631 to Lord Say and Seal, Lord Brook, Sir Richard Saltonstall and associates, by the Earl of Warwick. In 1633 the Dutch made a settlement at Hartford, but in a few years sold out to the English. In 1639 permanent settlements were made at Hartford, Windsor and Wethersfield by companies from Massachusetts.

Connecticut has always been the home of the shrewd type of Yankee that is the original of "Brother Jonathan," and due to his skill and frugality are the many varied industries for which the State is famed. According to the census report the position which Connecticut holds in the manufacturing world is due "in part to its excellent communication by rail and water with all parts of the country; to its geographical location, by which it can handle a large export trade, to its water power, to its plentiful supplies of labor and capital, the former gathered easily in the great centres of the East and the latter coming to it not only from its profitable manufactures, but also from its large insurance and banking interests; to its joint stock laws, and above all to its early settlers and their descendants, men of great inventive genius, frugality and industry."

On June 13, 1901, the Connecticut State Legislature passed a bill to submit to the electors in October of the same year an amendment to the Constitution, having for its object a change in the system of apportioning representatives in the General Assembly. This act was the result of agitation conducted for some years for the abolition of the existing system, which provides that the basis of representation in Connecticut shall be by township and not by population.

Professor Guy S. Ford says that this system of government is one of the best existing types of the archaic "rotten borough" system. The House of Representatives is made up of 255 members, representing 168 towns. Eighty-one towns have one representative each, and eighty-seven have two each. The smallest four towns and the largest four have two representatives each. The 2,355 people in the rural districts have as much influence in the government of the State as the 310,012 people in the cities and villages, and one voter in the small towns represents 121 voters in the large towns. Statistics show that the majority of members of the House of Representatives come from towns comprising one-ninth of the population of the State.

Gov. Abiram Chamberlain.

An attempt was made to pass an amendment through the Legislature, calling for a more equal distribution of representation, but it was persistently voted down by the country members, although indorsed by the Republican State Convention. It was then agreed to call a Constitutional Convention, each township in the State to have at least one delegate. This gave control of the convention to the country members, but as the amendment, when formulated had to be presented to the electors for acceptance, there was but little fear felt by the cities.

The convention met January 1, 1902, and adjourned May 15, having agreed upon a plan of representation, in brief, as follows: Every town was to have at least one representative in the House, and towns of more than 2,000 and less than 50,000 were to have two each, and one additional representative for each 50,000 inhabitants. The Senate was to consist of forty-five members, elected at large, instead of twenty-four.

On June 16 the amendment was put before the people for acceptance or rejection, and was rejected by a majority of about 10,000, very little interest being shown in the voting.

A widely discussed act regarding the formation of corporations was passed by the Legislature of 1901. This bill provided that corporations might be formed in the State by the payment of a small tax and be thereafter practically free from any State supervisory power. By the payment of 50 cents for each $1,000 up to $5,000,000, and 10 cents additional for each $1,000 of capital over $5,000,000, corporations might obtain charters forever exempt from State taxation. The idea was said to be to induce corporations doing business in Connecticut to incorporate in that State, adding that much revenue to the State treasury.

A clause provided that such corporations might not carry on any railroad business within the boundaries of Connecticut or carry on any business requiring the condemnation of property or the obtaining of franchise rights. These restrictions were not to hold provided that the business was conducted outside of the State.

A law provided for the organization and establishment by the Commissioner of the Bureau of Labor Statistics, of free labor employment bureaus in Hartford, New Haven, Bridgeport, Norwich and Waterbury, and provided that no other employment bureaus except for the employment of school teachers should be established in the State without being licensed by the Commissioner. Bureaus so licensed were prohibited from receiving any fee greater than $2.00, and if employment was not found for the applicant or the applicant did not accept the employment offered within one month from the time of registration, the fee should be returned.

A labor law for the protection of Italian contract laborers provided that no contractor or foreman should accept a fee for furnishing employment that shanties and lodging houses should be examined by the State health officers, and that agents or others who sold goods to laborers at more than the current market rates should be fined. No barber's license was to be granted unless the applicant had served at least three years' apprenticeship or had spent that length of time in a barber's school, and had passed an examination showing him to be free from cantagious diseases and to have a sufficient knowledge of the common diseases of the skin and scalp to avoid the spreading or aggravation of them.

The sentence for kidnapping was made imprisonment for not more than thirty years. An act was passed limiting the speed of motor vehicles to fifteen miles an hour outside of any city and twelve miles an hour within. Towns, however, might grant permits allowing motor vehicles to go at a greater speed. During October, 1901 and 1902, three towns in Connecticut elected Mayors from the Labor Party. These were Ignatius A. Sullivan, of Hartford; Stephen Charters, of Ansonia, and Dennis Mulvihill, of Bridgeport. A movement is in charge of the party electing these men, to enter the State campaign for Governorship and control of the Legislature. The platform states simply that the party advocates equal representation in the General Assembly for the people of the State, the right of trial by jury and the restriction of government by injunction.

On August 5, 1902, the conductors and motormen of the Fairhaven & Westville Street Railway Company, of New Haven, struck on account of the discharge of several of the employes of the road. Their demand was that "the Fairhaven & Westville Railroad Company recognize our union and that the men who

Digitized by Google

were discharged without cause shall be reinstated." The strike was complete, and for four days not a car of this company was run. There was no violence, and public sentiment was entirely on the side of the strikers. On August 9, after an attempt on the part of the State Board of Arbitration to settle the dispute, and successful efforts on the part of the Mayor to prevent rioting or damage to property, the strike was declared off, the employes winning a complete victory. It was charged that Franklin T. Ives, a member of the State Board of Arbitration, had refused to take part in the sessions of the Board, and that he had unqualifiedly condemned the strikers. His resignation was asked by the labor men of the State, but no action was taken by the Governor.

Considerable stir was made at Yale University, near the close of the last session, by the discovery of the existence of a "Criminal Club" at that institution. Steps were taken at once by the president of the university and the faculty to break up this organization, and the students having part in it were severely reprimanded and one expelled.

The Yale bi-centennial, held in October, 1901, drew to New Haven a gathering of savants and famous men such as has seldom assembled in America. Honorary degrees were conferred upon several well-known statesmen and foreign ministers.

A small tidal wave, originating from some unknown cause, entered the harbor of Bridgeport on October 14, and played havoc with the shipping. Several schooners and the submarine boat Argonaut were damaged, the latter losing her conning tower and air pipe mast.

Costa Rica.

—

Capital:
SAN JOSE.

On October 5, 1502, Christopher Columbus, having remained for a short time at anchor in the harbor of San Juan, sailed down the coast of Central America, and received at his stopping places specimens of gold ore, which caused him to name the land La Costa Rica y Castilla de Oro. Its history as a province of Spain is coincident with that of Guatemala, under which name all the country between the southern border of Costa Rica and the northern boundary of Chiapas, Mexico, was included previous to 1821. During the crisis which followed the declaration of independence of the Spanish-American colonies in that year, Costa Rica preserved a neutrality, but in November became, with the other Central American States, a part of the Republic of Mexico. A separation was effected July 1, 1823, after the downfall of the abortive empire of Iturbide, and a confederation was formed of the five States of Guatemala, Honduras, San Salvador, Nicaragua and Costa Rica. This lasted until 1840, when Costa Rica withdrew and formed an independent government under the presidency of Don Brulio Carillo. In 1847 a constitution was adopted, providing for a President and Vice-President, elected for six years, and a Congress consisting of a House of Representatives only, composed of twelve members. Various modifications were made in 1859, 1860 and 1863, the presidential term being fixed at four years, and Congress undergoing many reforms. In 1856 Costa Rica declared war against the filibuster, William Walker, who had taken possession of Nicaragua. The Costa Rican forces, under command of Don Juan Mora, met Walker's troops under Colonel Schlesinger, near Santa Rosa, routed them, followed them into Nicaragua, and in conjunction with the forces sent from other States caused his surrender to the commander of the United States sloop of war, St. Mary. In 1872 the Ministers of the several Central American republics met in the city of La Union, San Salvador, and signed a treaty for the formation of a Central American confederation, which failed to prove the lasting benefit expected.

Costa Rica touches both the Atlantic and Pacific oceans, and from her position commands good commercial advantages. The main range of the Andes traverses the entire territory of Costa Rica and forms a tableland upon which are situated the principal cities and centres of population. This plateau is intersected by a series of volcanic peaks, which are generally extinct, or, rather, dormant. On the Pacific coast the country is well diversified by valleys, and the valley of the San Jose is especially beautiful. It occupies the centre of the mountainous region of the isthmus, at nearly an equal distance from both oceans. The ground about the capital rises by great undulations eastward to the base of the volcano of Cartago, and northwest by more gentle slopes to the Barba peaks. On the south it swells to form the San Miguel Mountains, and on the west it declines to the level plains of the Carmen. The climate is as varied as the surface of the country. It is mild and temperate in the uplands and very healthful for the tropics. Both the coasts are sickly, however, and the length and severity of the rainy season is very trying to foreigners. The Atlantic coast suffers greatest from these rains.

The area of the five provinces and two territories composing Costa Rica has been estimated at 23,000 square miles. The estimated population in 1899 was 310,000. The population of European descent, generally of pure Spanish blood, dwell mostly around the capital, the city of San Jose, and in the towns of Alajula, Cartago, Guanacaste, Puntarenas and Limon. The government encourages immigration by the sale of land on easy terms. For the purpose of public health the country has been divided into 21 districts, superintended by medical men paid by the national treasury. The boundary disputes between Costa Rica and Colombia have been settled, rather to the advantage of the latter Republic.

The legislative power is vested in a Chamber of Representatives, one representative to every 8,000 inhabitants, chosen in electoral assemblies, the members of which are elected by citizens of the Republic who are capable of supporting themselves. The members of the Chamber are elected every four years, one-half retiring every two years. The President is elected for a term of four years, in the same manner as the Congress.

There are two banks in Costa Rica, the Anglo-Costa Rican Bank, and the Bank of Costa Rica, with a capital of 1,200,000 pesos and 2,000,000 pesos, respectively. In 1896 an act was passed providing for a gold standard at the ratio of 1 to 26¾, the monetary unit to be the gold colon. On July 16, 1900, the new coinage was put in circulation, all obligations contracted in national money being payable in the new coinage at the rate of one colon to the silver peso. Foreign gold is legal, but not foreign silver.

The Roman Catholic is the religion of the State, but all forms of faith are given entire liberty under the Constitution. In 1892, the latest figures obtainable, there were 2,245 Protestants, 36 Jews and 224 Buddhists and followers of other faiths in the Republic. Public primary education is free, and the law compelling school attendance is rigidly enforced. There are several establishments for higher education. The total foreign debt in 1901 stood at 2,000,000 pesos, and the internal debt was about 6,916,000 pesos. Costa Rica has an army of 600 men and 12,000 militia, but on a war footing can command 34,000 militia, for every male between eighteen and fifty may be required to serve. The Republic has also one torpedo boat and one gunboat.

Almost anything can be grown in Costa Rica, but the chief agricultural products are coffee and bananas. In 1899, the last figures obtainable, show that 35,486,000 pounds of coffee and 3,420,166 bunches of bananas were exported. The export duty on coffee was removed by a decree of April 20, 1901. Maize, rice and potatoes are commonly cultivated, and the culture of cocoa is extending. Several districts are auriferous and mining is carried on to some extent, but the machinery and plants are of small extent. From three mines worked with American capital the gold exports in 1900 were valued at about $160,000. Recent reports from various mining districts indicate renewed activity in the development of the mineral resources of the country. New companies are being formed and new methods are being applied to mines already in operation. The Abengares Gold Fields Company, which operates on the Pacific side of the Republic, is opening mines at lower levels than heretofore. In order to promote the cultivation of bananas, the export duty has

Digitized by Google

been removed for a period of ten years, beginning September 12, 1900, and inducements are being offered to planters desiring to engage in this industry, or to increase the extent of already existing plantations.

In 1900 Costa Rica had three merchant steamers of 783 tons, and two sailing vessels of 541 tons. The port of Limon is visited regularly by five lines of steamers, not including banana steamers, and is in close connection with the ports of Europe and America. The railway system extends from Limon on the Atlantic coast, inland to Alajula, with branches, 137 miles. From San Jose to Tivives a line 59 miles in length has recently been finished, to open communication between the east and west coasts. Still another road, to be 69 miles in length, is to be built by capitalists of the United States to cover the plantations of the United Fruit Company. In San Jose there is an electric railway of 3½ miles in length, and concessions have recently been granted for an extension. If the United States should decide to build a canal over the Nicaraguan route, the Costa Rica railway, with terminal at Limon, will have to be used for the conveying of material, and its directors are looking forward to the constructing of extensions that will be necessary if the canal project is carried out. An American-German company has recently received concessions to about 50,000 acres of coal and agricultural lands. The only stipulation in the agreement whereby the concessions were granted and privileges of tax exemption given, was that the company must dispose of one-fifth of its capital stock in Costa Rica.

Following the election of the new President, in February, 1902, a small revolt broke out among the soldiers in the barracks, who repudiated the vote of the people for President. The revolt was nipped in the bud by the outgoing President, Rafael Yglesias. The mutineers were captured in their barracks and their ringleader killed in the skirmish which ensued.

The candidates for President were Don Ascencion Esquival and Don Maximo Fernandez, the latter the candidate of the Republican party. The Costa Rican Congress, which declared the result of the popular election, met at San Jose, and by a vote of 27 to 4, declared Esquival elected President. The inauguration ceremony took place May 8, 1902. In his inaugural address President Esquival defined the policy which he intended to pursue during his administration, and called attention to many changes which he deemed necessary. He said that it seemed to be of great urgency that the municipal regimen should be amplified and greater independence given in corporations, even though a constitutional amendment should be necessary to carry out his plans. The situation of the public treasury would oblige the Government to simplify the service of the administration, to reduce the personnel of employes and curtail all expenses other than those of an absolutely indispensable character. Touching international affairs the President announced himself ready to follow the traditions observed by the Republic, and to fulfil all obligations imposed upon it by existing treaties.

Senor Don Ascencion Esquival is one of the most eminent statesmen of that progressive commonwealth. He is a celebrated lawyer and has taken part in the introduction of salutary legislative reforms which have been a credit to the country. He was candidate for the Presidency in 1889, resigning the office of Vice-President to accept the nomination, but was not elected.

The new minsitry is as follows: Minister of Foreign Relations, Justice, Worship, Charities and Public Instruction, Don Leonidas Cacheco; Minister of Government, Police and Improvement, Don Manuel J. Jiminez; Minister of Agriculture and Commerce, Don Cleto Gonzalez Viquez; Minister of War and Navy, Don Tobias Zuniga.

Cremation in the United States.

There is only one crematory for human bodies in operation in New York City, established 1885, and located at Fresh Pond, Queens Borough, but there are several cremation societies here, with thousands of members. The United States Cremation Company has recently reduced the charge for cremation of adults to $25, and of children to $15. This does not include transportation to the crematory or undertaker's services. Clothing and preparation of the body may be the same as for earth burial. The body is always incinerated in the clothing as received, and nothing can be taken from it. The coffin or any part thereof is never allowed to be removed from the building, but is burned after the incineration. In case of death from contagious disease, the coffin will not be opened, but will be burned with the body. The ashes will be deliverable at the office of the company the day after the incineration. Urns and niches for the final disposition of the ashes may be selected at the columbarium or at the office of the company. Incineration is held every day in the year.

LOUIS LANGE,
President of the United States Cremation Co.

The United States had, in 1901, twenty-six crematories, of which the one in Middletown, Conn., is not in use, with 2,595 cremations, as per table below; Germany had seven crematories, at Gotha, Hamburg, Heidelberg, Offenbach, Jena, Mannheim and Eisenach, this last one opened in 1902, with 693 cremations; England, with six crematories, at Woking, London, Manchester, Liverpool, Glasgow, Hull and Darlington, shows 445 cremations for 1901; France, with one crematory, at Paris, had 306 voluntary cremations. Italy operates twenty-two crematories, with fewer cremations than Fresh Pond alone has had; Switzerland has three, at Zurich, Basle and Geneva, and one in prospect for St. Gall; Sweden has two, at Stockholm and Gothenburg; Denmark, one, at Copenhagen. The increase of 1901 over 1900 in the number of cremations in this country is about 8 per cent.

The United States, by annexing the Hawaiian Islands, became the owner of a crematory in Honolulu, and operates it occasionally. The Government had the remains of Lieutenant Thomas M. Cobb, Thirty-ninth Infantry, U. S. V., who died of smallpox at Honolulu, cremated there last year. In the Mount Royal Cemetery at Montreal, Canada, a handsome new crematory has been erected and put in use quite recently. It owes its existence to the munificence of the late Mr. Molson, the Canadian banker.

Concerning munificence, it may be here mentioned that not long ago a Mr. Gallen of Paris left his fortune of about $2,000,000 to the French Government, and at the same time $6,000 to the Incineration Society of France. So did Mr. Louis Reckers, of Brooklyn, donate $1,000, an unnamed friend $50, and Mrs. Marietta P. Hay, of Tarrytown, N. Y., by will, $2,000, to the United States Cremation Company.

The value of fire or great heat as a sanitary agent is becoming increasingly evident through their enforced use as remedies in emergencies. The American health boards in a dozen cities recommend the cremation of pauper and contagious dead, and 3,000 physicians in Germany signed a petition for compulsory cremation in infectious and contagious diseases.

Like the French, the Cubans, and lately the Central Americans, who cremated many of their dead on the battlefields, so the Boers in South Africa last year burned hundreds of dead horses, and this year many of the victims of the Martinique volcanoes were cremated, after Catholic priests had walked among the dead in the devastated city of St. Pierre reading burial services and prayers.

In the methods of cremation nothing new has developed. The liquid air fake is exploded for good, electricity is much too expensive, so coal, wood, oil and gas remain the fuels used. Benares and Calcutta burn their dead in the open air on a wood pile and throw the ashes into the holy river, as they did a thousand years ago; Japan cremates them in sitting posture; the modern retorts are all level, when beyond doubt an upright body would cremate quickest.

Our Government mail carries human ashes, in packages of suitable weight, at the usual postage rates for merchandise, without reference to any laws on transportation of human bodies. Our postal and revenue authorities do not consider or treat human ashes as a human body, as those of some European countries do.

Among the more prominent friends of cremation, dead within a year in the United States, are J. Sterling Morton (of Mr. Cleveland's Cabinet), who incorporated a cremation company in Nebraska City; Judge

Digitized by Google

Andrews, of the New York Supreme Court, who decreed that opposition to his cremation should invalidate his last will; Rutherford Platt Hayes, a grandson of ex-President Hayes of the United States, cremated last January at Cincinnati; Rear Admiral Kimberley, U. S. N., and finally Mrs. Delphine Holland, a colored woman, from New Orleans, well educated, a spiritualist and independent thinker, cremated recently at Milwaukee. Regular cremations of colored persons are very rare, only four having taken place at Fresh Pond among 5,000. When Judge Lynch, however, holds court south of Mason and Dixon's line, negroes are occasionally burned at the stake alive. Only recently negroes in Southampton County, Virginia, afraid to touch and inter their brother negro, Thomas Douglass, who lay dead of smallpox in an outhouse, set fire to and burned the house down, at the same time cremating the contagious body.

One of the needs of the times seems to be a crematory for animal pets. There are a number of cemeteries for dogs in different countries, all of them nicely laid out and adorned with expensive monuments. In that one at Hyde Park, London, some 400 dogs have been buried; Queen Victoria had her dead dogs interred in a private plot at Windsor; at Clichy, near Paris, dead dogs are buried, being often brought there by the undertakers in small coffins on bicycles, and New York quadruped pets find graves at Hartsdale, near Tarrytown. But a crematory for their especial use does not yet exist. Occasional requests to the United States Cremation Company to cremate a dog elicit the invariable answer: "We cremate human bodies only," which is proper.

Of which number the State of New York, with five crematories, has 5,426.

Crime and Criminology.

In dealing with the criminal element in the community the aim of intelligent government is, primarily, the protection of society, and, incidentally, the reclamation of the criminal, if that is possible. The incidental feature of the punitive relation of the authorities toward lawbreakers is more marked under some governments than under others; and even in the United States there exist differences in this respect under the prison systems of the various States embraced in the Union. In this country, however, the interest in prison reform is general and steadily advancing, with the result that there is constant diminution of the probability that the casual offender will be turned loose upon society, a confirmed criminal, after expiating his first offence by a term in durance. Modern prison management presents to the prisoners of nearly every grade the possibility of eventual rehabilitation, and, in many of the States of the Union, the prison system is so arranged as to protect the more presumably reclaimable prisoners from the deleterious effects of constant association with those whose reformation is more problematical. The most effective agency in this direction is, it is needless to say, the reformatory, designed for persons convicted of minor crimes, and into which, in some of the States, the less incorrigible of the more serious offenders may be graduated from the State prisons, as a reward for extraordinary good conduct, or in recognition of evident improvement in character. Even where these institutions do not exist the incentive to good behavior and to better manhood, offered in the form of commutation of sentence and possibility of parole or pardon, tends to make the prison system remedial as well as punitive in its effects. The study of criminology is aiding materially in the movement for reclaiming those who, through either ignorance or willfulness have been led so far into wrongdoing as to come under the retributive power of the law. Such reclamation is certainly necessary in order to insure that protection of society which is aimed at for the reason that the man who leaves prison with improved character may fill worthily some useful position in the community, while the one who comes out at the end of his term feeling that he owes society nothing but a grudge will be undeterred by any fear of punishment from paying it off at the first convenient opportunity. While the science of prison reform has accomplished much in repressing crime through the improvements it has secured in punitive administration much remains to be done in the future; and to this end the collation of prison statistics has large value. In the tables which follow an attempt has been made, the first of definite character since the census of 1890, to bring together the related prison statistics of the several States and Territories of the United States, an undertaking which has been rendered extremely difficult by the lack of uniformity in keeping prison records. Each of several States has an excellent system of its own for keeping its prison statistics, any one of which might be made a general system to be adopted by all the States and Territories. This would make possible such a collation of facts concerning prisons and their inmates in all parts of the country, as would be invaluable in the study of criminology in all its branches.

The tables which follow present the most complete criminal statistics of the United States ever published. They have been prepared from information furnished The American Almanac chiefly by the wardens of the various prisons. Such tables are extremely valuable to any one interested in criminology, and especially so to those in public positions that call for a general knowledge of what the various States are doing for the protection of society. Statistics of executions for crime are given under a different head.

Wyo	1			.....	28,829.06	176	..	..	..

Note.—When not otherwise stated the figures given are the last published report. *For two years ending 1900. †No prison. ‡Has State farm where aged and infirm are confined. §Does not include cost of new buildings. ‖Maintains six penitentiaries. **Includes houses of refuge. ††Population at time of last report. ‡‡Two years profit of jute mill and brick yard. (a) 1901.

Note.—Alaska has no penitentiary. All prisoners convicted of heinous crimes and sentenced to one year or more of imprisonment are transported to McNeil's Island, Washington. The creation of a penitentiary on some island in Sitka Harbor is suggested. Many criminals are entering the district, and the prisoners sent to McNeil's Island form a large contingent there. The prisoners held in the Sitka jail spend their terms in enforced idleness.

Oklahoma has no penitentiary, but sends its convicts to the Kansas State Penitentiary at Lansing, paying 35 cents per day for each. On July 1, 1901, the number of these convicts was 252.

In the Philippines there are two prisons for offenders against the civil laws. The number in confinement at the presidio de Manila on June 30, 1901, was 946. In the Carcel Publica on the same date there were 615 native male prisoners, 25 native female prisoners, and 41 American prisoners—a total of 681.

CRIME IN ENGLAND.

The criminal statistics of England and Wales are very complete, those for 1900 being available during 1902. In that year there were 7,975 convictions before the Assizes and Quarter Sessions, and 616,731 convictions before the Court of Summary Jurisdiction.

Of the convictions secured before the Assizes and Quarter Sessions, 20 were for murder; 8 for attempts at murder; 3 for conspiracy to murder; 71 for manslaughter; 92 for felonious wounding; 483 malicious wounding; 165 assault; 667 social crimes, and 93 other offences.

In addition to these 1,602 crimes against the person there were 1,567 convictions for crimes against property with violence; 4,143 for crimes against property without violence; 185 malicious injury to property, including 58 for arson; 220 for forgery and other offences against the currency, and 258 for miscellaneous offences.

During the year 1900, 182,554 persons were received at the 56 local prisons, 133,345 being males and 49,209 females. During the same period 1,292 children were committed to houses of reformation, 997 boys and 132 girls having been found guilty of indictable crimes, and 167 boys and 16 girls of non-indictable offences.

The number of insane criminals committed to asylums during 1900 was 147, and the total number in such asylums at the close of the year was 770—579 being males and 191 females.

The total prison population, December 31, 1900, was 3,001, of which 127 were life prisoners.

CRIME IN INDIA.*

Prison statistics of the United Provinces of Agra and Oude, British India, indicate a gratifying decrease of crime in that country during several years past. The population of these provinces is about 50,000,000. The number of prisoners of all classes in confinement on January 1, 1901, was 30,893; and on December 31, of the same year, the number had been reduced to 28,756, a decrease of 2,137. The number committed to the jails during the year was 79,585, against 97,487 the previous year, a decrease of 17,902. These numbers include offenders of every kind—male and female; juvenile and adult; short term prisoners and convicted felons. Of the convict class the committals numbered 30,736 males, against 35,305 in 1900, and 2,224 females, against 2,992. This was a decrease of 4,569 males and 768 females, a total decrease of 5,337. Those committed under sentence of death numbered 118 males and 6 females, against 168 males and 10 females the year previous. Of habitual criminals the number committed was 3,580, a decrease of 1,325. The ratio of habitual criminals to the free population was 10.86 in 1901, against 12.80 in 1900; 10.96 in 1899; 12.03 in 1898, and 13.67 in 1897. The great bulk of the convict population was composed of Hindoos, the ratio being 86.20. The ratio of Mohammedans was 13.40; Christians, 0.10, and Buddhists, 0.02. Out of the total of 32,960 convicts, 30,934 were illiterate. The more serious offences for which prisoners were committed and the number were as follows: Murder and attempt, culpable homicide and attempt, and abetting attempts at suicide, 639; kidnapping, abduction and selling minors to slavery, 225; aggravated assaults, 1,956; attempts at suicide, 349; serious offences against decency, 214; offences relating to marriage, 262; housebreaking, with intent to commit capital crime, 46; forgery, 48; offences relating to coin and stamps, 197; theft, 5,361; bad living and belonging to wandering gangs of thieves, 4,639.

*The American Almanac is indebted for these statistics to the courtesy of the Rev. T. J. Scott, of the Bareilly Theological Seminary, India.

Cuba; the New Republic.

By an act unprecedented in history the United States, on May 20, 1902, gave to the world a new nation. On that day the Republic of Cuba came into possession of the independence which, in repeated revolutions, she had vainly striven to win. The boon so long denied her was wrested from Spain by the might of the first and greatest of American republics, and was bestowed upon her freely, as the gift of a mother to her own child, entering for the first time upon the responsibilities of life. The island of Cuba was discovered in 1492 by Columbus, who had already discovered America in that year. The Spaniards did not attempt its colonization until 1511, when Diego Velasquez subjugated and enslaved the natives. Small favor was ever shown the colony by the home government. It was subjected to heavy trade restrictions, and when, in the beginning of the eighteenth century, its agricultural wealth began to make a showing, the crown claimed the tobacco trade as a royal monopoly. The colonists opposed the claim violently, and there were frequent encounters between the Cubans and the Spanish militia. Spain finally was forced to give up the tobacco monopoly. During the struggle known as the Seven Years' War, which practically involved all Europe, the English, in February, 1763, gained possession of Cuba, and during the brief period of their occupation, its ports were opened to free commerce, while various needed internal improvements were inaugurated, only to be abandoned when the island was restored to Spanish rule. The better commercial conditions, however, were continued under the rule of Luis de Las Casas, who was the Spanish Governor from 1790 until 1796, and of his successor, the Count of Santa Clara. As a result, the island, through its Provincial Council, when Napoleon deposed Ferdinand VII., in 1808, and placed his brother Joseph upon the Spanish throne, unanimously declared unwavering loyalty to the old Bourbon dynasty. From this came its erstwhile title, "The Ever Faithful Isle," bestowed upon it, with promise of a more substantial reward, by the Provisional Government at Seville. When Ferdinand was restored in 1813, Cuba, with the other American colonies, soon began to feel the effect of his despotism. Spain's attempt to make the island a military station from which to direct operations against the Republics of Buenos Aires, Venezuela and Peru, which had shaken off her yoke, created general discontent there, leading to the formation of many secret political societies, and the persistent planning of revolutions. An open revolt in 1820 wrung from the King, after a struggle of two years, concession of the liberal constitution granted by the Provisional Government of Seville when Ferdinand was deposed. The first move for independence was planned by Soles de Bolivar in 1823, but the leaders were imprisoned upon the very day when the Republic of Cuba was to be proclaimed. Spain's rule became more rigorous, and in 1825 the Black Eagle Society organized another revolutionary movement, with headquarters in Mexico, and recruiting stations in the United States. This also was frustrated by the capture of the leaders before a blow was struck. A suspected plot for a revolt of the slaves about Matanzas in 1844 led to the torture of hundreds of

persons to obtain evidence, and of 1,346, who were tried and convicted, 78 were shot. Narciso Louez inaugurated a revolutionary movement in 1848, on the failure of which he escaped with some of his fellow revolutionists, reaching New York, where he began a new movement. His attempt to return to Cuba with a small party in 1849 was frustrated by United States authority. Organizing his forces outside of the United States in 1850 he landed in Cuba with 600 men, but was compelled to flee again, the party being chased by a Spanish war vessel to Key West, where the filibusters disbanded. Lopez, seconded by Colonel Crittenden, of Kentucky, led 450 men from New Orleans to Cuba in 1851. Dividing into two parties for their initial operations, they were surrounded by the Spanish forces. Crittenden was killed in action, while Lopez, who was captured, was subsequently shot. Stung by oppressive taxation, the Cubans, in 1868, began a war which lasted ten years. Carlos M. Cespedes, on October 10, at the head of 128 poorly equipped men, issued a declaration of independence, which drew to his standard within a few weeks 10,000 volunteers. A Republic was organized in April, 1869, with a constitution which, as one of its features, abolished slavery. Cespedes was elected President, and General Quesada was made commander of the insurgent forces. The Cubans, despite their generally poor armament, had the best of the war in the matter of fighting, but the Spaniards had superior resources, and the struggle degenerated into guerilla warfare on the part of the insurgents. After ten years both sides were ready for peace and General Martinez de Campos, the Spanish commander, made overtures to the Cubans, at that time under Maximo Gomez, which resulted in the treaty of El Zanjon, signed on February 10, 1878. Under this treaty Cuba was given representation in the Spanish Cortes, but Spain managed to control the elections, and the representation soon came to exist in name only. It was evident that Cuba could hope for nothing under Spanish rule, but must bear a constantly increasing burden of disproportionate taxation. Jose Marti planned a new revolution in 1894.

organizing an expedition in New York, and fitting out three vessels with men and war materials. These were intercepted by the United States authorities soon after sailing. Meanwhile there was a rebellion in Cuba. Marti joined Gomez, Crombet, Guerra and the Maceo brothers, all of whom had been in the former war, and plans were laid at the home of Gomez in Santo Domingo, which resulted in all of these leaders going to Cuba in May, 1895, when they found that the insurgents had already made some headway. Marti was killed in a skirmish a few days after their arrival, and Gomez, succeeding him in command, was once more opposed to General Campos, his former foe. General Valeriano Weyler succeeded Campos in command of the Spanish forces on February 10, 1896, and waged the war with such cruelty that he became known throughout the world as "The Butcher." In all these events, so far as they were subsequent to the establishment of the United States as an independent republic, there was a peculiar interest for the American Government. The proximity of Cuba and the important relation of the island to the commerce of the country made it desirable that peace should exist there. It was to this end that in 1848 President Polk made overtures to Spain for the purchase of Cuba, offering $100,000,000, which the Spanish Government declined. Besides the injury to trade sustained by the United States through the disturbances on the island there was the constant annoyance and frequent expense of maintaining international law by action to prevent invasion of Cuba by expeditions organized and fitted out in American territory. In addition there arose between the Spanish and American governments various issues which threatened warlike complications. The question of the right and the duty of the United States Government to interfere in the insular troubles came under discussion in official and other circles, and eventually there was developed a strong popular feeling in favor of such a course. This was manifest in repeated attempts to

Digitized by Google

bring before Congress the question of recognizing the belligerency of the Cuban Republic. While the agitation was in progress the U. S. battleship Maine called at the port of Havana, and while lying there was blown up by the explosion of a submarine mine during the night of February 15, 1898. This, although not the reason for the warlike action subsequently taken by the United States Government, had the effect of hastening that action. On April 20, 1898, an ultimatum was sent to Spain demanding the evacuation of Cuba. This was rejected by Spain and a war ensued which was one-sided from the start and was practically decided on July 3, by the sinking of Admiral Cervera's fleet off Santiago. Through M. Jules Cambon, French Ambassador at Washington, Spain, on July 6, 1898, opened negotiations for peace; and the terms laid down by the United States Government were accepted on August 2. The protocol was signed August 12, and Peace Commissioners were appointed who met in Paris on October 1. A treaty was signed on December 1, under which Cuba was finally evacuated by the Spanish troops on February 6, 1899. A military government of the island had been established by the United States on July 18, 1898, with Major-General John A. Brooke, U. S. A., as Governor. It was designed to establish a civil government, but the Cubans objected to having a civil governor appointed from the United States. Major-General Leonard Wood, U. S. A., succeeded General Brooke as Military Governor on December 20, 1898, and he immediately appointed a civil cabinet consisting entirely of natives, to whom were committed the several portfolios of State and Government, Justice, Education, Finance, Agriculture, Industry and Commerce. Under the administration of Governor Wood the rehabilitation of the island made rapid progress, and the work of public improvement, including sanitation, was carried on with vigor. Meanwhile, preparations were made for independent self-government, which had been pledged to the Cubans by their deliverers. Delegates to a Constitutional Convention were elected by the people on September 15, 1900, and began their deliberations in Havana on November 5. A constitution was adopted on June 12, 1901, which included a provision for certain treaty arrangements, giving to the United States practically a protectorate over the island. The form of government adopted was republican, with a President and Vice-President, each to serve four years; and a Congress consisting of a Senate and a House of Representatives. General elections were held under this constitution on December 31, for presidential and senatorial electors, representatives in the lower house of Congress, and provincial governors and councillors. At a meeting of the electors chosen, held on February 24, 1902,

Battlefield and Blockhouse at El Caney.

General Tomas Estrada Palma was elected President. Under a call issued by Governor Wood, which at the same time dissolved the Constitutional Convention, the Cuban Congress held its first meeting on May 5. President-elect Palma announced his cabinet on May 16. The formal inauguration of the new government took place at noon on May 20, when President Palma took the oath of office. Amid the salutes of cannon the American flag was lowered from every public building in Havana and the Cuban flag was raised in its place. Within the hour the last United States troops left the soil of Cuba and General Wood embarked on the U. S. cruiser Brooklyn for his return homeward. Cuba was left to national independence won for her by the arms of the United States.

THE ACT UNDER WHICH CUBA BECAME A NATION.

The following is the text of the Platt Amendment which defined the relations between the United States and Cuba:

1. That the government of Cuba shall never enter into any treaty or other compact with any foreign power or powers which will impair or tend to impair the independence of Cuba, nor in any manner authorize or permit any power or powers to obtain by colonization or for military or naval purposes or otherwise lodgement in or control over any portion of said island.

2. That said government shall not assume or contract any public debt, to pay the interest upon which and to make reasonable sinking fund provision for the ultimate discharge of which the ordinary revenues of the island, after defraying the current expenses of government, shall be inadequate.

3. That the government of Cuba consents that the United States may exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property and individual liberty, and for discharging the obligations with respect to Cuba imposed by the Treaty of Paris on the United States, now to be assumed and undertaken by the government of Cuba.

4. That all acts of the United States in Cuba during its military occupation thereof are ratified and validated, and all lawful rights acquired thereunder shall be maintained and protected.

5. That the government of Cuba will execute, and, so far as necessary, extend the plans already devised, or other plans to be mutually agreed upon, for the sanitation of the cities of the island, to the end that a

Digitized by Google

recurrence of epidemic and infectious diseases may be prevented, thereby assuring protection to the people and commerce of Cuba, as well as to the commerce of the southern ports of the United States and the people residing therein.

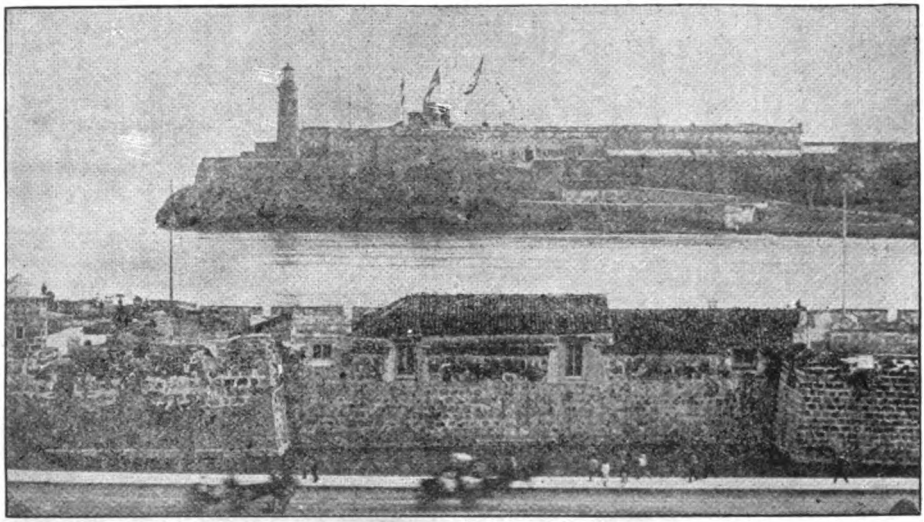
6. That the Isle of Pines shall be omitted from the proposed constitutional boundaries of Cuba, the title thereto left to future adjustment by treaty.

7. That to enable the United States to maintain the independence of Cuba and to protect the people thereof, as well as for its own defence, the government of Cuba will sell or lease to the United States lands necessary for coaling or naval stations at certain specified points, to be agreed upon with the President of the United States.

8. That by way of further assurance, the government of Cuba will embody the foregoing provisions in a permanent treaty with the United States.

The United States Government, in the latter part of 1902, appeared to be getting restless over a seeming disposition on the part of Cuba to evade the obligations it assumed by the incorporation of the Platt Amendment into the Constitution of the new Republic. Shortly after the inauguration of President Palma the United States sent to Cuba a commercial treaty, or "convention," the terms of which have not been published. Cuban authorities seemed to exhibit a complete indifference toward this treaty and failed to even recognize its existence. In October the Administration began to grow restless over the seeming disposition on the part of the new Republic to evade the obligations assumed by the incorporation of the Platt Amendment, and some decisive action on the part of the United States Government was rumored to be pending. From press reports it appears that the Cubans consider this treaty to offer them a small reduction on tariff charges, not enough to compensate them for the reduction asked by the United States. In view of a possible entanglement, it was said that the complete withdrawal of American troops from the Republic would be delayed for a time.

The Post Office scandal, which came to light in 1901, and which involved C. F. W. Neely, Chief of the Finance Division; H. G. Rathbone, former Director-General of Posts, and W. H. Reeves, were settled in March, 1902, when Neely, Reeves and Rathbone were each sentenced to imprisonment and to pay fines on conviction of embezzlement from the Cuban Postal Funds. On June 7 the Cuban Congress passed an act



Morro Castle That Guards Havana.

granting amnesty to all Americans in prison in Cuba, either under conviction or awaiting trial. These three were affected by the act, which was signed by President Palma, and were freed.

President Palma's administration, so far has not been altogether peaceful. Almost from the day of his inauguration, criticism of his acts began and has steadily grown. The dissatisfaction seems to have arisen from various appointments of the President, and the granting of some important concessions. In August it was rumored that an act of impeachment would be offered to the Congress, but it was never brought before that body for action. August 18, Emilio Terry resigned the portfolio of Secretary of Agriculture, giving "private reasons" as his grounds for this step. The newspapers of the island claimed it was done because of the policy of the administration, which did not please Senor Terry.

President Palma in his message to the first Congress of the Republic expressed gratitude to the Americans for liberty obtained for Cuba, said that the future of the Republic depended upon education, and called especial attention to the necessity of keeping the relations betwen Cuba and the United States most friendly.

In his message delivered November 3, 1902, the President spoke of the good order which had prevailed in the Republic since the Congress last met, and especially of the cordiality existing between his country and the United States. He referred only briefly to the recent treaty mentioned above.

The estimated income of the island is $17,513,800, and the expenditures $14,899,800, leaving a surplus of $2,614,000.

The Cuban Cabinet, at the close of 1902, is as follows: Vice-President, Luis Esteves Romero; Secretary of Justice, Carlos Zaldo; Secretary of State and Government, Diego Tamayo; Secretary of Finance, Jose Garcia Montes; Secretary of Public Instruction, Eduardo Yero; Secretary of Agriculture (acting), M. L. Diaz; Secretary of Public Works, Manuel Luciano Diaz.

Delaware.

Capital:
DOVER.

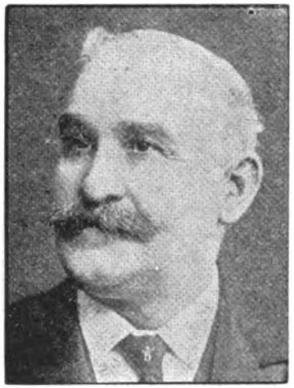
Delaware, one of the thirteen original States, and next to the smallest in the United States, takes its name from Lord De la Ware, or Delawarr, Governor of Virginia, who entered the bay in 1610. The discovery of the Delaware, however, was made in 1609, by Hudson. In 1829 De Vries and thirty colonists from Holland settled near Lewes. In 1637 the Swedish West Indian Company sent out a colony of Swedes and Finns, who settled the country from Cape Henlopen to the falls near Trenton. In 1656 the territory was reclaimed by the Dutch, who sent to Sweden all of those original colonists who refused to swear allegiance to Holland.

Delaware settlements continued to be under Dutch control until 1664, when New Netherlands was conquered by the English. Later William Penn obtained the grant of a tract along the Delaware River, which he called the "territories of three counties along the Delaware." The State became distinct from Maryland in 1703.

The State has an area of 2,050 square miles, and in 1901 its estimated population was 187,000. It is famous for its orchards and for the qualities of its fruits. Upon its horticulture and upon its geographical position depend the industrial status of the State. The markets of Philadelphia and Baltimore are easily accessible for its products and many railroads bring coal and iron from the Pennsylvania mines.

The principal manufacturing industries are iron and steel products; rolling mills, car shops, machine shops and ship building plants being of most importance. The total value of the products of these industries in 1900 was 30.7 per cent of the value of all the products of the State. The most remarkable development has been in the fruit canning and preserving industries, which advanced 112.2 per cent in a decade. There has been a marked decline in the manufacture of fertilizer and of cotton and woollen goods in the same period.

The main interest of the session of the Delaware Legislature of 1901 was centred in the fight for United States Senatorship. The Legislature met January 1, 1901, and was in session until March 8, and nearly daily ballots were taken without the deadlock being broken. The Republicans of the House were divided into two factions, those in favor of the election of J. Edward Addicks and those opposed to him. The Senatorial ambition of Mr. Addicks dates back to 1889, when he became a citizen of the State. Mr. Addicks displayed great energy in organizing the Republican forces, especially in the Democratic county, and through his personal following he held the balance of power between the Democrats and Republicans in the Legislature, but it was not enough to control the vote.



Gov. John Hunn.

In 1899 the expirement of the term of Senator George Gray left a vacancy in the National Senate, and there was immediately raised the cry of "Addicks or nobody." The "regular" Republicans, those opposed to Mr. Addicks, refused to accept him as their candidate, and so the party in the House could not agree upon a man to replace Senator Gray.

In 1901 the Legislature had to elect not only one Senator, but two, for the term of Senator Kenney would expire on March 4, 1901. The Addicks men endeavored to compromise matters with their opponents in the Legislature by offering to permit any of the regular Republicans to propose a candidate for the short term provided that Addicks be elected to the long term. The proposition was declined by the opposition, and the ballots were taken daily until the Legislature adjourned.

The regular time for adjournment was March 1, but as there had been a ruling in 1900 to the effect that a Governor could not appoint a Senator if a vacancy "happened" during a session of the Legislature, and as the term of Senator Kenney would expire March 4, it was thought the part of wisdom not to adjourn the Legislature until after that date.

On August 19, 1902, the "regular" Republicans met in convention and nominated L. H. Ball for Congress. The Union Republicans—the Addicks faction—held their convention on September 2, nominating William M. Byrne for Congress, Addicks having stated that he would withdraw from the convention if the nomination of Ball was indorsed.

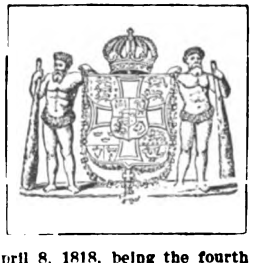
The platform of the Union Republicans touched on State issues and indorsed the Administration of President Roosevelt, although claiming that the Union Republicans had received unfair and unjust treatment. It approved President Roosevelt's Cuban policy and demanded that the anthracite coal mines be opened and held that the use of the mines should be controlled by the courts. It was asserted that trusts were a menace to the safety of the country.

A plan offered with the view of breaking the Senatorial deadlock was that both factions unite on a man from a list of twenty names, Addicks to be omitted, was not even considered by the Addicks faction.

At the suggestion of the Governor the Delaware Legislature of 1901 instructed the Attorney-General to take the necessary legal steps to protect the rights of the State in the boundary dispute between that State and New Jersey. The contest grew out of the arrest of some Delaware fishermen who were fishing along the New Jersey shore in 1871. Delaware claimed sovereignty over the Delaware River to the low water mark on the New Jersey shore opposite New Castle and distant not more than twelve miles from the coast. New Jersey claimed jurisdiction of all the river east of an imaginary line drawn down the centre of the stream. The litigation is now pending in the United States Supreme Court.

Denmark.

Capital:
COPENHAGEN.



From its earliest days the Crown of Denmark has been elective. When the male line of the princely House of Svend Estridsen became extinct, in 1448, the Diet selected Christian I., Count of Oldenburg, as ruler of the country, and the dignity remained in that family until 1863, when the male line became extinct with the death of King Frederick VII. In view of this lack of direct heirs, therefore, the Powers of Europe prepared and signed the treaty of 1852, by the terms of which the succession to the throne was bestowed upon Prince Christian of Schleswig-Holstein-Sonderburg-Glucksburg and his male descendants, through his union with Princess Louise, of Hesse Cassel, who was the neice of King Christian VIII. of Denmark.

Prince Christian, who assumed the title of King Christian IX., was born April 8, 1818, being the fourth son of the late Duke Wilhelm of Schleswig-Holstein-Sonderburg-Glucksburg. His marriage to Queen Louise,

Digitized by Google

who was born September 7, 1817, occurred on May 26, 1842. She died September 29, 1898. They had issue:

Name.	Born.	Died.	Married.	Born.	Marriage.	Issue.
1. Prince Frederick, heir apparent	1843	....	Princess Louise of Sweden	1851	1869	8

THE MINISTRY [Appointed July 23, 1901].—Minister of Foreign Affairs and Premier, J. W. Dennt-zer; Minister of Interior, Enerold Sorensen; Minister of War, Colonel W. H. O. Madsen; Minister of Justice and Minister for Iceland, P. A. Alberti; Minister of Public Worship and Instruction, J. G. Christensen; Minister of Marine, Admiral F. H. Johnke; Minister of Finance, C. F. Hage; Minister of Agriculture, O. Hansen, and Minis ter of Public Works, F. Horup.

King of Denmark.

THE NATION.—The constitu tion of the sovereign Kingdom of Denmark dates back to 1849. It vests the executive power in the King and his Ministers, and the legislative power in the Rigsdag, of two houses, and the sovereigns of the sixty-six members of the Laudsthing, or upper house, twelve of whom are appointed by the King for life and fifty-four chosen by es pecially selected electors for a term of eight years. The Folkething, or lower house, consists of 114 mem bers, elected by universal ballot, for periods of three years.

The established religion of Den mark is the Evangelical Lutheran, to which church the King must be long. Seven bishops superintend the affairs of the National Church, Religious toleration is complete and absolute.

Elementary education in Den mark is compulsory, the school age being from seven to fourteen. The schools, maintained in each com mune, are free. Besides the an cient University of Copenhagen, there are a great number of Gov ernment as well as private institu tions for higher study.

Over the Courts of Justice in the hundreds (districts) are two Courts of Appeal at Copenhagen and Viborg. The Hojesteret, or Court of Final Appeal, at Copen hagen, caps the system of judiciary.

Finance.—The estimated bud get for 1902-03 shows: Expendi ture, $18,097,052; revenue, $18,217,899.

Denmark is an agricultural country. Of its total area, 80 per cent is productive; less than half of this is arable, the remainder being pasture, meadow and forest. The value of imports in 1900 was $235,750; of exports, $168,875.

The Danish provinces consist of the Danish West Indies, of Iceland, Greenland and the Faroe Islands. These latter are important, though small, containing but 515 square miles and having a population of but 12,900. The Danish Government has made the trade of Greenland a State monopoly. It amounts to $166,200 in imports and to $68,000 in exports.

Iceland is perhaps the most important of the Danish possessions, and does the largest business. The export trade in fish, sheep and ponies in 1900 amounted to $598,600, while the import trade was $477,000, in the necessities of life. Iceland has its own Governor and Al-thing, or Assembly, although these are largely controlled by the Danish Government.

The Danish West Indies are the most important of Denmark's New World possessions. Although negotiations were long continued for their sale to the United States, and a treaty was signed January 24, 1902, and ratified in the American Senate February 17, 1902, the transfer has not as yet been made. These islands are three in number, St. Thomas, St. John and St. Croix. St. Thomas and St. John are members of the Virgin group, and are formed by a prolongation of the elevation that forms the Greater Antilles. They are 38 miles due east of Porto Rico. St. Croix, the largest of the three, lies 50 miles to their south and 60 miles southeast of Porto Rico. It belongs to the Lesser Antilles. St. Croix is usually regarded as the capital of the group. The largest city, Charlotte Amalia, is in St. Thomas, and has a population of 10,000. Christiansted, in St. Croix, has a population of 5,500. The cultivable area is not large. St. Croix has 16,500 acres of sugar plantations. All three produce considerable quantities of tropical fruits and small quantities of rum, tobacco and bay rum. The commerce of the islands, which was formerly considerable by reason of the fact that the port of Charlotte Amalia, on St. Thomas, has been for many years a free port, and one easily utilized by vessels engaging in the West Indian traffic, has materially deteriorated since the application of steam to navigation. Steam packets, with regular service, now visit every island in the West Indies, and thus render each island independent of local supplies, and the comparative monopoly formerly enjoyed by St. Thomas and its port of Charlotte Amalia has been to a considerable extent reduced.

The imports from the three islands into the United States in 1901 amounted to $478,262, while the exports from the United States to the islands were $692,150, an excess of $213,888.

The budget estimate for 1900 in St. Thomas and St. John provided for a joint expenditure of $179,686, while the revenue was only $95,620. In St. Croix the revenue amounted to $155,365, while the expenditure was $253,215.

THE DANISH COLONIES.

Colonies.	Area in Sq. M.	Population.	Imports.	Exports.
Iceland	39,756	70,927	$2,200,000	$1,800,000

District of Columbia.

Capital:
WASHINGTON.

The District of Columbia is the seat of the Government of the United States and is co-extensive with the city of Washington. It was formed March 30, 1791, by a cession of land amounting to 1,000 square miles on both sides of the Potomac River, to the United States by the States of Maryland and Virginia. It formerly occupied two counties, Alexandria and Washington. Alexandria County was re-ceded to Virginia in 1846, and in 1874 the county government of Washington was abolished.

The total area of the District of Columbia is approximately sixty square miles, and in 1901 its estimated population was 283,718. The present government of the District was instituted in 1878, when the administration of District affairs was given by an act of Congress to three Commissioners, two of whom are appointed by the President of the United States from citizens of the District having three years residence therein, while the third is detailed by the President from the Corps of Engineers of the United States Army. The present Commissioners are Henry B. F. McFarland and John W. Ross, whose terms expire in March, 1903, and Major John Biddle, who holds office during the pleasure of the President. The secretary is William Tindall.

The agricultural pursuits in the District are such as are usually found near large cities. Most of the cultivated land is devoted to vegetable and fruit farms and floral establishments, while there are many prosperous dairy farms within its borders. Of the 8,489 acres of land under cultivation, negro farmers possess only twenty-nine acres.

In manufacturing the District has only those industries which may be termed of local importance. The products of the manufacturing establishments are used within the District and the city of Washington, excepting, of course, the products of government establishments, which form about one-fifth of the manufacturing interests.

For more than a decade Washington has had one of the most complete systems of manual training in elementary schools to be found in the country. New school buildings are now being erected, and it is expected that this fact will mark an epoch in manual training development. In the new schools manual training in the domestic branches will be made obligatory for girls, it being felt that the rush for normal training is having the effect of making girls forget the domestic arts in their eagerness to become teachers.

The general tax rate in the District in 1901 was $1.50 for each $100 worth of property, except that used solely for agricultural purposes, where the tax rate was $1 for each $100.

Following the centennial celebration of the establishment of the seat of government in Washington, held in December, 1900, came a general popular demand that Congress should enact legislation for the improvement of the District. In accordance with recommendations of the District Commission, Congress made large appropriations in 1901 to meet the anticipated deficiencies in the District, so that no delay might be experienced in providing for the completion of a sewerage disposal system, the construction of a water filtering plant and the establishment of an adequate water supply.

At an extraordinary session of Congress, held in March, 1902, a commission of eminent architects and landscape gardeners was appointed to prepare a general plan for the improvement of the public park system of the District. Work at renovating the White House began in the early Summer of 1902, the State offices being moved for the time to another building, and for several months to Oyster Bay, L. I., where President Roosevelt has his Summer home.

The plans for the beautifying of Washington, as suggested by the Burnham Commission of 1889, and practically accepted by Congress, are really the celebrated plans prepared by L'Enfant under the supervision of Washington and Jefferson, with some modifications to adapt them to the altered and increased needs of the capital of a nation of 70,000,000 people. The plans call for the construction of a series of handsome public buildings and the laying out of parks, gardens and avenues, with axial relation to the Capitol, White House and Washington Monument. The revised plans were prepared by the Commission appointed in March, 1901, and there is now pending in Congress a scheme of taxation whereby the work may be carried on without proving burdensome to the District.

Dominican Republic.

Capital:
SANTO DOMINGO.

The settlement of Santo Domingo was made by the Spaniards, and the greater part of the island is still occupied by a Spanish speaking population. Within its limits was established the first civilized settlement of the new world, and its territory is closely associated with the career of Christopher Columbus. It continued under Spanish rule until 1801, when the government formally abandoned it. In 1821 the people proclaimed themselves a republic under the flag and authority of Colombia. Roger, President of Haiti, invaded it and the dominion of the whole island fell into his hands. In 1844 the people of the eastern end of the island again asserted their independence, and established the Dominican Republic, and from that date to this the two political divisions have been maintained. In 1861 the Spanish Government succeeded in re-establishing its authority over Santo Domingo, but in 1865 all claims to sovereignty were withdrawn. The inhabitants of the Republic became in time anxious for annexation to the United States, and in 1871 a commission appointed by President Grant visited the island to inquire into its condition and resources. Their report was favorable to annexation, but Congress took no action upon it. The population of the Republic is about 750,000, mainly composed of a mixed race of the original Spanish settlers and the Indian inhabitants, of mulattoes and negroes, and of whites or European descended inhabitants.

With the exception of Cuba it is the largest of the West India Islands, having an area of 28,249 square miles, of which 18,045 belong to the Republic of Santo Domingo, the rest being comprised in Haiti. It is a beautiful and fertile country, with a great variety of climate, soil and vegetation. Gold is found in the sands of the streams, and other mineral products include silver, platinum, tin and iron.

The government is popular, representative and Republican, its administration being entrusted to three co-ordinate branches, the legislative, executive and judicial.

The most important industry of the Republic at present is the production of sugar, the principal market for which is the United States, where it is now admitted free of duty. Other products are rum, cocoa, coffee, tobacco and tropical fruits. A striking characteristic of Santo Domingo is the luxuriance of its forests, the export trade in timber having reached large proportions. There is no lack of labor to prepare trees for the market, as all the inhabitants of the interior are skilful workmen and are more expert in this than in any other kind of labor.

The great element needed for the national progress and prosperity of the Dominican Republic is better means of transportation. The Government is doing all in its power, by means of liberal concessions and guarantees, to aid private enterprise in the construction of railroads. Under these circumstances the island is rapidly being supplied with railroads, which will be an important factor in its future prosperity.

Digitized by Google

The foreign commerce of the country, which is mainly with the United States, Spain, Great Britain, France, the Danish Antilles and Germany, is showing a healthy and steady increase. One of Santo Domingo's greatest needs is an influx of progressive and industrious people. With the increase of productive power supplied by these, together with improved means of interior communication, the country will be able to demonstrate the correctness of her estimate formed in 1871 by the United States commissioners, who said that, taken as a whole, Santo Domingo is one of the richest and most fertile regions on the face of the earth.

The city of Santo Domingo, the seat of the Government, is the oldest existing settlement by white men in North America, having been founded in 1493, by Bartholomew, a brother of Columbus. It was here that the great discoverer was imprisoned by order of Bobadelila, and the cell in which he was confined is still shown to visitors.

Santo Domingo has been famous in all times for its great mining wealth, which, however, still remains undeveloped. The most important minerals found are iron, gold, copper, lignite, salt and petroleum.

The Executive Cabinet is Secretary of State, General Juan Francisco Sanchez; Secretary of the Interior and Police, General Casimiro Cordero; Secretary of Justice and Public Education, Licenciado Jose Maria Cabral y Balz; Secretary of Finances and Commerce, Licenciado Emiliano Tejera; Secretary of War and the Navy, General Miguel Andreas Pichardo; Secretary of Improvements and Public Works, Senor Don Jose Fco Guzman; Secretary of Posts and Telegraphs, Licenciado Rafael J. Castillo.

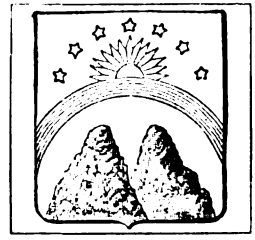
Ecuador.

—

Capital:
QUITO.



The history of Ecuador may be divided into three different periods—the first prior to the arrival of the Spaniards in 1526, the second comprising the three centuries of Spanish rule and the third the years which have elapsed since. In 1822 the independence of the country and the establishment of the Republic became accomplished facts. The history of the first period is, of course, mostly tradition, and consists of the usual story of warfare by savage peoples. Under Spanish rule the same misrule and despotism which prevailed everywhere in Spanish America were felt in Ecuador, with perhaps greater force than elsewhere. The peace which sometimes prevailed was the result rather of terror or lack of power than of the happiness and satisfaction of the people. On the 24th of May, 1822, the battle of Pichincha put an end to Spanish rule, and secured the independence of the country. Early in the year 1830 Ecuador constituted itself a free and independent State, framed a Constitution and elected a President, and has continued under the same form of government since.

The Republic owes its name to the fact that the equator traverses its territory at a very short distance from its capital, dividing the country into two sections north and south of the line. The limits of the country have never been surveyed or even determined. Its greatest length from north to south has been estimated at about 520 miles, while its greatest width, from east to west, is calculated to be about 740 miles. The total area is put at 248,580 square miles.

The government of Ecuador is popular, representative and republican in form. Suffrage is universal for citizens. The financial condition of the country has steadily improved under the benefits of peace and a stable administration. The country is making rapid progress in the matter of public instruction, there being, in addition to numerous primary schools, nineteen colleges and a university.

Owing to the topographical conditions and the peculiarities of its soil and climate, Ecuador is essentially an agricultural country, its productions varying, however, according to the difference of heat and elevation. The chief product is cocoa, and next to this comes sugar. Other valuable products are cotton, tobacco, ivory, nuts and Peruvian bark, or cinchona.

Ecuador abounds in gold and precious metals. The manufacturing business has not been developed in accordance with its capacity, partly owing to the difficulty of obtaining adequate transportation facilities. The foreign trade of the country has been as high as $25,000,000 in some years, and is nearly equally divided between exports and imports.

The Cabinet is made up of these members: Interior, A. Moucargo; Finance, T. Gagliardo; Army and Foreign Affairs, Jose Peraltad; Navy, Nig Grellan.

These officers are appointed and removed at the will of the President, but no one can be appointed who has not the qualifications required to be a Senator. The Constitution especially sets forth the cases in which the Secretaries of State become responsible, together with the President, or individually, for their official action. In all other cases the President himself is responsible.

Education in the United States.

MILES M. O'BRIEN,
ex-President
of the
New York Board
of Education.

Education is an undetermined problem, the solution of which, constantly approached, may never be fully reached, for education is one of the essential elements of progress, and progress is never ending. Three great nations—the United States, England and Germany—lead in efforts at solution of the problem, each pursuing a way of its own. The character of a nation makes its schools, as, in turn, the character of its schools makes a nation, and the American spirit, now making itself felt in every current of the world's life, asserts itself herein as emphatically as in any of the various directions wherein it has won for the country a pre-eminent place among the nations.

Of the three countries mentioned the United States is the only one where the Democratic spirit rules in the matter of directing educational affairs. England has a national system which has been aptly described by an English writer as multi-cellular and amply provided with safety valves, but not well adapted to getting up a good head of steam. Germany as well as the United States differs from England in this respect, for there is, strictly speaking, neither a German system of education nor an American system. While in England the schools are under the control of a Governmental Board of Education, no such control is exercised by the Imperial Government at Berlin, nor by the Federal Government at Washington. In educational matters the different States of the German Empire retain considerable varieties of organization and even of aim; and in America there are very great differences both in administration and in organization between the educational systems of different States of the Union, and even of different cities and towns in any one State. Nevertheless, the masses of the people in Germany have very little to do with determining the course of educational policy, for there the keys of the position, as a rule, are in the hands of a strong central authority; while in the United States nearly all education rests on popular control. In other words, educational progress in Germany is guided by administrative order, while in America it depends very largely upon free discussion.

That education is compulsory in the United States is not the result of any Federal enactment, but of self-imposed laws adopted by the several constituent commonwealths. The founders of the colony of Massachusetts in 1642 enjoined upon the municipal authorities the duty of seeing that every child within their respective jurisdictions should receive a proper amount of schooling. A similar obligation was practically accepted by the thirteen original States federated in 1789, and by all of the States which subsequently entered into the Union. But there is no central authority which could enforce the fulfilment of this duty, and hence there are considerable varieties of type among schools and marked differences in the nature and extent of provision made for primary, secondary, technical and collegiate education. The one point whereon there is practical unanimity among the authorities is that theological instruction in any form is debarred from the common school. Argument in favor of this lies in the conviction that in communities where religious thought and profession are absolutely unfettered, and where no single ecclesiastical body is entitled to special recognition or privilege, the State should keep itself aloof from religious parties and controversies, and in its support of the common schools should aim to make them meet those recognized needs which are common to all sects. Then it is believed that there is actually in the school, despite the absence of any teaching which might be forced into denominational channels, a religious atmosphere, derived from the influences of home and church, which is in no manner impaired by making the course of education strictly secular.

While there exists no uniformity in the methods or machinery of education in the several States of the Union, there prevails in its stead a local patriotism which makes each of the leading communities proud of its own institutions, and keenly solicitous to produce such examples of good work as may prove worthy of imitation elsewhere. Underlying all diversities of method, organization and achievement, and the variances of view expressed by experts, there is essential unity in the aims of all American communities,

Digitized by Google

as President Eliot, of Harvard University, has expressed it, "to make democratic education universally accessible, and by means of it to lift up the whole population to a higher plane of intelligence, conduct and happiness." In view of this Sir Joshua G. Fitch, LL.D., says, as author of one of a number of special reports on education in the United States, presented to both houses of the British Parliament by order of the King: "America may be regarded as a laboratory in which educational experiments are being tried on a great scale, under conditions exceptionally favorable to the encouragement of inventiveness and fresh enthusiasm, and to the discovery of new methods and new truths. The fundamental principle of democracy, in the view of American citizens, is local self-government. There is not, and is not likely to be, any vacillation of public opinion on this point; and there is at present no visible indication of any centripetal force which might tend to the greater influence of the central government over matters concerning education, since these are still, and always have been, within the exclusive province of the several State Legislatures."

Democratic education, to use President Eliot's term, may be defined as a form of individual self-government in the schools. Underlying the American idea of education there is that principle of human freedom and responsibility from which sprang the Republic itself. The old-time school was an autocracy or an oligarchy; the American school has become a democracy, no less under law than the other, but under law which applies to teacher as well as to pupil, and in the operation of which there is a common interest. Its processes as well as its character have changed, and the teacher is no longer a task-master, but a guide; a helper, who assists in the evolution of a mind which, expanding, absorbs from the world of knowledge so much of what is necessary for its full development as it can assimilate.

Thus, in America, education has come to a pass where it represents not merely a certain amount of time spent in the schools, not a certain degree of proficiency in spelling, reading, writing, geography and arithmetic, but the development of the entire personality of the pupil into a character which shall, as early as possible, harmonize with the ideals of American citizenship. It is to this end that the common school has been freed more and more from autocratic rule and placed under such systems of discipline as are based upon the principle of making the child capable and desirous of living in the best possible way in the forms of civilized life, namely, the family, the State, the Church, the industrial world and general society, to the end that he may develop into a self-respecting, self-governing and helpful component of these same institutions. Hence a moral element enters into the educational process at the very beginning in the awakening of a sense of responsibility to self and to the community, the latter represented to the pupil by his teachers, his schoolmates and the home circle, whereto he bears the influences which surround him in the school.

In the arrangement of courses of study due consideration is given as a matter of course to those things which are essential in the practial every-day life of a great industrial and commercial nation. While the three studies of reading, writing and arithmetic no longer make up the full complement of what constitutes a common school education, they have by no means lost their importance because the curriculum has been enlarged to include new elements growing out of moral and social considerations. The value of the equipment they confer is, on the contrary, enhanced by the creation of right tastes, the training of the hands and minds of children in useful ways which stimulate to industry and appeal to the love of usefulness or of beauty and the inculcation of that spirit of patriotism the presence of which in every American school is indicated by the fact of the national flag floating conspicuously over the schoolhouse or from some prominent point in its front on every day during the school year.

As to methods of instruction, they vary with locality, but in general the tendency is to get away from the old idea of forcing in upon the youthful mind something which is altogether extraneous to it. The antiquated system of a-b, ab, may still exist in out-of-the-way places, but in general it has been superseded by more rational methods. This is to be observed in the elementary and primary stages of education, which appear to be based more and more, as the science advances, upon the idea of so preparing the minds of pupils that they themselves will feel the desirability of such instruction as their school affords. Knowledge of language and numbers is imparted in connection with ideas at the very beginning. To this end the kindergarten system, first introduced in the country independently of the educational authorities, has been officially adopted in one locality after another with satisfactory results, which promise its universal adoption within a few years. The word to be spelled, the number to be expressed in figures is first made interesting to the pupil by means of stories or material objects, and the powers of letters or of figures are made evident in association with words representing known objects, or figures representing numbers which are comprehended. The result is that the child is led rather than driven along the paths of knowledge, and one of the greatest benefits is that the habit of thinking, essential to the full success of all study, is inculcated at a very early age. Or, it would be better to say, the power of thinking, which asserts itself in some manner even before it is considered necessary to begin the process of education, is brought under the systematic control of its possessor with a view to its being exercised with definite aims.

Thus the child enters upon the secondary stage of its education prepared to make intelligent use of the broader opportunities it offers for the acquisition of that knowledge which is to contribute to the successful exercise in life of whatever natural gifts the individual may possess. While it is altogether unlikely that any definite choice of future occupation has been made at this period, there is an accentuation of that moral principle in education which demands for the future citizen such all-around development of mental faculty and manual ability as would prove useful in any calling or under any circumstances. The special task of secondary education in a democratic community has been described very succinctly by Professor Paul H. Hanus, Professor of Pedagogy at Harvard University, in the following statement:

"First, to promote the pupil's normal physical development." This, of course, is in continuation of what is begun in the elementary and primary stages.

"Second, to stimulate every individual to aim at intelligent self-support, or some worthy form of life-work, whether he inherits an income or not, and to give him general preparation for such activity.

"Third, to stimulate and prepare each pupil, so far as his age and the time limits of secondary education permit, to participate, intelligently and helpfully, in promoting the welfare of the society of which he is to form a part.

"Fourth, to prepare and to stimulate each pupil to carry forward his own development uninterruptedly, so far as his circumstances permit, through self-teaching, whether he continues his studies in some higher institution after his school life is closed, or whether he enters at once on his active life work."

Professor Hanus advocates also the introduction of courses in manual training and commercial principles and practice, which, together with their general educational aims, minister directly to vocational and social aims. This is done in some places, while in others the school system includes fully equipped manual and industrial training schools and technical schools, wherein the vocational courses are paramount, but are so arranged as to permit of the continuation of such purely intellectual courses as require to be followed further by the class of youth eligible for admission. There are also commercial high schools included in some of the public school systems, and it is inevitable that, in view of the commercial character of the nation, this experiment in public education will have a large development. There is a strong argument for it in the success, as business enterprises, of the commercial colleges and business colleges which have been established by private parties in various sections of the country, some of them dating their foundation back a half century, and several of them expanded into chains of related institutions, offering the combined benefits of the entire chain to the students of a constituent college in any one of the cities and towns included in the system.

The idea of vocational courses is carried forward into the realm of the higher or collegiate education, and one of its manifestations is seen in the adoption of the "elective" principle in even such old and great institutions as Harvard University. It prevails in the academic departments to an extent which would scarcely have been deemed possible a generation or two back, especially in view of the fact that the larger colleges and universities each includes scientific and professional schools, other than those of law, medicine and divinity, which are presumably for post-graduates, and which, at any rate, are designed to prepare students for some one particular vocation.

Both in the rapid multiplication of colleges in the United States and in the lavish generosity with which endowments and other benefits are bestowed upon them, there is evident the spirit of utilitarianism

Digitized by Google

which underlies education in the United States. While the desirability of advanced and high scholarship is well recognized, and much is done in behalf of learning for its own sake, the practical American mind inquires continually as to what is the end in view. And here, as in the elementary and the primary schools, the answer is found in the manifest determination to create good citizenship and build up self-reliant, self-respecting and self-governing communities.

The idea is a national one, as was made evident in the fact that one of the gifts of the United States to Cuba, before conferring upon the young republic the independence won for her by American arms, was a thorough system of public education. There was earlier evidence in the attention which the United States Government gave to the creation of systems of education for the Indians and for the enfranchised colored people of the Southern States. In the case of each of these two races the Government has begun an experiment which is being carried on with the utmost care, the main object being, as in all American education, to assimilate these elements as nearly as may be possible to the general character of the entire population, working for both advance and rise in character, knowledge and ability. The problems presented are difficult ones, and are continually presenting new aspects as each difficulty is surmounted. Even greater difficulties than any yet encountered are presented in the Philippines, but the work has been undertaken there as systematically as elsewhere, with the certainty that, whether the islands remain a possession of the United States, become themselves one of the States, or receive ultimately the gift of independence bestowed upon Cuba, they will be American in the spirit of progress which stands for patriotism, personal character and productive or constructive worth.

Egypt.

—

Capital.
CAIRO.

The reigning Khedive of Egypt is the seventh ruler to represent the dynasty of Mehemet Ali, who secured absolute control of the country by force of arms in 1811. In 1879, Ismail I., grandfather of the present ruler, was compelled to abdicate by the Governments of Great Britain and France, and, while he was succeeded by his son, Mohamed Tewfik, a Comptroller-General was appointed by each of the two European nations, and these officials supervised the finances of the country until the military revolt, in 1882. On January 18, 1883, after the British had overcome the revolt and dispersed the army, the Khedive issued a decree abolishing the dual control and appointing a British financial adviser as a member of the Government. The position of Egypt, therefore, is a peculiar one. Nominally it is a province of the Turkish Empire, although actually it is autonomous under the Khedive, being subject only to the tribute of $3,410,460, payable annually to the Sultan, and yet, at the same time, it is dependent for its exis- tence upon the will of European Powers, Great Britain being the dominant factor in the control of its internal affairs.

The Khedive of Egypt.

Abbas Hilmi, the present ruler, is the son of Mohamed Tewfik. He was born July 14, 1874, and succeeded to the throne on the death of his father, January 8, 1892. He married Princess Ikbal Hanem, and their children are: Princess Emina Hanem, born February 12, 1895; Princess Atiaton-Ilah Hanem, born June 9, 1896; Princess Fathieh Hanem, born November 27, 1897; Prince Mohammed Abdul Mouneim, born February 20, 1899, and Princess Loutfieih Hanem, born September 29, 1900. Prince Mohammed Sepis heir apparent to the throne.

Egypt is a Turkish dependency. The administration of Egyptian affairs is carried on by native ministers under the ruling of the Khedive. All matters of finance must be concurred in by an English Financial Adviser, who sits in the Council of Ministers, but is not an executive. Egypt proper is divided into six governorships (those of Cairo, Alexandria, Damietta, Suez Canal, including Port Said and Ismailieh, Suez and Sinai Peninsula and El Arish) and fourteen provinces, six in Lower Egypt, eight in Upper.

Christians, Jews and Moslems form by far the largest part of the population, with the Moslems far outnumbering all others.

Egypt boasts 9,878 primary, 28 secondary, 25 higher or professional and 96 exclusively female schools and academies, both private and public.

The system of justice in Egypt is complicated. Religion plays a great part. Owing to the capitulations in Egypt, as in the rest of the Ottoman Empire, foreigners are exempt from the lower tribunals.

The estimated revenue for 1902 amounts to about $54,222,000, and the expenditure to about $49,501,395. In 1901 the public debt was $500,402,729.

Egypt is distinctively agricultural, having three seasons each year. The Winter crops, sown in November and harvested in May and June, are cereals of all kinds; the Summer crops, sown in March and harvested in October and November, are sugar, rice and cotton; the Fall crops, sown in July and Harvested in September and October, are a kind of maize, rice and vegetables. In Lower Egypt, where there is canal irrigation, cotton is grown in great quantities. The imports of Egypt in 1901 amounted to $76,244,695 and the exports to $78,650,440. This is exclusive of specie movements.

Anglo-Egyptian Soudan was won from the Khalifa in 1899 by the combined forces. Under the treaty of January 19, that year, the province is governed under the two flags and is presided over by a Governor-General appointed by Egypt with British assent. The import and export of slaves is prohibited, no duties are levied on imports from Egypt, and duties on foreign imports are under the Egyptian schedule. Laws are made by proclamation.

In 1891 the estimated revenue was $1,121,870, and the expenditure $3,070,475. Egypt makes up the deficit.

The whole of the Egyptian army was disbanded by a decree of the Khedive in 1882, and a new army organized by a British general officer known as the Sirdar. The present Sirdar is Major-General Sir Reginald Wingate, K. C. B., K. C. M. G., D. S. O., A. D. C. The army has a total strength of 18,114, and has 134 English officers of rank and a full complement of native subordinate officers. Since the rebellion of 1882 an English army of occupation has remained in the country.

Egypt and Great Britain rule the Soudan jointly, the flags of the two countries being used together. No duties are levied on imports from Egypt and the duties on imports from other countries may not exceed those levied in Egypt. The cost of administration is, for the present, largely borne by Egypt. The subject territory has an area of about 950,000 square miles and a population estimated at about 10,000,000. Egypt receives from this country a considerable amount of gold dust, ivory, ostrich feathers, gums, hides and skins, though the Dervish revolts of the last few years have nearly stopped active trade. By the convention between the British and Egyptian governments, signed January 19, 1899, the import and export of slaves is prohibited. Cairo is in telegraphic and railway communication with Khartum, and since December, 1899, the Soudan has been declared open for general traffic.

Interior of a Government Fish Car.

Fish, Their Propagation and Protection.

The work of the United States Commission of Fish and Fisheries is carried on at twenty-five stations or hatcheries located at suitable places throughout the country. At Woods Holl and Gloucester, Mass., cod, mackerel, lobster, and other important marine species are propagated, and the fry are deposited on the natural spawning grounds along the coast. At Battle Creek, Baird and Hoopa Valley, in California, at Clackamas in Oregon and Little White Salmon River in Washington, the eggs of the Pacific salmon are collected and hatched, and the fry are planted on the spawning beds in the neighboring streams. The Atlantic and land-locked salmon are cultivated in Maine, at Craig Brook, and Green Lake, to restock the depleted streams and lakes of New England and Northern New York. On the Great Lakes, at Cape Vincent, New York, Put-in-Bay, Ohio, Alperia, Mich., and Duluth, Minn., the work is with white fish and lake trout in order to sustain the great commercial fisheries conducted for these species. Hatcheries in the interior at St. Johnsbury, Vt., Wytheville, Mich., Manchester, Ia., Bozeman, Mont., Neocho, Mo., Quincy, Ill., San Marcos, Texas, and Leadville, Col., are devoted to the important work of maintaining in the inland lakes and streams the supply of brook trout, rainbow tront, black bass, crappie and other fishes. During the Spring on the Potomac, Delaware and Susquehanna rivers, shad are hatched and are distributed in suitable streams along the Atlantic coast.

For the distribution of fish and eggs the commission has four cars specially equipped with tanks, air-circulating apparatus, and other appliances.

In the prosecution of marine work three vessels are used, the steamers Albatross and Fish Hawk and the schooner Grampus. The Albatross is fitted with appliances for deep sea dredging and collecting work, and is used for surveying and exploring ocean bottoms and investigating marine life. The Fish Hawk is in reality a floating hatchery, and is engaged in hatching shad, lobsters and mackerel, in collecting eggs and in distributing fry, besides making topographic surveys of fishing grounds, etc.

The commission is constantly studying the condition and habitat of fish, and trying to devise means to keep up the supply which is drawn upon so heavily by the fishermen of the Atlantic and Pacific coasts, and the great Lakes. To that end hatcheries have been established at various places, as above noted, from which millions of fry are annually distributed which eventually mature into eatable and marketable fish.

As will be seen on another page, practically every State in the Union has laws for the protection of the more valued game fish, and it is their increase to which the efforts of the Game Commission are directed. At the various hatcheries a close study is made of their habits and needs, and the consequence is a great improvement within the past few years in the methods of producing and caring for the fish. Of all the States, however, New York is the first to offer a college course in the scientific culture of fish. This step has been taken by the provision of a fund for the teaching of pisciculture in the New York State College of Forestry. The object of this is to teach the students, in practical fashion, the purposes, methods and results of fish culture in this country. This unusual educational experiment has greatly interested scientists, who regard the new plan as of the highest importance and are giving it their enthusiastic support.. While, as a general thing, art does not improve upon nature, the contrary has been shown to be the case in the artificial propagation of fish. When a fish lays its eggs in a natural state, it has been proved that but two per cent of them are fertilized, while in the hatcheries the managers think they are doing badly unless at least 95 per cent of the eggs become fish.

In the State hatcheries of New York hundreds of thousands of young fish are artificially raised to the fingerling size, and then set free in the streams of the State. Many waters which were almost barren of fish have been replenished, and, if proper protection is given, there is hope that New York will be again the best fishing State in America.

The total capital invested in fishing on the Great Lakes is now nearly $1,000,000, and 10,000 men are engaged in the industry.

During the last year the United States Fish Commission distributed to various waters more than 10,000,000 fish and eggs.

Digitized by Google

The diseases of fishes are now being carefully studied by a scientist under the direction of the commission. Already he has found cures for several epidemics which prevail in hatching stations.

The efforts of the commission in planting fish in strange waters have been very successful. Rainbow trout are now caught in Texas, Virginia and many other States, where before they were entirely unknown. Salmon are now quite plentiful in the waters of the upper Delaware.

The fisheries of the Mississippi River and its tributaries have increased largely in the past few years. The principal products are catfish, German carp and buffalo fish.

There is now some $13,000,000 invested in the fisheries of Washington, Oregon and California. More than 20,000 people are employed in them.

Half a million Oregon salmon eggs were sent to New Zealand in 1901, and successfully hatched.

The United States Fish Commission is now operating 37 hatching stations, in addition to many hatcheries under control of the commissions of the several States.

Picking Out Dead Eggs.

Packing Salmon Eggs.

One of the most interesting movements of the Fish Commission steamer Albatross was the the recent trip to the South Sea Islands, during the five months of which ten groups of islands were visited and landings were made at fifty places. While fishing is carried on at all the inhabited islands in each group, yet in no one place is it prosecuted to any great extent, but is a local affair and hardly considered beyond the needs of home consumption. Tahiti seems to be the only island where commercial fishing is carried on, and then only to a limited extent, at Papeete. The average catch is small, not exceeding the amount that would be required to supply a town of 1,500 people.

The fishing is conducted with sieve, hook and line, and spear. At many places in the Society and Paumotu groups certain kinds of fish are poisonous in some localities and good in others. No theory is advanced as to the cause of this peculiar state of affairs.

At many islands pearl fishing is carried on, diving being performed in depths ranging from 5 to 20 fathoms, the average probably being from 10 to 15 fathoms. There are some 3,500 natives engaged in this industry, which is very profitable.

Considerable attention is being paid to the salmon fishing of Alaska, which, it is asserted, will eventually add as much to the wealth of the nation as the Klondike gold mines. These are situated mostly in what is known as the Bristol Bay district, which includes the Ugashik, Egagak, Naknek, Kulchak, Mushagak, and Wood rivers, and their sea approaches. These rivers are all large and flow great volumes of water. The earliest records of salmon fishing in this section tell of the salting of the fish on the Mushagak by the schooner Neptune in 1883, and the erection of cannery buildings in that year for the Arctic Packing Company, which made a trial pack of 400 cases in 1884.

Two methods only are employed in taking salmon for commercial purposes in this district, gill nets and traps, and both are well adapted to the local conditions. Traps catch not only the salmon, but other species, all of which are wasted. It is thought that if their use is not regulated they will work great injury to the fisheries in the future.

The fishermen are white, mainly Scandinavians, with some Italians, and their wages are very good.

This district, when running full, will pack 250,000 fish daily in the thirteen operating canneries. These canneries are practically in full operation about one month.

Flag of the United States; Its 125th Anniversary.

AUGUSTUS BEDFORD.

The year 1902 is the 125th anniversary of the birth of the American Flag. Its history is an interesting one, known by few, and never before published fully or correctly.

In 1265 England adopted as her banner a white ground with a red St. George cross, and this was the first flag to come upon our shores, being brought here in 1497 by John Cabot. The Scandinavians, who were here in 1000, brought no flag with them, and as Columbus did not come to this country the flag he carried was not brought here. The "St. George" flag (Fig. 1), is the flag under which the colonies were formed in 1643. In 1651 it was formally adopted by the Massachusetts colony and ordered placed on the "Bastile" on all proper occasions. It was the flag of this country for 189 years.

In 1686 Sir Edmund Andros arrived in Boston to become the Governor of the colony, and brought from the King a flag for New England. This was similar to the first one, the red cross, however, being wider, and in the upper part of the cross was a crown, signifying the King's authority, and in the lower part the letters J. R., standing for "Jacobus Rex," meaning "James the King" (Fig. 2). This was known as the "Andros Flag," and was our official flag for twenty-one years.

England and Scotland having united, in 1707 England changed her flag, and our flag changed with it.

Digitized by Google

This one was a red body ground, with a canton containing the St. George Cross of red on white, crossed by a St. Andrew Cross of white on blue, the latter from the cross of Scotland (Fig. 3). This flag was known as the "King's Union." When the King signed official documents he wrote "Jacobus Rex," but, on minor papers, without the seal, he would sign "Jacques." After a while the flag known as "King's Union" was often called "Jacques Union," and from this fact originated the words "Union Jack."

At the battle of Lexington, April 19, 1775, the minute men from the town of Bedford, under Captain Nathan Page, brought a flag which was known as the "Bedford Flag" (Fig. 4). Under this flag was fought the first battle for independence. The original flag used that day is now in the public library in Bedford, Mass. It is a maroon ground, upon which is an extended arm, grasping a sword, from which is suspended

The King's Union.

a band containing the words, "Aut Vince More," meaning "Conquer or Die." In October, 1775, the Continental Congress adopted a flag, white ground, with a pine tree, and over it the words, "An appeal to Heaven" (Fig. 5). This was the first flag officially adopted by Congress, and was specially designed for the navy. When General Washington left Philadelphia to go to Cambridge to take command of the army, he was accompanied as far as New York by the Light Horse Guards, of Philadelphia, who carried their flag with them. The body was a yellow ground, in the centre of which was a scroll. Inside of this, on a blue ground, was a bow of yellow ribbon, with thirteen ends. Underneath were the words, "For these we strive." On the left side of the scroll was an Indian with a bow in one hand and a pole in the other, upon which was a liberty cap. On the right of the scroll was an angel blowing a trumpet. Above the scroll was the head of a horse, over which were the letters L. H. In the left hand corner were thirteen stripes, silver and blue (Fig. 6). The original flag used at that time is in the possession of this same regiment in its armory on Market and Twenty-first streets, Philadelphia.

At General Washington's suggestion a flag was made at Cambridge consisting of thirteen stripes, red

Fig. 4.
The Bedford Flag.

Fig. 5.
The Pine Tree Flag.

The Light Horse Flag.

and white, with the English Union Jack, representing the thirteen colonies and recognizing England as our mother country (Fig. 7). This flag Washington raised over his army in Cambridge, January 1, 1776. The next day he hoisted it upon a staff on Prospect Hill in Somerville, Mass., where now stands a monument to commemorate the event. It was in use for six months, but was never officially adopted. On February 8, 1776, Colonel Gadsden presented a flag to Congress asking that it be adopted for the navy in place of the Pine Tree emblem. It had a yellow ground with a rattlesnake in the attitude of striking, and under it the words, "Don't tread on me" (Fig. 8). Congress did not adopt it, but passed a vote of thanks, and ordered it hung upon the walls of the Capitol.

At this period there were many different flags in use.

When the Declaration of Independence was read, the Cambridge flag, with the King's coat of arms, was destroyed, and later a movement was set on foot to secure a national emblem. Many designs were offered to the committee, but the members could not agree, and finally left it to General Washington. He suggested that as the red and white stripes had been continued in use on many private flags, they be adopted as

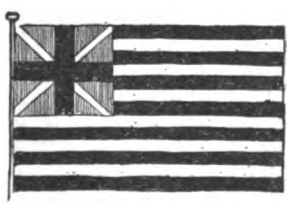

Fig. 7.
The Cambridge Flag.

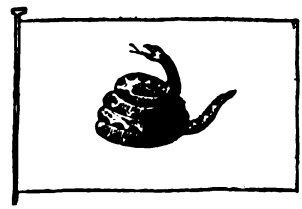

Fig. 8.
The Gadsden Flag.

Fig. 9.
First Stars and Stripes Adopted.

a body and a blue canton be added, with some different figure than that of the English Union Jack. This was accepted by the committee, and various suggestions were made for the canton. A beaver, indicating industry, was the first, which was rejected as not being significant enough. A sun, moon and cross were also suggested, but these were all rejected, and Washington named a star, which was accepted. Mrs. Betsy Ross, a young widow who was skilled in needlework and had done considerable fancy work for General Washington, had promised him to make the model flag. When he, with Robert Morris, the great financier, and John Ross, her uncle, one of the signers of the Declaration of Independence, called upon her and Washington drew out the design, she refused to make it, as the pattern had upon it a six-pointed star. Upon being asked her reasons, she said, "That star is a sign of heraldry. As they are to be placed in a circle they

Digitized by Google

will have to be put on always with much care, as they must be perfectly straight to look well, while a five-pointed star looks well anyway it is placed. If you look at a star in the sky it always looks as if it had five points." Taking a piece of paper, she folded it, and making one cut of the scissors, handed it to General Washington, who, opening it, said, "Gentlemen, it is perfect, let us have them five-pointed." This flag (Fig. 9) was adopted June 14, 1777.

So the flag remained for eighteen years, but in 1794, Kentucky and Vermont having been added to the Union, Senator Bradley, of Vermont, introduced a bill in Congress to change the flag to fifteen stripes and fifteen stars, claiming that these two States should be represented in the flag. The law was passed to take effect on May 1, 1795. This was our flag during the war of 1812, and it was the flag that Francis S. Key saw floating over Fort McHenry when he was inspired to write the "Star Spangled Banner." In 1816 there were nineteen States and all wanted a star and a stripe. In 1817 another State was added, and a committee was appointed to arrange a design for a new flag. Hon. Peter H. Wendover, of New York, was the chairman of the committee. He insisted upon keeping the same design, but not adding any more stripes, as they would be so narrow that the white would not always be visible at a distance and it might be mistaken for an English flag. In fact, his plan was to return to the thirteen stripes, representing the thirteen original colonies, and giving each State a star. Though meeting with great opposition, he won the day, and on April 4, 1818, Congress enacted the following bill, which is the law of to-day:

"Section 1.—Be it enacted that from and after the Fourth day of July next, the flag of the United States be thirteen horizontal stripes, alternate red and white; that the Union have twenty stars, white in a blue field.

"Section 2.—And be it further enacted that on the admission of every new State into the Union, one star be added to the Union of the flag; and that such addition shall take effect on the Fourth of July next succeeding such admission."

It has often been said in orations that the red meant valor, the white purity, and the blue loyalty, but Washington gave us a sentiment that is even grander. Gazing upon it, he said:

"We take the star from Heaven, the red from our mother country, separating it by white stripes, thus showing that we have separated from her, and the white stripes shall go down to posterity representing liberty."

NOTABLE DAYS IN CONNECTION WITH THE HISTORY OF THE AMERICAN FLAG.

(Copyright, 1895, by A. Bedford.)

Jan. 2, 1776.—"Cambridge" Flag unfurled over his army by General Washington, and on same day raised on Prospect Hill, Somerville, Mass.

Jan. 9, 1766.—The "No Stamp" Flag raised on Swing Bridge, Portsmouth, N. H.

Jan. 17, 1781.—First victory, battle of Cowpens under the "Eutaw" Flag, or "Tarleton's Terror."

Feb. 8, 1776.—Presentation of Gadsden's Flag to Congress, by Colonel Gadsden.

Feb. 15, 1778.—First salute to the Stars and Stripes, by a foreign government.

Feb. 28, 1866.—Raising of the first flag made of American Bunting.

March 17, 1776.—"Cambridge" Flag placed on Fort Hill, Roxbury, Mass.

March 21, 1775.—Raising of "The Congress" Flag.

April 4, 1818.—Adoption of the "Wendover" Flag, the present design, flag and bill drawn by Hon. Peter H. Wendover, of New York City.

April 14, 1865.—Raising the "Sumter" Flag on Fort Sumter that was fired on four years before.

April 27, 1867.—General Sickles compels the firemen in Charleston, S. C., to carry the Stars and Stripes, and every man to salute it.

April 28, 1862.—Raising the American Flag on the U. S. Mint at New Orleans, by Admiral Farragut.

April 29, 1776.—Adoption of the "Pine Tree" Flag by the Great and General Court of the Massachusetts colony.

May 1, 1795.—Adoption of and unfurling the "1795" Flag of 15 Stripes and 15 Stars.

May 1, 1862.—General Butler issues his famous Flag order.

May 2, 1745.—Lieutenant-Colonel Vaughn captures Fort Louisburg under Sir William Pepperell's "Nil Desperandum" Flag.

May 30. Memorial Day. Placing flags on the graves of our dead heroes.

June 14, 1777.—Adoption of the first Flag of Stars and Stripes, designed by General Washington and made by Mrs. Elizabeth Ross.

June 28, 1776.—Unfurling of the "Moultrie" Flag at Charleston, S. C., on Fort Moultrie.

June 30, 1497.—Planting the first Flag on American soil by John Cabot.

July 4. Independence Day. Adding new Stars to the Flag.

July 18, 1775.—The "Putnam" or "Somerville" Flag raised on Prospect Hill, Somerville, Mass.

Aug. 1, 1767.—Raising of the "Paradoxical" Flag by the Sons of Liberty in New York City.

Aug. 2, 1777.—Raising of first Stars and Stripes on a fort, Fort Schuyler, Utica, N. Y.

Aug. 8, 1776.—Declaration of Independence read in Charleston, S. C., under the "3 Crescent" Flag.

Sept. 11, 1777.—First battle under the Stars and Stripes at Brandywine.

Sept. 14, 1818.—"The Star Spangled Banner" composed by Francis Scott Key, while detained on the British vessel, Minden.

Sept. 23, 1779.—Lieutenant Stafford's brave act in saving Flag on the Bon Homme Richard.

Sept. 25, 1794. The American Flag entwined with the French Flag in France

Oct. 16, 1774.—The "Taunton" Flag unfurled.

Oct. 18, 1775.—Adoption of the "Pine Tree" Flag by the Continental Congress, for the Federal Navy. Our first official American Flag.

Nov. 3, 1773.—Raising Flag to call meeting in Liberty Hall (Harvard Grove), Boston, from which they marched and threw the "Taxed Tea" overboard.

Nov. 8, 1867.—First Stars and Stripes raised over Alaska by Major-General Rosseau.

Dec. 1, 1765.—Fort Johnson and Stamp paper captured, and the "3 Crescent" Flag unfurled.

Florida.

—

Capital:
TALLAHASSEE.

Florida, the southernmost State of the United States, was first visited by the Spaniards under Ponce de Leon, who landed near St. Augustine in 1513. In 1526 Pamfilo de Narvaez obtained a grant from Charles V. of all lands between Cape Florida and Rio Panuco, and in 1528 he landed with a numerous army, but met with such formidable resistance from the Indians that he was compelled to retreat, and at last perished near Panuco, only ten of his followers returning to Spain. Other attempts were made to settle the territory, first by the Spaniards and then by French Protestants, who fled to the new country to escape religious persecution. In 1696 Pensacola was settled by the Spaniards, who retained a foothold in the country until 1763, when the whole province was ceded to England for Cuba. In 1789 Florida was receded to Spain and the greater part of the inhabitants deserted the country, moving to the United States.

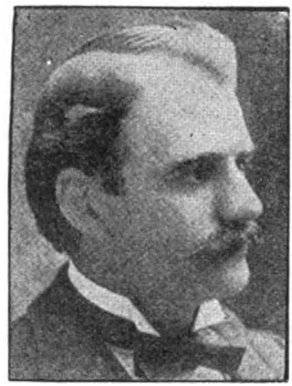
In 1803 it was claimed that the territory had been ceded to France, and this led to a claim on the part of the United States to that part of the country west of the Perdito River. Finally, in 1819, the whole of the province was ceded to the United States, and on March 3, 1845, the territory was admitted into the Union.

Digitized by Google

Florida has an area of 56,680 square miles, and in 1901 had an estimated population of 543,000. Agriculture and exploitation of min eral resources are the principal in dustries of the State, though there has been a steady growth in man ufacturing interests during the past few years. The most important manufactures of Florida are co-rel ative with her most important nat ural products, lumber and tobacco.

The tobacco manufacture ranks first in importance in the State, and it has been greatly augmented during the past ten years by the immigration of Cuban tobacco mak ers. More leaf tobacco enters the port of Tampa than at any other port in the United States, coming chiefly from Havana. Florida-grown tobacco is also largely used, the so called "Sumatra" wrapper leaf raised there having received a high er award at the Paris Exposition than that grown in Sumatra.

In 1888 rich veins of phosphate rock were discovered in Florida, and within a year the production had become nearly one-half of the total production of the country. 440,000 tons being exported that year. Increasing quantities are being retained within the State for local manufacture of fertilizer, and this industry promises to rank high within a few years.



Gov. William S. Jennings.

The forests of Florida are esti mated to cover 25,000,000 acres, and are composed largely of pitch pine, from which turpentine and resin are procured, and of live oak, used in ship building. Extensive swamps cover the southern portion of the State, and here are found enormous tracts of cypress, oak and palmetto.

In the raising of sub-tropical fruits Florida ranks second in the United States, California having taken the first rank during the last few years. The principal fruit crop is oranges, and the other cit rous fruits, such as lemons, limes, shaddocks and grape fruit are raised in abundance. Pineapple cul ture has almost doubled in volume in the past five years, and thou sands of crates are shipped North from the east coast during the ripening season.

On May 3, 1901, the city of Jacksonville suffered a fire almost as great in extent as the famous Boston fire of two decades ago. The fire zone extended for nearly two and a half miles in one direction, and half a mile in the other, destroying the greater part of the business and residence sections of the city. As soon as the magnitude of the disaster was known aid was hurried from all parts of the United States, and the work of rebuilding the city was begun almost before the ashes had cooled. Within a year much of the devastated territory had been rebuilt, and a new Jacksonville, better than the old, had sprung from the ruins.

France.

—

Capital: PARIS.

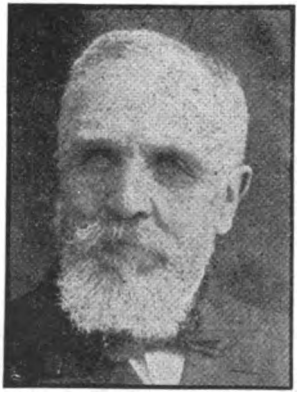
France has been under a republican form of government since the overthrow of Napoleon III., on September 4, 1870. The present President of the republic, M. Emile Loubet, was born December 31, 1838, and was elected February 18, 1899. The next election will be held in 1906.

THE MINISTRY.—Premier and Minister of the interior; M. Combes, Senator; Minister of Finance, M. Rouvier; Minister of Justice, M. Valle, Senator; Minister of Foreign Affairs, M. Delcasse; Minister of War, General Andre, Minister of Marine, M. Pelletan; Minister of Public Instruction, M. Chaumie, Senator; Minister of Public Works, M. Maruejouls; Minister of Colonies, M. Doumergue; Minister of Commerce, M. Trouillot, and Minister of Agriculture, M. Mougeot.

THE NATION.—Under the Constitution of the Republic of France, adopted in 1875, that country is governed by a President, elected for seven years by the two legislative houses, the Senate and Chamber of Deputies. In these latter the legislative power solely resides. The executive rests jointly in the President, the two Chambers and the Ministry, which act as checks on each other. The responsible head, however, is the Premier, the President of the Ministry, which, with the President's co-operation, he appoints.

Enactments make all religions equal under the law, and entitle any religion with 100,000 adherents to a State grant. The Jews, Protestants and Catholics can now claim this. Much rioting and great social disturbance was caused during the present year on account of the forcible closing, under the education laws, of all non-conforming religious schools.

Justice.—In criminal causes courts of the first instance are those of the Justices of Peace. Over these are the Courts of Assizes and twen ty-six Courts of Appeals, with one final Court of Cassation. In civil causes the scheme is similar, but has the addition of a lower civil tri bunal under the Justices of Peace. The system is unique in including tribunals of commerce and councils of experts for commercial cases.



President Emile Loubet.

Finance.—The budget estimate for 1902 included: Revenue, $719,- 432,816; expenditure, $719,414,440. The public debt amounted on Janu ary 1, 1901, to $5,800,691,814.

France has 1,760 miles of coast frontier and 1,575 of land. Paris, the centre of defence, is surround ed by a wall with 38 new forts and batteries, 17 old forts and ly 100 bastions. At St. Denis and Versailles these defences merge in to two entrenched camps.

French imports for home use in 1901 amounted to $942,900,000; ex ports of French origin to $833,240,- 000. About two-thirds of the area of France is cultivated fallow or in grasses. About one-sixth is in forests.

In France colonial affairs are di rected by the Ministry for the Colonies, of which latter the most important are Tunis and Algeria, in Africa. Tunis is attached to the Ministry of Foreign Affairs, while Algeria is really considered a part of France. Senegal, Madagascar and Indo-China are perhaps the next most important, although French possessions are to be found on all the continents. The administration of affairs in the colonies is marked by liberality of policy, many of the older colonies—Gulana, French India, Cochin-China, Marti nique, Guadeloupe and Reunion each sending representatives to the French Legislature. The colonies do not pay for themselves in France. expenditure on their account being $14,119,691 in 1902, while revenue from them the same year amounted to only $3,042,589, which is still a larger figure than usual. The total value of colonial exports for 1900 was $63,341,531; of imports, $62,482,191. (These figures do not include Madagascar and Guadeloupe, as yet unestimated.)

During the past year important changes have been made in the foreign relations of France. As an

Digitized by Google

offset to the Anglo-Japanese alliance an alliance was made with Russia for protection in Eastern affairs and President Loubet paid a visit to the Czar during the Summer that ripened the friendship of two nations. French relations in Haiti and Venezuela, although somewhat strained, did not reach the state of open breach. On the other hand, in Alsace-Lorraine and bordering German provinces pro-French demonstrations occurred on the anniversary of the battle of Voinville (August 16, 1870). Changes in the diplomatic service also were important. In the United States M. Jules Cambon was succeeded as Ambassador by M. Jean Jusserand.

Of still greater importance was the change in home affairs, caused by the retirement from the Premiership of M. Waldeck-Rousseau and his succession by M. Emil Combes and the religious school riots caused by M. Combes's forcible closing of all sectarian schools not conforming to the public schools laws. The Summer elections sustained M. Waldeck-Rousseau's policy, and a special vote of the Deputies afterward approved that of M. Combes.

The following are the latest available statistics regarding the condition of the French colonies:

Colonies and Dependencies	Area in Sq. M.	Estimated Population.	Approximate Imports.	Approximate Exports.
Asia:				
India	196	275,100	$807,580	$2,140,400

Fuel; the World's Supply.

Much study has been given during recent years to the matter of the world's future supply of fuel, and the problems connected therewith have become of vital interest to the people of this country, especially, because of the paralysis of the coal industry caused last year by the great strike of miners. In fact, the extraordinary prolongation of the trouble between the mine owners and the operatives had an effect upon that branch of industry in all coal mining countries. The inconvenience and even suffering which resulted from the cutting off in the United States of the customary supply gives additional interest to the fuel question in general.

While there is a constantly increasing demand for fuel in nearly every portion of the earth, there is a steady decrease in nature's stored supply of coal, which article constitutes the great bulk of the fuel supply of the present age. The persistent drain is not compensated for by any process of nature, such as marked the many centuries when wood constituted the only fuel, and when the comparatively slight destruction of forests was offset to a very considerable degree by new growth. Ever since the discovery of the adaptability of coal to use as fuel the inroads upon the forests for purposes of manufacture as well as for fuel have been so persistent and so destructive that it would be impossible for the world to recur to wood for use as ordinary fuel.

The available supply of coal is not inexhaustible, and computations of a somewhat sensational nature have been put forth from time to time tending to show that within a certain specified period the deposit would be exhausted, or so far exhausted as to make the further mining of it extremely expensive. Of much more value, some estimates made by Dr. Ferdinand Fischer, of Gottingen, Germany, are here presented. Dr. Fischer has collected with much care all the available data as to the coal resources of the entire world. The attainable supply, according to his estimates, is represented in round numbers as follows: Germany, 160,000,000,000 tons; Great Britain, 81,500,000,000 tons; Austria-Hungary, Belgium and France combined, 17,000,000,000 tons; America, including all its several countries which are coal-producing, 684,000,000,000 tons. Russia has coal deposits which are undoubtedly enormous, but of which little is known at present, so that its value as a source of future supply cannot be determined; while China, richer in coal than any other country, so far as is known, does not affect the problem as yet, because transportation from the mines would be too costly until the country attains a much greater development in modern facilities than it has reached. Japan has large coal resources, particularly in the southern province of Kiushiu; Borneo is rich in coal formations, and New South Wales has great deposits. Africa and South America are poorer in coal than any other portions of the world, but the developemnt of mines in South Africa affords promise of a supply sufficient for the industrial needs of that country.

Coal mining is carried to a greater extent in the United States than elsewhere, and the use of machinery in this industry is carried to a degree far exceeding its use in other countries. Great Britain is the one country that is so near the exhaustion of her supply as to make the possibility of immediate interest, the cause being that she supplies the larger part of the world's export. Dr. Fischer estimates that at the present rate of mining Great Britain's supply will be exhausted in fifty years, or in a century at most; while Germany has a supply available for the next thousand years. The coal production of the United States in 1901 was nearly 20 per cent larger than that of Great Britain, but, as already shown, the attainable supply is immensely larger—nearly eight times as large, in fact.

According to returns to the United States Geological Survey from producers representing fully 97 per cent of the entire coal output of the United States, the production in 1901 amounted to 292,240,758 short tons, valued at $348,813,831. As compared with 1900, when the output amounted to 269,831,827 short tons, worth $306,891,364, this represents an increase of 22,358,931 short tons, or 8 per cent in quantity, and of $41,922,467, or 13.6 per cent in value. The production of Pennsylvania anthracite showed a phenomenal increase from 51,221,353 long tons (equivalent to 57,367,915 short tons) in 1900 to 60,242,560 long tons, or 67,471,667 short tons, in 1901. This represented a gain of 17½ per cent, the largest percentage of gain made by the anthracite trade in twenty years. Part of this increase in 1901 was due to a decreased output of

Digitized by Google

anthracite in 1900 as compared with 1899, as owing to the historic strike of 1900 the output that year was reduced by over 2,500,000 long tons.

The increase in the value of the anthracite product is still more striking, the amount received at the mines in 1901 showing a gain of $27,716,160, or more than 31 per cent over that of 1900. This was entirely due to the unprecedented period of prosperity which enabled consumers generally to pay higher prices for their fuel. The average price for the marketed anthracite coal—that is, the product shipped to market or sold to local trade—was $2.05, the highest figure obtained since 1888.

The production of bituminous coal, lignite, cannel coal, etc., increased from 212,513,912 short tons in 1900 to 224,769,091 short tons in 1901, indicating a gain of 12,255,179 tons, or about 6 per cent. The value of this product amounted to $236,309,811, as compared with $221,133,512 in 1900, an increase of $15,176,298, or a little less than 7 per cent. The price of the bituminous product did not show any material advance in 1901.

The reason why the United States cannot compete with Great Britain in supplying other countries with coal is that, in the first place, her available deposits are further from the seaboard, and, in the next place, the distances from the American coast to the markets are much greater.

A comparison of the coal resources of Great Britain and the United States was recently made by Mr. A. S. E. Ackermann. Mr. Ackermann shows that the area of coal fields of the United States is about 225,000 square miles, and only 9,000 square miles in the United Kingdom. The American deposits have not been worked so long as the British. The former are found in wider seams and practically level strata, while the latter are tilted up at all sorts of angles and are so lean that a vein fifteen inches wide is not neglected. Perhaps the greatest disparity exists between the depths at which it is necessary to work, a disparity whose importance is recognized when the cost of hoisting and pumping is considered. Few American mines go deeper than 200 feet, while it is not uncommon on the other side of the Atlantic to mine coal 4,000 feet below the surface. Still another natural advantage enjoyed in this country is the relative scarcity of fire damp.

When it comes to actual mining operations the American uses much more machinery than the Briton. No specific reference is made to the difference in wages, which are greater in the United States than in England; but Mr. Ackermann says that the annual product of the American miner averages 526 tons, while that of the British miner is only 300. In the United States legal damages in consequence of the subsidence of the region over the mines are much lower than abroad, because the land is usually owned here by the coal companies. In America the railway freight charge per ton-mile is about one-sixth as large as in Great Britain. Two causes operate to produce that result. Coal in the United States is usually shipped in cars holding fifty tons, while in Great Britain it is broken up into six-ton or ten-ton lots; secondly, the original investment of capital in railroads is much greater a mile in England than in America, and the rates must be heavier in order to pay dividends. Before transportation becomes necessary, and while the coal is yet at the mouth of the mine, Mr. Ackermann believes that the cash expenditure in the United States is only one-half as great as in Great Britain. An equal advantage should be enjoyed, then, after land carriage has been paid for three times the distance which British coal must travel to reach the seaboard.

For domestic consumption the United States has a large supply of fuel in the form of natural gas, which is obtained from borings in certain regions of the country. This fuel is so economical that its use is very extensive in the localities where it is obtained, but to which it is confined, as the distribution of it to distant points has not been undertaken.

An important step in the adaptation of mineral oil to use for fuel has been made in Germany. A manufacturing concern in that country is now engaged in the production of solid petroleum in the form of briquettes, which can be handled like coal or coke, and possess all the desirable qualities of coal and ordinary petroleum without any of the objectionable qualities of either. The principal item of expense in the manufacture is that of the oil, the other ingredients and the machinery and labor costing but little.

Alcohol as fuel is not a new proposition, although its use has been extremely limited, confined, in fact, to the apparatus of the sick room, to the camp outfit and to the chafing dish. The possibility of its larger use has attracted the attention of no less a personage than the German Kaiser, upon whose suggestion the Norddeutsche Lloyd and the Hamburg-American steamship companies have decided to conduct a series of experiments to ascertain the value of alcoholic spirits as fuel. It is known that, volume for volume, spirits have just double the heating power of coal.

Peat has been used for years as fuel in some countries, notably in Ireland. In the North European countries it has long been an important reliance. Even in Germany, which is relatively rich in coal, the peat bogs are being exploited fairly extensively. In the United States, on account of the great abundance of coal and other fuels, there has been little inducement for the development of the country's peat wealth; nevertheless, many have believed that even at present there is a wide field for profitable use of peat fuel in this country. Far greater possibilities in this direction exist in Canada. Practically bare of coal, but rich indeed in peat (as is also the United States), that country is gradually finding itself forced to consider the use of this latter material on an extended scale to supply its needs for fuel. Peat, in its natural state, is a poor fuel. It holds, suspended in the meshes of the network of vegetable fibres of which it is composed, a very large percentage of water, and also contains much water in more intimate combination. A number of methods of treating peat have been developed, and some of them are in operation. It has long been realized, however, that the most desirable peat product would be a coke, and numerous attempts have been made in this direction. Up to the present none of these attempts has had sufficient success. A process developed quite recently promises better results. If the claims made for it are well founded the peat coke it produces will soon be a valuable and widely used fuel.

Electricity is a possibility in the direction of economic heating, for whatever purpose heat may be required, and it may be regarded as one of the eventual conservators of the world's supply of fuel. Its production at the present time increases the consumption of fuel, but the conversion of the natural forces of moving water into electrical energy has already begun, and when it is carried further, as it probably will be, to the conversion of this energy into heat for cooking and warming purposes, a new and welcome factor will operate in the fuel problem.

Georgia.

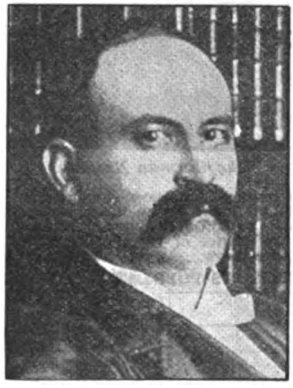
Capital:
ATLANTA.

Georgia is one of the original thirteen States, the last of the number to be settled. Previous to 1733 the country lying within its present bounds was a wilderness, and though comprehended under the charter of Carolina, was claimed by Spain as well as by the British. In 1732 George II. granted the territory to a corporation, "trustees for settling the colony of Georgia," and in November of the same year 116 persons embarked at Gravesend, under the direction of General James Oglethrope, with the intention of becoming colonists in the new country. Soon after landing, General Oglethrope purchased a large tract of land from the Creeks and founded a town which afterward became Savannah. Many of the colonists returned to Carolina to escape the onerous military duty attendant upon their holding lands in Georgia. The population continued to increase, however, and when war broke out between England and Spain in 1739, General Oglethrope was able to muster an army of 1,000 men.

In 1752 Georgia received a royal patent with the same privileges and regulations accorded the other colonies. From this period on population increased rapidly and the colony grew in wealth and importance until, at the breaking out of the Revolutionary War, it occupied an important place in the Continental Congress.

Georgia has an area of about 59,475 square miles and a population estimated in 1901 to be 2,258,000.

Like most of the Southern States, Georgia's industries are chiefly agricultural, though there has been a steady increase in manufacturing industries during recent years. As cotton is the principal crop of the State it is but natural that the chief industry would be its manufacture. Cottonseed oil and cake stand among the first of manufactured products, and, keeping pace with her sister States, Georgia has erected and put into operation numerous cotton mills during the last few years, and now manufactures a large part of her staple crop within her own borders.



Governor Joseph M. Terrell.

Ranking next to cotton production comes the manufacture of turpentine and resin, made possible by the extensive pine forests which cover the State. These forests supply large quantities of excellent timber, and in the production of yellow pine Georgia ranks high among the Southern States. By a proper system of forest preservation it is claimed that the products derived from the pine forests might be largely increased in value, but the destructive methods employed seem to destine them to early extinction.

In recent years much attention has been given to the raising of fruits for market, and the peach orchards of Georgia are the largest in the United States. The Georgia peach has a reputation for excellence unsurpassed by that fruit in any other section of the country, and the warm climate makes its cultivation doubly profitable. Fruit canning and preserving have become important industries, dependent upon the success of the fruit crops.

At the Democratic State Convention, held July 2, 1902, Joseph M. Terrill was nominated as Governor. This convention adopted as part of the platform of the party that: "We do not believe the cause of temperance should be made a political issue in this State. The best interests of the people, as well as the furtherance of the cause, demand the complete separation of this question from personal and party politics. We approve the wisdom and safety of the non-partisan policy which characterizes our present legislation upon this subject." The Kansas City declaration was entirely ignored.

The Liquor law of Georgia provides for local option, and 120 out of the 137 Counties have prohibition. After the convention, Hon. Dupont Guerry announced himself as Democratic candidate for Governor squarely in favor of State prohibition of the sale of liquor on the plan adopted in Maine, expecting thereby to throw the Democratic vote against the seventeen "wet" Counties of the State, or drive the Prohibitionists of the 120 Counties into direct opposition to the party.

German Empire.

Capital:
BERLIN.

The kings of Prussia are descended from Count Thassilo, of Zollern, who was one of the generals under Charlemagne, and it was his successor, Count Friedrich I., who built the family castle of Hohenzollern, in 980 A. D. In 1273 Friedrich III. became a Prince of the Holy Roman Empire, receiving the Burggraviate of Nuremburg in fief. In 1415 the property of the family was increased by the addition of the province of Brandenburg, and, two years later, Count Friedrich IV. obtained the rank of Elector. In 1511 Margrave Albrecht, a younger son of the house of Hohenzollern, was elected Grand Master of a large province in Prussia, and, a few years later, he declared himself hereditary prince. The early extinction of his male line, however, brought the province to the Electors of Brandenburg, who already occupied an important position in Northern Germany.

Under the wise reign of Friedrich William (1640-1688), the Hohenzollerns prospered greatly, for the Great Elector left his house so well established that his son, Friedrich I., was able to assume the kingly crown, January 18, 1701. From that day the Hohenzollerns have steadily increased in wealth and strength, and while, under Friedrich William III., nearly one-half the State was taken by Napoleon, the Congress of Vienna not only remedied the loss, but added still more territory, including part of the Kingdom of Prussia, the Rhineland and Swedish Pomerania, making a vast domain which was shaped into a compact State by the war in 1866.

The election of Wilhelm I., King of Prussia, as German Emperor, in 1871, was by the vote of the Reichstag of the North German Confederacy, and, upon his acceptance of the dignity, the imperial office became hereditary in the House of Hohenzollern. Wilhelm, "Der Grosse," reigned until 1888, when he was succeeded by his son, Friedrich, who lived but a few weeks. His eldest son, the present emperor, Wilhelm II., was born January 27, 1859. On February 27, 1881, he married Princess Victoria of Schleswig-Holstein-Sonderburg-Augustenburg (born October 22, 1858), daughter of the late King Friedrich.

THE MINISTRY.—Chancellor of the Empire, Count von Bulow; Minister of Foreign Affairs, Baron von Richthofen; Minister of the Interior, Dr. Count von Posadowsky-Wehner; Minister of Marine, Admiral von Tirpitz; Minister of Justice, Dr. Nieberding; Minister of Finance, Baron von Thielmann; Minister of the Post Office, Herr Kmelhe; Minister of Railroads, Herr von Budde.

The German Emperor.

By the Constitution of the Em pire, dated April 16, 1871, the States of Germany are bound into a perpetual union, with the King of Prussia as the Deutscher Kaiser. The Kaiser has absolute power only to declare defensive war, make peace, enter into treaties, and ap point and receive Ambassadors. In other matters the Kaiser acts with the Bundesrath of fifty-eight mem bers appointed by the States each session, and the Reichstag, of 397 members, elected by universal bal lot for five years each. Of all the States of the Empire, Alsace-Lor raine alone is without vote in the Bundesrath. The Kaiser has no legislative vote. Railways and tele graphs are mainly under Govern ment control.

Religious liberty is constitution ally provided for, but the relation between the Church and the differ ent States varies. The order of Jesuits is prohibited, and convents and religious orders (unless medical or purely contemplative), are sup pressed.

Education is compulsory be tween the ages of six and fourteen throughout the Empire. There is also a most thorough system of academic and preparatory schools, and working children must attend night school. There are twenty-one universities.

One judicial system prevails throughout the Empire. Pauper ism is relieved under laws enacted in each State, based on national en actment.

The system of finance includes operation of telegraphs and State railways, and the profit from these with the revenue from customs, ex cise and posts, defrays the common expenditure. The States are as sessed to make up the deficit.

Germany has a frontier of 4,570 miles. The Empire is divided into ten fortress districts, fortified with seventeen first-class and nineteen other fortresses. The peace strength of the Imperial army is at present 494,351 men, not including officers. Every able-bodied German must be in the army from his twentieth to his twenty-seventh year. The navy ranks next to that of the British Empire. It is manned by the obligatory service of the maritime population.

The German Empire is composed as follows:

THE EMPIRE, ITS POPULATION AND FINANCES.

Free Hanse Towns and States.	Population Per Sq. M.	Estimated Revenues.	Estimated Expenditures.	Total Debt.
Prussia	256.1	$618,066,500	$618,066,500	$1,347,920,900

The most important of German colonies are those in Africa, Togoland, Kamerun and German East, and Southwest, Africa. The first and last named of these possessions are governed by an imperial commissioner; the other two by an imperial governor. The possessions in the Pacific are more numerous and less extensive, amounting in all to 96,160 square miles. In Asia there is a German foothold of 200 square miles in Kiauchau Bay, over which presides an imperial governor, the other possessions having commissioners, with the exception of the Samoan Islands, governed under a foreign treaty by a civil governor. Kiau-Chau, being a seizure from the Chinese Empire, is guarded about by many treaties, concessions and agreements with China and with European powers. It is of practical strategic and commercial importance because of its situation, its fine harbor and its nearness to vast coal fields. It is "leased" to the German Government for ninety-nine years.

Without exception the German colonies and dependencies are a dead weight, financially, on the hands of the government, the expenditures on them annually being far greater than the annual revenue.

The most important change in diplomatic circles in the German Empire was the resignation of the Hon. Andrew D. White from the post of United States Ambassador at Berlin, which post he held longer than any of his predecessors. He had made an ideal Ambassador, and Germany, to whom he had been, indeed, persona grata, expressed sincere regrets at his departure.

In foreign circles the only disturbance of importance was occasioned by the German pressure of her claims against the Venezuelan Government and the resulting strained feelings. The firing of the German gunboat Panther upon the Haitien gunboat Crete-a-Pierrot occasioned no trouble. The Haitien gunboat was practically in the hands of the Firmist revolutionists.

In interior affairs Poland is the one cause of worry. Poland is under the rule of three countries—Austria ruling one part, Russia another, Germany the third. The prevalent disquiet in the German province of Posen, where dreams of freedom have never been abandoned, is caused by the greater degree of freedom which the Austrian Prussians enjoy. Russia, too, is seemingly desirous of creating a pro-Russian feeling in Posen, and to this end is treating the Russian Poles better than formerly. Frequent articles in the Austrian press comparing their happier lot to that of the German Prussians keeps the feeling ripe, and incidentally tends to threaten the harmony brought about by the Triple Alliance. Emperor William during his visit to Posen in last August greatly decreased the dislike with which he is regarded in that city and lessended the anti-German feeling by his determination to protect Posen by a series of modern stone fortresses to take the place of the obsolete dirt embankments which have hitherto been Posen's sole defence and which cost over $50,000,000.

King of Saxony.

The Regent of Bavaria.

King of Wurtemberg.

RULERS OF THREE GERMAN KINGDOMS.

WURTEMBERG.

—

Capital: STUTTGART.

Prior to the Peace of Pressburg, in 1805, Wurtemberg was a duchy and electorate. By the decree of January 1, 1806, however, it became a kingdom. The present ruler, Wilhelm II., ascended the throne upon the death of King Karl I., October 6, 1891. He was the son of the late Prince Friedrich (cousin of the late King) and the late Princess Katherine, the late King's sister. He first married Princess Marie of Waldeck Pyrmont, who died April 30, 1882. On April 8, 1886, he married Princess Charlotte of Schaumburg-Lippe. By his first marriage he had one daughter, Princess Pauline, born December 19, 1877, and married October 29, 1898, to Prince Friedrich of Wied.

HEIR PRESUMPTIVE.—Duke Nicolaus of Wurtemberg, who was born March 1, 1833, and who married the late Duchess Wilhelmine of Wurtemberg May 8, 1868, is heir presumptive to the throne.

MINISTERS OF STATE.—Dr. de Breitling, Dr. de Pischek, Herr de Zeyer, Baron de Soden, Dr. de Weizsaecker and Herr de Schnurlen.

Wurtemberg, a constitutional hereditary monarchy, is one of the four kingdoms in the German Empire. Its constitution bears date 1819. The executive of the kingdom vests in a Ministry of State of six departments. The legislative authority is held by the Landstande, which is convened every three years, and comprises an upper and a lower chamber. Whenever the chambers are not sitting they are represented by a committee of three members from the upper and nine from the lower chamber, including their presidents.

Of the population (1900) 69 per cent are Protestants and 39 Catholic. The King is constitutionally the supreme director and guardian of the Evangelical Protestant Church. The Roman Catholics and Jews are under especial councils appointed by the King.

Wurtemberg has the imperial law of compulsory education. According to official returns there is no illiteracy in the kingdom above the age of ten. Enormous sums are spent on a perfect system of public education. The university is at Tubingen.

The estimated revenue for 1902-1903 was $18,220,658; estimated expenditure for same period being $17,771,119.

Wurtemberg is an agricultural State, with 2,948,900 acres under cultivation.

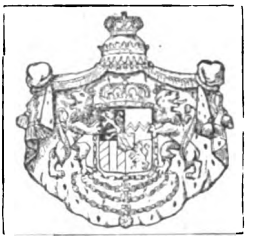
BAVARIA.

—

Capital:
MUNICH.



The members of the reigning house of Bavaria are descended from the ancient Counts of Wittelsbach, who held a high position during the twelfth century. Duke Maximilian I. of Bavaria, was made Elector of the Holy Roman Empire in the Thirty Years' War, and Elector Maximilian Joseph was elevated to the rank of king, in 1805, by Napoleon. According to the present Constitution, which was adopted in 1818, the crown is hereditary in the male line.

The present King, Otto, was born April 27, 1848, and succeeded his brother, Ludwig II., June 13, 1886, when that insane monarch committed suicide by drowning himself in the lake at Starnberg. Soon after his accession, Otto also developed indications of insanity, and it was at last found necessary to confine him in one of the royal chateaux, and to establish a regency under Prince Luitpold, the King's uncle, and heir apparent to the throne.

Prince Luitpold was born March 12, 1821, and was married April 15, 1844, to Archduchess Augustine of Tuscany, who was born in 1825, and died in 1864. They had issue:

Name.	Born.	Died.	Married.	Born.	Marriage.	Issue.
1. Prince Louis	1845	....	Archduchess Marie Theresa of Austria	1849	1868	10
(1.) Prince Rupert	1869	....	Duchess Marie-Gabrielle	1879	1900	1

(3.) Prince George	1880	....				
(4.) Prince Conrad	1883	....				
3. Princess Theresa	1850	....				
4. Prince Arnulf	1852	....	Princess Theresa of Liechtenstein	1850	1882	1
(1.) Prince Henry	1884	....				

THE MINISTRY.—President and Minister of Foreign Affairs, Baron von Crailsheim; Minister of Finance, Dr. Baron von Riedel; Minister of Interior, Baron von Feilitzsch; Minister of Justice, Baron von Leonrod; Minister of War, Lieutenant-General Baron von Asch, and Minister of Instruction, Ritter von Landmann.

The Kingdom of Bavaria is in size and population the second kingdom in the German Empire; the government is a constitutional monarchy, the King having sole executive power, and exercising legislative functions jointly with a Parliament, which is divided into an Upper House, the Reichsrathe (a House of Lords), and a Lower House, a Chamber of Representatives with elected Deputies.

The Roman Catholic religion predominates, with (1895) 4,112,623; Protestants, about one and a half million, and Jews, about 53,000, rank next.

School attendance is compulsory between the ages of six and fourteen. Elementary schools are maintained in all parishes. Of the three universities, the two at Munich and Wurzburg are Roman Catholic, while that at Erlangen is Protestant.

Intervening between the Oberlandesgerichte in Bavaria and the Imperial Reichsgericht, is the Appeal Court of Oberstes Landgericht. Under its jurisdiction are five Oberstandesgerichte and twenty-eight Landgerichte.

The largest items in the Bavarian budget (total for 1900-1901) $86,583,998, are the administration expenditure and the contribution to imperial expenditure. State railways, post, telegraph, mines, etc., are a source of great revenue.

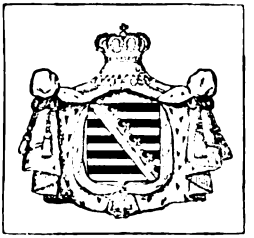
The Bavarian army is a portion of the Imperial army, although in time of peace it has its own administration.

Bavarian forests are extensive, the soil highly productive of wheat, rye, oats, barley and tobacco, and, in portions, of hops and wine grapes. Manufactures are important. Exports, other than cereal, are wine, beer, timber, glass and leather.

SAXONY.

—

Capital:
DRESDEN.



The royal house of Saxony is one of the oldest reigning families in Europe, and while in its early days the house spread into numerous branches, all are still represented by such ducal families as Saxe-Altenburg, Saxe-Coburg-Gotha, Saxe-Weimer, and Saxe-Meiningen. The Albertine line, which is the younger branch, is now represented by the rulers of the Kingdom of Saxony.

On the death of King Albert, 1902, the throne passed to his brother, Prince George, who was born August 8, 1832, and was married to Infanta Maria Anne, daughter of King Ferdinand of Portugal, May 11, 1859. She died February 5, 1884. They had issue:

Name.	Born.	Died.	Married.	Born.	Marriage.	Issue.
1. Princess Mathilde	1863	....				
2. Prince Friedrich August, heir apparent	1865	....	Princess Louise of Austria	1870	1891	5
(1.) Prince George	1893	....				
(2.) Prince Friedrich Christian	1893	....				
(3.) Prince Ernest Henry	1896	....				
(4.) Princess Marguerite	1900	....				
(5.) Princess Marie Alice	1901	....				
3. Princess Marie	1867	....	Prince Otto of Austria	1865	1886	2
(1.) Archduke Charles Francis	1887	....				
(2.) Archduke Maximilian Eugene	1895	....				
4. Prince John Georg	1869	....	Princess Isabella of Wurtemberg	1871	1894	....
5. Prince Maximilian	1870	....

MINISTERS OF STATE.—Dr. Schurig, Herr von Metzsch, Herr von der Planitz, Herr von Seydewitz, and Herr von Watzdorf.

The Kingdom of Saxony is one of the four comprised in the German Empire. Legislative functions repose in the King and Parliament jointly, the latter consisting of two Chambers, the Upper, of hereditary and appointed members; the Lower of thirty-seven Deputies of towns and forty-five representatives of rural communes. The executive is in the King and the Ministers. Although the great majority of the inhabitants are Protestant, the reigning family are Roman Catholics.

Public instruction follows the scheme of compulsory education common to the Empire. The University of Leipzig is one of he largest in Germany.

Justice is administered in one Oberlandesgericht, seven Landgerichte, and 107 Amtsgerichte. At Leipzig is the Imperial Reichsgericht.

The budget estimate for 1900 and for 1901 was $18,436,202, the expenditure balancing it. There was also an extraordinary revenue and expenditure of $22,556,687. The public debt amounted in 1901 to $175,433,490.

Industry.—Textile manufactures form the leading branch of industry in this, the busiest of all German States. Mining and mettalurgy are important, and the State is highly cultivated.

Great Britain.

Capital: LONDON.

The right of Edward VII. to the throne of England rests upon the statute by which the succession to the crown of Great Britain and Ireland was vested upon Princess Sophia, of Hanover, and "the heirs of her body, being Protestants."

The present ruler, "Edward VII., by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas King, Defender of the Faith, Emperor of India," as his title was declared under the Royal Title act, as proclaimed November 4, 1901, was born November 9, 1841, and succeeded to the throne on the death of his mother, Queen Victoria, January 22, 1901. On March 10, 1863, he married Princess Alexandra, the eldest daughter of King Christian IX., of Denmark. Their children are:

Name.	Born.	Died.	Married.	Born.	Date of Marriage.	Issue.

THE NATION.—The United Kingdom of Great Britain and Ireland, the nucleus around which the British Empire has been built, was perfected in 1603, when the crowns of England and Scotland were united. The executive power of the empire vests in the sovereign, through his ministers. The real power of the empire, however, is to be found in Parliament, which body has the complete legislative power, and exercises also, through the Lower House, much authority in executive matters. Parliament consists of an Upper House of Lords and a Lower House of Commons. Parliament lasts seven years, or until dissolved by the sovereign. It usually meets annually for about six months. The members of the House of Lords are peers, who hold either by hereditary right, by crown appointment to the election for life, or for the duration peerage, by virtue of office, or by 592 peers. The Lower House of of Parliament. In 1901 there were ted from counties, boroughs and uni Commons consists of members elecversities, 670 in all, in 1901.

The established Church of Eng land is the Protestant Episcopal Church, of which the King is the supreme governor. But all religions are tolerated and are equal at law.

Public instruction is not com pulsory in Great Britain, but the National Board of Education main tains control of the school boards and requires accommodation for all children between five and fourteen years of age to be made in each district. Secondary education is not controlled by the Government, but the university system is, perhaps, more perfectly developed in England than in any other country.

England and Wales, Scotland and Ireland, each has its own graded system of courts of justice. There is a general poor law throughout the kingdom: paupers are well cared for. In 1901, 789,689 received assistance in England and Wales; 100,819 in Scotland; 101,090 in Ireland.

King of England.

The budget shows, for 1901, actual revenue to the amount of $583,201,360, and expenditure of $650,258,113. The public debt is about $3,060,926,304.

For purposes of defence the kingdom is divided into twelve military districts; eight are in England and Wales, one in Scotland, and three in Ireland. These sub-divide into sixty-seven regimental recruiting districts.

About 17½ per cent of the area of the United Kingdom is uncultivated, about 48 per cent is under crops and grasses, 30 per cent is grazing lands, and over 4 per cent is in woods and plantations.

Great Britain's trade is enormous. In 1901 the exports amounted to $1,402,494,445, and the imports to $2,611,194,930.

THE MINISTRY.—The new ministry is constituted as follows:

Office.	Name.
In the Cabinet:	
First Lord of the Treasury and Lord Privy Seal	Mr. Arthur James Balfour.
Lord High Chancellor	Earl of Halsbury.
Lord President of Council	Duke of Devonshire.
Home Secretary	Mr. Akers-Douglas.
Foreign Secretary	Marquis of Landsdowne.
Colonial Secretary	Mr. Joseph Chamberlain.
Secretary for War	Mr. William St. John F. Broderick.
Secretary for India	Lord George Hamilton.
First Lord of the Admiralty	Earl of Selborne.
Chancellor of the Exchequer	Mr. Charles Thomas Ritchie.
Lord Chancellor of Ireland	Lord Ashbourne.
Chief Secretary for Ireland	Mr. George Wyndham.
Chief Secretary for Scotland	Lord Balfour of Burleigh.
President of the Board of Trade	Mr. Gerald Balfour.
President of the Local Government Board	Mr. Walter Long.
President of the Board of Agriculture	Mr. Robert William Hanbury.
President of the Board of Education	Marquis of Londonderry.
Postmaster General	Mr. Austin Chamberlain.
Not in the Cabinet:	
Chancellor Duchy of Lancaster	Sir William Walrond.
First Commissioner of Works	Lord Windsor.
First Junior Lord of the Treasury	Mr. Henry Torrens Anstruther.
Second Junior Lord of the Treasury	Mr. Allwyn Fellows.
Third Junior Lord of the Treasury	Mr. H. W. Forster.
Financial Secretary to the Treasury	Mr. Hayes Fisher.
Parliamentary Secretary to the Treasury	Sir Archibald Acland Hood.
Paymaster General	Duke of Marlborough.
Judge-Advocate General	Sir Francis Jeune.
Civil Lord of the Admiralty	Mr. Prettyman.
Secretary to the Admiralty	Mr. Arnold Forster.
Financial Secretary for the War Office	Lord Stanley.
Attorney-General	Sir Robert Finley.
Solicitor-General	Sir Edward Carson.
Lord Advocate for Scotland	Mr. Graham Murray.
Solicitor General for Scotland	Mr. Scott Dickson.
Lord Lieutenant for Ireland	Earl of Dudley.
Attorney General for Ireland	Mr. John Atkinson.
Solicitor General for Ireland	Mr. Campbell.

Digitized by Google

THE MINISTRY.—Continued.

Office.	Name.
Under Secretaries of State:	
For the Home Office	Mr. Cochrane.
For the Foreign Office	Viscount Cranborne.
For the Colonial Office	Earl of Onslow.
For the War Office	Earl of Hardwicke.
For Indian Affairs	Earl Percy.
Parliamentary Secretaries:	
To the Board of Trade	Mr. Bonar Law.
To the Local Government Board	Mr. Grant Lawson.
To the Board of Education	Mr. William Anson.

THE PARLIAMENT.

The present form of Parliament, divided into two Houses, the Lords and the Commons, dates from the middle of the fourteenth century. The House of Commons consists of 670 members, elected by popular vote, about one-sixth of the population being electors. All elections for members of Parliament must be by secret vote by ballot, an act being passed annually to this effect.

The House of Lords consists of peers who hold their seats by hereditary rights, by creation of the sovereign, by virtue of office (English Bishops); by election for life (Irish Peers); and by election for the term of Parliament (Scottish Peers). There were 592 names on the roll of the House in 1901.

No one under twenty-one years of age can be a member of Parliament. All clergymen of the Church of England, ministers of the Church of Scotland, and Roman Catholic clergymen are disqualified; all government contractors, all sheriffs and returning officers are disqualified both from voting or sitting as members. No English or Scottish peer can be elected to the House of Commons, but non-representative Irish peers are eligible.

The Speaker of the House of Lords is the Lord High Chancellor of England, Hardings Stanley, Earl of Halsbury; Chairman of Committees, the Earl of Morley; Deputy Speakers, the Earl of Cork and Orrery, and the Earl de Montalt. The princes of the royal blood are George Frederick Ernest Albert, Prince of Wales, Duke of Cornwall and York; Arthur William Patrick Albert, Duke of Connaught; Leopold Charles Edward George, Duke of Albany; George William Frederick Charles, Duke of Cambridge. The Archbishop of Canterbury is Frederick Temple, D. D., and of York, William Dalrymple Maclagan, D. D.

Following is a list of Dukes of England:

Created.		Family Name	Heir Appar. or Presumpt.
1892	Argyll	J. D. S. Campbell, K. T. (Sc. D., Argyll), b. '45, s. 1900, m	Ld. Archd. Campbell, b. '46

COLONIAL POSSESSIONS.—The British possessions are world-wide. It has tritely been said that the sun never sets upon them. They exist on every continent and in all climates and latitudes. British colonies are of three types: 1. The Crown colonies, entirely controlled by the home government; 2. Those having "representative" institutions, in which case the Crown retains only a right to veto legislation, although the home government retains the control of the public officers; 3. Those having "responsible" government, in which the Crown has only the veto and the home government can appoint the governor, but has no control over any public officer.

Exclusive of India, British expenditure on the colonies amounts to about $10,000,000 annually.

Gibraltar and Malta are the European possessions of the empire. The Rock of Gibraltar, which is a Crown colony, is a naval base and military foothold of great strategic importance. In 1900 the expenditure on this port, $309,060, was almost equalled by the revenue, $307,090.

Malta is an island in the Mediterranean, about sixty miles from Sicily. It is one of the most important ports of call in the world, being the base of supplies for the Mediterranean fleet. The Government is modifiedly representative, the Governor being assisted by a Council of six official and thirteen elected members. Italian is the official legal language, but public English schools are provided. The revenue of about $1,783,790 nearly meets the expenditure.

In a group of four are Aden, Perim, Sokotra and the Kuria Muria Islands. Aden is a peninsula about 100 miles east of Bab-el-Mandeb, on the coast of Arabia. Perim is at the entrance to the Red Sea, and is a small settlement on an island. Aden, being an important coaling station on the eastern route, is strongly fortified. The two are governed by a Political Resident. Attached to them are Sokotra, off the coast of Africa, and the Kuria Muria Islands, off the coast of Arabia.

The Bahrein Islands, the largest of which is Bahrein, lie in the Persian Gulf, twenty miles off the Arabian coast. The chief occupation is pearl fishing, while the donkeys and the reed mats of Bahrein are famous. Dates and sail cloth are also produced. A Political Resident governs.

British North Borneo consists of the northern part of the Island of Borneo. It is leased to the British North Borneo Company, under whose jurisdiction it is. Labuan, a Crown colony island, about six miles northwest, is also leased to it. The laws follow the Indian codes and the local ordinances. The expenditure exceeds the revenue by nearly $1,000,000.

Ceylon is an important colony, having representative government. The religions are mainly Eastern, Buddhists, Hindoos and Mohammedans. Public education is attempted. The revenue and expenditure are about equal; the public debt is on account of public works. The commerce is considerable, and imports and

Digitized by Google

exports are about equal. The Maldine Islands, 500 miles west, although governed by a hereditary Sultan, pay yearly tribute to Ceylon.

Cyprus, forty-one miles from Syria, and the third largest of Mediterranean Islands, is administered by a British High Commissioner, under a treaty with Turkey. It is essentially an agricultural country.

Hong Kong, an island off the southeast coast of China, at the mouth of the Canton River, and Wei-Hai-Wei, in the Chinese Province of Shang Lung, are the British footholds in China. They are Crown colonies and strongly fortified.

The Indian Empire is, by far, Britain's most important Asiatic possession. Prior to 1858 British India proper was under the jurisdiction of the East India Company. Now it is governed in the name of the King, who is styled Emperor of India, and, in England, through the Secretary of State for India, assisted by a Council of ten members appointed by the Secretary. The executive authority in India vests with the Governor-General in Council. Since 1858 the Governor-General has been Viceroy, is appointed by the Crown, and holds, usually, for five years. Administratively, India is divided into eight great provinces, each with an English head.

The chief religion is that of the Hindoos (over 75 per cent), and the Mohammedans (over 22 per cent).

Justice is administered in a system of courts of a mixed English and native character.

Budget estimates for 1902 put the total revenue for India at $541,439,000, and the expenditure at $536,257,250. The external India trade in 1901 amounted to $752,356,752 imports, and $669,954,050 exports.

Dependent on India are the two border States of Baluchistan, in south central Asia, and Sikim, a State in the Himalyas, south of Thibet proper. Feudatory, also, are the Andaman and the Nicobar Islands, in the Bay of Bengal, and the Laccadive Islands, off the west coast of Malabar.

The Straits Settlements, comprising Singapore, Penang, Malacca, the Cocos Islands and Christmas Island, situated in the Malay Archipelago, form a Crown colony.

The Federated Malay States of Perak, Negri, Pehang, Sembilan and Selangor, forming a large portion of the Malay Peninsula, are under British protection. Their trade is valuable, and the revenue, which in 1900 was $15,669,807, overbalances the expenditure of $12,728,000.

British African possessions may be classed as those in East, West, South and Central Africa, and all others. British East Africa includes the East Africa Protectorate (from the Umba to the Juba River and inland to the borders of Uganda), and the Uganda Protectorate (over the Kingdom of Uganda), on the mainland, and the Zanzibar Protectorate over the Islands of Zanzibar, Pemba and others of smaller area. The first two protectorates are directly under the Foreign Office, the last is governed by it through the ruling Arabic Sultan or Seyyid.

The West African Colonies, all of which are Crown colonies, include the Gold Coast (along the Gulf of Guinea Coast, between German Togoland and the French Ivory Coast), Lagos (Lagos Island and 140 miles of coast between Dahomey and Southern Nigeria), Gambia (at the mouth of the Gambia River), and Sierra Leone (between French Guinea and the Republic of Liberia).

The South African Colonies are those of the Cape of Good Hope and Natal (including the Province of Zululand). These are both partly Crown, partly Representative colonies. They are two of the most important commercially.

The Central Colonies are important, including the Orange River Colony (prior to 1900 the Orange Free State), ruled by a Lieutenant-Governor under the Governor who is placed over it, and the Transvaal Colony (prior to 1900 the Transvaal Free State); Rhodesia (divided by the River Zambezi into Northern and Southern Rhodesia), which is governed by the British South Africa Company, assisted by a Government Executive Council, appointed; the little colony of Basutoland, northeast of Cape Colony, under its Commissioner, and the Central Africa Protectorate (on the southern and western shores of Lake Nyassa), under the government of a Foreign Office Commissioner.

Other British colonies in Africa are the Somaliland Protectorate (running west of Zeyla from Lahadu to Bandar Ziyada); Nigeria (comprising Lagos, Northern Nigeria and Southern Nigeria); the Bechuanaland Protectorate (between the Molopo River and the Zambezi, and between the South African Republic and Matabeleland, on the east, and German Southwest Africa on the west), and the Island Colonies. These latter include Ascension Island, 700 miles northwest of St. Helena; St. Helena, 1,200 miles west of the West Coast (including administratively, the Tristan da Cunha group, midway to South America); Mauritius, in the Indian Ocean, 500 miles east of Madagascar, and the Seychelles and dependent groups adjacent.

Bermuda, a colony with representative government, consists of a group of 360 small islands, east of the North Carolina coast, about 580 miles. The climate is delightful and salubrious, and they are principally known as Summer resorts. The revenue and expenditure—about $200,620 in 1900—nearly equal each other. The exports for the same year were $468,845, the imports, $1,985,680.

In the South Atlantic, about 300 miles east of Magellan Straits, are the Falkland Islands, a Crown colony. The revenue and expenditure are about equal, being in 1900 about $78,000. The imports for 1901-02 were $334,740, and the exports, $557,695, most of which went to Great Britain.

British Guiana is ruled by a Governor, assisted by a Court of Policy and a combined court. It is especially valuable for its rich deposits of gold; diamonds are also extensively exported. In 1901 the expenditure and revenue each amounted to about $2,527,460. The imports were $6,967,645, and the exports were $10,342,430.

British Honduras is a Crown colony in the Caribbean Sea, 660 miles west from Jamaica. It is principally noted for its hardwoods and mahogany. The revenue ($298,500) more than pays for the expenditure. It comes mainly from customs and excise taxes.

The islands in the British West Indies include the Bahamas, Barbados, Jamaica, the largest and most important, Trinidad, and the Leeward and Windward groups. Each of these colonial units is governed by a Governor, assisted by a Legislative and an Executive Council. Jamaica is the military, political and commercial centre for the entire group. In 1900 the total expenditure, for all of the West Indian possessions, was $10,585,855. This was more than offset by a revenue of $10,669,825. The imports were $33,697,825, and the exports $31,801,720.

The chief British possessions in Australasia are the Australian colonies, the six States of which form the Australian Commonwealth. The executive power, vested in the British King, is exercised by his Governor-General. The legislative power vests in him and the Federal Parliament, of a Senate and House of Representatives. The total Federal revenue amounts to over $51,500,000, and the combined expenditure to less than $47,000,000. New South Wales is the most important of the States and sends twenty-six Representatives to the House; Victoria comes next with twenty-three; then Queensland with nine; South Australia with seven, and West Australia and Tasmania each with five. Religious toleration is universal in the States, and there is no State religion or State aid of religion in any, except in Tasmania, where financial support is given impartially to all. The judicial system, which is similar throughout, is closely patterned after that of the usual State systems in this country. Sydney, which is the headquarters of the British Australian fleet, is a first-class port, and the centre of defence.

The southeastern part of the Island of New Guinea is a British possession. It is, at present, a dependency to the Commonwealth, although its final relation to it has not been yet established.

In New Zealand, next to Australia, the most important of the Australian colonies, the Government is represented by a Governor, the executive head for the Crown, who, with the General Assembly of two Chambers, forms the legislative power.

There is no State Church; there is a system of free public primary education.

The total revenue for 1901 was $27,912,510, which was about $500,000 more than the expenditure. The imports in 1901 were about $53,350,000, and the exports about $66,200,000.

The Islands of the Fiji group in the Western Pacific, are governed for the Crown by a Governor, who is the executive head, and sits with the Legislative Council. The Islands pay for themselves, the revenue in 1900 being $557,845, while the expenditure was $500,120.

In the Pacific Islands, Tonga or the Friendly Islands group, while nominally neutral, are through preponderance of interests, practically a British colony. A protectorate was proclaimed over the kingdom May 19, 1900.

Colonial Representatives.—The British representatives in the colonies and protectorates are:

India.—Lord Curzon of Kedleston, Viceroy and Governor-General; Madras, Lord Ampthill; Bombay, Lord Northcote; Bengal, Sir John Woodburn; Northwest Province, Sir Anthony P. MacDonald; Punjab, Sir W. M. Young; Burmah, Sir F. W. R. Fryer; Ceylon, Colonel Rt. Hon. Sir J. W. Ridgeway; Straits Settlement, Sir Frank A. Swettenham; Hong Kong, Sir Henry Arthur Blake; Boreno, Hugh C. Clifford; Sarawak, H. H. Sir Charles Johnson Brooke, Raja.

Dominion of Canada.—Earl of Minto, Governor-General; Newfoundland, Sir Cavendish Boyle.

Africa.—South Africa, Lord Milner, High Commissioner; Cape Colony, Hon. Sir. W. F. Hely-Hutchinson; Basutoland, Sir Godfrey Yeatman Lagden; Bechuanaland, Major H. J. Goold-Adams; Transvaal and Orange River, Lord Milner; Natal, Colonel Sir H. E. McCallum; Rhodesia, Sir Michael J. Clarke; Gambia, Sir George C. Denton; Gold Coast, Major Matthew Nathan; Sierra Leon, Sir Charles A. King-Harman; Lagos, Sir William McGregor; Southern Nigeria, Sir R. D. R. Moore; Northern Nigeria, Brig.-Gen. Sir F. D. Lugard; Somaliland, Lieut.-Col. J. H. Sadler; East Africa Protectorate, Sir C. N. E. Elliot; Unganda, Sir H. H. Johnston; Witu, A. S. Rogers; Zanzibar, Sir C. N. E. Elliot; British Central Africa, Alfred Sharpe.

Commonwealth of Australia.—New South Wales, Earl Beauchamp; Victoria, Colonel Sir George Sydenham Clarke; South Australia, Lord Tennyson; Queensland, Lord Lamington; Tasmania, Sir Arthur E. Haveloch; Western Australia, Captain Hon. Sir Arthur Lawley; New Zealand, Earl Ranpurly.

British West Indies.—Jamaica, Sir A. W. L. Hemming; Bahama, Sir Gilbert T. Carter; Leeward Isles, Sir Henry M. Jackson; Windward Isles, Sir Robert B. Llewelyn; Barbados, Sir Frederick M. Hodgson; Trinidad and Tobago, Sir Cornelius A. Moloney.

Miscellaneous Islands and Protectorates.—Bermuda, General Sir George Digby Barker; Gibraltar, General Sir G. S. White; Malta, General Sir F. Wallace Grenfell; St. Helena, Robert A. Sterndale; Cyprus, Sir W. F. Haynes Smith; Fiji, Sir George T. M. O'Brien; British Guiana, Sir J. A. Swettenham; British New Guiana, George Ruthven Le Hunte; British Honduras, Colonel Sir David Wilson; Mauritius, Sir Charles Bruce; Seychelles, E. B. Sweet-Escott; Ascension, Captain G. N. A. Pollard; Falkland, William Grey-Wilson; Pacific Islands, Sir G. T. M. O'Brien.

Events in 1902.—The present year has been an eventful one for Great Britain, seeing the close of the South African war, with British success—a complete vindication of the war policy of the British Ministry at that time; the coronation of King Edward, after the ceremonies had been postponed on account of an illness which threatened to end fatally for the King; great changes in the Cabinet, including the voluntary retirement of Lord Salisbury as Premier and the succession of the Hon. Arthur James Balfour to that important post. English politics has undergone a change, Lord Rosebery, the long-time leader of the Liberal party, having split from it, claiming that the Irish demanded too much, among other things an independent Parliament in Dublin. The "National" Liberal faction is led by Sir Henry Campbell Bannerman, while Lord Rosebery has organized the new "Liberal League."

Not less worthy of record is the so-called American invasion of the English business world, the most striking features of which have been the bitter war for supremacy in the tobacco trade waged by the American and the British tobacco monopolies; the securing of franchises for and commencement of work on probably the greatest system of underground railways ever projected—the work of an American financier—Charles Tyson Yerkes—and, greatest of all, the consolidation of the leading British shipping interests into the ship merger, consummated by the work of Mr. J. Pierpont Morgan, and familiarly known as the American Ship Trust.

Capital:
OTTAWA.

The Dominion of Canada originally consisted of the two provinces of Canada—Upper and Lower—Nova Scotia and New Brunswick, but the "British North American Act," which was passed in 1867, not only provided for the consolidation of these provinces, but made provision for the admission of British Columbia, Prince Edward Island, the Northwest Territories and Newfoundland, a privilege of which Newfoundland alone has not availed herself.

In accordance with this Act of Consolidation the Constitution of the Dominion is "similar in principle to that the United Kingdom," and while the executive authority is vested in the British sovereign, the legislative power of the Dominion is exercised by a Parliament of two houses—the Senate and the House of Commons—and each province forming the Dominion has a separate Parliament and administration, a Lieutenant-Governor being at the head of all provincial bodies.

The Senate of the Dominion is composed of eighty-one members who have been nominated for life. Each must be at least thirty years of age, a born or naturalized subject and possessed of $4,000 worth of property in the province from which he was appointed. The 213 members of the House are elected by the vote of their constituencies, the electors of which are qualified by the act of each provincial assembly.

The Speaker of the Senate and House each receives a salary of $4,000, while each member of the two houses is granted a session allowance of $1,500, with 10 cents per mile for travelling expenses. In cases of absence, except for sickness, the sum of $8 per diem is deducted. The Governor-General, who receives a salary of $50,000 per annum, is appointed by the Federal Government for a term of five years, and he is assisted in his functions by a Council composed of fourteen heads of departments, each of whom receives a salary of $7,000 per annum, except the Premier, who has a salary of $8,000 per annum.

The representation from the several provinces is as follows: Ontario, 24 Senators, 92 Commons; Quebec, 24 Senators, 65 Commons; Nova Scotia, 10 Senators, 20 Commons; New Brunswick, 10 Senators, 14 Commons; Manitoba, 4 Senators, 7 Commons; British Columbia, 3 Senators, 6 Commons; Prince Edward Island, 4 Senators, 5 Commons; Northwest Territories, 2 Senators, 4 Commons.

DOMINION GOVERNMENT.—The present Executive of the Dominion is composed as follows:

Governor-General, Earl of Minto. Staff—Secretary to the Governor-General, Major F. S. Maude; Aide-de-Camp, Captain A. C. Bell; Comptroller of the Household, Arthur Guise, Esq. The Cabinet and the Executive Committee of the Privy Council—President of the Privy Council and Prime Minister, Rt. Hon. Sir Wilfrid Laurier; Minister of Trade and Commerce, Hon. Sir Richard Cartwright; Secretary of State, Hon. Richard William Scott; Minister of Justice, Hon. Charles Fitzpatrick; Minister of Marine and Fisheries, Hon. James Sutherland; Minister of Militia and Defence, Hon. Frederick William Borden; Postmaster-General, Hon. William Mulock; Minister of Agriculture, Hon. Sydney Arthur Fisher; Minister of Public Works, Hon. Joseph Israel Tarte; Minister of Finance, Hon. William S. Fielding; Minister of Railways and Canals, Hon. Andrew George Blair; Minister of the Interior, Hon. Clifford Sifton; Minister of Inland Revenue, Hon. William Patterson; Minister of Inland Revenue, W. J. Cabinet, but not in the Council: Clerk of the Privy Purse, John Joseph McGee, Esq.. Not in the Cabinet: Solicitor-General, Hon. Henry George Carroll. Other prominent officials: Speaker of the Senate, Hon. Lawrence G. Powers; General Librarian of Parliament, Alfred D. De Celles; Deputy Minister of Inland Revenue, W. J. Gerald; Deputy Minister of Finance, J. M. Courtney; Deputy Minister of Militia and Defence, Col. L. F. Pinault; General Officer Commanding the Militia, Maj.-Gen. H. O'Grady-Haly; Adjutant-General, Col. Rt. Hon. Lord Aylmer; Quartermaster-General, Col. W. H. Cotton; Deputy Minister of Trade and Commerce, W. G. Parmelee; Deputy Minister of Marine and Fisheries, Major F. Gourdeau; Deputy Ministetr of the Interior, James A. Smart; Commissioner of Dominion Lands, J. G. Turriff; Chief Inspector of Surveys, William Pearce; Superintendent of Mines, Dr. Eugene Haanel; Deputy Head of Surveys, Dr. Robert Bell; Auditor-General, John Lorn McDougall; Deputy Minister of Agriculture, George F. O'Halloran; Deputy Minister of Railways, C. Schreiber; King's Printer, S. E. Demson; Deputy Minister of Public Works, A. Gobeil; Deputy Minister of Justice, E. L. Newcombe; Registrar of Supreme Court, E. R. Cameron; Deputy Postmaster-General, R. M. Coulter; Commissioner of Customs, John McDougald; Commissioner of Police, Northwest Territories, A. B. Perry; Superintendent of Police, Yukon Territory, Z. T. Wood.

Sir Wilfrid Laurier.

THE PROVINCES.—The seven provinces which are now comprised within the Dominion have a total area of nearly 4,000,000 square miles, including both land and water, and is thus the largest of all the colonies of the British Empire.

AREA, POPULATION AND GOVERNMENT OF THE PROVINCES.

Province.	Capital.	Area in Sq. M.	Population.	Lieutenant-Governor.	Salary	Premier.	Salary

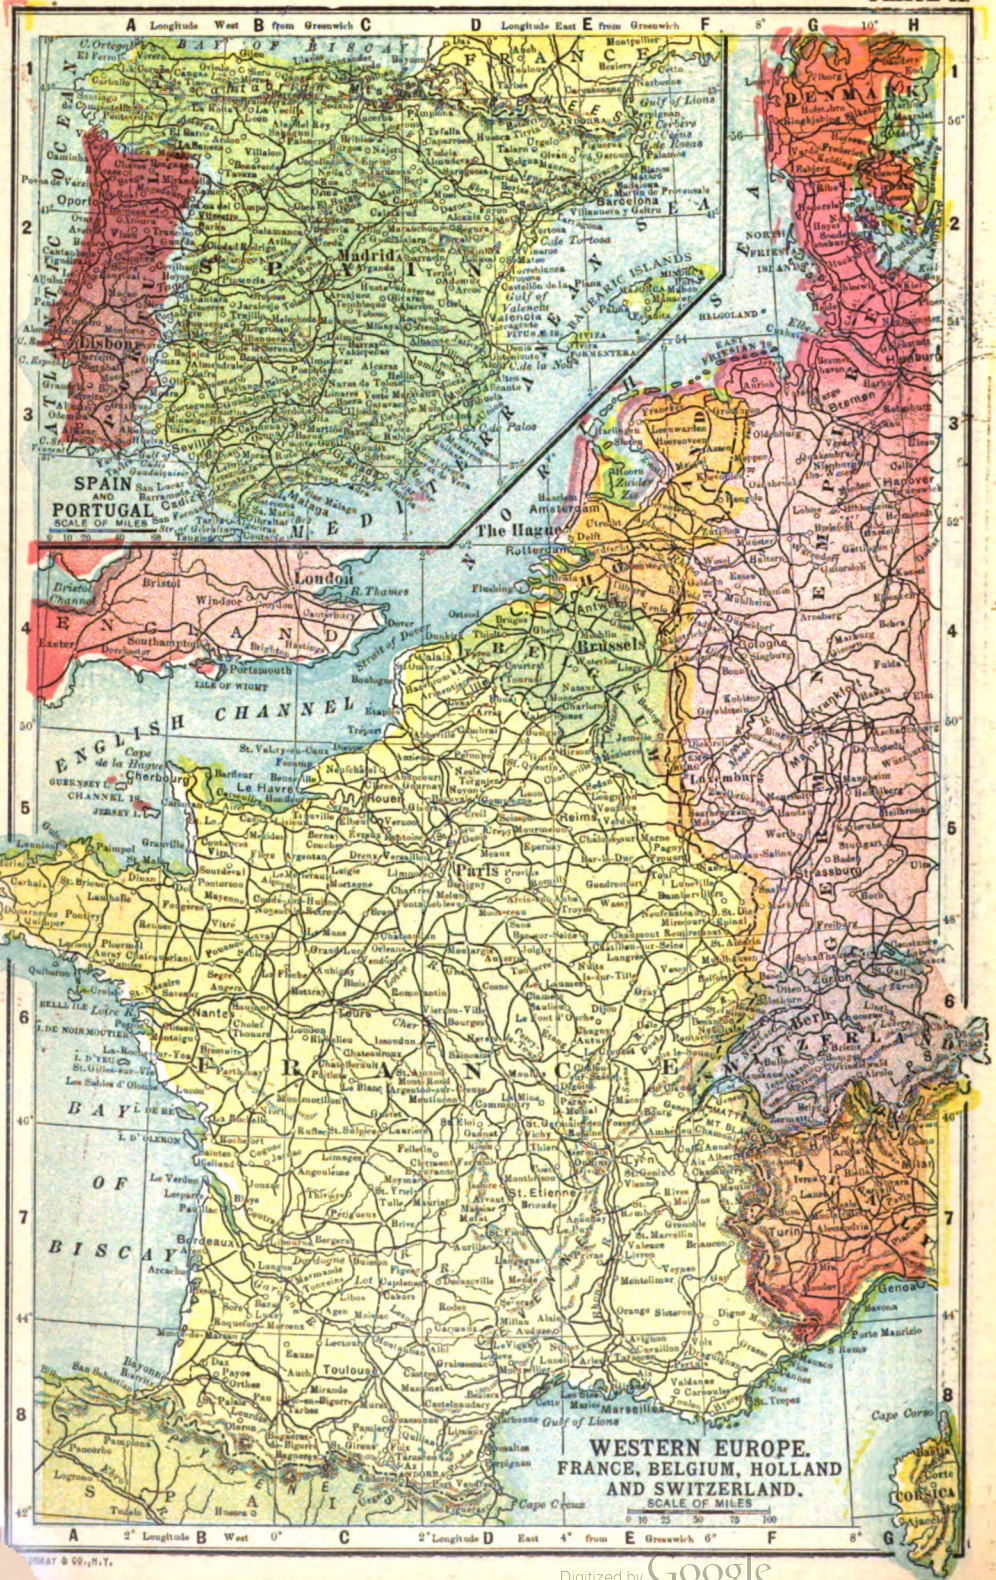
BORNAY & CO., N.Y.



Digitized by Google

policy of the central government. The Lieutenant-Governor of each province is appointed by the Governor-General, while the other officials are elected by the people. The present executive is composed as follows:

Executive for Prince Edward Island—Attorney-General, Hon. Arthur Peters, Premier; Secretary, Treasurer and Commissioner of Agriculture, Hon. Benjamin Rogers; Commissioner of Public Works, Hon. James H. Cummiskey; Members of Council, Hon. James W. Richards, Hon. Peter McNutt, Hon. R. C. McLeod, Hon. Malcolm McDonald, Hon. George Forbes; Clerk, Arthur Newbery.

Executive for Nova Scotia.—Provincial Secretary, Hon. G. H. Murray, Premier; Attorney-General, Hon. J. W. Longley; Commissioner of Works and Mines, Hon. Arthur Drysdale; Members of Council, Hon. Thomas Johnson, Hon. A. H. Comean, Hon. A. MacGillivray, Hon. T. R. Black, Hon. D. McPherson, Hon. W. T. Piper.

Executive for New Brunswick—Provincial Secretary and Receiver-General, Hon. Lemuel J. Tweedie, Premier; Surveyor-General, Hon. A. T. Dunn; Attorney-General, Hon. William Pugsley; Commissioner for Agriculture, Hon. Lauchlan P. Farris; Chief Commissioner of Public Works, C. H. La Billois; Members of Council, Hon. H. A. McKeown, Hon. George F. Hill; Clerk, J. H. Dickson.

Executive for Quebec—Minister of Lands, Mines and Fisheries, Hon. S. N. Parent, Premier; Attorney-General, H. Archambeault; Minister of Agriculture, Hon. F. G. M. Dechene; Secretary and Register, Hon. H. Tomgeon; Provincial Treasurer, Hon. H. T. Duffy; without portfolio, Hon. J. J. Guerin; Minister of Colonization, Hon. L. Gouin; Clerk, G. Grenier.

Executive for Ontario—Treasurer, Hon. G. W. Ross, Premier; Attorney-General, Hon. J. M. Gibson; Minister of Education, Hon. Richard Harcourt; Commissioner of Public Works, Hon. F. R. Latchford; Secretary, Hon. J. R. Stratton; Commissioner of Crown Lands, Hon. E. J. Davis; Minister of Agriculture, and Registrar, Hon. John Dryden; Clerk, John R. Cartwright.

Executive for Manitoba—Minister of Agriculture and Immigration, Hon. R. P. Roblin, Premier; Treasurer and Land Commissioner, Hon. J. A. Davidson; Secretary, Hon. D. H. McFaddeu; Attorney-General, Minister of Education and Municipal Commissioner, Hon. Colin H. Campbell; Minister of Public Works, Hon. Robert Rogers; Clerk, C. Graburn.

Executive for British Columbia—President, Hon. James Dunsmuir, Premier; Secretary and Minister of Education, Hon. J. D. Prentice; Attorney-General, Hon. D. M. Eberts; Minister of Finance and Agriculture, Hon. J. D. Prentice; Commissioner of Lands and Works, Hon. W. C. Wells; Minister of Mines, Colonel the Hon. E. G. Prior.

Executive for Northwest Territories—Attorney-General, F. W. G. Haultain; Treasurer and Commissioner of Public Works, J. H. Koss; Secretary and Commissioner of Agriculture, G. H. V. Bulyea; Clerk of Council and King's Printer, J. A. Reid.

Population.—As no vital statistics are collected for the Dominion it is impossible to estimate the rate of natural increase in population. The population of its largest cities, however, was as follows in 1901: Montreal, 266,836; Toronto, 207,971; Quebec, 68,834; Ottawa, 59,902; Hamilton, 52,550; Winnipeg, 42,336; Halifax, 40,787; St. John, 40,711; London, 37,983; Vancouver, 26,196; Victoria, 20,821.

Religion.—There is no established Church in the Dominion. The Roman Catholic Church is governed by one Cardinal, seven Archbishops, twenty-three Bishops and about 1,600 clergy; the Episcopal Church by twenty bishops and more than 1,000 clergy, while the Presbyterian Church has 1,000 ministers, the Methodist Church 1,700 and the Baptist Church 550 ministers. The census of 1891 gives the number of followers of each creed: Roman Catholics, 1,992,017; Presbyterians, 755,326; Episcopalians, 646,059; Methodists, 847,765; Baptists, 303,839; Lutherans, 63,982; Congregationalists, 28,157; other creeds, 106,739; Pagan and no creed, 89,355.

Education.—There are one or more universities in each province, and several colleges that prepare for university degrees. The total annual expenditure of these institutions is more than $700,000, and they are attended by nearly 14,000 students. The public school system is also upon a good basis. In 1901 there were 18,963 schools, which were attended by 1,100,000 pupils, and the annual expenditure for their support exceeded $10,000,000.

Crime and the Courts.—Each province in the Dominion has its Superior and County Courts, and there is a Supreme Court in Ottawa, composed of a Chief Justice and five judges, which has jurisdiction throughout Canada.

According to the criminal statistics recently prepared by the Dominion statistician the number of charges in 1901 for indictable offences was 128 less than in 1900, being 8,291 in 1901, as against 8,419 in 1900. The statistical position of 1900 as compared to 1899, however, was 249 more charges. The percentage of convictions in 1901 was 68 per cent, as against 68.51 per cent in 1900. The convictions by provinces were as follows:

	1900.	1901.		1900.	1901.
Ontario	2,769	2,769	New Brunswick	137	127
Quebec	1,487	1,490	Yukon	95	40
British Columbia	489	457	Prince Edward Island	27	17
Nova Scotia	325	329			
Manitoba	269	202	Canada	5,768	5,638
Territories	170	207			

The convictions for indictable offences in 1901, in which the convicted represented himself as a dweller in a city or town, numbered 4,217. From those figures the following results are worked out: Urban crime, 29.80 persons in every 10,000 inhabitants; rural crime, 2.35 persons in every 10,000 inhabitants. By occupations the returns denote that convicted crime among the agricultural, commercial, domestic, professional and laboring classes decreased. Convicted crime among the industrial class increased, the figures being 652 in 1901 and 590 in 1900, an increase of 62. By percentages it was 11.56 per cent in 1901, 10.01 in 1900, and 12 per cent in 1899. Of the total convictions during 1901 males numbered 5,338 against 5,430 in 1900, a decrease of 92. Females numbered 300, against 338, a decrease of 38.

With regard to juvenile delinquency, while there has been a satisfactory decrease in the juvenile criminals of the female sex, the juvenile criminals of the male sex have most disproportionately increased. This is the most serious fact of the records of crime in Canada. In regard to summary convictions, there was an increase of 1.7 per cent in 1901 as compared with 1900.

For the last seven years the committals to the penitentiaries have not varied greatly in number. For 1901 they were 492, the offences being as follows: Murder and attempt, 4; manslaughter, 7; social offences, 37; bigamy, 3; shooting at or wounding with intent, 28; assault, 18; burglary and robbery with violence, 137; horse, cattle and sheep stealing, 17; other offences against property, 196; forgery and offences against the currency, 19; arson, 10; other felonies and misdemeanors, 16; total, 492.

The following is the total number of convictions of all kinds in Canada for the year ending September 30, 1901: Offences against the person, 4,677; offences against property with violence, 450; offences against property without violence, 4,216; malicious offences against property, 192; forgery and offences against the currency, 91; other offences not included in the above classes (including drunkenness, vagrancy, petty larceny, etc.), 32,025; total, 41,651.

[The facts relating to crime in Canada were supplied to The American Almanac by James Massie, Esq., Registrar, Toronto, Canada.]

Products and Industries.—The Dominion is rich in mineral resources, and vast areas of the mining properties are still unimproved. The total value of mineral products in 1900 was $63,775,090. The coal produced in 1900 exceeded 5,332,197 tons, with a value of more than $12,668,000, while among the other minerals mined in 1900 were: Gold, $27,916,752; nickel, $3,227,700; asbestos, $763,431; copper, $3,227,707; silver, $2,730,598; lead, $2,760,521; pig iron, $583,158; petroleum, $1,151,000.

The timber wealth of Canada is also great, and the production of lumber is one of its largest industries. The wood pulp industry is also increasing rapidly, the exportable surplus in 1900 being nearly $2,000,000. The value of the timber products in 1900 exceeded $32,790,000.

Digitized by Google

Much attention has recently been given to agriculture, and the efforts of the Board of Agriculture to educate the people in the most modern methods of farming and dairying have met with remarkable success. The exports in 1901 included the following agricultural products: Wheat, $6,871,939; flour, $4,015,226; oats, $2,490,521; oatmeal, $467,807; peas, $2,482,249; cattle, $9,064,562; cheese, $20,696,961; butter, $3,295,663; pork, bacon and ham, $11,829,820; eggs, $1,691,640.

The fisheries of Canada are also a great source of income, the value of the catches in 1900 exceeding $20,600,000.

Militia.—Since the passage of the Consolidation act the Dominion militia has been under the command of a Major-General of the British army. For military purposes the Dominion is divided into twelve districts, with district officers and a brigadier staff in each. The permanent militia number 1,021; the active militia, 38,090, while the reserve militia consists of all adult males between the age of eighteen and sixty years who are not serving in the active militia. In addition there are two royal schools of artillery, one school of cavalry, one of mounted rifles and five of infantry. There is also a well-established military college at Kingston.

At the present time Canada possesses no marine militia, but efforts are now being made to include the Dominion among the recruiting stations for the Imperial navy.

Railways and Canals.—Canada's system of canal, river and lake navigation is more than 2,700 miles in length, and through it vessels pass from lake ports to the Atlantic without breaking bulk. At the close of 1900 nearly $80,000,000 had been spent on canal construction alone.

The total length of the railroads in the Dominion is nearly 18,000 miles, the line of the Canadian Pacific alone being 2,906, from Montreal to Vancouver. There are also thirty-five electric railways in Canada, with a mileage of 681.

Financial and Commercial.—If it were not for the public debt, the interest on which forms the largest items in the list of annual expenditures, Canada's revenue would greatly exceed her disbursements. As this debt was chiefly incurred on account of public works and improvements, however, its magnitude does not appall, for its payment in the natural course of events can only be a matter of time. The following table will furnish some idea of the financial growth of the Dominion:

FINANCIAL CONDITION OF THE DOMINION, 1881-1901.

Year.	Consolidated Fund. Receipts.	Consolidated Fund. Expenditure.	Expenditure Per Capita.	Sinking Fund.	Total Receipts.	Total Expenditures.	Total Exports.	Total Imports.

In Newfoundland the Government is administered by a Governor, who is appointed by the Crown at a salary of $10,000, and he is assisted by an Executive Council of nine members, a Legislative Council of fifteen members and a House of Assembly composed of thirty-six representatives.

The present Governor, Sir Cavendish Boyle, was appointed in 1901. His Executive Council is composed as follows: Premier and Colonial Secretary, Hon. Robert Bond; Minister of Justice, Hon. W. H. Horwood; Minister of Finance, Hon. E. M. Jackman; Ministers without portfolios, Hon. E. P. Morris, Hon. A. W. Harvey, Hon. J. S. Pitts, Hon. H. J. B. Woods, Hon. J. D. Ryan and Hon. G. Gnowling.

The population of Newfoundland is estimated as somewhat in excess of 200,000, of whom 72,400 are Roman Catholics, 68,000 Anglicans and 53,000 Methodists. These inhabitants have largely located along the coast of the island, the interior of which is still practically in a state of nature, although the construction of nearly 640 miles of railroad has tended to attract settlers to the rich tracts of agricultural, mineral and timber lands which had hitherto been almost unapproachable.

Mining and fishing are the chief industries of the island, the exports of the colony being: Codfish, $5,453,538; cod and seal oil, $778,322; seal skins, $162,330; lobsters, $441,202; minerals, $1,046,792.

St. John's, the capital of Newfoundland, has a population of about 30,000, while the population of other large towns is: Harbor Grace, 6,466; Carbonear, 4,127; Twillingate, 3,585; Bonavista, 3,551.

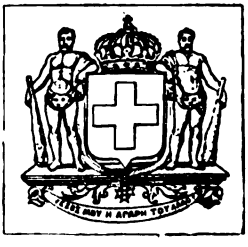
Labrador, a dependency of Newfoundland, forms the most easterly part of America. It possesses a few missionary settlements and a few posts established by the Hudson Bay Company. Its fisheries are its only industries.

Greece.

—

Capital: ATHENS.

Greece was a province of the Turkish Empire from the beginning of the sixteenth century until it gained its independence by the insurrection of 1821-29. By the protocol of London, February 3, 1830, it was declared a kingdom, under the protection of France, Great Britain and Russia, and the crown was offered to Prince Leopold of Saxe-Coburg. He declined the honor, however, after which it was accepted by Prince Otto of Bavaria, who ascended the throne January 25, 1833, and reigned until October, 1862, when he was expelled from the kingdom.



The present ruler, George I., was the second son of the present King of Denmark, and was born December 24, 1845. After the expulsion of the late ruler the Greeks, meeting in National Assembly elected him King of the Hellenes, March 18, 1863, and on June 4 of the same year he accepted the crown, his father acting as his guardian, as he was not then of legal age. On October 27,

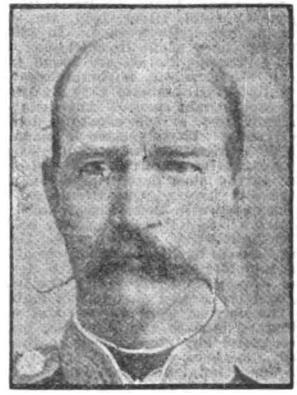
6. Prince Christopher	1888	....				

THE MINISTRY.—The Ministry is constituted as follows:

Prime Minister and Minister of Foreign Affairs, M. Alex Th. Zaimis; Minister of the Interior, M. Nicholas Triantaphylakos; Minister of Worship and Instruction, M. Ant. Momferato; Minister of War and Marine, Colonel George Corpas; Minister of Finance, M. Ph. Negris; Minister of Justice, M. C. Topalis.

THE NATION.—Since 1829 Greece has been an independent, constitutional, monarchy. Its independence is protected by Great Britain, France and Russia. The Kingdom of Hellas, as it is correctly styled, includes the three provinces of Northern Greece, the five of Philoponnesus, the three of Thessaly and five islands. The legislative power rests in the one-chambered body, the Bule, of 207 representatives, elected by male ballot to serve four years.



King of Greece.

The principal religion is that of the Greek Orthodox Church. Complete religious liberty is guaranteed, but this religion is constitutionally that of the State, and all succeeding rulers and their heirs must profess it. By special enactment this is not required of King George I.

Nominally, school attendance is compulsory between the ages of five and twelve years.

The actual revenues for 1901 were $13,650,533; expenditures $13,626,200; public debt (1901) $168,548,444, including a paper debt of 171,424,980 drachmai (about $34,284,996).

Greece is an agricultural country. Of its 25,000 square miles, over 5,500,000 acres are in cultivation; 5,000,000 are pasture and 3,000,000 are waste land. Manufactures are few and unimportant. The special commerce in 1900 was: Imports, $15,997,213; exports, $20,417,864.

The first school for higher learning in modern Greece was established by decree in 1837, and was modelled somewhat upon the universities of Germany. Classes met and lectures were heard in what had formerly been a private house, there being no structure suitable for the university found in Athens. In 1841 a building was erected and dedicated, and the university has grown slowly since. The attendance is proportionate to the population of the country, owing probably to poverty and political disturbances. The only purely ecclesiastical institution of higher learning in the kingdom is the Rizareian School, an endowed institution for candidates for priesthood. A collegiate school, the Leonine Lyceum, exists at Athens, for the education of children of Catholic parents of that city. The Arsakeian School for girls, also at Athens, the conservatory of music, the libraries, laboratories and museums, supported by the Government, complete the institutions for higher learning.

The Greek army is based on what resembles a feudal system, the soldier, with the exception of those in the Chasseur branch of service, is a Jack-of-all-trades, and exercises the functions of policeman, fireman and excise officer. The pay of the private is 100 lepta a day, or about 20 cents, of which 25 lepta a day are taken to provide for arms and equipment, 59 go for food and 1 lepta is deducted for the support of the home for aged soldiers. The Chasseur branch, in picturesque starched kilts and short jackets, forms the important arm of the service, and it is due to this branch that the mountains of Greece are practically free of brigands.

According to recent reports in trade journals, the progress of communication within Greece is very marked and promises soon to bring convenience of travel to a level with those of any country in Europe. The first electric street railway in Greece has just been completed in Patras, and the Athens-Piraeus railway is about to be equipped for electric service. All of the apparatus has been supplied by American companies, and the corporation operating the road is the Thomson-Houston Company, of the United States.

Guatemala.

—

Capital:
NEW GUATEMALA.

Guatemala was discovered by Columbus in 1502, and in 1524 the country became a Spanish dependency, being erected into a captain-generalcy by Charles V. in 1527. Its history during the years of Spanish occupancy is nearly identical with that of other Central American territories, and not until 1821, when the yoke of Spain was thrown off, did the country begin to have a story of its own. In that year it became a part of the Mexican empire under Iturbide, and in 1823 became a part of the Central American Federal Republic. In 1839 the territory of the latter was diminished by the secession of Honduras, and eight years later Guatemala separated from the confederation, becoming an independent republic on March 21, 1847. Up to 1862 Guatemala kept out of the many wars which proved so disastrous to other Spanish-American countries, but shortly after that time its finances were considerably embarrassed and its development retarded by a succession of petty wars. In 1870 several towns and villages were visited by an earthquake and several were severely damaged. In May, 1871, a revolution broke out against President Cerna, which was terminated by his deposition and the installation of Granados to the executive chair. The new government was soon obliged to exile the archbishop of Guatemala and banish the Jesuits, who were charged with stirring up a new revolution in favor of Cerna. The property of the Jesuits was confiscated, the order being declared extinct. In 1872 an alliance, offensive and defensive, was made with San Salvador, the principal stipulations of which were mutual protection in the event of internal dissensions, the connecting of the two republics by telegraph lines, and the complete interdiction of the Jesuits. The constitution now in force was proclaimed December, 1879, and modified in 1885, 1887 and 1889. By its terms the legislative power is vested in a National Assembly consisting of one member for every 20,000 inhabitants and elected for a term of four years, and a Council

Digitized by Google

of State of thirteen members, partly elected by the National Assembly and partly appointed by the President. The executive is vested in a President, elected for a term of six years, and not eligible to re-election for the following period.

The area of Guatemala is estimated at 48,290 square miles, and in 1900 the population was 1,574,340. About 60 per cent are pure Indians, the remainder being half caste, with but very few descendants of Europeans. The Republic is administratively divided into 22 departments.

Almost the whole surface of the Republic is an elevated plateau, which is a continuation of the tableland of Yucatan, intersected by numerous mountains, with deep and extensive valleys. No continuous mountain chain traverses the country, but the depressions of the tableland toward the Pacific coast is so rapid and presents so many steep declivities that when viewed from the sea it looks like an elevated mountain range. The edge of the plain toward the ocean is marked by several volcanoes, some of which are still active. Remarkable among the extinct volcanoes is the Volcan de Agua, so named from a torrent of water which burst from its crater in 1541 and overwhelmed the first city of Guatemala, the ruins of which still exist. All the volcanoes, whether active or extinct, are in a line with those of Nicaragua and San Salvador.

Agriculture is the principal industry, and coffee, sugar, corn, bananas, tobacco and cocoa are the leading products. By the national Land Law of 1894 the State lands, except those on the frontiers and seashore, were divided into lots for sale, the maximum allotment permitted to one person being fifteen caballarias, or about 1,687 acres. The price varies from $250 per caballaria (112½ acres) to $400 or $500, including costs of surveys, titles, etc. Uncultivated land may be granted gratuitously to immigrants or immigrant companies, to municipalities, villages and schools, or as assistance toward road making. The forest area has an extent of about 526,593 hectares. The soil generally is very fertile, and especially adapted to the growing of coffee. The largest coffee plantations are in the hands of Germans. To encourage rubber cultivation it was provided by decree of January 14, 1899, that for every 20,000 rubber plants four years old planted after the date of the decree the owner should receive 112½ acres of national land. On the high tableland there is excellent grazing ground. Gold, silver, lead, tin, copper, manganese, antimony, sulphur, salt, lignite and other minerals exist, but are little worked. In 1897 mining for gold was carried on at the Motaga River, where about $50,000 had been spent in machinery, dwellings, etc. Silver and salt mining are also carried on with profit. The precious metals are found in but small quantities, however.

In regard to the trade conditions of the Republic, a comprehensive resume of the conditions was prepared by Consul-General James C. McNally, at Guatemala City in May, 1902. He said in his report to the Government that the opportunity for the introduction of American goods into Guatemala was never so good as at that time. Shoes and haberdashery are in constant demand, while cotton fabrics, hardware, paints, oils and varnishes have a ready sale. The objection is made to American goods that they are not adequately represented by agents, and the dealers are loath to purchase without knowing the full quality of the articles they are asked to buy. The catalogue or circular system of advertising is of but little value.

On the 18th of April, 1902, severe earthquakes destroyed much property in the vicinity of Guatemala City, and caused serious damage to the city itself. Quezaltenango, Antigua and Santa Lucia were among the towns that suffered most, and the loss of life in these three places was estimated at more than 500. The only white person reported killed was Mrs. Clara Kildare, the wife of a photographer at Quezaltenango. The volcanoes of Chingo and Santa Maria became active, the latter for the first time since the earliest Spanish settlements. In view of the suffering caused by the destruction of homes and of coffee plantations, an extra session of the Congress of the Republic was called, with a view of taking such measures as the conditions demanded. Several decrees were passed, increasing the import duties on articles of luxury such as could be produced in the Republic, and the duties on building materials, including paints and oils, were removed for a period of five years. The decrees were approved at once by the President.

Roman Catholicism is the prevailing religion in the Republic, but all creeds have complete liberty of worship. The Government does not recognize any creed above another. Education is free and compulsory. Besides the primary and secondary schools, there are several institutes and normal schools, several establishments for professional and special education, and a polytechnic school. The Government also supports a national library.

There are six railroads in the Republic, with a total length of about 342 miles. In 1902 there were several roads projected, and routes for some of them have been surveyed. The longest railway now open to traffic is the Northern Railroad, along the Atlantic coast, and having a length of 159 miles. About 25 miles more of this road has been prepared for rails. The national telegraph system was in a flourishing condition, according to reports by the Secretary of Public Works, made in June, 1902. In the same report it was shown that the earthquakes of April so affected the coffee plantations, to the extent of damaging the warehouses and machinery, that the crop of 1902 was expected to be not more than one-half of the usual output.

The forests of Guatemala furnish an excellent quality of mahogany and cedar, and recently concessions have been given to F. Arturo Ramirez, to cut mahogany and cedar on the public lands within a belt extending five miles on each side of the Northern Railway, to an amount not to exceed 2,500 tons. The concessionaire is to pay into the National Treasury from $3 to $4 a metric ton for all mahogany cut, depending upon the quality of the timber.

The army of Guatemala, the cost of which is about one-tenth of the total public expenditure, consists of about 7,000 officers and men in regular service. The effective army consists of 56,900 men from eighteen to thirty years of age, and the reserve has 30,000 men from thirty to fifty years of age.

In his message to Congress in 1902, the President of the Republic spoke of the benefits to be derived from the recent Convention of Peace and Obligatory Arbitration lately celebrated between the South American Republics, and referred to the opportune visits of the Presidents of Costa Rica and Salvador, to Guatemala. He reported that the Department of Finance was able to pay, in 1901, the sum of 10,000,000 pesos for account of expenses of the Government, and in liquidation of the public debt, and this without having to negotiate new loans or increase the rate of taxation.

There are three banks of issue in the Republic, which are jointly empowered to arrange for the issue of notes to the extent of $6,000,000, to be legal tender to the exclusion of bank notes and coin, even for debts contracted to be paid for in silver.

The President of the Republic is Estrada Cabrera, and the Ministers of State are: Minister of Interior and Justice, Juan J. Argueta; Minister of Foreign Affairs, Juan Barrios; Minister of War, Luis Molina; Minister of Finance, Guillermo Auguirre; Minister of Public Instruction, J. A. Mandujano.

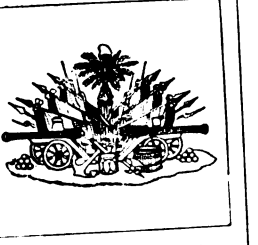
Haiti.

—

Capital:
PORT AU PRINCE.



The Republic of Haiti constitutes about one-third of that island lying southeast of Cuba, sometimes called Haiti and sometimes San Domingo. The other two-thirds of the island is occupied by the Republic under the latter name. The island, materially and geographically, as well as historically, is one of the most remarkable places in the Western Hemisphere. It is situated somewhat less than 1,400 miles directly south of the New England coast, and only a little more distant directly east of the city of Mexico. Cuba is some fifty miles to the northwest, and Porto Rico the same distance to the east, while Jamaica lies about one hundred miles to the southwest. It is placed, as it were, right in the centre of the four great Antilles, of which it is one, and is next in size after Cuba. Haiti, the Republic, is nearly as large as the country of Belgium. Barely separated by a range of mountains, Haiti and San Domingo are, in language, traditions and social ideas, as dissimilar as France and Spain. Not more than one-tenth of the population of Haiti consists of white foreigners, and the remainder is made up of persons of unmixed African blood, and mulattoes, quadroons and octoroons of varying degrees of color. French is the language spoken, pure among the educated and a patois among the lower classes. For three generations it has been the rule for the well-to-do people to send their children to France to be educated, and it is a saying in Paris that the only foreigners who speak French perfectly are those from Haiti and from Russia. It is said that the United States would be preferred as an educational point for the young people of this republic were it not for the prejudice here against black complexions. The patois of the country class is a creole, which almost deserves rank as a separate language, though but a dialect. This is essentially an unwritten language, and its leading characteristic is abbreviation. Little attention is paid to distinctions of gender, number and case; plurality is indicated by a particle only when it is absolutely necessary, and the feminine adjective seems to be preferred. All classes speak this language, it being necessary for the carrying on of business.

Haiti was the sixth point of land discovered in the New World in 1492 by Columbus, and was named by him Hispanola. Historians have made an estimate that the island contained about 1,000,000 inhabitants at that time. Here was founded the first Spanish colony in the Western Hemisphere. The discovery of gold filled the country with greedy adventurers, who drove the natives to work in the mines and till the soil, in spite of protest, revolt and resistance. Spaniards liked to compare this land with the splendors of Andalusia, and the colony became the commercial emporium of the New World. But it was found that under the cruel exactions of the Spaniards the aborigines decreased in numbers, and there were no more than 60,000 left after fifteen years of Spanish occupancy. Natives from the surrounding islands were decoyed from their homes and made to work in the mines, but they were not found to suffice, and in 1502 Africans were purchased from the Portuguese for servitude in the colony. When the yield of the gold fields began to diminish there was a rush of the colonists to Mexico and Peru, and their black slaves were taken with them. This ended the glory of Spanish occupation.

The English and French, united against Spain in 1520, formed coincidently bases of operations on the Island of St. Christopher. Their garrisons were attacked by the Spaniards, and the French who escaped went to the Island of Tortuga. Their numbers being increased by others who fled from the Spanish, they began to take possession of the larger island, and in about 1530 French occupation of the country was commenced. They pushed little by little into the interior, cargoes of black slaves were brought, to the number of many thousands annually, and the colony became one of the most favored in the world. In 1795 Spain, by the treaty of Baie, ceded the whole island to France, but the eastern part went back to the dominion of the former country after the downfall of Napoleon. When the French Revolution broke like a tornado over the world it found the elements in Haiti quite ripe for a similar outburst. There were 30,000 whites, 30,000 mulattoes, free, but smarting under most humiliating social, legal and industrial discriminations, and 50,000 blacks, still slaves. In 1789 the news of the decrees of the National Assembly at Versailles reached Haiti, the whole colony was thrown into excitement, turmoil and finally anarchy, and continued so until the mulattoes carried their point, which was to secure full recognition of their citizenship, and they, together with whites, appealed to the blacks. Then followed a fierce strife, compared with which the French Revolution appeared tame, and the condition of affairs led the commissioners sent by France to restore order to proclaim a general emancipation in 1793. In 1804 the declaration of Haitien independence was proclaimed. During the first eighty-eight years of the Republic's life she has had seventeen chiefs of State. Of these Toussaint L'Ouverture died a prisoner in France; Dessalines was assassinated; Christophe committed suicide; Petion died in office; Boyer and his successor, Riviere, were overthrown by violence and died in exile; Guerrier and Riche, like Petion, died in office; Soulouque was overthrown with violence; Geffard was driven to exile; Salnave was driven out by a revolution and shot by order of his successor; Saget retired at the end of his term and died in his own country; Domingue died in exile; Canal retired voluntarily after a revolution; Salomon died in exile; Legitime was driven out by a revolution.

General Tiresias Simon Sam was elected President in 1896.

The Republic of Haiti has an area of about 10,204 English square miles, and by an ecclesiastical enumeration in 1894 the population was found to number about 1,210,625. No enumeration has been made since that time. The religion is nominally Roman Catholic, and it is said that there is probably not a Protestant Church or society made up entirely of native citizens in the Republic. The Protestnat denominations have established churches and are well represented, however, the Constitution providing for their welcome and support. Public elementary instruction is free, the country being divided into fourteen inspectors' districts. The sum allotted to schools is nearly $1,000,000 annually, but the educational system is said to be very imperfect, especially in rural districts. There are 400 national schools, besides private schools, and five public Lycees.

The industries of Haiti are mainly agricultural, and the most important product is coffee of excellent quality, though the export duty is so considerable as to prevent the development of its cultivation. Cocoa is grown extensively, and cotton is exported in increasing quantities. A company was recently formed for the cultivation of tobacco and rum, and other spirits are distilled but not exported. The cattle trade has been checked by heavy duties levied on exports for horses, cattle, goats and sheep. Haiti possesses mineral resources quite undeveloped. Gold, silver, copper, iron, antimony, tin, sulphur, coal, kaolin, nickel, gypsum, limestone and porphyry are found abundantly, but not worked to any extent. The coffee plantations cover an area of about 125,500 acres, and in the season of 1899-1900 the exports amounted to 72,122,781 pounds. The export duty is $3.86 2-3 per hundred weight.

The Haitien army, at the beginning of 1902, consisted nominally of 6,828 men, chiefly infantry, and the Republic possessed a flotilla of six small vessels, ranking as third-class cruisers. The newest and best of these vessels was the Crete-a-Pierrot, built in England in 1895, and having a displacement of 940 tons and a speed of 15.5 knots.

Early in May, 1902, General Tiresias Simon Sam, President of the Republic, resigned his office because of the dissatisfaction shown by members of his party. It was claimed that he was working to succeed himself at the expiration of his term, in direct opposition to the Constitution of the Republic, and comments on this rumor led him to tender his resignation. Congress was called to meet May 12, to select a successor, but succeeded only in establishing a provisional government. General Firmin, who desired the office for himself, appealed to the dissatisfied element, and a revolt was begun in June. The rebels met with the full opposition of the regular army of the Provisional Government, and there were numerous engagements throughout the Summer. The gunboat, Crete-a-Pierrot, the best vessel of the Haitien Navy, was seized by the Firminists and used as a blockade vessel at Cape Haitien. Threats to bombard the town brought

Digitized by Google

appeals from the foreign residents, and the United States sent the Machias and the Cincinnati to look out for American interests. The commanders of these vessels reported no effectual blockade of any port. On September 2 the Crete-a-Pierrot stopped a vessel of the Hamburg-American packet line and took from her ammunition and guns intended, presumably, for the Provisional Government. In retaliation, Germany ordered the gunboat Panther to find the Firminist vessel and demand her surrender. Without delay the Panther proceeded to the harbor of Gonaves, found the Crete-a-Pierrot, gave her commander five minutes in which to leave her, extended the time to fifteen minutes, and then found that the Haitiens had fired their boat before escaping to shore. Shells from the Panther finished her.

The officers of the Firminists' Government were: President, M. Firmin; Minister of War and Marine, M. Killick; Minister of Finance, M. Bourand; Minister of Foreign Affairs, M. Henriquez; Minister of Public Works, M. St. Louis; Minister of Interior, M. Chicoye; Minister of Agriculture, M. Lamour.

Hawaii.

—

Capital: HONOLULU.

Hawaii, or the Sandwich Islands, is a small group of islands in the Pacific Ocean, about 2,100 miles west-southwest of San Francisco. The islands were acquired by the United States by an act of Congress of July 7, 1898, and were organized as the Territory of Hawaii by an act of April 30, 1900, with the capital at Honolulu on the Island of Oahu. The Islands were discovered by the Spaniards in 1549, and examined by Captain Cook in 1778. During the greater part of the nineteenth century they formed an independent kingdom, whose integrity was recognized by the powers. In 1893, however, the reigning Queen, Liliuokalani, was deposed and a provisional government formed. In 1894 a republic was proclaimed, with a president and a legislature of two houses. For military purposes the islands have been attached to the Department of California. The total area of the islands is 6,640 square miles, and the total population, according to the report of the Governor of the Territory, was 153,727 in 1900. The number of native Hawaiians was 29,834, showing a decrease in this element of population since the last census.

Ex-Queen Liliuokalani.

The manufacturing industries of Hawaii may be divided into two classes, the various small industries maintained to supply local needs and the large industry of sugar manufacture, dependent upon the territorial supply of sugar cane. Sugar mills of the best kind, equipped with modern machinery, have been built in Hawaii, and the increased development of the industry is assured provided the sugar cane supply and the labor supply are kept sufficient.

Before the act of 1900, which made Hawaii a part of the territory of the United States, Chinese and Japanese were brought freely to the islands to work in the sugar fields, and an abundant supply of cheap labor was assured. The act of 1900 applied the United States Immigration laws to the islands, and made it impossible to import alien labor. Americans seem to be unable to stand the severe work of the sugar fields, and the remaining supply of laborers is insufficient to fill the need. The Governor, in his report for 1901 states that "all sugar planta tion stocks have fallen far below their former value, owing to the uncertainty of the labor supply, and if no relief is forthcoming the most disastrous results will fol- low."

Governor Sanford B. Dole.
Copyright, Purdy, Boston.

When the territorial act for the government of Hawaii was ing formulated in Congress, earn best representations were made ing a property qualification for the urgright of suffrage, on the ground that a general suffrage, placing the Hawaiians and poorer classes in power would be prejudicial to American interests. However, the islanders were given practically universal suffrage, and the Ha- waiians refused to ally themselves with either the Democratic or Re- publican parties, but formed a "home rule" party of their own. At the first election held in the Territory this party was victorious, electing Robert W. Wilcox as Dele gate to Congress.

At the first session of the Leg islature, beginning March 1, 1901, very little business was done, ex cept to formulate county laws and to devise a dog tax. Most of the efforts of the "home rule" legis- lators seemed to be directed against Governor Dole. No ap- propriation bills were even intro duced, and it was necessary to call an extraordinary session of the body to provide for the running expenses of the Territory. In his message Governor Dole character- ized the legislators as having been wasteful of both time and money. The "home rule" party sent a petition to Congress asking the removal of Governor Dole, on the grounds that he had exceeded the powers of his office and had shown favoritism. The Republican mem- bers of the Legislature sent a coun ter petition, endorsing the Gov- ernor.

An act was passed to provide for the ascertainment and payment of all claims caused by the fire which destroyed "Chinatown," Honolulu, in 1900, and $1,500,00 was appropriated for this purpose. This fire was set by orders of the Government, to stay, if possible, the spread of the bubonic plague, which threatened to decimate the poorer class of the population.

In his report for the year ending June 30, 1901, Henry E. Cooper, acting Governor during the illness of Governor Dole, asked aid of the Federal Government for the authorization of the conversion of all Hawaiian silver coins amounting, as originally issued in 1883, to $1,000,000, into corresponding coins of the United States; to amend the Immigration laws so far as to allow the immigration of a limited number of Chinese laborers, upon condition that they engage in only agricultural pursuits during their residence in the Terri- tory, and that upon ceasing to do so that they return to their own country; to authorize the services in Hawaii of an expert forester to report upon the condition of forests and upon the best methods of conserv- ing and extending them; to authorize the granting of licenses to direct water from lands where it is valueless to arid sections that are otherwise adapted for agricultural purposes. He also asked that Congress authorize the retention by the Territory of a sufficient amount of the receipts of the custom house to pay all judgments awarded by the commission on fire claims.

A spirit tolerant toward holidays is shown in Hawaii, and one would have to be extremely lazy not to be satisfied with the numerous days off furnished by the calendar. Those universally observed on the Islands include January 1, New Year's Day; January 17, downfall of the monarchy; February 6, Chinese New Year; February 22, Washington's Birthday; Good Friday; May 30, Decoration Day; June 11, Kame- hameha Day; June 14, Admission Day; July 4, American Independence Day; August 12, Flag Raising Anni- versary; First Monday in September, Labor Day; third Saturday in September, Regatta Day; November 28, Recognition of Hawaiian Independence; last Thursday in November, Thanksgiving Day; December 25, Christmas Day.

Queen Liliuokalani continues to press her claim against the United States for certain crown lands of which she says she was deprived when Hawaiian Independence was declared. She has made several trips to this country in the interests of these claims, the last in 1901 and in the Fall of 1902.

Honduras.

—

Capital:
TEGUCIGALPA.

The coast of Honduras was discovered by Columbus in 1502, and in 1626 Cortez, at the head of an army which he brought from Mexico, took possession of the country and founded the towns of Trujillo and Puerto Caballos, now Puerto Cortez. The whole known portion of Central America was shortly proclaimed to belong to Spain, and placed under a government fixed at the present town of Gracias. In 1823 Honduras entered the Central American Federation, but in 1839 became an independent republic and took part in the wars and intrigues which followed each other in rapid succession until 1862. Insurrections and civil strife contributed to retard the progress of the Republic in its early history, and especially in 1861, when the clergy preached dissensions against the government. Guardiola, who was President at the time, thwarted the designs of these preachers, and granted an amnesty to all, not excluding the vicar, who was the chief promoter of the trouble. Guardiola, however, was assassinated shortly after, and was succeeded by Montes. One of the first acts of this new President was to make a treaty of alliance with San Salvador against Guatemala and Nicaragua. His army was defeated at Santa Rosa in Guatemala, and one of his generals, Medina, joined the army of the enemy, overthrew Montes and caused himself to be proclaimed President in 1863. He resigned the government in 1864, and was immediately re-elected, continuing in the Presidency until his deposition in 1872 by Don Celeo Arias. A treaty of peace and amity with Spain was signed March 15, 1866. The country is now governed under a charter proclaimed in October, 1894, and the President, elected in 1899, is General Terencio Sierra. The legislative power is vested in a Congress of Deputies, elected at the ratio of one to every 10,000 inhabitants.

Honduras has an area of about 46,250 square miles, and the population in 1900, exclusive of uncivilized Indians, was estimated at 587,500. The bulk of the inhabitants consists of aboriginal Indians and a sparse population of European-descended people, mainly Spaniards. The capital of the Republic is the ancient town of Tegucigalpa, situated nearly in the centre of the State.

The Roman Catholic is the prevailing religion, but the Constitution guarantees freedom to all creeds, and the State does not contribute to the support of any. Instruction is free and compulsory and is entirely secular. The State supports 784 primary schools and 23 schools for higher instruction. At Tegucigalpa there is a central university with faculties of medicine, science, law and political economy. The annual expenditure for primary instruction is 138,000 silver dollars. Agriculture forms an important industry, and is gradually developing. The chief product is bananas, which are produced in large quantities on the Atlantic coast and are shipped to the United States. Tobacco, sugar, maize and coffee are freely cultivated, and small crops of indigo, rice and wheat are grown. Cattle breeding is carried on extensively and dairy farming on a small scale. The Government offers facilities for the acquisition of land by private persons and companies for agricultural and mining purposes, but labor is scarce. The plaiting of straw hats forms a common local industry.

Honduras excells chiefly in her mineral resources, at present generally undeveloped for lack of capital. Gold, platinum, silver, copper, lead, zinc, antimony and nickel are found in almost every department. Deposits of brown and other coal have also been discovered. There are six principal mining basins under actual development in the Republic. The ore deposits of Agalteca, in the northwestern part of the department of Tegucigalpa, which were declared State property in 1899, are deserving of special mention. These ores, for the most part magnetic, contain up to 69 per cent of metallic iron and are very very pure, containing no phosphorus and only a very small quantity of sulphur, and are suited to the manufacture of steel of superior quality. Limestone in abundance is found near these deposits and water in sufficient quantity to furnish water power. The Government claims that the mining industry offers the best investment to foreign capital, and believes that if, during former years, certain mining companies have ceased to work, it is entirely due to their own bad management. Besides the working ores, opals equal in quality to those of Hungary are found in Erandique, and calcareous formations from limestone to marble are common, while petroleum and asphalt are found in some parts of the territory. The quantity of gold extracted by washings from the river sands amounts annually to about $200,000.

Several excellent public roads have been constructed recently, and the capital is connected with the new port of San Lorenzo by a new macadamized highway. In general, travelling and transportation are accomplished by means of mules and ox-carts. There is a railway from Puerto Cortez to San Pedro Sula, and thence to La Pimienta, a distance of sixty miles. A contract has been let for the construction of a railway from Trujillo to Omoa. In 1899 there were 2,730 miles of telegraph line, and the telephone is now in use in the capital and several other towns. In March, 1902, a convention was ratified between Honduras and France, providing for a reciprocal tariff scale.

In July, 1902, the British Government finally and officially withdrew all claim to any sovereignty over the Bay Islands, and formally acknowledged that they belonged to Honduras. The population of these islands is almost entirely British, coming from Jamaica, and some Americans from the Western States. English is the only language spoken. When the proclamation was made, on July 17, that these people were no longer under the British Colonial Government, but must consider themselves as citizens of the Republic of Honduras, the greatest indignation was aroused. The people claimed that the British Government had deserted them, and from having the widest admiration for King Edward it is said that their respect changed to intense hatred. The Honduras Government issued a proclamation announcing that the people would not be disturbed in the enjoyment of their property nor their religious belief and worship interfered with. These islands were recognized originally as part of Honduras, but for years were no more than an abode for pirates. About sixty years ago people from Jamaica settled part of the country, and the Honduras Government sent a governor, who was expelled by the natives and sent back to the main island tied up in a sack. Having no navy, Honduras was unable to maintain its supremacy. The people established a government of their own, and later the British sent a gunboat and raised the British flag. Honduras has repeatedly protested against British occupation, and her claims have been recognized by the United States.

Honduras has been the location of numberless schemes of colonization companies and like organizations. The Government itself has suffered many misfortunes of a financial nature from entering into projects for the rapid increase of her revenues. In 1897 she gave the management of her custom houses to a syndicate of New York capitalists, in order to get rid of a foreign debt of about $15,000,000. This debt was owed in England, where bonds to that amount had been sold for the building of a railroad across Honduras. The railroad was started, under contract with agents, but was never completed, though the Honduras Government paid for five times more than was constructed. When the syndicate was given control of the customs, under agreement to complete the road and make good the railroad bonds, everything went along swimmingly at first, but friction soon developed between the Government and the syndicate, the latter finding that the revenues took a decided drop after it had assumed control of the revenue offices, and accused the Government of being half-hearted in its dealings with smugglers. The Government said that the syndicate was doing nothing toward wiping out the bonds. At the end of the first year the syndicate found itself losing money, and work was stopped on the railroad. The attempted union of Central American Republics prevented Honduras from carrying out her part of the bargain, and in retaliation the syndicate threatened to present large claims against Honduras and to invoke the aid of the United States in settling them. This brought about the signing of a new contract and demands for new concessions, and the matter is still under consideration. Honduras is the home of the exiled Louisiana Lottery.

The Ministers of State are: Minister of Foreign Affairs, Dr. C. Bonilla; Minister of Public Works, F. Altschul; Minister of Justice and Public Instruction, Dr. Juan A. Arias; Minister of Interior, Dr. C. Bonilla; Minister of Finances, D. Fortin; Minister of War, M. Rosales.

Idaho.

Capital:
BOISE.

Idaho was created a territory by an act of Congress March 3, 1863, from portions of Dakota, Nebraska and Washington, and its area then embraced the present State of Montana and nearly all of Wyoming. It was part of the original Louisiana purchase and was included first in Oregon and later in Washington. The permanent settlement of the territory did not begin until the discovery of gold in 1860. It was admitted to Statehood July 3, 1890. The area is 84,290 square miles, and the estimated population in 1901 was 169,000.

Mining and agriculture are the principal industries of the State, and the manufacturing interests are dependent upon the forests, mines and farms, and are incidental to these. Flour and grist mill products, car construction and repair are of chief importance. The principal industry is the manufacture of lumber and timber products. There are 7,000,000 acres of timber land in the State which has just begun to be worked.

The mountains of Idaho are well supplied with gold, silver, lead and copper. More than one-fifth of the lead product of the United States in 1899 was taken from the mines of this State, while in the production of silver, Idaho ranked fourth.

The Idaho Legislature of 1901 enacted a law similar to those passed in Illinois and Missouri, providing for the creation of a Labor Commission to act as a State Board of Arbitration. The Board was to consist of two persons, one of whom should be identified with labor interests and should himself have been an employe for at least six years, while the other should have been an employer for the same length of time. The two Commissioners were to be of opposite political parties. Whenever a strike occurred affecting at least fifty persons the Commissioners were directed to offer their services as arbitrators, and if the offer was accepted both parties should abide by the decision of the board. The court to hear cases should consist of the Commissioners and the Judge of the County Court in whose district the strike occurred. In case the parties refused to accept the services of the board it was empowered to make investigations and report to the Governor. Strikes involving less than fifty and more than twenty-five persons were also placed under the jurisdiction of the board.

Gov. John T. Morrison.

A constitutional amendment was voted by the Legislature, to be submitted to the electors, providing that the Legislature might have power to pass special laws for the health and safety of employes in factories, smelters, mines and ore reduction works.

A law regulating employment bureaus provided that every manager of such a bureau should deposit $5,000 as a security against fraud and misrepresentation. A bill intending to relieve women of jury duty was passed, but vetoed by the Governor on the grounds that women were allowed to vote they should do court duty.

A bill that failed of passage provided that the Governor might, on application of the proper county officers, send militia to any part of the State where there was rioting, and that he should immediately call the Legislature into special session to adjust the difficulties, and that his proclamation of martial law should not be effective for more than thirty days.

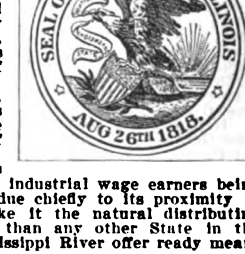
A State Library Commission was created to assist and advise municipalities in the establishment or improvement of public libraries, and the Common Council of every city and town was empowered to establish and maintain a public library and reading room and to levy annually a tax not exceeding one mill on a dollar.

Congress was petitioned not to adopt any policy that would lead to the leasing of public lands for grazing purposes, as much of the irrigation water of the State flowed through public domains. It was also applied to not to give assent to the Grout Oleomargarine bill, it being claimed that the passage of this bill would affect the stock raising interests of the State.

The Democratic State Convention met September 5, 1902, and adopted a platform indorsing the Kansas City platform and William Jennings Bryan. The Republicans at their convention, August 22, indorsed President Roosevelt, condemned trusts and indorsed protective tariff with a reservation.

Illinois.

Capital:
SPRINGFIELD.



Illinois was first settled by the French as a consequence of the enterprises of Marquette in 1673. As the colonies extended disputes arose between the French and English which ultimately resulted in the war that ended with the capture of Quebec and terminated French dominion over any part of the country east of the Mississippi. In 1809, after Indiana, Ohio and Michigan had been set off, Illinois territory included what are now the States of Illinois, Wisconsin and part of Minnesota.

The area of Illinois is 56,650 square miles, and in 1901 the estimated population was 4,930,000. Chicago is the second city in the United States, and had in 1900 a population of 1,698,575. There is no Sate debt.

According to the census of 1900 Illinois ranked as the third manufacturing State in the United States, the per cent of industrial wage earners being 8.2 per cent of the total population. Its rank as a manufacturing State is due chiefly to its proximity to abundant coal and iron supplies and to transportation facilities, which make it the natural distributing point to the West and South. In 1900 Illinois had more railroad mileage than any other State in the country, the total number of miles being 10,997. Lake Michigan and the Mississippi River offer ready means of communication.

Slaughtering and meat packing are the most important industries, and in 1900 these products were valued at $287,922,277. Chicago is the great live stock market for the West and Northwest, and industries dependent upon animals have been greatly stimulated by inventions which make possible the utilization of all by-products.

The manufacture of foundry and machine shop products ranks second in importance in the State. The abundance of cheap iron afforded by the mines in the Lake Superior region has tended to increase the iron and steel output. The manufacture of liquors ranks third, and the city of Peoria has become the largest producer of whiskeys and high wines in the United States. The output of agricultural machines has followed the development of agriculture, and Illinois manufactories furnish machines to a greater part of the West.

Digitized by Google

A considerable portion of the time of the State Legislature in 1901 was devoted to redistricting the State as regards Congressional and State Senatorial representation. As the law was finally passed, eighteen of the twenty-five Congressional districts were distributed so as to make certain, it was believed, a Republican majority in ordinary times. Seven Republican districts were assigned to Cook County (Chicago), leaving but three to the Democrats. Of the fifty-six State Senatorial districts, thirty-six were arranged as Republican.

Gov. Richard Yates.

The main contention in the Legislature was as to what power should be given Cook County representation. A resolution for a constitutional amendment limiting Cook County representation in the Legislature to one-third of the entire membership, was adopted by the Senate, but failed to pass the House, and the bill stood as passed.

The Legislature appropriated $250,000 for the erection of a suitable building at the St. Louis Exposition in 1903, and appointed a committee of fifteen to have charge of Illinois interests there. One hundred and fifty thousand dollars was appropriated for repairs and maintenance of the Illinois and Chicago Canal.

A labor act provided that no person under the age of sixteen should be employed for more than sixty hours in any week. All establishments subject to factory inspection, where girls and women were employed, were directed to provide suitable seats for their use and permit them to be used when the employes were not actively engaged at their duties.

The State Board of Arbitration was empowered to make investigations of facts in the case of strikes or lockouts which might cause the public to suffer injury or inconvenience with respect to lights, food or fuel, communication or transportation. When neither party will consent to submit the dispute to the State Board the Board may proceed to make investigations on its own order, to summon witnesses and hear testimony, and shall make its finding public, with such recommendations to the parties involved as in its judgment will contribute to a fair and equitable settlement of the difficulties.

Laws were passed making bequests to religious, charitable and educational purposes exempt from the inheritance tax. An act giving the State Auditor supervision over the accounts and bookkkeeping of the State and every political subdivision of it, and instructing the Governor to establish a uniform system of public accounting, was vetoed by the Governor on the grounds of unconstitutionality.

In 1901 the Illinois State University received an appropriation of $912,000 from the Legislature, and two private bequests of $25,000 each.

Within the last two years Chicago University has been given a sum of money apparently sufficient to support several colleges for several years. In December, 1901, a gift of $1,250,000 was received from John D. Rockefellar, and in June, 1902, a further gift of $750,000 was announced from the same source. Since 1890 the institution has received $11,000,000 in gifts from Mr. Rockefeller alone. By a vote of the trustees, taken in June, 1902, co-education was abolished at the University, and "segregation," providing separate recitation rooms for the women students, was adopted. There was much discussion on the matter, and for a time charges were made against President Harper by some of the members of the Alumnae Association, that he had purposely changed the result of the vote when he counted the ballots.

The Democratic State Convention, which met June 17, 1902, limited its platform to all "fundamental principles of the Democratic party as laid down in the Declaration of Independence and the Constitution of the United States affirmed at the last National Convention."

In the Republican State platform, adopted May 8, the party "condemns all conspiracies and combinations to restrict business, create monopolies, limit production or control prices."

The history of the meat packing industry in Illinois is interesting, showing as it does, how Chicago was almost forced to become the meat packing centre of the United States. The packing of meats was begun there in 1836, before the city was incorporated, cattle and hogs being brought in on the hoof. The pioneer establishment was located very near the mouth of the Chicago River, in what is now the heart of the city. Attention was early concentrated on the by-products, and now nearly the entire animal is utilized. The flesh is sold as meat. The blood is dried and used for clarifying purposes, the hoofs are turned into neatsfoot oil, the parings of the hoofs, bones and hides are converted into glue, the finest of the fats are made into butterine, lard, oils, and the finest tallow; the cruder fats are made into soap grease; the hides are marketed for the manufacture of leather; the horns are sold to combmakers; the larger bones are used for making knife handles and for other purposes; the switches and tail ends are sold to hair mattress makers, and the short hair, which cannot be dried and curled, is sold to felt works.

According to the census, there were, in 1900, in the 61 establishments reported, 27,861 employes, or a little more than 7 per cent of the workers of the State, and the total value of the products was $287,922,277, or 22.9 per cent of the value of the total products of the Stae.

Indiana.

—

Capital:
INDIANAPOLIS.

Indiana was organized as a Territory July 4, 1800, and was admitted as a State, December 11, 1816. It originally constituted a part of New France and subsequently of the Northwest Territory. In 1702 a party of French Canadians descended the Wabash and established settlements, meeting with but small opposition from the Indians. Little is known of these settlements prior to 1763, when the territory was ceded to Great Britain. In 1788 an Indian war broke out, causing great distress at Vincennes, and it was not until 1791, after the Battle of Tippecanoe, that the hostile tribes were finally subdued. On May 7, 1800, Ohio was erected into a separate Territory, leaving all the country to the north and west to be included in Indiana. In 1805 Michigan was set off, and in 1809 Illinois, leaving Indiana with its present boundaries.

Indiana has an area of 36,350 square miles and in 1901 its estimated population was 2,552,000. The chief industries of the State are manufacturing and mechanical, though agriculture forms a large part of the general wealth.

The growth of manufacturing in Indiana has been largely dependent upon the extension of railways, for the State has but few navigable waterways, none of which extend either to large sources of supply or to important markets. The discovery of natural gas greatly stimulated manufacturing by the abundance of cheap fuel, readily transported, that it affords. In 1899 Indiana produced more natural gas than any other State in the Union, and in the production of petroleum it ranked fourth, and in coal, sixth.

The leading industry of the State is that of meat packing, the products being valued in 1900 at $43,862,273. The manufacture of flour and grist mill products ranks second in importance and the manufacture of liquors follows next. Lumber and timber products have a large part in the industries of the State and there are still extensive tracts of hard wood uncut, but a greater part of the supply comes from Tennessee and Kentucky. The typical wood products of the State are high grade wagons, carriages, furniture and agricultural machines.

The Legislature of 1901 passed several acts of importance to manufacturers and laborers. Among them was a bill to regulate trusts within the State, making certain acts of a corporation unlawful. The refusal of a corporation to furnish its articles at a reasonable price when needed by any manufacturer, the charging of a manufacturer more than a fair market price for any goods, and any action affecting or intending to affect the selling out or closing down of any manufac- tory were to be regarded as illegal. Domestic corporations disobeying these provisions were to be deprived of their charters and foreign cor- porations to be prohibited from doing any further business within the State. The agents, officers or directors of these corporations were to be punished personally by a fine or imprisonment or both. Foreign corporations were forbidden to mort- gage or encumber their real or per- sonal property in Indiana to the injustice or exclusion of any cred itor or corporation in Indiana, and no mortgage of any foreign corpora tion, except railroad and telegraph companies, given to secure a debt created in any other State should take effect as against any person or corporation in Indiana until the lia- bilities due to any citizen of In diana at the time of recording the mortgage should be satisfied.

Gov. W. T. Durbin.

Several acts looking to the pro tection of employes were passed. One provided that unskilled labor employed on public works should be paid a minimum rate of 20 cents an hour. Another which seemed to have for its purpose the exterminа- tion of all trade in convict-made goods, provided that such goods should be labelled as convict made, and that persons or corporations selling them should pay an annual tax of $500. Another act provided for the sanitary condition of bakeries and other food producing establishments. This prescribed rules for the health of the employes and prohibited the employment of per- sons with communicable diseases.

A bill making direct primaries compulsory in one county and op- tional in all passed the House. The primaries of all parties were to be held at the same time and under sworn election officers. The bill also passed the Senate, but with great modifications. It finally pro- vided for separate primaries and partisan supervision, and while the House bill had provided for direct nominations, the Senate bill required the election of delegates to a nomi- nating convention. The Senate bill was finally accepted by the House. This law was to apply to only two counties and the expenses of the primaries were to be borne by party organizations instead of by the State, as first intended.

A stringent act was passed to prevent unauthorized practice of medicine within the State, and was aimed chiefly against Christian Scientists and so-called mental healers of all sorts, but it premitted the practice of osteopathy. It provided that no one shall be entitled to practise medicine who has not gradu- ated from a regular medical school; that such a person may not heal or attempt to heal diseases of mind or body or advertise a willingness to do those things or to use in connection with his name the word Doctor, Professor or Healer; provided, however, that such a person may practise osteopathy upon the passing of a medical examination in all respects like that of a regular medicine examination, except as to materia medica.

A State Board of Forestry was provided for, whose duty should be to collect and disseminate informa- tion regarding forests, timber lands and timber culture, and to recommend plans for the establishment of State forests. An act was passed defining kidnapping and making it punishable by not less than 10 years' imprisonment.

The Democratic State Convention met June 4, 1902. In the platform there was no mention made of the Kansas City programme. The administration's Philippine policy was condemned. The Republican Conven- tion met April 24. Its platform confirmed the platform adopted by the Republican National Convention of 1900, and approved the course of the administration in regard to the Filipinos.

Indian Territory.

Capital: TAHLAQUAH.

Indian Territory is an unorganized territory of the United States, set apart by Congress in 1834 for Indian reservations. Its area is 31,000 square miles and in 1901 its population was estimated to be 413,000. This section was part of the Louisiana purchase of 1803, and a western strip was originally part of Texas, ceded to the United States.

Indian Territory is devoted almost entirely to agriculture, though the opening of tracts of the country to white settlers has developed some small manufactures attendant upon local needs. Stock raising and grazing is carried on extensively, and in the southern part of the ter- ritory fruit culture has recently risen into prominence. Lack of transportation facilities prevents any extensive export trade. Cotton is raised to some extent and there are several factories for the manufacture of cotton-seed oil and cake. The total capital invested in manufactures in 1900 was a little more than $2,000,000.

After the setting off of Oklahoma, large tracts of land were opened to white settlers, at first those who arrived earliest after a set date receiving the best lands. The last great opening of Indian lands to white settlers occurred August 6, 1901. This section constituted the Kiowa, Comanche and Apache reser- vations, with the adjoining Wichita reservation in southwestern Oklahoma. The area contained approxi- mately 3,750,000 acres. Each Indian had been allotted 160 acres of his own selection, inalienable for a term of years, and other reservations were made for Federal, territorial and other purposes. The balance was then disposed of by lottery for homesteads of 160 acres each or by public auction for town lots in the regularly established town sites.

Within a week after the proclamation thriving towns were in existence at the sites provided and the

Digitized by Google

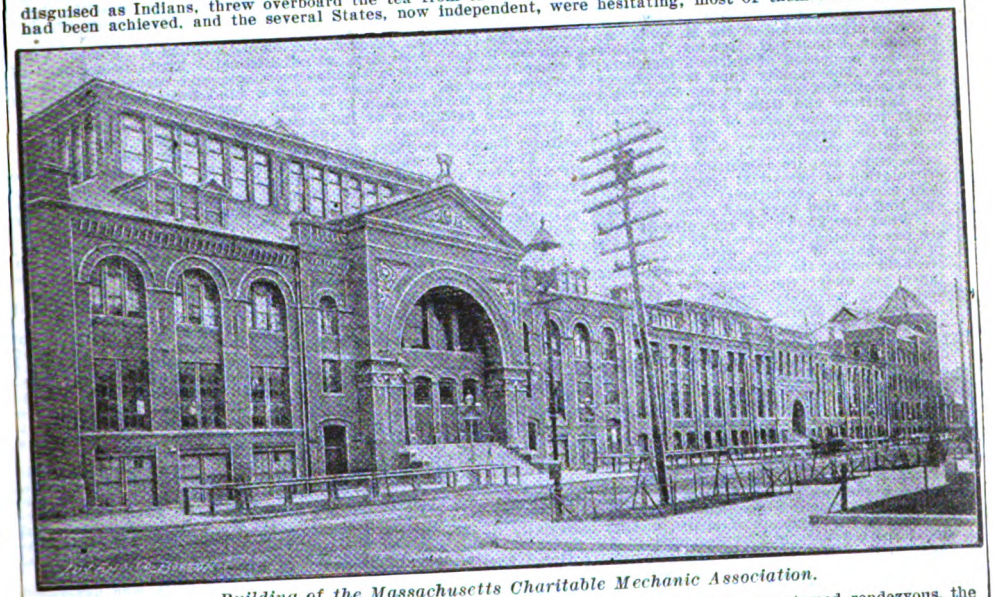
whole municipal machinery was in action, while the rural settlers had their fields ploughed and crops planted. The proceeds from the sale of town lots were turned over to the treasuries of the counties for public purposes, as will also be the proceeds from the sale of certain reserved school lands.

During 1902 there were some disturbances in the Choctaw Government, an Indian Government under Federal supervision, as to tribal elections. It was alleged that fraud had been practised by both parties seeking to gain power, and finally it became necessary for the Territorial authorities to take a hand. Supreme Judge Wesley Anderson, of the Choctaw Government, was forced to turn over the ballot boxes to Governor Dukes, who displaced Judge Anderson and appointed Silas Cole to act as temporary judge in custody of the election returns. The opposing factions found it necessary to bring the matter before the Interior Department for settlement and Federal troops were sent to prevent conflicts between the partisans of the rival candidates. Governor Dukes had taken possession of the Capitol building, and had permitted persons to enter and take seats in the Choctaw Council upon commissions issued by himself. The official dispatches received by the Department indicated that Green McCurtain had been chosen Governor by a majority of 689, and he was duly sworn in October 12, 1902.

The question of a territorial government that would not be inimical to the interests of the Indian citizens on the one hand nor to the white settlers on the other, has been discussed to some extent, but without result. It seems to be a general opinion that the Indians of the territory should be left as free as is considered safe to formulate and define their own laws, and afterwards execute them.

Industrial Expositions in America.*

What was probably the first industrial exhibition ever held in the United States was held under the auspices of the Massachusetts Charitable Mechanic Association on July 4, 1818, and it was the forerunner of triennial exhibitions which that historic organization has held regularly in the city of Boston since 1837, the latest, continuing as usual through a period of six weeks, occurring last year. It opened on September 22 and closed on November 1. The Massachusetts Charitable Mechanic Association was the outgrowth of a movement inaugurated by the master mechanics of Boston to secure the enactment of laws giving better regulation to the existing ones relative to apprentices. The leader in it was Paul Revere, who had long been one of the foremost men in the old town, and whose famous ride to warn the farmer patriots of Middlesex County that the British troops were about to attempt the seizure of their arms and ammunition has been celebrated in song and story. The mechanics of Boston had been for years prior to the beginning of the War for Independence a respected and influential element in the community. They entered heart and soul into the cause of liberty, and herein, as in other things, Paul Revere was one of the most active spirits. He was one of the men who, disguised as Indians, threw overboard the tea from the British ships in Boston harbor. When Independence had been achieved, and the several States, now independent, were hesitating, most of them about accepting



Building of the Massachusetts Charitable Mechanic Association.

the National Constitution, the mechanics of Boston, from a meeting held in their accustomed rendezvous, the Green Dragon Tavern, sent a committee, headed by Paul Revere, to urge upon the Massachusetts Convention, then in session, the duty of ratifying the instrument. Samuel Adams, president of the convention, asked Mr. Revere: "How many mechanics were present when these resolutions were adopted?" "More than the Green Dragon could hold," was the reply. "And where were the rest, Mr. Revere?" "In the streets, sir." "And how many were there in the streets?" "More than there are stars in the sky." It is needless to add that the mission of the committee was successful.

The meeting of the mechanics to consider the apprentice question was held in the Green Dragon Tavern in January, 1795, Paul Revere presiding. After several meetings had been held notice was published by Mr. Revere in March, 1796, that "the Constitution of the Associatted Mechanics of the Town of Boston was ready for their signatures." In this constitution the name used was the Associated Mechanics and Manufacturers of the Commonwealth of Massachusetts. Mr. Revere was elected president. Efforts to secure the passage of an act of incorporation by the State Legislature failed repeatedly on account, mainly, of an apprehension that the association was "a combination to extort extravagant prices for labor." It was not until 1806 that the passage of an act of incorporation was effected, the organization entering upon its legal existence under its present name. From the beginning it has included in its active membership the most prominent men of Boston identified with mechanical pursuits, and its work has contributed not only to the advancement of the mechanic arts in New England, but in many ways to the industrial development of the entire country. Its contributions to the local upbuilding of the industrial population during its earlier years,

*Matter relating to M. C. M. A. furnished by Mr. Alfred Bicknell, secretary of the association.

Digitized by Google

and before such work was rendered unnecessary by larger enterprises of similar character undertaken by the municipal authorities, consisted in the establishment of a Mechanic Apprentices' Library, a library for the members of the association, and schools to meet the special needs of apprentices.

The first exhibition held under the auspices of the M. C. M. A., heretofore mentioned, resulted from the receipt by the president, in June, 1818, of an anonymous letter containing $35, with the request that the sum be given by the association as prizes to coopers' apprentices for the best casks to be made by their own hands. The trust was accepted, and three prizes of $20, $10 and $5, respectively, were offered for the best, second best and third best cask made by apprentices, to be exhibited on Boston Common on the ensuing "Fourth of July." There were ten entries, and all the casks were sold at auction after the prizes were awarded, the owners realizing good prices. During the next year the donor of the $35, who proved to be Mr. William Wood, a prominent merchant, donated $80 to be given as prizes for the best casks and hats made by apprentices, and this exhibition also was a success. In 1820 a more elaborate exposition of industrial progress was held in the Washington Gardens, when the custom of awarding medals and diplomas was inaugurated, three silver medals and sums of money aggregating $60 constituting the prizes. There were eleven exhibits, all of apprentice work, consisting of harnesses, doors, wheels, ships' blocks, boots and barrels. A still larger display was made in October, 1821, when popular interest had become so far enlisted in the matter that quite a sum of money was subscribed for prizes. It was now proposed to hold regular annual exhibitions, but there came a lull in the interest, which lasted until 1832, when the matter of establishing regular exhibitions was referred to a committee. It was not until 1836 that any decided action was taken, but in that year a committee made so strong a recommendation that in the January following an appropriation was made for the purpose of preparing for an exhibition to be held in the Fall. This was really the first of the series which have for more than half a century been one of the great events in New England every third year. It was held in the second stories of Faneuil Hall, and the long edifice nearby, known as Quincy Market, a covered bridge connecting the two edifices temporarily, and this was the scene of many successful expositions, until it was deemed advisable for the association to build a permanent exhibition hall of its own.

For several years the project of an exhibition building was agitated in the association, and finally, in 1880, a plot of land containing 109,890 square feet—a little more than two and a half acres—was purchased as a site. It has a frontage of 652 feet on Huntington avenue and of 333 feet on West Newton street, two of the finest thoroughfares in Boston, the rear line of the property being along the line of the N. Y., N. H. & H. Railway. The building erected here is an imposing one, both in size and architecture, and is admirably arranged, not only for the purposes of the association, but for renting, either wholly or in part, for assemblies, conventions, balls, concerts, etc. The building was completed in time for the triennial exhibition of 1881, and has been the scene of each successive exhibition since then. It has been occupied also for a great variety of purposes, including many functions of large social or public importance.

In addition to the mission performed by the association as thus described it has been true to that descriptive portion of its name which places it in the category of benevolent organizations. Its charities have always been generous and wisely administered, consisting not merely in giving aid where necessary, but in assisting its beneficiaries toward self help.

The organization of the M. C. M. A. includes the following officers: President, William N. Young; Vice-President, Edmund H. Hewins; Treasurer, Newton Talbot; Secretary, Alfred Bicknell. There is a Board of Trustees composed of thirteen members; a Committee of Relief with nine members, and various other committees. The charity fund is in charge of three trustees, and there is also a fund for other purposes of the association, known as the Shattuck Fund, which is in the hands of a similar board.

Institute and Other Fairs.—Annual fairs for the exhibition of industrial progress have long been frequent in various parts of the country, the larger ones, indicative of advances in mechanics, being usually held in the larger cities. The American Institute, founded in 1828, and incorporated in 1829, has held many successful exhibitions in New York City. The Franklin Institute of Philadelphia was established about the same time, and its exhibitions have not only attracted a full share of interest, but have contributed to the stimulation of industrial progress. San Francisco has a Mechanics' Institute, founded in 1865, which has held excellent exhibitions. Cincinnati inaugurated a series of exhibitions in 1870. St. Louis, Baltimore and Buffalo also have had some of a very satisfactory character.

What are known as agricultural fairs, which are annual events in nearly every section of the country, are not devoted exclusively to that particular branch of industry, but afford opportunity and encouragement in the shape of prizes, diplomas, etc., to the exhibition of nearly every kind of handiwork. These fairs are held under the auspices of town organizations in a great many places, while those of the larger importance are under the auspices of county and State agricultural societies, a number of these owning and maintaining permanent grounds and buildings for the purpose.

American World's Fairs.—The first American World's Fair was held in New York City by a company organized and incorporated to carry on such an exhibition. This company obtained a lease for five years of the grounds now comprised in what is known as Bryant Park. A huge building of pleasing architectural design, and constructed largely of glass and iron was erected, and was given the name of the Crystal Palace. Here the first World's Fair in America was opened with grand ceremony by Franklin Pierce, President of the United States, on July 14, 1853. The exhibition was practically a continuous one for three years, reopening for extended periods in 1854 and 1855. As a business enterprise it did not prove sufficiently encouraging, and it was abandoned, the Crystal Palace being let thereafter to the American Institute for its annual exhibitions. During one of these the building was destroyed by fire on October 15, 1858.

The next world's fair was a stupendous enterprise undertaken in commemoration of the centennial anniversary of the Declaration of Independence. It was held in Philadelphia during the year 1876, aided by a large appropriation from the Congress of the United States, and the co-operation of the various State governments, a number of which erected buildings of their own upon the grounds in Fairmount Park. The exhibition was generously aided by foreign governments also in the same way, and the exhibits from abroad occupied a vast amount of space, adding materially to the interest and value of the affair. American industries were naturally represented in all their varieties, and the exhibition grounds, with their avenues, gardens, beautiful buildings and other attractive features, were, in effect, a small and ever-popular city.

Atlanta, Ga., had a fair in 1881, which, while it was not a world's fair, inasmuch as it was designed mainly to illustrate the progress and magnitude of the cotton industry, was of a size and importance to rank with such. It was participated in by all the cotton-producing States, and was known as the Cotton States' Exposition. Another exhibition of much importance, although not characterized as a world's fair, was the Southern States' Exposition, held in Louisville, Ky., in 1883. The World's Industrial and Cotton Centennial Exposition was held in New Orleans, La., in 1884. The Columbian Exposition, held in Chicago in 1893, to commemorate the 400th anniversary of the discovery of America, was another magnificent enterprise on the scale of the Philadelphia Centennial, which it naturally excelled by the aid of many elements, including the immense progress made in practical science during the seventeen years intervening between the two. The "White City," built on the shore of Lake Michigan, was the marvel of the period, and the exposition was in the fullest respect a world's fair, enlisting the interest of nearly every race on earth, exemplifying every phase of human progress at the time, and drawing visitors from every land. The California Mid-Winter International Exposition was held with gratifying success in San Francisco in 1894. Atlanta, Ga., had a second exposition of Southern industries in 1895. The Tennessee Centennial and International Exposition was held in Nashville, Tenn., in 1897. Omaha, Neb., was the scene of the Trans-Mississippi and International Exposition in 1898. Ranking with the Philadelphia Centennial and the Chicago Columbia expositions, the Pan-American Exposition, held in Buffalo, N. Y., in 1900, was in some respects superior to either of them. Marvellous progress, especially in the application of electricity to the uses of mankind, had been made, even in the brief period of seven years following the Chicago exhibition, and in spite of the fact that the growing frequency of world's fairs had taken the edge off from interest in such enterprises, Buffalo was the objective point of tourists from all parts of the world while the exhibition remained open. It was made sadly memorable, however, by the assassination of President McKinley, who was fatally shot while holding a public reception in one of the buildings.

Initiative and Referendum.

GEORGE E. PLUMBE,
of the Referendum
League of Illinois.

In a general way initiative may be defined as the power of the people to secure desired legislation, and referendum as the power of the people to ratify or reject legislation at the polls, if they express a desire to do so. These ideas are not, by any means, new, having their inception in the assemblies of the Angles and Saxons, mentioned by Bryce in his American Commonwealth (vol. I., page 465), which died out during the Middle Ages. The first appearance in modern Europe of this method of direct legislation by the people is the provision of the French Constitution, framed by the National Convention of 1793, which directed that any law proposed by the legislative body should be published and sent to all communes of the Republic, whose Primary Assemblies should be convoked to vote upon it, in case objection to it should be raised by one-tenth of such Primary Assemblies in a majority of the departments.

Some thirty years ago the Swiss Republic applied the referendum not only to enactments of the Separate Cantons, but also to its federal enactments.

In Great Britain, in recent years, a sort of referendum is employed in cases where a general act of Parliament may become operative in any particular district upon the affirmative vote of its people. No other European country puts the responsibility for the final settlement of public questions upon the people to even the slightest extent.

In Canada there is occasionally a vote taken upon public measures, but the result seems to be merely advisory. Under a republican form of government the theory is that the will of the people is the supreme law of the land, but in fact their will upon any single important measure of public policy is very rarely discovered. In most elections the personal and partisan elements are so prominent that when the polls are closed it is found that the voters have simply made a choice of men who exercise their own wills under such restraints only as party organizations may impose. For the purpose of enabling the voters to favor good measures, without at the same time electing unworthy or incompetent men to office, the advocates of the initiative and referendum maintain their election laws should be so framed that the people may have such specific laws as are to be voted on printed upon a ballot entirely separate and distinct from those containing the names of the candidates. Whether the people outside of the Legislature or City Council suggest the question to be decided, or whether it is formulated by a regular legislative body, is unimportant. The people may indorse the act and it will then become the law, because it embodies their will, or they may reject it, in which event it becomes inoperative, even although the legislators have unanimously passed it and Governors or Mayors have approved it.

The movement in favor of the adoption of the initiative and referendum is very pronounced through the entire West, from Illinois to the Pacific Coast, and in many of the States strong leagues have been formed to secure the adoption of such amendments to State laws. The movement is entirely non-partisan, party lines cutting no figure in the alignment of either advocates or opponents.

In Illinois the campaign for initiative and referendum is now on. The General Assembly in 1901 passed a law, advisory in its character, permitting a vote to be taken upon questions of public policy, upon petition, at a general election. The petition must contain the names of 25 per cent of the registered voters in cities, and 10 per cent in the State, but no more than three questions can be submitted at the same election. Prior to the city election, in April, 1902, a petition was presented to the Board of Election Commissioners, signed by more than 25 per cent of the registered voters of Chicago, asking that the following three questions be submitted, upon a separate ballot, to the voters. The first was as to the municipal ownership of gas and electric light plants; the second as to municipal ownership of street railways; and the third as to the nomination of all candidates for city offices by direct ballot at primaries held for that purpose. Party lines were totally obliterated, and the first proposal carried by a majority of 96,828; the second by a majority of 118,635, and the third by a majority of 122,432. The fact that very many of the franchises of the street railway companies are about to expire, which the companies are anxious to renew for fifty years upon terms not satisfactory to the people, gave zest to the campaign. The Common Council of the city was, by this election, fully advised of the temper of the people regarding the renewal of these franchises. This large vote shows indisputably that the people will express their opinions upon public questions if given the opportunity to do so.

Following up this success, petitions, containing the signatures of 150,000 registered voters, were filed with the Secretary of the State of Illinois, and, on the 4th of November, 1902, every voter in every election precinct in the State was given a "little ballot" upon which to register his "advisory" opinion upon the adoption or rejection of three questions, as follows:

1. Shall the next General Assembly enact a statute by which the voters of the political subdivisions of the State of Illinois may be enabled to initiate desired local legislation, by filing a petition therefor, signed by 8 per cent of the legal voters in said political subdivisions; and to have referred to the voters any legislation enacted by the several local legislative bodies, by the filing of a petition therefor of 5 per cent of the legal voters of any such political subdivision; the action of a majority of those voting to decide in each case?

2. Shall the next General Assembly submit to the people of the State of Illinois, at the next State election, a Constitutional Amendment providing for the control of legislation by the people, by means of the initiative and referendum; said amendment to provide for the initiation of legislation upon a petition of 8 per cent of the voters of the political divisions affected; and for the reference of legislation upon a petition of 5 per cent of the voters of the political divisions affected, the action of the majority of the electors voting to be final; thus restoring to the people the power they once held, but which they delegated to the General Assembly by the Constitution?

3. Shall the next General Assembly take the necessary steps under Article V of the Constitution of the United States, to bring about the election of United States Senators by the direct vote of the people?

All legislative power in Illinois is vested in the General Assembly, and every member of that body will be fully advised as to the wishes of his constituents when the Legislature convenes in 1903.

As to this movement in other Western States, a few examples will show its progress. On June 3, 1902, the people of Oregon voted, by an overwhelming majority, in favor of a Constitutional Amendment for vesting legislative power in the people. After a campaign of ten years' duration they have adopted the initiative and referendum.

In Nebraska a law establishing the same principle was enacted in 1897.

In South Dakota, initiative and referendum was adopted in both municipal and State affairs in 1898, and may be invoked upon a petition signed by 5 per cent of the voters. The people of that State have not to this date employed it, owing to the fact that the placing of this vote power in the hands of the people has been a check upon the Legislature against vicious or undesirable legislation.

In November, 1900, the people of Utah adopted a Constitutional Amendment which established initiative and referendum in both State and municipal affairs. The adoption of the amendment was opposed by both the Republican and Democratic party organizations, by the Mormon Church and generally by the press.

In San Francisco, Cal., the people may apply the referendum to any ordinances or amendments to the city charter upon a 5 per cent petition, but certain ordinances and franchise grants must be submitted without a petition. The tendency in cities seems to be to make the submission of franchise grants and municipal ownership propositions compulsory, leaving the referendum upon other questions entirely optional with the people. In California municipalities make their own charters, and that State is one of the five in which such power exists. Four cities in the West have direct legislation under their charters. These are Alameda and San Francisco, California, and Buckley and Tacoma, Washington.

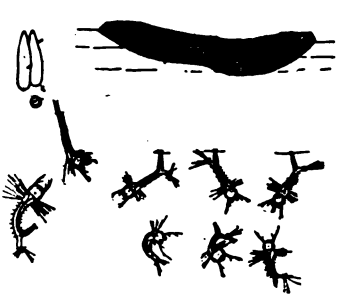
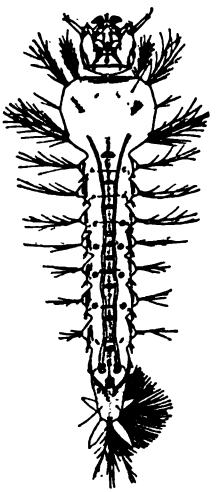
Insect Extermination; the Practical Study of Entomology.

Entomology is, in its practical aspect, a science so broadly utilitarian that the study of insects has a value which very largely overshadows its academic interest. This value grows out of the vital relations existing between insect life and the health and general welfare of mankind; and in its nature it is both sanitary and economic. The economic value is dual in that, while certain classes of insects are producers, or aids to production, for the benefit of the human race, others are destroyers, and for that reason are to be studied with a view to their own destruction. The honey bee and the insect which gives us the silk worm are included in the first class, the former being, in addition to its character as a producer, one of those insects which aid in production by their agency in the fertilization of plants. Study of this class of insects has for one of its objects the propagation, improvement and broader distribution of the breeds.



Eggs and Larvae of the Mosquito.

The other class, designated as injurious insects, includes varieties which are inimical to vegetable life, of which there is a great number; and those which affect unfavorably the conditions of animal life, even, as is now established, to the extent of disseminating disease. Against this class, as represented in parasites, mankind has waged war from the beginning of time, but with crudity of method, until within a comparatively recent period. In fact, it is only through that knowledge which is derived from entomological investigation that it is possible to conduct such a warfare scientifically. Husbandry appealed for this, and it was in the interest of agriculture especially that States made provision for that study of destructive insects which seeks, in addition to means for destroying them when they appear, the means of protection against their appearance by preventing or minimizing their propagation. This involves, in order to be successful, a complete knowledge of the biology of the species against which measures are to be taken. To this end many of the States in the Union maintain an entomological bureau as part of the government machinery, while in the United States Department of Agriculture one of the most important divisions is the Division of Entomology, at the head of which is Mr. L. O. Howard. While the investigations conducted by Mr. Howard and his associates relate primarily to the preservation of agricultural interests from the damage, and even havoc, with which they are threatened by certain insects, the menace to health which exists in the multiplication of some of the species is included in the field of study. As to the insects which are injurious to agriculture, the list is an extremely long one, including an enemy for nearly every variety of root, plant and tree. Among those which have appeared within several years are two which have attracted particular attention because of the growing importance of the sugar-beet industry. Both are destructive of the beet. One is the beet army worm, which is related to the well-known Fall army worm. It appeared during the year 1899 in Colorado and New Mexico, and although it is obviously of foreign origin and restricted in this country to an area considerably west of the Mississippi Valley, there is always a probability of its migrating, as the Colorado beetle did. Hence it is one of the pests to be guarded against. The beet webworm is the other enemy of this great and valuable crop, which is disposed to make its way eastward from the Pacific coast, whence it comes.



Full-Grown Larva of the Harmful Mosquito.

In regard to the relations of insects to the general health, the medical profession has been interested for a number of years in the question of how far they contribute to the spread of disease. In 1880 Dr. Laveran, a French army surgeon on duty in Algeria, published the report of an investigation he had then concluded in which he claimed to have discovered the specific organism of the disease known as malarial fever. The appearance of this report was followed by exhaustive bacteriological research on the part of other observers, who fully confirmed Laveran's statement and presented additional and indisputable evidence that the parasite causing malaria had been identified. Subsequent to this Drs. Ross, Manson, Koch, Grassi and other investigators in different parts of the world, and working independently of each other, proved that the malarial parasite was transmitted from one person to another by the female of the species of mosquito known as the anophele. Later, during the presence of the United States troops in Cuba, Dr. Walter Reed, an army surgeon, successfully demonstrated by experiment that mosquitoes transmit yellow fever. The value of these discoveries lies very materially in the question whether this cause of disease can be combatted, as successful warfare against disease-bearing insects would mean a great deal in the matter of bringing these specified diseases under control. Among scientific men who have devoted thought and labor to the subject none has been more active than Dr. A. H. Doty, Health Officer of the Port of New York. For two or three years past Dr. Doty has been carrying on an interesting series of experiments at and near the Quarantine Station on Staten Island. Of these he says:

"In the beginning of the investigation I selected for the experiments a district known by physicians of this place to contain many cases of malaria, both in the acute and chronic form. This section, consisting of a basin, or low lands, and less than a square mile in extent, contained not more than 150 small wooden houses, some distance apart. Within its boundaries were no less than 25 stagnant pools, varying in size from 10 feet in diameter to an acre or more in area. A house-to-house inspection showed that at least 30 per cent of the inhabitants of this section were suffering with the acute or chronic form of malaria. In almost every house or yard were found typical breeding places for mosquitoes, either in the shape of used, or unused rain barrels, cisterns,

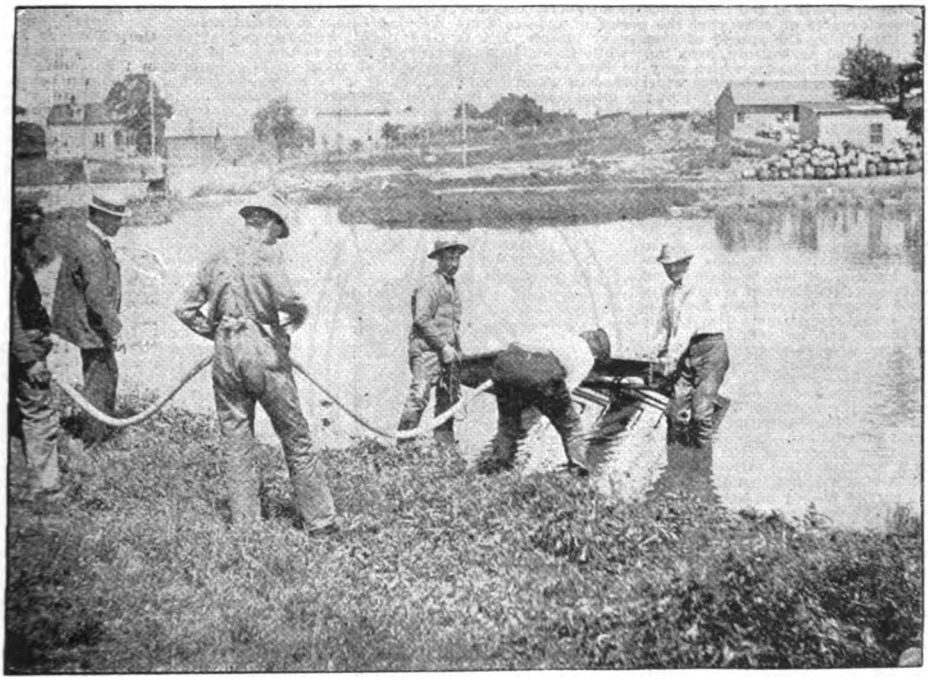
Digitized by Google

cesspools or abandoned receptacles thrown about the premises. Samples of water from these, as well as all stagnant pools were examined and the larvae found. In some instances, particularly in receptacles about the house, the water contained was actually alive with them. As the larvae require but a few days to become the full-fledged, winged insects, it will be appreciated that a very small receptacle can supply innumerable mosquitoes. Large glass tubes were distributed among the houses for the purpose of securing some of the mosquitoes which infected the neighborhood, and among those collected were found the anopheles, or malarial mosquitoes. These were particularly evident in tubes coming from a small section consisting of a few scattered houses. In one of the latter was found a family consisting of five persons, all of whom presented evidence that they were suffering from the acute, or chronic form of the disease. On two evenings I secured live mosquitoes from the bedrooms in this house. The first evening five were captured and all but one of them were anopheles. On the second evening twenty-two were collected, and of these more than one-half were the malarial insect."

Through experiments made with the blood secured from malarial patients the parasite has been found and identified, and dissection of the anophele has disclosed the same parasite carried as transferable matter. Such dissections and discoveries have been made by a number of physicians, including Dr. Doty. Of the experiments made for the elimination of the mosquito Dr. Doty says:

"Many tests have been made in the laboratory to ascertain the value of different agents believed to be destructive to the mosquito larvae. This has included experiments with the different grades of petroleum oil, permanganate of potassium, bichloride of mercury, carbolic acid, bromine, formaldehyde, etc. It was a surprise to find that a solution of bichloride of mercury (1-2000) sufficiently strong to kill all micro-organisms, or germs, affected the larvae slowly, some being alive at the expiration of twenty-four hours. In weaker solutions they live indefinitely. It would be unsafe under any condition to use this dangerous agent in pools or ponds, etc., which are exposed—this may also be said of carbolic acid and other agents experimented with. Permanganate of potassium, which has been strongly recommended for the destruction of the larvae produced, had but little effect except in very strong solutions. During these tests the marked super-



Launching the Distributor.

iority of petroleum oil soon became manifest. There seemed to be no special advantage of one petroleum over another. The lima oil, which was used in petrolizing the stagnant pools and rain barrels, etc., is a crude petroleum with a minimum amount of naptha. One cubic centimetre of this added to 3,500 cubic centimetres of water containing larvae killed them in three or four hours. This is equivalent to about 20 drops of oil to a gallon of water—as a matter of fact this result was usually obtained by less than this amount of oil. Whether the destructive action of the oil on the larvae is due to some specific quality, or whether it obstructs respiration, I am not at present able to say, however, I am inclined to believe that it is the latter. Furthermore, emanation from the oil, or its odor, or both, are particularly repugnant if not dangerous to the full-grown mosquito. There is no doubt that the best effect of the oil is gained by introducing it to a considerable depth under the water. In this way it is more surely brought in direct contact with the larvae, particularly if the water is agitated. This principal was carried out in our practical work. The apparatus used consisted of wooden floats of different sizes, having beneath a network of small perforated iron pipes, with the openings on the under surface. These are connected by a rubber hose with a portable oil tank containing oil under air pressure. In this manner the oil was forced almost to the bottom of the pool, and in its transit to the surface, its resting place, it undoubtedly was thoroughly mixed with the larvae. Whereas, when it is simply thrown on the surface, it does not descend, but collects in different parts by the force of the air, etc., and leaves spaces where the larvae may breathe."

During the Summer of 1902 a work similar to that of Dr. Doty's, so far as attacking the mosquito is concerned, was carried on in South Orange, N. J., under the auspices of the Village Improvement Society there. Mr. Spencer Miller, chairman of the Central Committee, having the matter in charge, said in a report to the society: "Speaking roughly of our results, I should say that in 1901, by the use of oil alone, we reduced the mosquitoes at least 50 per cent. This year, by adding drainage to the oil work, we have surely cut down the supply 75 per cent. We can hope another year to reduce the supply 10 per cent more but that is the best we can do until the surrounding communities take up the fight. The area we

Digitized by Google

Tsetse Fly.

Black Gadfly.

have been treating is 2 miles long and 1¾ wide. This year we expended $1,100, and our results are much more emphatic than last year. Ten thousand dollars spent at once would drain and fill every wet spot in town and the problem would take care of itself."

This is precisely the view of the subject taken by Dr. Doty as a result of his study of the matter. He regards the root of the evil as existing in defective drainage, and he suggests that relief from the mosquito can be brought about only by the strict enforcement of modern sanitary regulations. "The hope that this can be left to the people to carry out by cooperation among themselves is sure to end in disappointment," he says. "The responsibility of carrying out this important work must rest with the municipal, State and federal authorities. Municipal sanitary codes should include strict regulations not only against the existence of stagnant pools, but all forms of breeding places, and should empower sanitary officers to employ such means as are necessary to protect the public against these insects, and where required, the application of oil should be made under their direction, provided proper drainage cannot be secured. In order to make this work uniform and effective, the cooperation of the State and federal authorities is absolutely necessary. Such actions would be followed by the most gratifying results, and would go far toward freeing us from a disease which has entered many households."

The disease-carrying tendency of other insects than the mosquito is under investigation, but not to so full an extent as yet. Among the suspects are the common house fly, fleas, the bedbug and other insects which are pests of the home and its adjuncts, together with such as the tsetse fly and such other creatures as are capable of conveying the germs of disease from infected cattle to human beings.

Concerning the spread of disease by insects, Mr. L. O. Howard, Entomologist of the United States Department of Agriculture, says that while in malaria and typhoid we have the two principal diseases common in the United States which may be thus conveyed, the agency of these little creatures in the transfer of disease germs is much more widespread in warm countries, and it is by no means confined to human beings. It is, therefore, possible that in the large commerce in foreign products, and especially in the importation of tropical fruits into the United States, the diseases peculiar to the warmer countries may be introduced here from time to time by specimens of the insects lurking among the importations. In Egypt and in the Fiji Islands there is a destructive eye disease which attacks human beings, the germs of it being carried by the common house fly. These are far-off countries, but that their affliction might come to us is evident in the fact that certain portions of the country would afford favoring conditions for the development of disease. bearing flies from the tropics. Mr. Howard notes the fact that in our Southern States an eye disease, known as pink-eye, is carried by certain very minute flies of the genus Hippelates. In certain tropical countries there is a disease named filariasis, some- what resembling certain forms of leprosy, which is transferred among human beings by mos quitoes. Mr. Howard is authority for the statement that there is good reason to suppose that the germs of the bubonic plague may be transferred from sick people to healthy persons by the bites of fleas, and he adds that "the so-called Texas fever of cattle is unquestionably transferred by the common cattle tick, and this was the earliest of the clearly demonstrated cases of the trans fer of disease by insects." That insects which aid in the propaga tion of disease among domestic animals are also injurious to hu man health is shown by the fact that gadflies, or horse flies, infect ed with that disease of cattle known as anthrox are apt to pro duce malignant pustules upon human beings by their bite.

Seventeen Year Locust.

The agency of the common house fly in the spread of disease is a moot question with scientific men. Dr. Doty is one among them who will not commit himself to the assertion that the house fly carries disease germs, although he admits the possibility. The house fly, however, does not bite, and even were it to absorb germs of disease, it could not, as the mosquito and other biting insects do, inject them into the blood of human beings. It is a question of whether such as might attach to them accidentally would be taken up or spread except in an occa sional instance. On the other hand, L. O. Howard, in discussing "How Insects Affect Health in Rural Districts," a paper pre pared for the Department of Agriculture, and expressing a wish to point out as forcibly as possible the danger of the spread of typhoid fever by insects, says: "The principal insect agent in this spread is the common house fly, and this insect is especially abundant in country houses in the vicinity of stables in which horses are kept. The reason for this is that the preferred food of the larvae of house flies is horse manure. House flies breed in incredible numbers in a manure pile largely derived from horses. Twelve hundred house flies, and perhaps more, will issue from a pound of horse manure. Ten days completes a generation of house flies in the Summer. The number of eggs laid by each female fly averages 120. Thus, under favorable conditions, the offspring of a single over-wintering house fly may in the course of a Summer reach a figure almost beyond belief. With an uncared-for pile of horse manure in the vicinity of a house, therefore, flies are sure to swarm. Their number practically will be limited only by breeding opportunities. They are attracted to, and will lay their eggs in, human excrement. Under favorable conditions they will breed, to some extent, in this excrement. They swarm in kitchens and dining rooms where food supplies are exposed. They are found commonly in box privies, which sometimes are not distant from the kitchens and dining rooms. Therefore, with an abundance of flies, with a box privy near by, or with excremental deposits in the neighborhood, and with a perhaps unsuspected or not yet fully developed case of typhoid in the immediate neighborhood there is no reason why, through the agency of contaminated flies alighting upon food supplies, the disease should not be spread to healthy individuals. That it is so spread is not to be questioned. That under the unusual conditions of the army concentration camps in the Summer of 1898 it was so spread to a shocking extent has been demonstrated by the army typhoid fever commission. And the remedy is plain. It consists of two courses of procedure: (1) Proper care of excreta; (2) the destruction of flies."

While Mr. Howard's remarks, here quoted, are applicable primarily to country places, they embody ample suggestion for the residents of cities and towns as well; and there is more of it in the following: "While extended investigations have shown that the common house fly is the fly most to be feared in guarding against typhoid on account of the fact that over 99 per cent of the flies found in kitchens and dining rooms are house flies, there are others to be guarded against. The little fruit flies of the genus Drosophila, which breed in over-ripe or decaying fruit, are the principal species in this category.

Cat and Dog Flea.

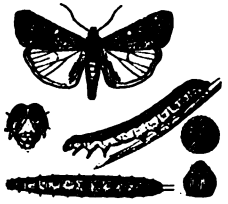
Bedbug.

Digitized by Google

Therefore, fruit storehouses or fruit receptacles should be screened, and over-ripe fruit should not be allowed to remain in dining rooms or kitchens for any length of time."

The close relations existing between city and country in this matter of the propagation of disease are set forth by Mr. Howard in the following: "While it is true that both malaria and typhoid prevail in large cities, it is none the less true that they may with a certain degree of accuracy be termed country diseases, that is to say, rather specifically, diseases of the farm and the small village. Malaria, in fact, has been called by medical men a country disease. Swampy regions do not occur in cities, or, at all events, only in the suburbs, whereas they occur commonly in the country. Open streams with side pools of still water are found only in the country, and it is in such small, still pools, and in more or less permanent but small accumulations of water, that the malarial mosquito breeds. This mosquito, therefore, does not accomodate itself well to city conditions, but it is found almost everywhere in the country, except possibly in very dry localities and at certain high elevations. Even in dry regions it sometimes abounds, especially where there is a definite rainy season, or where the land is irrigated. Irrigating ditches are prolific breeding places for mosquitoes, including the malarial kind. Malaria in cities, as a rule, is found only with persons who have contracted it in the country or in the suburbs, although with some cities having marshy places on their borders a malarial belt may exist, the extent of which depends upon the direction and force of the prevailing Summer breezes, as pecially the night breezes. For example, such a condition as this accounts for the prevalence of malaria in certain portions of the city of Washington before the re- clamation of the Potomac Flats, which lie to the south of the city, the prevailing night breezes of the Summer being southern. Cities well supplied with water from a reservoir, especially a filter reser- voir, which possesses a modern sewage system, and in which water-closets are universal, derive typhoid fever only from the fol- lowing sources: Contaminated country milk, the return of peo- ple in the Autumn from the sanitary country, and lack of care in the disposal of the discharges of persons who have contracted typhoid from either of the first two sources.

Beet Web Worm.



Beet Army Worm.

"Of course it will be said that the entire water supply of a city may become contaminated at or immediately above its reservoir supply. This contamination is from country sources and might be obviated either in a general manner by the establishment of a reservoir filtering plant, or in a special manner by individual householders by the constant and thorough use of house filters. In cities possessing a common water supply and modern sanitary plumbing there is no excuse for the presence of typhoid in the household. Even the city water must be filtered, which can be done by the use of any one of the cheap filters now on the market; the milk which is drunk by children must be sterilized, and strict sanitary precautions should be taken with persons re- turning from the country; these measures, systematically followed, will aid in the abolition of typhoid fever within city boun- daries."

The fact that the bedbug is suspected of even more than its long-known unpleasantness in that it is a possible conservator and distributor of disease germs adds greatly to the desirability of exterminating the pest from the household, if such a thing is possible. While the constant care of the housekeeper effects a great deal in most cases, the best that can be done by the usual methods of warfare is to check the evil.

Insurance of Life in the United States.

ISRAEL C. PIERSON, Ph. D., of Washington Life Insurance Co.

A century and a half ago the subject of making provision for one's family, by some form of life insurance, was quite generally considered among the people of the then colonies. The first definite action was taken when, in 1759, a life insurance company, now called the "Presbyterian Ministers' Fund," was incorporated by the Proprietaries of the Province of Pennsylvania, to insure annuities for the benefit of the widows and orphans of clergymen of all churches governed by elders. During the succeeding eighty years several other companies were chartered to sell annuities and transact life insurance business, including the Protestant Episcopal Corporation in 1769, the Pennsylvania Company for Insurance and Annuities in 1812, the Massachusetts Hospital Life Insurance Company in 1818, the New York Life Insurance and Trust Company in 1830, and the Girard Life and Trust Company in 1836. These ventures, although conservatively conducted, were necessarily tentative and experimental.

At the end of the period mentioned above, as nearly as can be ascertained, there were in force about 100 annuities and 550 policies, insuring $1,250,000. Excepting the pioneer, these early companies several years ago practically discontinued transacting life insurance and annuity business.

It is within the past sixty years that the vast business of life insurance in the United States has been developed. The experimental stage was ended and the era of advance was opened when, in 1843, the Mutual Life Insurance Company of New York began business, its first policy having been issued on February 1 of that year.

Since then a large number of life insurance companies have been established. The following list includes those now transacting business which had their inception between 1843 and 1860, inclusive, arranged according to the date of the first policy issued:

Company.	First Policy Issued.	Company.	First Policy Issued.
The Mutual Life Insurance Co.	1843, Feb. 1.	Ætna Life Insurance Co.	1850, Aug. 1.
[1]New England Mutual Life Insurance Co.	1844, Feb. 1.	Manhattan Life Insurance Co.	1850, Aug. 1.
New York Life Insurance Co.	1845, April 17.	Massachusetts Mutual Life Insurance Co	1851, Aug. 2.
[2]Mutual Benefit Life Insurance Co.	1845, May 6.	Phoenix Mutual Life Insurance Co.	1851, Sept. 11.
[3]State Mutual Life Assurance Co.	1845, June 1.	[4]Berkshire Life Insurance Co.	1851, Oct. 27.
Connecticut Mutual Life Insurance Co.	1846, Dec. 15.	Northwestern Mutual Life Insurance Co.	1858, Nov. 25.
Penn Mutual Life Insurance Co.	1847, June 25.	Equitable Life Assurance Society	1859, July 28.
Union Mutual Life Insurance Co.	1849, Oct. 1.	Washington Life Insurance Co	1860, Feb. 2.
National Life Insurance Co. of Vermont.	1850, Feb. 1.	Home Life Insurance Co.	1860, May 1.
United States Life Insurance Co.	1850, March 4.	Germania Life Insurance Co	1860, July 16.

How life insurance has progressed since the early part of 1843 is shown in the subjoined table, by periods of years as indicated:

Dec. 31,	Amount of Outstanding Insurance.	Amount of Assets.	Dec. 31.	Amount of Outstanding Insurance.	Amount of Assets.
1843	$6,500,000	$1,000,000	1892	$4,898,000,000	$907,441,000
1867	1,235,000,000	124,534,000	1901	7,573,000,000	1,880,000,000

1. The New England Mutual Life Insurance Company was chartered 1835, April 1.

2. The insured under Policy Number 2, Mutual Benefit Life Insurance Company, issued 1845, May 20, life, $1,500, having attained in 1898 the age of ninety-six, the tabular limit by the American Experience Table of Mortality, the Company paid to him the amount of the policy in full.

3. Mr. William E. Starr, the nonogenarian member of the Actuarial Society of America, has been the Actuary of the State Mutual Life Assurance Society ever since 1848.

4. It is a curious coincidence that the holders of Policies Numbers 1 and 2, respectively, issued by the Berkshire Life Insurance Company, 1851, October 27, then residents of Pittsfield, Mass., after having paid premiums for thirty-seven years, both died in the same year, 1888, the first on March 28, in Platteville, Col., residence, Chicago, Ill., and the second on May 22, in Kenosha, Wis., residence, Pittsfield, Mass.

The companies did not have any tabulated American Mortality Statistics, but, as the habits and conditions of the people and the climate of the United States were similar to those of Great Britain, they concluded that the tables in use in the latter country would apply to conditions in the United States. They therefore employed for premiums and reserves the Northampton, Carlisle, Combined Experience, and other tables, modified in some cases by observations in this country. For the Annuity charges in "The Presbyterian Ministers' Fund," the plan of the Church of Scotland was followed.

The president of the New England Mutual,[5] in "Reminiscence, 1847-97," says: "In determining the basis of premiums for the company, the rates of mortality given by seven tables were compared," including one which Professor Edward Wigglesworth, of Harvard University, made up from records in healthy portions of Massachusetts, and published in 1789. It was the table used by the Supreme Court of Massachusetts in calculating present values of estates and interests of heirs. The premiums of this company were an average of these seven tables. The mortality table compiled by Professor Wigglesworth seems to have been the first American table used at all for calculating life contingencies.

5. Mr. Benjamin F. Stevens became associated with the company in 1847. He has been the president since 1865.

In 1859, Mr. Sheppard Homans, the Actuary of the Mutual Life, investigated the fifteen years experience of the company and constructed a mortality table which, after subsequent adjustment, became known as the "American Experience Table of Mortality." It was soon after adopted by the State of New York and by many other States as the official standard. The State of Massachusetts, early in the year 1900, adopted it as the standard for valuation of future business. The table may now be called the universal standard in the United States for calculation of premiums, for valuations and for the distribution of surplus. The construction of this table was the first considerable step in the progress of the Science of Life Contingencies in the United States. It is the basis of many volumes of commutation tables, tables of premiums and of reserves for a large variety of forms of insurance.

State supervision was introduced in 1856 by the State of Massachusetts. The Actuary of that Department, Hon. Elizur Wright, afterward Insurance Commissioner, made a valuation for November 1, 1859, by the Combined or Seventeen Offices' Experience table, at four per cent. interest. Since then all of the States have established Insurance Departments and the valuations have been made at December 31 of each year. The State which requires the highest standard of reserve establishes the rate for all of the companies. Recently the state of Massachusetts adopted a three and one-half per cent reserve by the American Experience Table, to take effect and to apply to all policies issued on and after January 1, 1901. Many of the companies, however, have for several years been computing reserves on new business upon a basis of three per cent or three and one-half per cent interest, American Experience Table.

Digitized by Google

More than 400 kinds of policies of forms of life insurance have been devised and used in order to promote the business and meet the various desires and circumstances of insurers. The calculation of the premiums and the reserves for these multitudinous contracts require the best mathematical training, the highest actuarial skill and the soundest judgment.

Insurance, Fraternal.

J. M. EMERY, M. D., Secretary of the Fellowship of Solidarity.

A form of life insurance which is well known, especially in English-speaking countries, is furnished by fraternities, known as friendly societies in Great Britain. The first life insurance institution to be established in Great Britain, known as the Amicable Society, and established about 1690, was a fraternity, being a mutual association holding stated meetings and furnishing life insurance to its members only.

The original plan of the Amicable Society was as follows: Each member, without regard to his age at admission, or his age at the time of payment, paid into the society a certain sum of money each year. At the end of the year the money received was divided among the beneficiaries of members who died during the year. Thus the payment was definite, but the amount of the benefit indefinite. The society grew for a time so rapidly that it was soon necessary to limit the amount of the benefit, and afterwards many variations were made as to the form of both payment and benefit. After nearly a century of useful existence the Amicable Society adopted what are now known as "old-line" plans, but in consequence of the many changes the mortality remained excessive, and after almost a century and a half the society reinsured and retired.

There were many small friendly societies in Great Britain during the eighteenth century, but the movement reached its highest point early in thhe nineteenth century. Most of the societies were organized on plans copied from the plans of the Amicable Society, or on similarly unsound plans, and many of them failed, but some altered their methods of operation and have survived and flourished. The leading friendly societies are now on what is known as "old-line" plans in the United States, and hold reserves generally nearly, if not quite, adequate, according to the tables employed by them. Some of them are more than fifty years old, and hold large resources, in one case amounting to more than $15,000,000.

The forms of insurance furnished by these friendly societies are generally as follows, viz.: Protection against sickness, accident, permanent disability and old age, together with a small life insurance. Most of these societies have a lodge system, but not all.

In the United States fraternal insurance was introduced by "Father Upchurch," who some thirty years ago organized the Ancient Order of United Workmen. His original idea was that of a labor union or workingmen's association, with life insurance as a mere incident. The life insurance plan consisted of charging a flat assessment, the same in amount without regard to age at admission or attained age, to be applied to pay the current losses. These assessments were to be collected after the losses were incurred. This fraternity is still in existenc, and with a large membership, but its plans have been changed so as to charge according to the actual risk at the attained ages, as measured by a mortality table.

Many other fraternities were founded upon the flat assessment basis, most of which have either failed or reformed their plans. The only societies which now persist in employing it are some small local organizations.

Digitized by Google

Other societies were organized upon what is known as the "graded assessment plan," which means that they levied assessments, graded according to age at admission, but not varying in amount, as the risk of death increased with the increasing age of the member. Many very successful fraternities, so far as number of members is concerned, have been built up on this plan, which is yet in common use, though now being generally discarded.

Experience has shown that neither of the two plans mentioned can be permanently continued. In both cases the mortality of the entire membership bears eventually so heavily upon the younger members that the growth stops, and unless a change of plan is adopted the institution fails. This fact has been realized in recent years by the managers of all the fraternities. At first it was thought that a solution of the difficulty was found by a continuous growth or "new blood;" then by maintaining "an average age," then by means of "gains from lapses," but now the idea has been generally accepted by managers of fraternities that the only sound plan must be based upon recognition of the fact that mortality increases with age.

Some fraternities have attempted to meet the increasing mortality by means of an increasing rate of assessment, but as this rate of assessment becomes practically prohibitive at the higher ages it results in excessive mortality at those ages among members who remain, the good lives dropping out, which prevents any mortality table from applying.

Various modifications of the "step rate plan" have also been proposed, and some fraternities are now employing level premium plans also. They are more commonly using the National Fraternal Congress mortality table, which is believed to represent closely the average experience of well-conducted companies.

The volume of insurance in the fraternities of the United States is very great, being in excess of $6,000,000,000, and nearly, if not quite, as large as the insurance in the "old-line" companies. One fraternity also has as much or more insurance in force than any "old-line" company. Their assets are small, their plans hitherto, whether on one basis of assessment or another, being current cost plans, but they have conducted their business at so small an expense that it is generally thought that a change to a sound basis can readily be made, and that the advantages will still be, in the United States as in Great Britain, so great on account of economy of operation and convenience of payment that the fraternities can readily continue to compete with "old-line" insurance in the field.

The last development is the organization of two fraternities, the Fellowship of Solidarity and the Fraternal Reserve, upon "old-line" plans, binding themselves to put up the full legal reserve and charging premiums, payable monthly, sufficient to do so, but with a very small provision for expenses. These fraternities employ the American Experience Table of Mortality, the standard table in most States.

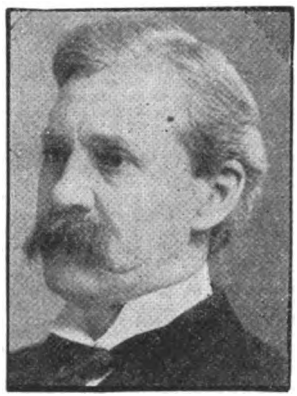
Iowa.

—

Capital:
DES MOINES.

Iowa was originally included in the Louisiana purchase of 1803. The first white settlements were made by a French Canadian, Julien Debuque, who obtained a large grant of land in 1788 and built a fort at the site of the present city of Dubuque. In 1834 the territory now included in the State of Iowa was placed under the jurisdiction of Michigan and later under that of Wisconsin. On June 12, 1838, it was erected into a separate territory and then included a greater part of Minnesota and all of the Dakotas. On December 28, 1846, Iowa was admitted to Statehood, with the present boundaries. Its area is 56,025 square miles, and in 1901 its estimated population was 2,267,000.

Iowa is primarily an agricultural State, its manufacturing industries having increased but slowly in the past five years, and not having become consolidated in manufacturing centres. The interests are diversified and evenly distributed over the State. Formerly the manufacture of lum ber and timber was the principal industry, but this has declined in recent years, owing to the misuse and exhaustion of the timber lands.



Gov. Albert B. Cummins.

Wholesale slaughtering and meat packing is the most important industry in the State, its products amounting to 15.6 per cent of the value of the total products. Factory manufacture of butter, cheese and condensed milk ranks second in importance, while flour and grist milling holds the third place. Allied to the lumber and timber industry is the manufacture of planing mill products, car construction and repair shops, and the manufacture of agricultural implements.

An industry peculiar to Iowa is the manufacture of pearl buttons from the shells of fresh water mussels found along the Mississippi and other rivers. While this industry is successful financially, no attention is paid to the breeding of young mussels, and it is feared that the supply will soon be exhausted.

At the session of the Legislature in 1902 an act was passed to provide for the comfort and safety of laborers and other persons in factories. It requires that all machinery in factories shall be supplied with belt shifters or other safe mechanical devices for the purpose of throwing belts off on pulleys, wherever this is possible, and that all geared machinery, saws and machines of every description shall be properly guarded. No person under sixteen years of age, and no female under eighteen years of age shall be permitted to clean machinery while in motion, and children under sixteen years of age shall not be permitted to operate or assist in operating dangerous machinery of any kind. All factories using emery wheels, emery belts or tumbling barrels for polishing castings shall be provided with blowers and pipes of sufficient capacity to protect the laborers from dust. It is made the duty of the State to enforce the provisions of this statute.

The State Democratic Convention met September 3, 1902, and rejected the Kansas City platform after much debate, the vote standing 344 in favor of its adoption and 384 for rejection. The platform they adopted declares in favor of tariff reduction and condemns the Philippine war. The Republicans at their convention in August heartily indorsed the Administration of President Roosevelt and called for a revision of the tariff schedule in all cases where it affords a shelter for a monopoly.

The State Democratic convention was held at Des Moines, September 3. The principal issue before the convention was the wording of the plank with regard to the indirsement of the Kansas City platform of 1900. Ex-Governor Boies led against the adoption of the silver plank of this platform. At district caucuses held in the morning, it was decided by a vote of 7 to 4 that there should be no reaffirmation of the Kansas City platform, though a minority report was sent in. In the convention proper reaffirmation of the platform was refused by a vote of 384 to 344. The platform finally adopted declared in favor of tariff reduction and condemned the conditions in the Philippines.

The Republicans met in convention in August. The platform adopted contained a lengthy discussion of the tariff and asked for a revision of the schedule as it stands. It suggested that the people of Iowa wanted a revision of those schedules that were adopted to protect industries which no longer need protection, and that they were particularly anxious to see modification of the duties that affect the trusts.

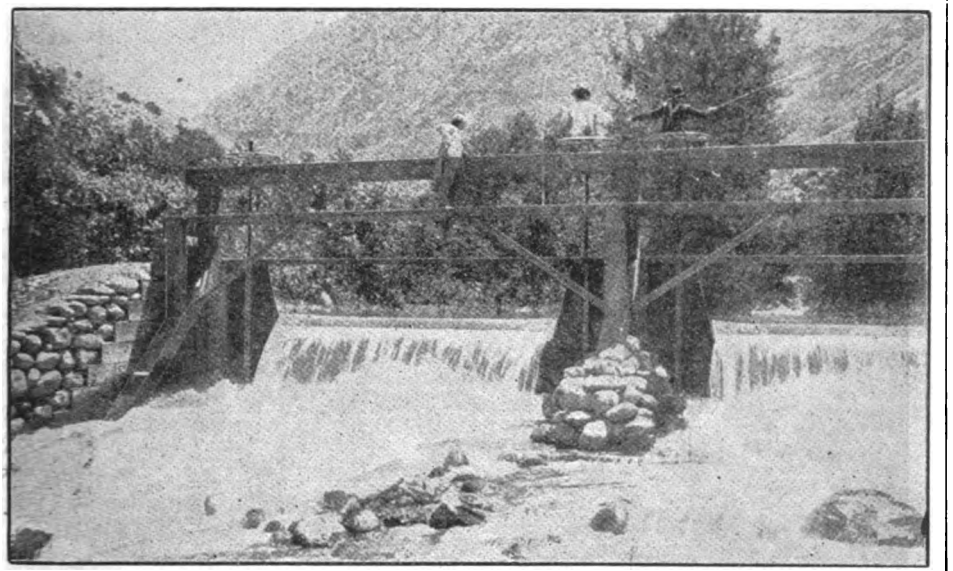
Irrigation in the United States.

It is particularly appropriate that the centenary of the Louisiana Purchase should be commemorated by the inauguration of the great work of irrigation that is so soon to be undertaken under the new National Irrigation Law, for now that the Federal Government has decided to construct and maintain the necessary artificial waterways it will be possible to cultivate at least 60,000,000 more acres of land within the Louisiana tract, a condition which will add materially to the profit which the United States will derive from its great real estate transaction of 1803.

For a number of years, as the Western States and Territories have become settled and the cultivatable land has been taken up, the subject of irrigation has assumed a more important aspect. Gradually all the good lands have been exhausted by settlement, leaving only the arid and undesirable lands open to the public, until, in some parts of the country, the limit of population has almost been attained. As the natural result the eye of the western resident and land-owner has turned toward the great American desert and the possibility of making this uninhabitable tract available for habitation is a problem that has taxed both the ingenuity of the practical agriculturalist and the knowledge of the scientist. Again and again individuals and private corporations have attempted to grapple with the problem, but, while their efforts have not met with the most satisfactory results, so much has been accomplished, so many thousands of acres of desert land have been made to yield fruits of the soil in spite of climatic and other adverse conditions, that the practicability of a great and systematic plan of irrigation has been more than amply demonstrated.

In President Roosevelt's first message to Congress he urged the necessity of the passage of a law which would enable the Government to approach the problem of irrigation in a practical manner, and, acting upon his suggestion, and upon the actual experience of several members of the House and the Senate, both branches of Congress, during its last session, approved the law which now promises relief from this great obstacle which has so long stood in the way of Western progress.

The arid lands, which require irrigation and which are to receive attention under the provisions of the



Weir on Big Cottonwood Creek, Utah.

new law, are located in Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Washington and Wyoming, and aggregate 550,000,000 acres. It is said, however, that of this immense tract only 60,000,000 acres can now be irrigated, as there is no known water supply that will reach the other arid sections. In other words, there are about 490,000,000 acres of arid lands in the Western States and Territories that cannot be made fruitful, but will always remain arid unless subterranean sources of water supply exist and are discovered. This, of course, is not impossible, as such water supplies have been discovered in several sections of the desert.

The Geological Survey has now devoted fully a dozen years to the systematic investigation of the irrigation problem, and the reports published by the department show that the expenditure of a small sum of money for artificial irrigation greatly increases the value of lands, and the private control of irrigation reservoirs has already proven a very profitable form of investment. In Colorado and Utah the reservoir systems are under co-operative control of the farmers, who make use of them. In this way those who derive the benefit of the irrigation works are able to keep the expense of their maintenance at a minimum point.

In nearly all the sections where irrigation is required there are State and Territorial officers who have all irrigation matters under their control. Colorado is divided into six irrigation divisions, each of which is in charge of a superintendent; Wyoming has four such divisions, and Nebraska has two. California formerly delegated irrigation matters to the State Engineer, but he has ceased to have jurisdiction over them and they are now under private control.

The first source of water supplies for all irrigation projects is naturally the rivers and streams which flow through the arid sections, but as these are few in number and cannot be depended upon, being liable to dry up completely in periods of drought, the Government proposes to drive many artesian wells in the desert in order that they may test the underground water supply. In many districts which appear to forbid irrigation it is possible that water may be found beneath the surface in such volume as to convert the surrounding desert into a fertile territory, and it is estimated that Government land now practically valueless may be so improved by irrigation as to be worth at least $20 per acre. In Louisiana and Texas rice lands which were formerly dependent upon natural irrigation have been increased in value by artificial irrigation from $10 to $50 and even $100 per acre, while the cost of constructing a small irrigation system is scarcely more than $200.

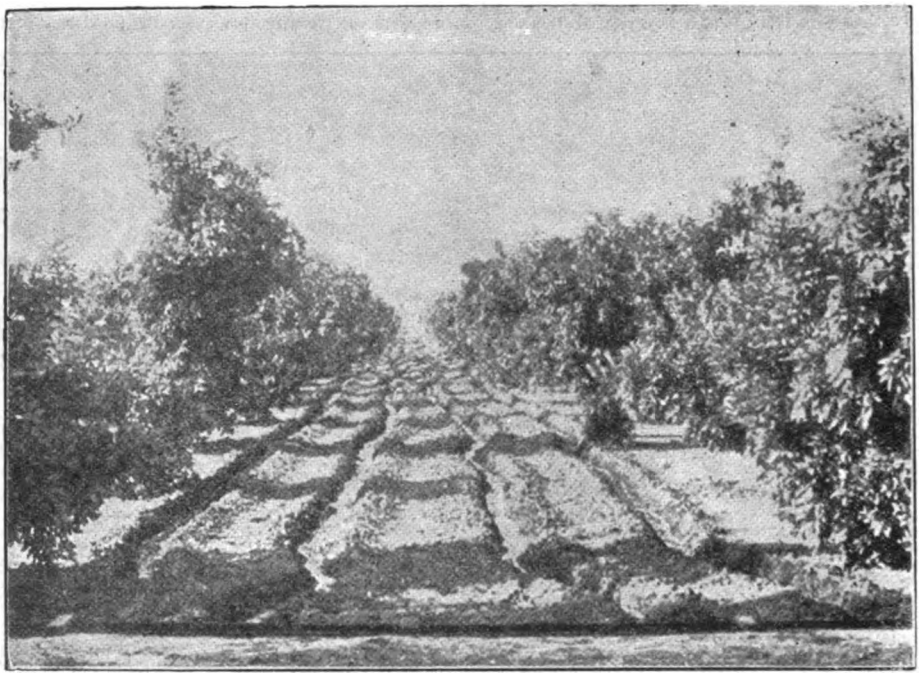
Digitized by Google

It has been declared that the area of wheat lands in this country is now all under cultivation and that as there can be no further expansion the wheat supply must inevitably become too small for the country's needs; but it is believed that by having recourse to irrigation the time when there will not be enough wheat to supply the population will be postponed for many years. The experience of farmers in the arid or semi-arid regions shows that wheat will flourish in such sections if properly cultivated. There are a number of Russians in the arid sections of the West who seem to have solved the problem how to grow wheat with little water, and the varieties of that cereal which they have developed are said to be extremely hardy and of excellent quality, and with an extension of wheat acreage by irrigation there need be no cause for alarm as to the future of the world's wheat supply.

The transcontinental railroads have also done much to aid favorable irrigation action by Congress, for they are vitally interested in the development of these arid plains where they hold many millions of acres of land by virtue of the grants made to them by the Government when they constructed their lines across the continent. These tracts are now uninhabitable and consequently cannot be disposed of nor opened to settlement. Irrigation will change this condition, for it is estimated that in the section where no creature save the prairie dog now lives a population of nearly 50,000,000 may in time be supported. In other words, a population nearly two-thirds as great as the present population of the United States may find homes in the Great American Desert when it has been opened up to cultivation by irrigation, a prospect that suggests that, before the close of the present century, there may be cities among the Rocky Mountains greater than Chicago.

Not only will the production of cereals be greatly increased by irrigation but cattle and sheep raisers will be equally benefited by it. The land available for ranges is limited by lack of natural water supplies and consequently there will be a desire on the part of stockmen to avail themselves of the new facilities for obtaining water for their stock by artificial means. It will also increase the supply of forage for cattle. In fact, every interest of the great western plains will be directly benefited by the new Government irrigation plan.

The fear has been expressed that irrigation on such a scale as is contemplated by Congress will in some



An Orange Grove Irrigated by Furrow Methods.

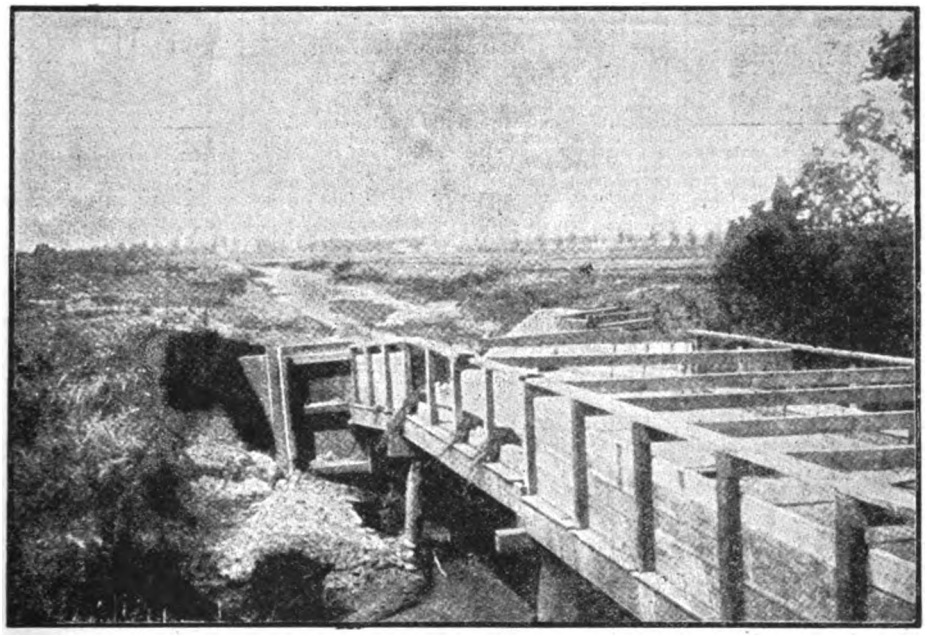
way interfere with Eastern interests by making the West a greater competitor of the East in farm products, but it has been shown in refutation of that theory that while the irrigation plans appear revolutionary they are really not to be dreaded. In the first place it will require many years to put the projected plans in operation, for they are of such a character as will necessitate the most careful consideration before action is taken. Engineering works of such magnitude cannot be constructed in a day or a year, but will need many years for completion. Thus they will not be forced beyond the needs of the people whom they are to serve, and they are not now needed except in sections of the country that are already settled. As the population increases by immigration and otherwise the irrigation system will be extended, but as that will be a matter of gradual development, no alarm need be felt in any section of the country.

One of the most important features of the Federal irrigation plan is the effort to safeguard the interests of those who now own water rights on the streams and water ways which are to pass under the Government control. This is a matter that will engage the attention of the authorities at every step, for the subject is such a complicated one that titles to lands in the irrigated districts are in many cases likely to be affected by the action of the Federal officials. To prevent unnecessary hardship on that account will be one of the chief concerns of those who have the irrigation project under control.

The law which President Roosevelt approved June 17, 1902, provides that all moneys received from the sale of public lands in the States and Territories to be benefited by the law, except such as are reserved by previous laws for educational and other public purposes, shall be set aside as a reclamation fund to be used in the examination and survey of arid lands and for the construction and maintenance of irrigation works, and if there be not sufficient moneys realized from such a source, then the deficit shall be paid from the United States Treasury. All lands required for irrigation are to be withdrawn from public entry until they have been irrigated, when they are to be opened for settlement again. No right to the use of water for land in private ownership shall be sold for a tract exceeding 160 acres to any one landowner, and no such sale shall be made to any landowner unless he be an actual bona fide resident or occupant thereof, residing

Digitized by Google

in the neighborhood of said land, and no such right shall permanently attach until all payments therefor are made. Moreover, the owners of such lands are to maintain the irrigation works so constructed by the Government at their own expense subject to such rules and regulations as may be prescribed by the Secretary of the Interior, while the Government is to retain title to irrigation reservoirs and works until the Congress provides otherwise. At the same time there shall be no interference by the Government with the laws of any State or Territory relating to the control, appropriation, use or distribution of water used in irrigation, or



Looking Glass Flume, Great Eastern Canal, Nebraska.

any vested right acquired thereunder, and the law expressly stipulates that the Secretary of the Interior, in carrying out the provisions of the act, shall proceed in conformity with such State and Territorial laws.

Throughout the West there is a considerable increase in the amount of land irrigated each year. It is found that nearly all kinds of crops, notably grains, can be grown in land hitherto considered worthless. If the proposed system of national irrigation is ever put into operation it will make valuable many thousands of acres of land which is now useless, and add largely to the material wealth of the people.

The results of irrigation work reported by the United States Census Bureau for 1900 were as follows:

IRRIGATION IN THE UNITED STATES. FROM FACTS OBTAINED FROM THE CENSUS BUREAU.

States and Territories.	Acres Under Irrigation June 1, 1900.	Average Value of Land.		Value of Crops Produced on Irrigated Land.	Total Cost of Construction.	Average Cost of Water Per Acre.	
		Irrigated.	Arable Land Unirrigated.			Water Rights.	Annual Maintenance.

Italy.

—

Capital:
ROME.

The origin of the present reigning house is not historically established, but the most reliable genealogists trace it back to the German Count Berthold, who settled on the western slope of the Alps in the eleventh century. By the end of the century the family had acquired the counties of Turin and Susa, and when, in 1381, Count Amadeus founded a law of primogeniture the family's position was so strong that it was soon able to secure the territory of Nice. The title of Duke was adopted by the Count of Savoy in 1416; in 1713 they obtained the island of Sicily, with the title of King, and although they were subsequently compelled to exchange the island of Sicily for that of Sardinia, they retained the royal dignity and added considerable territory to the Sardinian crown. In 1831 the direct male line died out with King Carlo Felice, and the throne therefore reverted to Prince Carlo Alberto of Savoy-Carignano, a branch founded in 1596. In 1849 King Carlo Alberto abdicated in favor of his son, Prince Vittorio Emanuele, and at the assembly of the first Italian Parliament, February, 1861, Victor Emmanuel II., was declared King of Italy, and by 1870 his domain included all the former Italian States.

The present ruler, Victor Emanuel III. is the son of King Humbert I., who was assassinated July 29, 1900. King Victor Emmanuel was born November 11, 1869, and was married October 24, 1896, to Princess Helena (born January 8, 1873), daughter of Prince Nicholas of Montenegro. They have two children, both daughters, Princess Yolande, born June 1, 1901, and Princess Mafalda, born November 19, 1902.

THE HEIR APPARENT.—As the provisions of the Salic law prohibits the accession of females the heir apparent to the throne is Prince Emmanuel, Duke of Aosta. He was born January 13, 1869, and was married to Princess Helene of Orleans, daughter of the late Comte de Paris, June 25, 1895. They have had two children, Prince Amedeo, born October 21, 1898, and Prince Armone, born March 8, 1900.

THE MINISTRY.—President of the Council, without portfolio, Signor Zanaidelli; Minister of the Interior, Signor Giolitti; Minister of Foreign Affairs, Signor Prinetti; Minister of the Treasury, Signor di Broglio; Minister of Finance, Signor Poalo Carcano; Minister of Justice and Ecclesiastical Affairs, Signor Cocco-Ortu; Minister of War, General G. Ottolenghi; Minister of Marine, Vice-Admiral Constantino Enrico Morin; Minister of Commerce, Industry and Agriculture, Signor Guido Baccelli; Minister of Public Instruction, Signor Nasi; Minister of Public Works, Signor Balenzano; Minister of Posts and Telegraphs, Signor Galimberti.

King of Italy.

THE NATION.—Under the char ter of 1848 Italy is a constitutional monarchy, with the entire executive power resting in the King, and the legislative power jointly in him and the Parliament. This latter is of two houses, the Senate consisting of princes of the blood and an unlimited number of members appointed for life by the King. The Lower House is composed of one Deputy elected for each 64,000 of population, the present number being 508.

Officially the Roman Catholic Church is the State church. Its power has been much curtailed, however, and religious freedom and equality practically prevail. But nearly all the population is of the mother church, about 100,000 only being Jews and Protestants. The Pope, or Roman Pontiff, is on the civil lists of the State.

The State strictly regulates public instruction. All private and public schools must be under its authorization. Education in primary branches is supposedly compulsory between the ages of six and nine. There are twenty-one State and free universities.

Courts of first instance in Italy are the Pretori, the penal tribunals and the Courts of Assize. Appeal courts are the penal tribunals of appeal and the courts of appeal. Over all is the Court of Cassation. There is no State provision for caring for the poor.

The estimated revenue for 1902 is $362,384,902, the expenditure for the same period being $358,191,956. The national debt amounted to $2,583,983,780 in 1901.

Italy's frontier is being protected by a series of fortifications being built. Rome is surrounded by a wall with forts.

Some of Italy's chief products for export are silk cocoons and silk, wines, fruit, olives and olive oils, dates and sardines.

In 1901 her imports amounted to about $331,497,902 and her exports to $265,283,305.

THE ITALIAN DEPENDENCIES.

Dependencies.	Area in Sq. M.	Population.	Revenues.	Expenditures.
Eritrea	88,500	450,000	$443,743	$2,013,086
Italian Somali-Land	100,000	400,000	....	....
Totals	188,500	850,000		

Italy possesses 670 miles on the coast of the Red Sea, from Cape Dumeirah to Cape Kasar. To this has been added Hamasen and the district north of it running to the coast and the province of Tigre. She also forms a protectorate over a large part of the Somali coast, inland about 180 miles. These colonies are all unimportant. Italian rule in them is by a civil Governor, nominated by the King and under the direction of the Minister of Foreign Affairs.

Italy's diplomatic relations were broken with Switzerland for a short time in the Spring of last year over a supposed insult to the memory of the late King. No serious consequences followed. Important, however, was the maintenance of her standing under the old status of the expired Triple Alliance.

Japan.

Capital:
TOKIO.

The Empire of Japan consists of the Archipelago of Niphon, which includes the four large islands of Honshiu, Kiushiu, Shikoku and Hokkaido, or Yezo, together with Formosa and the Pecadores, ceded to China in 1895, and nearly 4,000 smaller islands. The total area of the empire, according to the official estimate, is 161,198 square miles, and the population, January, 1899, was 46,561,133, including Formosa, with 2,798,000 inhabitants, mostly Chinese.

The Japanese claim that their empire was founded by the first Emperor Jimmu, 660 B. C., and that the dynasty then founded still reigns. It was revived in 1868, when the now ruling sovereign, after a short war, overthrew the power of the Shogun, the de facto sovereign, who had held the ruling power in successive families since the twelfth century. In 1871 the feudal system was entirely suppressed. The sovereign bears the name of Kotei, or Emperor, though he is generally known in foreign countries as the Mikado, or "The Honorable Gate."

The present Mikado is Mutsuhito, born at Kyoto, November 3, 1852. He succeeded his father, Komei Tenno, February 13, 1867; was married February 9, 1869, to Princess Haruko, daughter of Prince Ichijo. The Mikado has five children: Prince Yoshihito, born August 31, 1879, married May 10, 1900; Princess Masako, born September 30, 1888; Princess Fusako, born January 28, 1890; Princess Nobuko, born August 7, 1891; Princess Toshiko, born May 11, 1896. The Crown Prince has one son, Prince Hirohito, born April 29, 1901. By the Imperial House Law of 1889, the succession to the throne was definitely fixed upon the nearest male descendant.

Though Japan is included among the absolute monarchies of the world, a constitution was adopted February 11, 1889. By this constitution the Emperor is head of the Empire, having all the rights of the sovereign, and exercising full executive power, with the advice and assistance of the Cabinet Ministers, appointed by himself. There is also a Privy Council and House of Diet, consisting of a House of Peers and a House of Representatives, members of the latter being elected by popular ballot. The House of Peers consists of members of the imperial family, twenty-five years old and upward; counts, viscounts and barons of the age of twenty-five and upward who have been elected by their various orders; persons above the age of thirty years who have been nomi nated members by the Emperor for meritorious service to the state, or for erudition; persons who shall have been elected by each pre fecture from among and by fifteen male inhabitants thereof, above the age of thirty years and paying therein the highest amount of direct national taxes on property, industry and trade, and who have been nominated by the Emperor. The entire membership of the House of Peers must be about three hundred. The President and Vice-President of the House of Peers are nomi nated by the Emperor from among the members, and the President and Vice-President of the House of Representatives are nominated by the Emperor from among three candi dates elected by the House. The Presidents of both houses receive an annual salary of 5,000 yen, or about $2,500 in gold. The Vice-Presidents receive 3,000 yen each, and the elected and nominated members of the House of Representatives, 2,000 yen each, together with travelling expenses.

Emperor of Japan.

By the constitution, absolute freedom of religious belief and practice is secured, so long as it is not prejudicial to peace and order. The chief forms of religion are Shintoism, with 11 sects; Buddhism with 16 sects and 25 creeds. There is no state religion and no state support. There are also numerous Catholics, of the Greek branch, and Protestants. There are shrines dedicated to the eminent ancestors of the Imperial House, and to meritorious subjects. These are independent of any religious sect, and some of them are supported by state or local authorities. Elementary education is compulsory. In 1900 there were 26,997 elementary schools, 193 middle schools, 7 high schools, 37 high schools for girls, 49 normal schools, 2 higher normal, 303 special and technical schools, 1,152 un-named, 230 kindergartens and 2 universities. The two universities are at Tokio and Kyoto, and both are supported by the government. Formosa has a special educational system. There are about forty libraries. A system of justice, founded on modern jurisprudence, has been recently established. There are four classes of courts, sub-district courts, district courts, courts of appeal and courts of cassation. For the trial of cases connected with the military and naval services there are courts-martial. Formosa has a special system of justice.

The supreme command of the army and navy is vested in the Emperor. The Imperial army has been organized on a uniform system based on conscription. All male subjects of the age of seventeen to forty are liable to military service. The active army is levied from males of the age of twenty, and the term of service consists of three years in the army and four in the navy. The reserve is composed of those who have quitted the active army, and the term of service is four years and four months in the army and three years in the navy. The total active army consists of 167,929 officers and men, and the grand total is 632,007. The Japanese Navy has its Ministry and the Department of Naval Command in Tokio. The navy has undergone remarkable development within the last few years, and during the war with China the squadron was handled with considerable skill and with very decisive effect. An extensive shipbuilding programme has been laid down which provides for the building of many battleships and cruisers and about 100 torpedo craft.

According to the last official report (1898) taxed land owned by private persons and local corporations amounted to about 33,545,710 acres, of which 12,080,907 were under cultivation. The principal agricultural products are rice, wheat, barley, rye, tea, sugar, and silk. Silk, cotton, and other textiles are manufactured extensively, though trade conditions have not been of the best during the last two or three years. The camphor industry of Formosa is now a Government monopoly, and is being carried on by a British corporation under contract with the Government. The foreign commerce is carried on through the open ports of Yokohoma, Kobe, Osaka, Nagasaki, Hakodate, Niigata, and twenty special export ports. In 1901 the imports amounted to $127,396,689, and the exports were $124,208,923.

In 1900 the Ministry of Marquis Yamagata was succeeded by that of Marquis Ito. One of the first acts of this Ministry was to propose a financial scheme which aroused much opposition in the House of Peers. The proposition was for an increase of taxes on sugar, spirits, beer, tobacco, etc., to meet the expenditures caused by the Chinese troubles. The entire Ito Ministry resigned on May 2, 1901, and a new Ministry was set up by Viscount Katsura, made up almost entirely of Peers who belonged to neither of the political parties, but included two of the Ito Ministry. This Ministry was constituted as follows: Minister of Foreign Affairs, Jutaro Komura; Minister of War, General Kodama; Minister of the Navy, Admiral Yamamoto; Minister of Agriculture and Commerce, Tosuke Hirata; Minister of Interior, Tadakatsu Utsumi; Minister of Finance, Arasuke Sone; Minister of Education, Daikoru Kikuchi; Minister of Justice, Keigo Kiyoura; Minister of Communications, Akimasa Yoshikawa.

February 11, 1902, official announcement was made of an alliance between Great Britain and Japan. The preamble to the treaty stated that the Governments of the two countries, "actuated solely by a desire to maintain the status quo and general peace in the extreme East, and being, moreover, especially interested in maintaining the independence and territorial integrity of China and Korea, and in securing equal opportunities in those countries for the commerce and industry of all nations," agreed to take such measures as might be indispensable in case the interests of the contracting parties be threatened by aggressive action of any other Power or by disturbances arising within either China or Japan; that in case one party became involved in war with another Power threatening interests in the East, the other would remain neutral; that if other Powers should join the aggressor in hostilities against one of the contracting parties, the other should come to its assistance. It was further agreed that whenever, in the opinion of Great Britain or Japan, the above-mentioned interests are jeopardized, the two Governments will communicate with one another fully and frankly.

This treaty on the part of the two countries was looked upon with suspicion by the rest of Europe, for it was generally thought that it was directed primarily against Russia, whose operations in Northern China were becoming aggressive. Russia, however, diplomatically declared that the settlement of this treaty stilled all her fears regarding Japan's intentions toward Korea, and while not a party to it, had acquiesced to the agreement.

Japan's rapid advance into the first rank of civilization almost within two decades, cannot be better characterized than by quoting Marquis Ito to show the attitude the statesmen of the country take toward modernization. He said: "Nothing has been accomplished in comparison with what has to be done in Japan. The mind of the nation has not yet been civilized. The people have not the business instinct. Everything of old Japan must be uprooted." Japanese civilization is being based, not so much upon the introduction of Western civilization as upon the destruction of indigenous civilization.

The American Asiatic Association of Japan, with headquarters at Yokohama, is an organization having for its objects, to foster and safeguard the commercial and other interests of America in Japan, the social union of the members, gathering and distributing information and co-operating with the American Asiatic Association of New York. The officers elected October 24 are: President, N. F. Smith; Vice-President, B. C. Howard; Secretary, G. H. Scidmore; Treasurer, W. L. Merriman; Executive Committee, J. W.. Copmann, E. S. Booth, G. W. Bramhall, F. H. Ziegfeld, D. H. Blake, E. W. Frazer and J. H. Jewett.

Jews and the Zionist Movement.

I. L. BRIL,
of the Jewish World.

The members of the Hebrew race who have settled in the United States of America have become, especially during the last twenty years, an important factor in the development of the country. The population is somewhat over one million. In New York alone there are 584,788 Jews, and they are to be found in nearly every State of the Union. Jewish money assisted Columbus to make his famous expedition, and since that time the Jews have become an integral part of the States, assisting in the development of its commerce, industry and arts. Jews have been statesmen, politicians, soldiers and men of business, and the new arrivals to these shores speedily become acclimatized to the condition of things prevailing here.

The majority of Jews who have settled here come from countries where persecution has been rife, and have taken full advantage of the freedom vouchsafed to them under our liberty-breathing Constitution. Up to 1882 the Hebrew was mainly represented by those coming from Germany, where many had fought for the struggle for freedom in 1848, and had fled from their native country to escape political persecution. The majority, however, have come, since that date, as a result of the Russian persecutions.

These two sections of the Jewish people, German and Russo-Polish, have hitherto kept, and still to some extent, hold aloof from each other. The German Jew was responsible for the extreme reform movement which was, and is, distasteful to the Jew coming from Eastern Europe. The union of forces which is so evident among the Jewish communities in other countries, does not exist in the United States. The teachings of the one do not harmonize with the teachings of the other, and whilst the Russian, Roumanian and Galician Jews will, as time goes on, become impregnated with the free atmosphere of the United States, they still cling to Judaism as taught to them in the old countries. The German Jew, on the other hand, goes the full length of extreme reform. There are districts in this country where Jews hardly remember that they are Jews. And the new settlers from Russia find it hard to work in unison with the older settlers. There is a constant conflict of ideas between these two branches of the Jewish family, but with the constant stream of conservative men and women, the dominion in Jewish affairs is slowly but surely passing into the wisest hands. Zangwill has said that the future of Judaism in this country lies in the reawaking of a spirit of conservatism, and present events seem to tend toward this end. In New York, which is the largest Jewish centre in the world, those who have become alarmed at the laxity displayed by the second generation (thoroughly American), are about to take steps to remedy the existing state of affairs. Even the reformers have evinced some anxiety as to how far the offspring of the older people are interpreting the older teaching.

On the other hand, little respect is shown for strictly orthodox rabbis, who are out of sympathy with the ideas which are bound to be inculcated in a country like the United States. There is now a tendency to combine both schools by creating a conservative element. It has been recognized that a means must be chosen in order to preserve something of the Jewish traditions, at the same time adapting them to conditions prevailing here.

That the strictly orthodox rabbis realize this is shown by the fact of their meeting in convention in New York for the purpose of discussing ways and means which would enable them to put their house in order. They, as well as those holding different views, recognized the necessity that only organization could solve the problem. In no country in the world is there such a lack of combined effort on religious matters as exists among the Jews of the United States. It is too early yet to say whether this Jewish renaissance will be of a permanent character. The step has been a right one, and the next few years will show whether the new leaders have profited by the lessons of the past.

Politically the Jew, especially in New York, has made his influence felt. The large proportion of Jewish voters in a city like New York, has made it imperative for those seeking political honors to pay regard to the wishes and desires of the new citizens. In Eastern Europe the rank and file of the Jewish people have little, or next to no political freedom. Their wishes are disregarded, they are governed and must expect of the governing classes nothing but what they are pleased to give them. Arriving on these shores, they meet conditions which are absolutely different to those they have been accustomed to experience. They suddenly find themselves treated as men whose voice in public affairs must be heard. The great difficulty has been to teach these new arrivals a right conception of their newly acquired duties. They had not been used to this kind of free citizenship, and the many agencies at work, both in New York and in other large Jewish centres, are accomplishing a great deal in inculcating right and proper ideas of citizenship. Too much cannot be expected of the older generation; but the younger generation, who are brought up here, soon see the difference between the country of their parents and this land of freedom, and, naturally, they evince a great interest in public affairs, the majority of them desiring to work only for the welfare of their new country.

Among the forces for good are the great fraternal orders and many similar beneficial societies which exist in every Jewish community. The Independent Order Bnai Brith, the most important, not only cares

Digitized by Google

for its own members, but also aids those Jewish non-members who are in distress. During the Roumanian immigration movement, the Order distributed in about three hundred towns and cities in this country nearly 3,000 Roumanian Jews who had come to America in order to escape the persecution to which they were subjected in their native land. The Order maintains homes for the aged and orphan, and substantially assists the National Jewish Hospital for Consumptives. During the course of the last year the Order took up the question of relieving the congestion on the lower East Side of New York City, and also of interesting the immigrants with a view to their becoming good citizens. The other orders have satisfied themselves, mainly, in supporting their members.

Educationally, much progress is to be reported for the year 1902. The sixth Summer Assembly of the Jewish Chautauqua was held in Atlantic City, N. J., in July, when matters relating to the training of the young, and various phases of philanthropic work were discussed. Of no little interest was the opening of the Jewish Theological Seminary, which has for its object the training of Jewish conservative rabbis, ministers and teachers. Owing to the munificence of Messrs. J. H. Schiff, Guggenheimer and the late Leonard Lewisohn, the Seminary began its work fully endowed and installed in a building, near Columbia University, worthy of the work to be accomplished. The principal of the Seminary is Professor Dr. S. Schechter, who was formerly the Reader in Rabbinic in the University of Cambridge, England. This institution was originally founded by the late Rev. Dr. Fabbato Morais as a protest, as it were, against the Hebrew Union College at Cincinnati instituted by the late Dr. Wise, the organizer of the reform movement in the world to

In the labor movement there is very little to chronicle. It is the most difficult matter in the world to organize the Russian, Roumanian and Galician Jews, who have little knowledge of organization and cannot appreciate its value. The unions, however, are making steady progress, and while nothing of a startling character has been accomplished, the work of organization is gradually, but surely, continuing. The only event has been the annual tailors' strike, and this was settled by arbitration.

The fact that the children of immigrants, all the young men and women, speedily become acclimatized has called forth the necessity of addressing them in the English language, and the great Yiddish dailies have thought it wise to have a page printed in the vernacular so as to be better able to influence the younger people, for the great problem has been, and still is, to Americanize the immigrants as speedily as possible, and the principal men among the Jews have considered means whereby the Ghetto can be broken up. They view the congestion in large cities like New York, Philadelphia and Chicago with no little concern. The economic, social and moral conditions of these large centres do not, in every case tend toward good citizenship. Moreover, they retard in a very great measure, acclimatization of those who have only recently arrived here. The independent Order Bnai Brith in New York finds employment for, and assists those who are willing to go to other States in the Union, and the work of dissemination is now being assisted by the Jewish Colonization Association, founded by the late Baron Hirsch, the directors of which have instructed their representatives in this country to help those agencies engaged in this work.

This practically sums up the activity of the Jews during the year 1902. That the Jew in this country has a great future before him cannot be gainsaid. It is only a matter of organization. Dr. Schechter, in a memorable interview, has deprecated the lack of organizing capabilities of those coming from Eastern Europe; but the conditions under which these people have been compelled against their own will to live, must not be forgotten. To-day the tendency is upward, for nearly every one arriving on these shores makes up his mind to strive hard in order to attain the highest possible success. The Jew makes a good citizen, even in those countries where he is persecuted; he has shown that he understands good citizenship, and that only leaders are needed to guide the masses in the right direction.

What the Jews lack here, therefore, is a guiding force. They have been accustomed, abroad, to see two or three men lead and shape a policy for them to follow. Here they find everything different, and they have neither the time nor the means to effect a permanent organization. Moreover, the sudden change from *the* Pale of Settlement and the chronic Ghettos of the Old World to absolute freedom and liberty of conscience in the New World sometimes causes those who undergo these new experiences to jump from one extreme to the other.

It is only a matter of time, however, when things will rectify themselves and the balance is restored. *The* Statue of Liberty attracts more in the hope that they will be able to live better and happier lives on this side of the Atlantic than does the fact that economic conditions are more favorable here than in the places whence they came. The chasm between the old and the new settlers is also being slowly but surely bridged over. There is now a general desire to work in harmony, and the year 1903 may witness even greater activity in everything that will tend toward promoting the welfare of the Jews in the United States of America.

THE ZIONIST MOVEMENT.—Since the dispersion of the Jewish people 1832 years ago, the dream of once more re-settling in Palestine has been a vivid one, and from time to time there have arisen men who desired to lead the Jewish people back to the land of their forefathers. It was not until the year 1882, however, that any definite steps were taken to re-people Palestine with Jews, but the persecutions in Russia and Roumania at last drew the attention of those who could not and would not assimilate, to the Holy Land. Young men and women gave up their academic careers, left behind them flourishing businesses, and set out for the land which had lain barren for centuries, with a view to transforming it into a veritable garden. The history of the colonization movement is full of romance. These people, who had been accustomed to every possible comfort, to a life of ease, went out to work the plow, the scythe, the hoe and the pruning hook. The difficulties were many, and in 1884 Baron Edmond Rothschild, of Paris, decided to assist the colonists by advancing them money and supplying them with all necessary implements. Colony after colony was thus called into existence, and it was thought that the dream of many ages was at last to be realized. The work went slowly on, but administrative ignorance and the fact that the head was far away from the scene of operations, did not cause the colonies to flourish as successfully as they might have otherwise done. There are now in Palestine about thirty colonies in a more or less flourishing condition. In 1896, however, the whole idea underwent a change. Dr. Theodore Herzl, then unknown to the mass of Jews, came forward with a proposal to acquire Palestine by purchase from the Sultan and to establish there those Jews who desired to return. For this purpose he convened, in connection with Dr. Max Nordau, a congress, in August, 1897, at Basle, Switzerland, which was attended by four hundred delegates, coming from every portion of the globe, and, at this time, it was decided to secure "a legally recognized and properly safeguarded home for the Jewish people in Palestine." Since then five similar congresses have been held.

The Jewish Colonial Trust, the financial instrument of the Zionist movement, was called into existence in 1898, and, up to date, nearly $2,500,000 have been subscribed by the adherents of the movement. Dr. Herzl, who naturally became the leader, has conducted negotiations with the Sultan of Turkey, and, although His Majesty has not seen his way to grant the full concessions asked for, he has expressed a sympathy with the movement. The leaders, therefore, express the opinion that it is only a matter of time when they will be able to gain their ends.

The movement has gained a strong foothold in the United States. There are affiliated to the Federation of American Zionists 245 societies, representing 15,000 members. Professor Richard Gotthell, of Columbia University, is the president, and Mr. J. de Haas, who is also editor of the official organ, "The Maccabaean," is the secretary.

The movement has made the most rapid strides in Russia, however, and the Russian Government, for the first time, allowed a public conference to be held in Minsk in September last. In England the English Zionist Federation accounts about ninety subordinate societies, and the headquarters of the Jewish Colonial Trust are in London. Societies have also been formed in Morocco, Siberia, Algeria, Australia, New Zealand and South Africa. An important conference was held in October in Vienna for the purpose of deciding what steps should be taken with a view to considering the proposals of the Sultan.

The movement all over the world has at least 500,000 contributing adherents, and there is evidence that the number is still increasing. The followers of Dr. Herzl are enthusiastic and are prepared to make every sacrifice to attain their object.

The following table was prepared by Mr. Brill, the writer of the articles which precede, and the statistics were collected by him especially for The American Almanac. The figures are the most accurate obtainable, and while those for population are given in round numbers, they are as nearly exact as possible. It

Digitized by Google

will be noticed that the largest number of Jews are found in the States where are the largest commercial centres. The agricultural and mining States show the smallest relative population.

States.	Population.	Synagogues.	Charities.	Newspapers.	Lodges and Beneficial Societies.	States.	Population.	Synagogues.	Charities.	Newspapers.	Lodges and Beneficial Societies.

Kansas.

—

Capital:
TOPEKA.

The present State of Kansas was included in the Louisiana purchase of 1803 and in 1854 was organized as a Territory, Congress leaving the question of slavery to the decision of the inhabitants. A large immigration from Northern and Eastern States took place and as many of these came from free States, there was much opposition on the part of those settlers from Missouri who had moved into the new Territory and brought their slaves with them. The contest between the two parties resulted in rioting and bloodshed and gained for the Territory the name of "Bleeding Kansas." It was not until 1861, when Kansas was made a State and a non-slavery constitution had been adopted, that peace was assured. During the first years of the Civil War the eastern part of the State suffered much from irregular warfare carried on by Confederate raiders from Missouri and Arkansas and the Unionists who opposed them.

Kansas has an area of 82,080 square miles, and in 1901 its population was estimated at 1,477,000.

Agriculture and stock raising are the leading pursuits of the State, though manufacturing and mechanical industries have increased largely in the past few years. The relative importance of the industries are dependent upon the relative value of the agricultural products.

Extensive stock raising makes the manufacture of meat products of chief importance, and Kansas City is the second largest meat packing city in the country. Soap and candles are largely manufactured from what would otherwise be waste products, and the factory manufacture of butter, cheese and condensed milk is also allied to stock raising.

Flour and grist mill products rank second in importance, though in this line the increase has not kept pace with the extension of wheat culture. The wheat crop of Kansas in 1900 equalled about 3.3 per cent of the entire wheat crop of the world. Only about 24 per cent of this was ground within the State, because the small mills were unable to compete with the larger mills in other States and freight rates were high from manufacturing centres.

Gov. W. J. Bailey.

The smelting and refining of zinc has become one of the important industries of the State within a few years, owing to the presence of zinc ores in the same local ity with cheap fuel, the bituminous oil and gas fields of Southern Kansas furnishing an unlimited supply.

The Legislature of 1901 spent much of its time in discussion of the Ballot law and in formulating changes in it. As the law stood, the marking of a cross opposite name of the party did not constitute voting the straight ticket, it being necessary to mark each name on the ticket. The new law made it possible for electors to vote either a straight ticket by marking a single cross, or to vote for individuals irrespective of party if so desired.

The principal effect of the new law, however, was to make a fusion ticket impossible. A political party was enjoined from choosing an appellation consisting of more than two words, one of which must be "party," or from taking an appellation, emblem or part of an appellation belonging to any other political party, and a candidate for office was prohibited from accepting nominations from more than one political party. Any candidate who was nominated by two parties against his will might be voted for, but only by the elector writing this candidate's name on the ballot.

An act much like one passed in Connecticut provided for the appointment of a director of free employment, who should see that in every city of over 2,000 inhabitants there was established and maintained a free employment bureau for bringing together employers and laborers. The State Director was especially ordered to secure from rural districts lists of the number of extra laborers needed during harvest season and to fill this demand as far as possible, and in general to provide employment for any laborer seeking it.

Managers of all mercantile establishments, stores, hotels and restaurants were required to furnish seats for their women employes and to permit the women to use them when not actively employed at their work. An act providing for the safety, comfort and health of employes in mines provided that all abandoned or worked-out parts of operated mines should be blocked off from the operated portions.

An act provided for the appointment of a State Board of Medical Registration and Examination which should issue certificates permitting applicants to practise, provided only that they had been graduated from a medical school of recognized standing, as determined by the Board, or had studied medicine for four years and passed an examination satisfactory to the Board. Graduates of a legally chartered school of osteopathy might be permitted to practise, and the act further specifically permitted Christian Scientists to practise, asserting that "nothing in this act shall be construed as interfering with any religious beliefs in the treatment of diseases, providing that quarantine regulations relating to contagious diseases be not interfered with."

A Commission of five was appointed to supervise the Kansas exhibit at St. Louis in 1903, and $75,000 was appropriated for this purpose. An appropriation of $10,000 was made to be used by June 30, 1903, in paying a bounty of $1 a ton on sugar beets raised within the State.

As a result of the Carrie Nation crusade it was attempted to make the liquor laws of the State more stringent. Several sections were added to the already extensive liquor laws, providing that if appeal were taken from the decision of a court declaring that a saloonkeeper's liquors and paraphernalia were forfeited to the State because he had kept a "common nuisance" contrary to law, the appealing party must file a bond as surety that the appeal would be promptly taken. Leases were to be void when entered into to maintain a nuisance. In all prosecutions it should be considered prima facie evidence against the accused if he should be found to have fitted up a bar and to have there a United States Internal Revenue stamp.

Kansas gave the Republicans an overwhelming majority in the State Legislature at the election in November, gaining a Federal Senator and Congressman for this party. The new ballot law, the fourth in as many elections, caused some trouble among those unable to understand its complications, which resulted in invalidating almost 10 per cent of the votes cast. Neither party saw grounds to charge fraud, the Republican victory being so complete. The Populist vote, without a candidate, turned generally to the Republican nominees. The fight for the Senate became very warm almost immediately after the election results were announced. Senator Harris retires in March and three candidates appeared for the office; Congressman Long, Congressman Curtis and former Governor Stanley. The Legislature meets in January, when the choice will be made. It is expected that Senator Harris will be pushed for appointment as Democratic member of the Isthmian Canal Commission.

Kansas City, Kan., was visited by a severe storm in August and more than 200 dwellings and business houses were damaged. The Masonic Temple and two school buildings were unroofed and the steeple of one Methodist church was blown down. Electric light, telephone and telegraph services were interfered with.

Kentucky.

—

Capital:
FRANKFORT.

The earliest exploration of Kentucky was made by John Finley and several companions from North Carolina in 1767. In 1769 Daniel Boone, Finley and others visited the region, and in 1770 Colonel James Knox made extensive explorations. The fort at Boonesborough was built in 1775, and in the same year Daniel Boone concluded a treaty with the Cherokees by which Kentucky was sold to Colonel Richard Henderson and his colony. In 1776 Kentucky was made a part of Virginia, and in 1783 was formed into one district, and seven years later was made a Territory. It was admitted to the Union June 1, 1792. Its area is 40,400 square miles, and the estimated population in 1901 was 2,179,000.

The manufactures of Kentucky depend largely upon her natural resources and the facilities afforded by the Ohio and Mississippi rivers, which furnish connections with the great river systems of the central valley of the United States, and to numerous railroads. Tobacco, corn and wheat fields, hard wood forests, coal and iron mines and abundant water power offer unusual opportunities for manufacturing.

Gov. J. W. C. Beckham.

Tobacco is the principal product of the State, Louisville being the largest leaf tobacco market in the world. In 1900 the product was valued at $21,922,111, or 14.2 per cent of the value of the total products of the State.

Next in importance are flour and grist mill products, the export trade in these having reached large proportions. In the recently manufacture of distilled liquors Kentucky stands near the head of the list and is first in the manufacture of corn whiskey. There are two extensive coal mines in the State, and large deposits of iron ore are found, but until recently lack of transportation facilities has prevented their extensive development.

Kentucky has long been famous for the breeding of fine horses, and this industry has not declined during the past years.

Nothing has attracted more attention throughout the United States in recent years than did the murder of State Senator William E. Goebel, Democratic contestant for Governor. He was shot January 30, 1900, while standing in front of the Capitol building in Frankfort, and died February 3. Caleb Powers, Republican Secretary of State, James Howard and others were accused of being either murderers or accessories to the murder. On September 26 of the same year Howard was found guilty of having fired the fatal shot and was sentenced to be hanged. Powers was tried, and on August 18 was found guilty of being an accessory to the crime and was sentenced to life imprisonment. Appeals were taken, and on March 27, 1901, new trials were granted both. Powers was reindicted by the Grand Jury, tried again and again sentenced to life imprisonment. James Howard was tried in January, 1902, and was again convicted of murder, his sentence being changed to life imprisonment. Both Powers and Howard asked for new trials, and the petitions are now pending before the Court of Appeals (October, 1902).

Gerry Howard, a brother of James, and accused of being also an accessory before the fact, was acquitted April 23, 1902, making the second acquittal in the case, the other being that of Garnett Ripley, who was tried in April, 1901. Henry Youtsey, another charged with being an accessory, accepted life imprisonment on his first trial.

Ex-Governor W. S. Taylor, Republican, was indicted as an accessory and fled to Indiana. Governor Durbin refused to honor the requisition of Governor Blackburn, of Kentucky, for ex-Governor Taylor and ex-Secretary of State Finley, on the grounds that the conditions in Kentucky were not such as to warrant him in believing that the men would receive a fair trial if returned.

The Democrats elected 10 out of 11 Congressmen in Kentucky, and 4 Judges of the Court of Appeals at the November elections, securing control of the court by 5 to 2. It had formerly stood Republican by 4 to 3.

The change in the complexion of the Court of Appeals tended to have a peculiar effect in the motion to make Judge Field's injunction against the Corbett-McGovern fight perpetual. The arguments were begun before Judge Toney, the attorneys for the athletic club taking the grounds that Judge Field had no jurisdiction. A ruling in favor of the athletic club by Judge Toney puts the burden of the decision on the Court of Appeals, and it having changed in personnel since the former decision was made, would allow those interested in the fight some hope of success.

Another case for the decision of the new Court of Appeals is in regard to the removal of H. C. Ganter as manager of the Mammoth Cave, and the appointment of W. Scott Miller, Jr., of Louisville, to the position. There had been dissatisfaction shown by a majority of trustees at the Ganter management, and Judge Settle, of the Circuit Court, was petitioned to issue a writ of mandamus compelling Mr. Ganter's removal. This Judge Settle refused to do until the death of one of the trustees caused another petition to be presented. Then the Judge reversed his own decision and granted the writ. The Court of Appeals has been called upon to decide which decision of the Judge should be accepted.

A new lease for the cave was given in June to W. Scott Miller, to whom the management of the Mammoth Cave Hotel was given. According to the will of Dr. John Croghan, the original owner of the cave, the hotel and the land on which it is situated must be conducted separately from the cave proper, an agent being appointed for the care of the cave.

Korea.

—

Capital:
SEOUL.

The people of the peninsula of Korea, numbering about 8,000,000, are mainly of Mongolian stock. One often meets with people whose faces are almost English. Women are not much esteemed, but enjoy considerable freedom, and it is only among the upper classes that they are kept in seclusion. They have a strong affection for their children and filial piety is held in the highest estimation. If the father is sick the son must attend him, if he is in prison the son must be close at hand. On the death of the father the eldest son becomes the head of the family. The houses in Korea are of one story only, flimsily built of wood, clay and rice straw, usually covered with thatch and very badly provided with windows. There are no beds and no chairs.

The reigning monarch, Heui Yi, who succeeded to the throne in 1864, is reckoned as the thirtieth in succession since the founding of the present dynasty in 1392. Up to the declaration of war by Japan upon

Digitized by Google

China, in 1894, the monarchy was absolute. The Government was in the hands of a hereditary aristocracy, exclusive and corrupt. Since early times the country has acknowledged the suzerainty of China, but by the treaty of 1895, at the conclusion of the war, China renounced this claim, and under Japanese influences many reforms were instituted. There exists, however, a strong reactionary tendency, and various abuses have been recently revived. The central government consists of ten departments or ministries of State. The local government is administered in 13 provinces, which are subdivided into 339 districts.

The area of the country is about 82,000 square miles and the population is variously estimated at from 8,000,000 to 10,000,000. Aside from the worship of ancestors, which is punctiliously observed, religion holds a low place in the kingdom. Confucianism is held in highest esteem by the upper classes. In 1898 there were about 100 Protestants and 30 Roman Catholic missionaries in the country. There are in the country about 30,000 Catholics and 1,000 Protestants. In 1890 an English church mission was established, with a bishop and 20 other members. Two hospitals are attached to the mission with an English doctor and trained nurses. The American missionaries have also two hospitals in Seoul. In Seoul there is a school for English, with two English teachers and 100 pupils. There are besides schools for teaching French, Chinese, German and Russian, an American mission school and 10 or 11 schools for little boys, where Chinese and Korean are taught. All these schools except the American, which is subsidized, are under the Education Department.

King of Korea.

The estimated revenue for 1901 was $4,539,728, and the expenditures $45,039,341.

The standing army now consists of about 17,000 men trained under European methods. In 1896 a royal guard was formed and armed with Berdan rifles, and periodically a draft of well trained men is transferred from this guard to the standing army. A police force of about 2,000 men has also been formed. Korea is also an agricultural country, but the methods of cultivation are of a backward and primitive type. Rice, beans and ginseng are now exported in large quantities. An American company is working a gold mine at Won-San under a concession granted in 1895. Several other concessions of like nature have been granted to companies of different nationalities. Copper, iron and coal are abundant.

The total value of the trade at the open ports in 1900 was: Imports, $5,506,797; exports, $4,719,934. The actual trade, however, is much greater than this, but no account is taken of that at non-treaty ports, or on the Russian and Chinese frontiers.

Labor: Strikes in 1902.

SAMUEL E. MOFFETT.

The year 1902 was introduced by an event destined to be memorable in the history of labor. On December 16, 1901, a meeting called by the National Civic Federation was held in New York to consider the best means of promoting industrial peace. The Hon. Oscar S. Straus, formerly Minister to Turkey, presided over the conference, which was composed of men famous in the fields of business, labor and thought. After a full and frank discussion, in which a desire to establish fair and harmonious relations between labor and capital was manifested on all sides, a commission of thirty-six was created, to be known as "The Industrial Department of the Civic Federation." This was to be a permanent body, charged with the duty of endeavoring to check labor disputes by timely mediation, if possible, and in the last resort by formal arbitration. It was to be composed equally of representatives of employers, of laborers, and of the public. The members selected were:

On the Part of the Public:
Grover Cleveland, ex-President of the United States, Princeton, N. J.
Cornelius S. Bliss, ex-Secretary of the Interior, New York.
Oscar S. Straus, ex-Minister to Turkey, New York.
Charles Francis Adams, former President of the Union Pacific Railroad, Boston.
Archbishop John Ireland, of the Roman Catholic Church, St. Paul.
Bishop Henry C. Potter, P. E., New York.
Charles W. Eliot, president of Harvard University, Cambridge, Mass.
Franklin MacVeagh, merchant, Chicago.
James H. Eckels, former Comptroller of the Currency, Chicago.
John J. McCook, lawyer, Chicago.
John G. Milburn, lawyer, Buffalo.
Charles J. Bonaparte, lawyer, Baltimore.
(Ex-Officio) Ralph M. Easley, secretary of the National Civic Federation, New York.

On the Part of Employers:
Marcus A. Hanna, coal mines, iron, shipping and street railways, Cleveland, O.
Charles M. Schwab, president of the U. S. Steel Corporation, New York.
S. R. Callaway, president of the American Locomotive Co., New York.
Charles A. Moore, president of the Shaw Electric Crane Co., New York.
John D. Rockefeller, Jr., Standard Oil Co., New York.
Edward P. Ripley, president of the Atchison, Topeka & Santa Fe Railway System, Chicago.

Geo. F. Baer.

John Mitchell.

Samuel Gompers.

John Markle.

PROMINENT FIGURES IN THE GREAT COAL STRIKE.

I. Kruttschnitt, vice-president of the Southern Pacific Company, San Francisco.
H. H. Vreeland, president of the Metropolitan Street Railway Co., and of the National Street Railway Association, New York.
Louis Nixon, proprietor of the Crescent Shipyards, New York.
Marcus M. Marks, president of the National Association of Clothing Manufacturers, New York.
James A. Chambers, president of the American Window Glass Co., Pittsburg.
William H. Pfahler, ex-president of the National Founders' Association, Philadelphia.

On the Part of Wage-Earners:
Samuel Gompers, president of the American Federation of Labor, Washington.
John Mitchell, president of the United Mine Workers of America, Indianapolis.
Frank P. Sargent, grand master of the Brotherhood of Locomotive Firemen, Peoria, Ill.
Theodore J. Shaffer, president of the Amalgamated Association of Iron, Steel and Tin Workers, Pittsburg.
James Duncan, general secretary of the Granite Cutters' National Union, Boston.
Daniel J. Keefe, president of the International Longshoremen's Association, Detroit.
James O'Connell, president of the International Association of Machinists, Washington.
Martin Fox, president of the Iron Molders' Union of North America, Cincinnati.
James M. Lynch, president of the International Typographical Union, Indianapolis.
Edgar E. Clark, grand chief conductor of the Order of Railway Conductors, Cedar Rapids, Iowa.
Henry White, general secretary of the United Garment Workers of America, New York.
W. MacArthur, editor of the Coast Seamen's Journal, San Francisco.

The commission immediately organized, with Marcus A. Hanna as chairman; Samuel Gompers as first vice-chairman; Oscar S. Straus as second vice-chairman; Charles A. Moore as treasurer, and Ralph M. Easley as secretary. The plan and scope of its work were outlined in the following programme:

"This committee shall be known as the Industrial Department of the National Civic Federation.

"The scope and province of this department shall be to do what may seem best to promote industrial peace; to be helpful in establishing rightful relations between employers and workers; by its good offices to endeavor to obviate and prevent strikes and lockouts; to aid in renewing industrial relations where a rupture has occurred.

"That at all times representatives of employers and workers, organized or unorganized, should confer

Digitized by Google

for the adjustment of differences or disputes before an acute stage is reached, and thus avoid or minimize the number of strikes or lockouts.

"That mutual agreements as to conditions under which labor shall be performed should be encouraged and that when agreements are made the terms thereof should be faithfully adhered to, both in letter and spirit, by both parties.

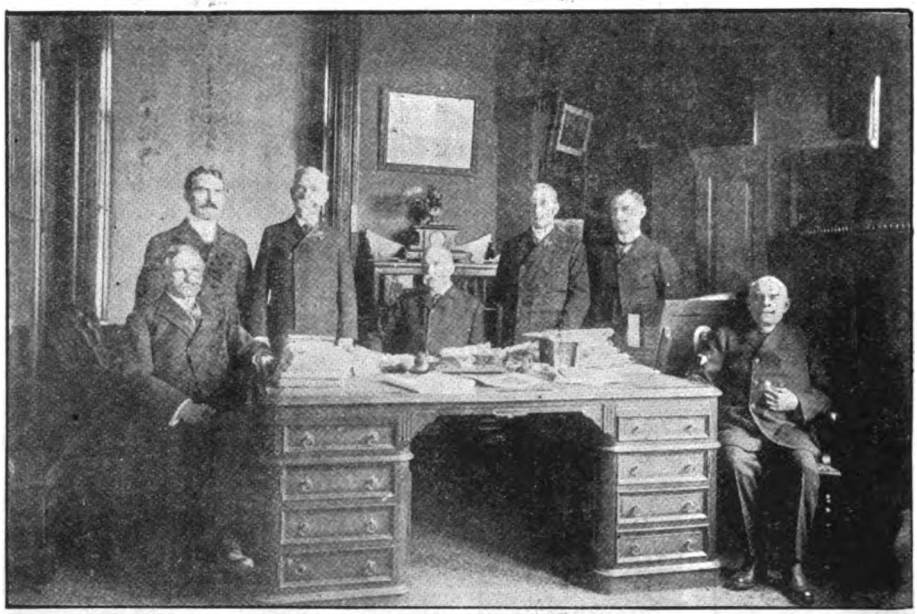
"This department, either as a whole or a sub-committee by it appointed, shall, when requested, act as a forum to adjust and decide upon questions at issue between workers and their employers, provided in its opinion the subject is one of sufficient importance.

"This department will not consider abstract industrial problems.

"This department assumes no powers of arbitration unless such powers be conferred by both parties to a dispute.

"This department shall adopt a set of by-laws for its government."

The first opportunity for the good offices of the new agency came in connection with the strike that had been in progress for two years against the National Cash Register Company, of Dayton, Ohio. A conference was brought about on March 7, 1902, between the officers of the company and the labor leaders, in the presence of Secretary Easley, of the Civic Federation, and after a discussion of two days the strike and its accompanying boycott were called off. In the same month the Federation averted a strike of fifty thousand workmen in thirty paper mills. In all, eleven strikes were prevented or settled by this body before the outbreak of the troubles in the anthracite coal fields. It was confidently hoped that the Federation would be able to maintain peace in this quarter as well, and it did succeed in delaying the rupture, but the



The Coal Arbitration Commission.

determination of the operators to make no concessions to their men left no basis for conciliation, and the matter had to be fought out.

The coal strike was the great industrial struggle of 1902, as the steel strike had been that of 1901. But there was the usual number of minor conflicts, some of them of considerable importance. A strike of union teamsters in Boston in January led to a sympathetic strike of freight handlers in March, involving twenty thousand men. The trouble was settled within a week by the mediation of Governor Crane. In the same month a threatened strike of sixteen thousand textile workers at Lowell was averted by the intervention of a Citizens' Committee.

Paterson was kept in turmoil for nearly three months by a strike of workers in the silk mills. It began with a sudden outbreak of dyers' helpers, on April 22, accompanied by rioting, and spread until it tied up all the mills. The cause originally assigned for the trouble was the insufficiency of the old wages to meet the exactions of the Beef Trust. There was bloody rioting in June, incited by Anarchists, and on July 12, after the operatives had refused to join the dyers' helpers, the strike was declared off.

A riotous strike of teamsters in Chicago, in June, was followed by one of railroad freight handlers in July. The latter contest was settled in ten days in a conference, on terms generally favorable to the railroads.

There have been several particularly fierce trolley strikes, marked by great disorder. The most notable have been those on the lines of the Pawtucket Traction Company, R. I., in June, and on the Hudson Valley System, New York, in September and October.

During almost the whole of the year 1902 the country was disturbed by the preliminaries, the progress and the consequences of the anthracite strike. Before 1900 the conditions of employment in the anthracite field had been regulated by local arrangements in each colliery or group of collieries. In 1899 the United Mine Workers of America, which had already succeeded in unionizing the bituminous field, with annual trade agreements between the employers and the workmen, undertook to organize the anthracite miners. This effort was successful to a considerable extent, and in 1900 a strike was declared for higher wages and other advantages. The operators wished to resist this movement, but they were urged to yield by Senator Hanna, who warned them that a prolonged strike at that time would endanger the election of McKinley. Accordingly they reluctantly made concessions—not, however, by recognizing the union, but by posting up notices of a 10 per cent increase in wages and other benefits in the various collieries. In the Spring of 1901 the president of the United Mine Workers, Mr. John Mitchell, tried to induce the operators to enter a conference with his organization for the purpose of agreeing upon a wage scale for the following year. In this he failed, but the presidents of the various companies uniformaly agreed to continue the existing advance in force until April, 1902. On February 14, 1902, the United Mine Workers invited the operators to a joint conference at Scranton on March 12, to form a wage scale for the year ending March 31, 1903. The presi-

Digitized by Google

dents of the companies promptly declined, giving their reasons at length. In the absence of political excitement they thought the time opportune for testing the strength of the union, and they determined to make no concessions. The miners' convention met at Shamokin in March and demanded an increase in wages and an eight-hour day for men employed on a time basis, the weighing of coal for payments by the amount mined and a uniform rate of wages. They invoked the good offices of the Civic Federation, and resolved to allow only three days' work a week after April 1 utnil the dispute shall be settled.

This was one of the very intentions for which the Industrial Department of the Civic Federation had been created three months before, and as that body contained some of the leading representatives of capital and labor, there seemed every reason to believe that its intervention would be successful. Its chairman, Senator Hanna, promptly took the matter up and brought the miners and operators together. Long discussions followed, but no agreement was reached. Finally, on May 8, Mr. Mitchell sent a long dispatch to each of the corporation presidents, proposing that the questions in dispute be submitted to an arbitration committee of five persons selected by the Industrial Department of the National Civic Federation, the award to be binding for a year. In case that offer proved unacceptable, Mr. Mitchell suggested that Archbishop Ireland, Bishop Potter and one other person to be selected by them should make an investigation into the conditions prevailing in the anthracite field, their recommendations to be accepted by both parties. Both these propositions were curtly rejected, and from this time the operators adopted the policy of having no further dealings with Mr. Mitchell.

On May 14 the United Mine Workers met in convention at Hazleton, and the next day the strike, which had already broken out, was officially declared. The demands of the strikers were:

1. An increase of 20 per cent in the pay of miners working by the ton—about 40 per cent of the whole number.

2. An eight-hour day for per diem employes, being equivalent to a reduction of about 20 per cent in working time without change of wages.

3. Payment by weight to be based on a ton of 2,240 pounds.

The men were intrenched behind a law requiring every miner in the anthracite field to have a certificate of competence, granted after examination, and based on at least two years' experience as a laborer. As there were only about 40,000 holders of such certificates, and practically all of them belonged to the union, it was impossible to operate the mines as long as they held out, and the contest settled down into one of endurance. One hundred and forty-five thousand men were idle. An attempt was made to call out the bituminous miners in a sympathetic strike, but this proposition was rejected in a general convention of the United Mine Workers held at Indianapolis on June 18. At first the public watched the contest without alarm, but as the Summer passed and the stocks of coal on hand became depleted, the popular uneasiness grew. September brought a general scarcity, verging upon famine. By October the country was facing a calamity. The price of anthracite went up to $20 and even $30 per ton, and only small lots could be obtained at those rates. Political pressure was brought to bear upon the operators, but they defiantly refused to yield an inch. At last President Roosevelt resolved to end the intolerable situation. He had already, in June, directed Labor Commissioner Carroll D. Wright to investigate the causes of the dispute, and he finally invited President Mitchell and the representatives of the operators to meet him in conference on October 3. Mr. Mitchell offered on the part of the miners to accept arbitration by a commission selected by the President. The operators rejected this proposition, and their whole attitude appeared so offensive as to make them the objects of intense popular indignation. They insisted that the whole matter was one of protection, and said that if troops enough were furnished they could operate the mines. A considerable force of militia was already on duty, but on October 6 Governor Stone called out the entire National Guard of Pennsylvania, numbering 10,000 men. It soon became evident that miners could not be obtained under any conditions, and the public excitement ran so high that it became evident something would have to be done. Accordingly, Mr. J. Pierpont Morgan intervened to end the conflict. He held an interview with Mr. Root, the Secretary of War, on board his yacht, the Corsair, on October 11th, conferred with President Baer of the Reading the next day, and went to Washington the day after, where he discussed the situation with the President and Secretary Root. He offered on behalf of the operators to accept the arbitration of a commission to be appointed by the President, and to consist of:

1. An army or navy engineer officer.

2. An expert mining engineer, not connected in any way with coal mining properties.

3. One of the Judges of the United States Court of the Eastern District of Pennsylvania.

4. A man of prominence, eminent as a sociologist.

5. A man who by active participation in mining and selling coal was familiar with the physical and commercial features of the business.

The findings of this commission were to be binding for at least three years.

This proposition was accepted with the understanding that the President would exercise a large discretion in the selection of commissioners, and a convention of the United Mine Workers at Wilkesbarre on October 20 declared the strike off. Mining was resumed on October 23. As members of the commission the President appointed U. S. Court Judge George Gray, Carroll D. Wright, Thomas H. Watkins, General John M. Wilson, E. W. Parker, E. E. Clark and Rt. Rev. John L. Spalding.

Following are the latest statistics available as relates to strikes. The Commissioner of Labor is at work on supplementary statements, which will be issued as soon as prepared, but in the meantime no further information can be obtained. During the twenty years included in this report New York had the largest number of strikes, as well as the largest number of establishments affected, the number of strikes being 6,460, and the number of establishments concerned 37,845. The greatest number of employes thrown out of work by strikes was found in Pennsylvania, which shows 1,666,043 for the twenty-year period. Of the lockouts which occurred 21.49 per cent were in New York; 11.64 per cent in Pennsylvania; 9.65 per cent in Massachusetts; 9.45 per cent in Illinois, and 7.46 per cent in Ohio. During the twenty-year period ending December 31, 1900, the majority of all establishments affected by strikes and lockouts were located in Illinois, Massachusetts, New York, Ohio and Pennsylvania.

Labor Unions and the Union Label.

JOHN N. BOGART,
Labor Editor of the
New York
Evening Journal.

The history of trades-unionism in the United States probably begins with the Declaration of Independence. While this document was not intended to liberate any bondsmen, save from the control of Great Britain, it did have that effect by simple force of circumstances. Men "deserted" their masters to enter the Continental Army, and there they came in contact with people occupying a different social plane, and with the ides of equality strong in their minds. The progress of the war brought about a kneading together of the elements forming the army, and at its close the former bondman found himself in a position to select and engage in work that best suited him. He had begun, too, to understand just how important organization was for the success of society.

The conspiracy laws remained, however, and, as in the days of Queen Elizabeth, it was still a crime for workingmen to combine with a view of bringing employers to terms, and many harsh prosecutions were instituted and maintained on this ground. Property qualifications excluded the workingman from suffrage in several States, and so he had no voice in the laws under which he lived. The property qualifications were gradually repealed and the workingman then became recognized as a political factor. The rivalry of political parties for his favor led to the effacement of the statutes which interfered with his right to organize for an increase in wages and the general improvement of his conditions. Labor unions began to be formed in all parts of the country, especially in the great industrial centres, and were patterned after the trades-unions of England, which probably had their birth in the merchant guilds of London.

Demands upon employers for improvement in conditions and wages, and strikes, prudent or imprudent, which followed when the demands were refused, brought to public notice the fact that the laborer had become strong enough to be heard. But either from the imprudence of the leaders, the inexperience of men in handling a new weapon, or the general ignorance of the public as to what the laborer wished and was fighting for, labor unionism did not meet with favor at first. Even those who agreed with the principles it represented were chary about openly expressing their views. In some places and by some classes unionism, arson and anarchy were, only a few years ago, considered to be closely allied. Being even now but a growing youth and hardly conscious of its full responsibility, trades-unionism to-day has not received the regard due it.

Still its growth has been large in the last few years. There are about 1,500,000 members of the American Federation of Labor, and nearly as many more members of unaffiliated labor bodies in the United States. It is strong enough to control elections, to regulate wages, to support for four months a hundred thousand people out of employment.

Organization of labor has undoubtedly had an effect in maintaining wages at a figure sufficient for comfortable living. The workman outside of a labor organization is entirely at the mercy of a bad employer, and there is sufficient evidence easily obtained to show that the man within the union is independent of employers' desire for cheap labor. The employer is probably justified in wishing to have his work done as cheaply as possible, other things being considered, but the workman is equally justified in wishing to receive as much as possible for his labor. The object of the trades-union is to bring these two desires into equilibrium, to give to the employer the best work at the best wages for the employe.

What has probably been the greatest result of the trades-union idea is the passage of laws looking to the welfare of the workingman. There is scarcely a State in the United States that has not statutes providing for the hours of labor, the sanitary conditions of workshops, the liability of employers, the age limit for the employment of children. Politicians have recognized the powerful influence organized labor can exercise and have acted accordingly, in spite of capital and the threats of capital. The public—the part of the public not affiliated with labor bodies—is beginning to understand that better conditions for workmen mean better communities, more schools and more intelligence. They find that with the incentive of a fair wage the workman can make better products, and by having more money, spends more for his own products and those of his fellow-workmen.

While the actual success of the labor unions depends upon the rank and file, still the responsibility for the success depends upon the leaders. The labor leader of to-day must be a giant, must be capable of accepting the greatest responsibility, of fighting against the shrewdest, richest and most influential men in the world. He has to employ his skill, not against individual employers, but against corporations and combinations of men able to employ the craftiest lawyers and managers that can be found. He has behind him thousands of men factious and obstinate, an army recruited from all classes of intellect, and it is his duty to make these men of one mind for their general betterment. He dare not make a mistake or speak once without thinking, for every word and every act of his are watched, not only by those he leads, but by those who oppose him.

Herbert N. Casson, in an article on "Up-to-date Trade-Unionism," says: "The leadership of a trade-union depends upon the intelligence and stamina of the rank and file. Ignorant men will always choose ignorant leaders. No clever, efficient man will for long allow himself to be ground between two millstones—the power of capitalists and the ignorance of the workers he represents."

The organization, as it exists in America, consists of local unions in cities and towns; Central Labor Unions in the cities, which act as governing bodies for the local unions, and some national organization. The American Federation of labor is probably the best known, and probably the largest. Recently unions in the West formed a body known as the American Labor Union, which, while not entirely antagonistic to the American Federation, has no affiliation with that body. This American Labor Union seems to have entered rather strongly into the field of politics, working in conjunction with the Socialist Party, and in this way differs greatly from the American Federation.

The strongest weapon of trades-unionism in the United States is the union label. It wins more for the cause than strikes or boycotts, for it is known everywhere as a guarantee of good and honest workmanship. It is an evidence of good feeling between workman and employer. Wherever it is found it is the boast of organized labor that with it will be found the best possible working conditions and the best possible workmanship. The writer of an essay which won a prize offered by the Social Reform Club of New York, sums up the benefits derived from the union label, as follows:

It supersedes the strike, the lockout and the destructive boycott; it is an outward manifestation of harmony between employer and workman, binding both parties to maintain their friendly relations and the continued approval and patronage of a discriminating public. It condemns child labor and humanizes factory life. It minimizes convict competition with free and honest labor. It wipes out the tenement and sweat shop systems of production. It has ferreted out, exposed and cleansed the unwholesome cellar bakery. It shortens the work day and gives the toiler time to read, think and cultivate the social side of life. It guarantees a living wage and rational conditions of employment. It warns all to shun the bargain counter, which makes the 'cheap' thing dear when woven with the virtue, sweat and blood of womankind. It stands for quality and honest workmanship. It is not a weapon for industrial war, but an olive branch of peace held out to bind the brotherhood of man."

In connection with the union label a word should be said about a movement organized by the compliment of the producer, the consumer. It is an organization of women, known as the Consumers' League, which agrees to purchase no goods unless made in "fair" and cleanly shops. Committees of its members in various cities visit the shops which produce those things which women buy, and personally inspect the conditions of the workmen. A white label is used, and in the parts of the United States where the league is active, there are few manufacturers who are not anxious for the privilege of placing this white label on their products.

Life-Saving Service of the United States.

SUMNER I. KIMBALL,
General Superintendent of the Service.

The sea and lake coasts of the United States, exclusive of the coast of Alaska, have an extent of more than 10,000 miles. There are to-day upon these coasts two hundred and seventy-two life-saving stations, one hundred and eighty-seven of which are on the shores of the Atlantic, eight on the shores of the Gulf of Mexico, sixteen on the shores of the Pacific and sixty on the shores of the great lakes. There is, besides, a station at the falls of the Ohio River, at Louisville, Ky. These stations are located at selected points of danger to shipping, and vary somewhat in character, according to their environment and the nature of the service demanded of them. On some portions of the coast they are placed only at long intervals, while upon others they form chains of contiguous posts within communicating distance of each other. Since the establishment is chiefly related to commerce and the collection of the revenue, it is attached to the Treasury Department, which discharges all executive functions of that character. It has, indeed, from its earliest inception been formed and fostered by that department. The present system was established in 1871 upon the New Jersey and Long Island coasts by a code of regulations under the authority of somewhat scattered and fragmentary legislation. Acts of Congress passed since that time have extended it to embrace the entire ocean and lake coasts, which are divided into thirteen districts, limited in general by prominent natural or political boundaries.

The law provides that the stations on the Atlantic and Gulf coasts shall be opened and manned for active service from the 1st day of August in each year until the 1st day of the succeeding June, and those on the lake coasts from the opening to the close of navigation, usually from about the 15th of April to about the 15th of December. On the Pacific coast the period is left discretionary with the General Superintendent. The time during which the stations are manned is designated the "active season." The stations on the Pacific coast are kept open the year round, experience having shown that disasters in their neighborhood occur more frequently from local causes than from stress of weather, and are about as liable to happen at one season as at another. For similar reasons a crew is kept continuously at the Louisville station.

While this system may appear to be an expensive and elaborate one, it must be remembered that, putting aside entirely the consideration of the value of human life, which is beyond computation, it saves many times its cost in property alone, and that it fulfills the functions usually allotted to several different agencies. It rescues the shipwrecked by both the principal methods which human ingenuity has devised for that purpose, and which in some countries are practised separately by two distinct organizations; it furnishes them the subsequent succor which elsewhere would be afforded by shipwrecked mariners' societies; it guards the lives of persons in peril of drowning by falling into the water from piers and wharves in the harbors of populous cities, an office usually performed by humane societies; it nightly patrols the dangerous coasts for the early discovery of wrecks and the hastening of relief, thus increasing the chances of rescue and shortening by hours intense physical suffering and the terrible agony of suspense; it places over peculiarly dangerous points upon the rivers and lakes a sentry prepared to send instant relief to those who incautiously or recklessly incur the hazard of capsizing in boats; it conducts to places of safety those imperilled in their homes by the torrents of flood, and conveys food to those imprisoned in their houses by inundation and threatened with famine; it annually saves, unaided, hundreds of stranded vessels with their cargoes from total or partial destruction, and assists in saving scores of others; it protects wrecked property, after landing, from the ravage of the elements and the rapine of plunderers; it extricates vessels unwarily caught in perilous positions; it averts numerous disasters by its flashing signals of warning to vessels standing into danger; it assists the customs service in collecting the revenues of the Government; it pickets the coast with a guard, which prevents smuggling, and, in time of war, surprise by hostile forces.

The following table contains the statistics of the service for the fiscal year ending June 30, 1902:

	Year ending June 30, 1902.	Since introduction of life-saving service system, in 1871, to June 30, 1902.
Total number of disasters	746	13,397
Value of property involved	$14,567,130	$201,300,529
Value of property saved	$12,292,795	$158,370,977
Value of property lost	$2,274,335	$42,929,552
Number of persons involved	4,220	98,012
Number of persons lost	25	1,004
Shipwrecked persons succored at stations	712	16,661
Number of days' succor afforded	1,272	40,592
Number of vessels totally lost	51	.....
Number of life savers lost	7	.....

	Year ending June 30, 1902.
Disasters to sailboats, rowboats, etc.	361
Total value of sailboats, rowboats, etc.	$174,121
Value of sailboats, rowboats, etc., saved	$167,576
Value of sailboats, rowboats, etc., lost	$6,545
Number persons involved	796
Number persons saved	790
Number persons lost	6
Net cost of maintaining the service for the fiscal year ending June 30, 1902	$1,654,392.96

Life-Saving Volunteer Work.

J. WESLEY JONES,
President of the U. S. Volunteer Life-Saving Corps.

The United States Volunteer Life-Saving Corps was incorporated in 1890 for the purpose of organizing the yachtsmen sailing for pleasure, the boatmen and fishermen working along the shores, and the young men and women passing their Summer vacations at the pleasure resorts along the coast and on our inland waters into life-saving crews by teaching them not only to become expert swimmers, but to know how to rescue the drowning and how to restore them to life. Its success in this work has been remarkable. Devoting its energies especially to the State of New York for several years, it has established 800 life-saving stations, with a membership of over 7,000 persons. It has distributed over $1,500 worth of life-saving buoys, consisting of tested steel and alluminum buoys, capable of supporting four persons in still water, and cork air-chambered rings good for three persons in any surf. In addition there are wooden balls for carrying life lines to persons who may have broken through the ice; life ladders for piers on the rivers and lakes, and many lifeboats at dangerous points, ranging

Digitized by Google

from the flat bottomed dories to costly air-chambered, unsinkable life boats that will outlive and outride any surf.

It has furnished, also, medicine chests containing the remedies that a layman can be trusted to use, and has distributed thousands of its rescue and resuscitation cards annually. It has a corps of inspectors and organizers who visit its stations to instruct its members in its rules and drills, and in the art of rescue and resuscitation. They also examine all life-saving supplies, and have all necessary repairs made.

The primary object of these crews is to save life, and, secondly, to educate the youth of both sexes to become expert swimmers that they may protect their own lives and be able and ever ready to plunge into the waters to save a drowning person.

So great has been the achievements of this association that its fame and influence have extended to other States and enlisted the sympathies of some of their noblest and most humane citizens. The States of New Jersey, Massachusetts, Rhode Island, Connecticut and Pennsylvania have well organized departments, and Maryland, Ohio, Michigan and Illinois are fast developing the life-saving corps work along their waterways.

It is certainly an astonishing fact that in the year 1902 not a single life has been lost in the vicinity of any of the United States Volunteer Life-Saving Stations established in any State, while its members have rescued, to Septembr 1, in New York State, 649 lives; New Jersey, 242 lives; Pennsylvania, 162 lives; Connecticut, 54 lives; Rhode Island, 36 lives, and Massachusetts, 51 lives; making a total of 1,225 lives. The other States have not yet reported.

Every year, along the Atlantic and Pacific coasts and the shores of the Great Lakes there are numerous accidents to boats, generally to pleasure craft, and many careless swimmers get into dangerous places. It is in cases like these that the work of the volunteer life savers is generally done, for the members of the corps are to be found at nearly every shore resort, or places where accidents are liable.

Another feature of the work is the saving of persons who may break through the ice while skating. Special instruction is given the members regarding the best means of rescue, and appliances are furnished the stations along the lakes and ponds where large numbers of skaters congregate in Winter.

The growing enlistment of the yacht clubs and sailing and launch parties in the United States Volunteer Life-Saving movement, is vastly extending its usefulness to a wider range upon the waters. The larger number of rescues from capsizes during the present year is a result. On the first Sunday in June alone twenty lives were rescued from capsized boats around the east end and south of Long Island from Whitestone to Sayville.

Not only are owners of yachts and pleasure craft instructed how to save others, but are given such information as might be of use to them in saving themselves in case of a wreck or serious accident. Yacht clubs have shown strong commendation of the work of the corps, and have generally given all the aid possible to the furthering of the work. In some instances special corps have been organized by clubs, and their methods of work are as systematic as those of the regular life saving crews employed by the Government.

The Life-Saving Corps is supported entirely by private contributions. It is designed that each State shall support the volunteers of its own department, and the work will be extended into other States as fast and as far as the means contributed will permit.

The members of the Volunteer Life Saving Corps stand much in the same position as the members of volunteer fire companies, or even of members of the Red Cross Society. They risk their lives without expectation of reward in order to be of benefit to those who need their help, and the large membership of the organization shows that there are hundreds of unselfish men to be found when there is work to do. By acting in conjunction with the regular Life Saving crews of the various stations along the ocean and lake coasts they render most valuable assistance in times of heavy storms, when the regular crews are inadequate for the work.

From the beginning of the organization there has never been lack of volunteers, and men best suited to the work have been among the first to offer their services. The spirit of rivalry brought about by the desire to do the best possible, and the sense of all working for one object, have had much to do in preserving the integrity of the organization and of bringing about successful results. The directors report but few cases of shirking of duty, and even these were due to some circumstances which might excuse an exhibition of apparent cowardice.

Sums of money are often sent to individual members of the corps for heroic action in particular instances, but almost without exception these gifts are turned into the general fund, which, as has been stated, is supported entirely by voluntary contributions. Many of the members, however, wear medals for bravery.

The president and general superintendent, as well as the Board of Directors, give their time without salaries, the only officers who receive remuneration being the travelling organizing inspectors and instructors, not exceeding two in the larger and one in the smaller States.

The great army of United States Volunteer Life-Saving Corps members also give freely all their services, receiving only their supplies, flags, signs and badges of office and membership, which are recognized everywhere as the insignia of a great life-saving guild of sober, industrious, expert swimmers, who are ready at all times to risk their own lives to save other lives on land or sea.

During the past nine years the United States Life-Saving Corps has distributed honor medals for all noble rescues in saving life that have been fully attested. Nine hundred and seven have already been awarded, and it now has an honor medal list of 101 awaiting funds necessary for manufacture and presentation.

The total number of lives saved by the Life-Saving Corps since 1894 is 4,699, including the 1,225 rescued from death during 1902.

The officers are: J. Wesley Jones, president and general superintendent; Com. Thomas Smith, secretary; Mr. Joseph Wentworth White, treasurer; Hon. Henry E. Abell, ex-Police Commissioner of New York; Hon. James R. Howe, ex-Member of Congress; Com. Theodore Krombach, directors. Its national office is at No. 63 Park row, New York City.

THE LIFE-SAVING CORPS IN GREATER NEW YORK.

BROOKLYN DIVISION.—Theo. Krombach, Com. Coney Island to Newtown Creek.

Stations.— Manhattan Beach, Coney Island, Old Iron Pier, Norton's Point, Sheepshead Bay, Plum Island, Coney Island Creek, Bay 27th st., Ulmer Park, Gravesend Bay Yacht Club, Bensonhurst, Bath Beach, West End Hotel, River View Pier, Bay 17th st., Fort Hamilton Pier, 58th, 56th, 53d st., Bay 21st, 20th St. Piers, Gowanus Bay, Erie Basin, Amity, Harrison, Baltic and Bridge sts., Catharine St. Ferry, Wallabout Basin, N. 8th St., Newtown Creek and Gowanus Canal bridges.

MANHATTAN AND THE BRONX.—Charles W. Disbrow, Com. and Sec.

Hudson River Division.—Frank A. Koch, V. Com. from the Battery to Spuyten Duyvil; Eugene A. Reilly, V. Com., Whitehall Ferry to Hell Gate.

Stations.—North River, Battery Park, Barge Office, Governor's Island Pier, Piers 1, 2, 3, 4, 5, 6, 7, 10, 12, Franklin, Grand, Morton, Desbrosses, 49th, 50th, 55th, 61st, 83d, 86th, 192d, 123d, 124th, 149th, 151st and 155th sts.; Cinder Beds and Audubon Park front to Inwood.

Harlem River.—U. S. Canal, 162d st.; Wyanoke Club, 153d, 165th st.; Lone Star Club, 140th, 147th, 149th, 132d sts.; Friendship Club, 125th, 98th, 92d sts.

East River.—E. 87th, E. 84th sts.; Cygnet Club, E. 76th st.; East Side House, E. 65th, E. 55th, E. 51st sts.; Blackwell's Island Ferry, E. 49th st.; Recreation Pier, E. 24th st.; Rivington st., E. 5th st.; Recreation Pier, E. 3d st.; Corlear's Park, Grand st., Jefferson, Market and Dover sts.; Coenties slip.

QUEENS.—Jamaica Bay, Thomas Smith, Com.

Stations.—Carnarsie, Bergen Beach, Ruffle Bar, Barren Island, Rockaway Beach, Broad Channel, Old Mill Creek, Aqueduct, Breakwater, Hammels, Springfield, Arverne, Edgemere, Far Rockaway and Long Beach.

Digitized by Google

Long Island Sound Division.—J. M. Finch, Com. Ravenswood Boat Club; Clinton ave., Astoria, Bowery Bay, Steinway, College Point, North Beach, Seawanhaka Boat Club, Flushing and Sanford Points, Wetzel's Island and Max Zehden's, Flushing Bay, Star Athletic Club.

RICHMOND.—Port Richmond, Elm Park, West Brighton, Quarantine, South Beach, Crede's Hotel, Atlantic and Miller's Hotel, Midland Beach, Cable's Hotel.

There are 182 stations in New York, 48 sub-stations and 468 boats in service. Five hundred and forty-nine lives have been saved from drowning in New York State in 1892, and 102 medals have been awarded for risking life.

The president and officers of the corps will address public schools, or library or other associations on the heroism of the life-saving work, free of charge, wherever desired.

Literature in 1902.

HENRI PENE DU BOIS.

Literature is not here at the height of the plastic arts. The sculptors and painters made last year landscapes, portraits, figures, scenes of interiors which were, in forms and colors, art. The men of letters wrote books which were said to be historical, social, realistic or romantic. They did not write books which were literature. The reason of this inferiority of the writers seems to be that they have not yet learned the lesson that painters and sculptors obey docilely. This lesson is that the object of a work of art is to realize itself. And literature is art or it is nothing.

Mark Twain retained his superiority as a man of letters. The least phrase that came from him had for its aim not humor, nor a philosophical maxim, nor morality, nor popularity, nor wealth of course, but literature. William D. Howells and Henry James wrote admirably, as is their habit. But Howells was not harshly criticised with an idea that to read him is to look out of the window when nothing is happening, and Henry James was not too cruelly charged with obscurity. In the laudable wish to suggest rather than to define, to sketch rather than to polish and clarify, he became almost hermetic. Howells and James have earned the right to expect an effort from their readers. But the mission of literature, like that of art, is to be charming.

The adverse critics, William D. Howells and Henry James, of the books that are full of action wrote well, the authors of the books that are full of action wrote badly. None of the historical novels, the *books* that are full of action—inspired by the success of Paul Leicester Ford's "Janice Meredith," Charles Major's "When Knighthood Was in Flower," and Mary Johnston's "To Have and to Hold"— deserved to be regarded as literature. Their models were not literature and they were followed almost servilely. Only Richard Harding Davis, who had the good fortune to be encouraged by Robert Louis Stevenson, and retains of *this* amiable interest a sort of charm, took pains to write as if he wrote for the angels. This is the only attitude that a man of letters, to be a man of letters, may assume. Others imagine too much that they are writing for irredeemable sinners.

They preach. They rehearse the decalogue and the maxims of the copybooks in tales, in novels, in *poems*, in essays, in everything. It is exasperating, it is a plague. The writers and the publishers say that "it pays." But the object of literature is not to "pay." It is to be literature.

The books that had the largest circulation were, "The Virginian," by Owen Wister; "Mrs. Wiggs of the Cabbage Patch," by Alice Caldwell Hegan; "The Fortunes of Oliver Horn," by F. Hopkinson Smith; "The Mississippi Bubble," by Emerson Hough; "Castle Craneycrow," by George Barr McCutcheon; "Hearts Courageous," by Hallie Erminie Rives; "A Speckled Bird," by Augusta Evans Wilson; "The Vultures," by Henry Seton Merriman; "Dorothy Vernon," by Charles Major; "The Spenders," by Harry Leon Wilson; "The Leopard's Spots," by Thomas Dixon; "The Conqueror," by Gertrude Atherton.

The popular books were historical novels, single character novels, novels expressive of localities, imitations of imitations. They were "Monsieur Beaucaire" and "The Two Vanrovels," by Booth Tarkington; "Dorothy South," by George Cary Eggleston; "Cardigan" and "The Maid-at-Arms," by Robert W. Chambers; "Eben Holden" and "D'ri and I," by Irving Bacheller; F. Marion Crawford's "Cecilia," Edith Wharton's "The Valley of Decision" had more literary merit than they. And every one may be in the humor to be persuaded that the publishers had the manuscripts of works of greater literary value still, which they did not print; for they have a method which is not unreasonable. Their method is that they must print many big books that surely will "pay," to give to themselves the luxury of printing one little book that has originality and may not find buyers at all.

Originality is not immediately profitable, and book publishing is a business, and business is for profit. Paris has an advantage in several printing houses that are martyrs to cult of literature. They suffer proudly for years and years. Out of them comes one day a masterpiece, the "Aphrodite" of Pierre Louys. It makes a fortune. But it was a relative fortune, after all. And Paris has not the business ability of New York. American magazines may be written palely enough to excite the disquietude—about American art of writing—of Walter H. Page, an experienced magazine editor, but they make money.

This is not as valuable as literature, but literature's time was not last year. Newspaper men who were celebrated as newspaper men, wrote novels. There were Alan Dale's "A Girl Who Wrote," James Creelman's "Eagle Blood," Julian Ralph's "The Millionairess," David Graham Phillips's "The Great God Success" and "Her Serene Highness," Joseph Altsheler's "The Captive." They are interesting and valuable books. But why—since they were written by newspaper men—are they not short stories, chronicles and memoirs? Because short stories, chronicles and memoirs have not ordinarily a large circulation.

Digitized by Google

This is the bad reason that a publisher can give. But Froissart was a newspaper man, or the equivalent of the newspaper man of to-day, and his fame endures in the centuries because he wrote chronicles. They are literature. An American newspaper man, a young man, is surely to make modern soon the art of Froissart's chronicles.

In biography and memoirs the year produced Edward Everett Hale's "Memories of a Hundred Years"; "Lowell," by Henry Van Dyke; "Emerson" and "Hawthorne," by George Edward Woodberry; "Franklin," by Owen Wister; "Whittier" and "Longfellow," by Thomas Wentworth Higginson; "Christopher Columbus," by John Boyd Thacher; "My Life in Many States and in Foreign Lands," by George Francis Train; "The Autobiography of a Newspaper Gurl," by Elizabeth L. Banks; "Daniel Webster," by John Bach McMaster; "Recollections of a Player," by James H. Stoddart, and Clara Morris's "Confidences."

Historical works were Woodrow Wilson's "History of the American People," "New France and New England," by John Fiske; "The Romance of the Colorado River," by Frederick S. Dellenbaugh; "A Political History of Slavery," by William Henry Smith; "A History of the Nineteenth Century," by Edwin Emerson, Jr.: "The American Merchant Marine," by Winthrop L. Marvin; "The Struggle from a Continent," edited from the writings of Francis Parkman by Pelham Edgar.

In general literature appeared "Literature and Life," by William Dean Howells; "The Christmas Kalends of Provence," by Thomas A. Janvier; "A History of Criticism," by George Saintsbury; "Shakespeare and Voltaire," by T. R. Lounsbury; "A Fighting Frigate and Other Essays and Addresses," by Henry Cabot Lodge; "Literary Values," by John Burroughs.

In poetry appeared Charles E. Russell's "Such Stuffs as Dreams," philosophical and gravely harmonious; Bliss Carman's "Pipes of Pan," "Up From Georgia," by Frank L. Stanton. These three books had the merit of works made with a cult for art twice ardent and in order to compensate it for the indifference of the multitude. But in the smallness of this number of books of poems the slightness of the year's regard for literature is only too flagrant.

In travels and descriptions appeared Jesse Lynch Williams's "Picturesque New York," "Mountaineering in the Sierra Nevada," by Clarence King; "Two Thousand Miles in an Automobile," by "Chauffeur"; "Fictional Rambles in and Around Boston," by Frances Weston Carruth; "Literary Landmarks of Oxford," by Laurence Hutton.

In art of painting and music appeared John C. Van Dyke's "Old English Masters," with wood engravings by Timothy Cole; George P. Upton's "Musical Pastels," John Ward Stimson's "The Gate Beautiful,"

Mary Johnston.

E. S. Martin.

E. Thompson Seton.

William D. Howells.

Arthur Elson's "Orchestral Instruments and Their Use," "Music and Musicians," by Professor Albert Lavignac, with additions on music in America by H. E. Krehbiel.

Among books of nature were "Birds of the Rockies," by Leander S. Keyser; "American Animals," by Witmer Stone; "Handbook of Birds of the Western United States," by Florence Merriam Bailey; "Forestry" with special reference to the care of American forests, by Filibert Roth.

In science appeared "A Bibliography of the Sanskrit Drama," by Montgomery Schuyler, Jr.; "Astronomy for Everybody," by Professor Simon Newcomb. In politics, sociology and economics appeared Jacob A. Riis's "Battle with the Slum," "Handbooks of American Government," edited by Lawrence B. Evans; "American Politics," by James Albert Woodburn; "The Citizen and the Individual Situation," by Rt. Rev. Henry C. Potter, and the same admirable bishop's "East of To-day and To-morrow."

In theology and religion appeared the Rev. Dr. Newell Dwight Hillis's "Quest of Happiness," and "Faith and Character." There were new editions of Poe, Hawthorne, Bret Harte, new gift books of old American authors, new books for children, new text books for schools and colleges and miscellaneous works among which the Rev. Minot J. Savage's "Spiritualism or Telepathy" and "Title Pages," by Theodore L. de Vinne were specially captivating to New Yorkers.

The list does not pretend to be complete. It omits, doubtless, several important works. But literary editors could not hope to be acquainted with all the new books. They were too numerous. The following table, compiled by the bibliographers, has a permanent interest:

Classes.	1900.		1901.		Classes.	1900.		1901.

The record of last year may not prove to be as voluminous. A reaction against quantity was expressed with much force. But it is still necessary to impress writers with Stephane Mallarme's idea that every civilisation is to express itself for the ages in one book—the Book of the Dead, Iliad, the Bible, the Zend-Avesta. In their formation all the works that had not beauty of form, genius, divine inspiration, died. And one must write always as if one wrote for eternity.

Living Expenses in the United States.

As the average wage of a man in the United States is $490.90, according to the 1900 census, the comparisons of the cost of living which were compiled during 1902 by the Massachusetts Bureau of Statistics of Labor are of more vital interest to every individual in the great laboring class in this country than any which have been published in many years. While the figures which the Massachusetts Bureau has prepared merely cover retail prices in the various towns and cities in that commonwealth, and will vary in some particulars from those quoted in other localities, they will be found to be approximately correct, especially throughout New England and the Eastern and Middle States.

The cost of transportation to the Middle and Western States might tend to increase the cost on a few articles which are produced in the East or imported into Eastern ports only, but the average would be scarcely changed, for other articles can be bought cheaper in the West than in the East or Middle States. The South, however, cannot be classed in this table, for living expenses are generally lower in that section, and the average wage is much less.

The first table covers the average retail prices for 1872, 1881, 1897 and 1902, showing the increase or decrease in the cost of living in 1902, as compared with 1897.

Cost of Living.—The third table presents the result of the careful inquiry into the expenses of 104 normal families (consisting of father, mother and immediate dependent relatives, or members of the family circle), whose income was based upon the labors of the members of the household, and was not increased by taking boarders or lodgers. In making its presentation of the facts obtained, the Bureau has arranged the families in five groups, according to the graded scale of income.

Expense Classification.	Expenditures of Families and Incomes.									
	Under $450.		From $450 to $600.		From $600 to $750.		From $750 to $1,200.		Above $1,200.

Louisiana.

—

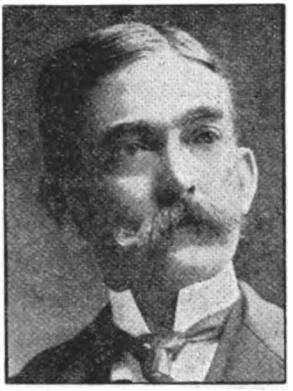
Capital:
BATON ROUGE.

The first permanent settlement in Louisiana was at New Orleans, which was founded in 1718, and became the seat of Colonial government in 1722. The French, after their establishment in Canada, explored the Mississippi to the sea in 1682, but founded no settlement until 1699, when Iberville founded his first colony at Biloxi, in what is now Mississippi, but formerly was included in the Territory of Louisiana. In 1717 the Province of Louisiana was granted, with extensive powers and privileges, to a corporation known as the "Western Company." The prosperity of the Territory was greatly increased under the proprietorship of this company, which continued for fifteen years. In 1762 France ceded the Territory to Spain, who in turn re-ceded it to France in 1800, who sold it to the United States in 1803 for the sum of $15,000,000

Louisiana is another agricultural State in which manufacturing has increased rapidly in recent years. Its manufactures depend closely upon its natural resources, its forests, which cover a greater part of the State, and upon the sugar cane, cotton and rice fields, as well as the excellent transportation facilities afforded by the Mississippi River and the Gulf of Mexico.

The refining of sugar is the most prominent industry in the State, and the obstacle to its increase, that of enforced idleness during a great part of the season, promises to be removed by the increased use of the refuse of the cane for the manufacture of paper.

The facilities of the port of New Orleans have greatly stimulated the manufacture of cotton products, such as cottonseed oil and cake. At tendant upon this has been the increase in the manufacture of jute and burlap bagging for raw cotton, cottonseed and fertilizer.



Gov. W. W. Heard.

Recently waterways for the transportation of coal have been insured by the improvements on Warrior River, Alabama, and the canals from the Mississippi to the Gulf, through Lake Borgne. The discovery of oil in Louisiana and Texas has also provided a cheap fuel, and the manufacturing interests of the State promise to increase rapidly during the next dec ade.

The upper part of Louisiana is covered with forests of yellow pine, and there is also a large area of this timber in the southwestern part of the State. The yield of lumber per acre is among the greatest of the timber area of the South. The cypress forests of the State are practically untouched, and but slight impressions have been made upon the pine areas. The hard wood forests, except that they have been culled of the choicest of white oak, remain in their primal state. These facts are attracting attention from lumber dealers all over the country, and never before in the history of the State has the timber industry been carried on to so great an ex tent as at present.

At the last session of the Legislature a change was made in the general law governing the sale of liquor, making the sale of intoxicants optional in the parishes. The law provides that whenever a police jury orders an election to take the sense of the voters of a parish concerning the sale of liquors, the result of such an election should not only govern the rights of all municipal corporations, such as towns, villages, etc., but that no municipality should have the right to sell intoxicating liquors, should the general election throughout the parish prohibit such sale, until another election shall be ordered by the police jury of the parish and a change in the sentiment of the people of the parish shall take place.

There was no change in the law establishing the qualifications for voting, that being governed entirely by the Constitution of 1898. There was no legislation regarding labor. A law was passed prohibiting marriage between first cousins.

In July, 1902, the fresh water canals, used for irrigating the rice fields, became impregnated with salt water, and the brackish fluid which resulted scalded the rice fields and seriously injured the crop. Salt water fish were found further up the river than was ever known before, and fishermen reported better catches just off the wharves at New Orleans than they had known far out in the Gulf. A beneficial result of the high tides was the sweeping away of the water hyacinth, which had filled many of the fresh water canals, obstructing navigation and impeding the free flow of water after heavy rains.

It is expected that within a short time the city of New Orleans will have a plentiful supply of pure water for domestic purposes. A filtering plant is to be constructed at the cost of about $4,000,000, with a pipe system to extend over nearly 500 miles of streets. The water of the Mississippi will be used, which, after filtering, offers a potable water of exceptional purity.

Much agitation has been going on in the same city recently looking to a more rapid improvement of the levees along the river. Much of those now standing have been declared unsafe, and work of reconstruction is now in progress.

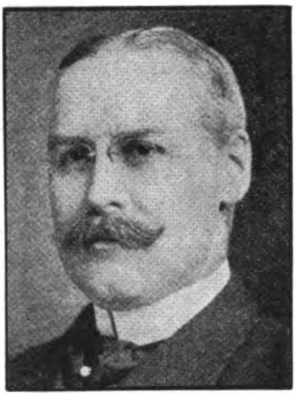
Maine.

Capital:
AUGUSTA.

Maine was first visited in 1602 by Bartholomew Gosnold, and a year later by Martin Pring. The first settlements were made by the French, who in 1604 took possession of the shores of the Kennebec River. In 1607 the Plymouth Colony, having obtained a grant which included this territory, sent out a colony, which existed but a year. A second French colony, sent out in 1613, to establish a missionary settlement near Mount Desert, was dispersed by a force sent out by the Virginia magistrates. In 1614 Captain John Smith established a trade with the Indians along the Kennebec, and in 1622 a permanent settlement was effected by the English at Monhegan. Disputes between England and France occupied much of the State's history until the Indian wars under King Phillip, which lasted from 1675 until 1700, brought about the necessity of protecting the territory more thoroughly by placing it under the government of Massachusetts. The final separation between Maine and Massachusetts took place March 15, 1820, when the former was admitted to the Union as a State.

Maine has an area of 33,040 square miles, and in 1901 its estimated population was 698,000. There has been a marked growth in the mechanical industries in Maine during the past decade, and especially within the last few years has the single industry of paper making made rapid strides. The chief industry of the State is the manufacture of cotton goods, due chiefly to excellent water power and transportation facilities. In this industry there has been a decline, however, during the past three or four years, due to the increase of cotton mills in the South. In the manufacture of wool products the State still holds a high position.

Due largely to the extensive for ests the lumber industry of the State has been steadily increasing. The entire northern portion of Maine is covered with enormous tracts of white pine, spruce and poplar, and in spite of the inroads made by the timber cutters these forests still appear to have been untouched. Rough timber and shingles form two of the most important products of these forests, while nearly all the wood used in the manufacture of matches comes from this State. Another industry, small but interesting, is that of canning small herring under the name of "sardines," which are said to be equal to the genuine.



Gov. John F. Hill.

One of the most important laws passed by the Legislature of 1901 provided that every trust and banking company should set aside yearly, as a guaranty fund, not less than 10 per cent of its net earnings until this fund and the interest thereon amounted to one-fourth of the capital stock. This surplus should then be kept intact. Banking and trust companies were prohibited from a loan to any of their directors, officers, agents or employes until such loan should be approved by the Board of Directors. The collateral inheritance tax was raised from 2½ to 4 per cent.

Punishment for kidnapping was raised from a maximum of five years to a maximum of twenty years' imprisonment. The use of voting machines was authorized, providing they had been first examined and approved by the proper officers. The State Board of Agriculture was abolished, and a single Commissioner of Agriculture was directed to be appointed in its stead.

Several new provisions were made with regard to the State game laws. It was enacted that any hunter who mistook a man for an animal and shot the man should be punished by a fine not exceeding $1,000 or by imprisonment for ten years, or both.

In 1902 a law was suggested to compel every non-resident of Maine visiting "the woods" to procure a license to hunt, and that during "close" seasons no non-resident should be permitted to take a gun of any kind into the woods. It was thought that such laws would have the effect of stopping some of the infringement upon the game laws, and the first was aimed chiefly at the "pot hunter," who found ways of killing more than his share of deer in a season.

There has been some talk within the last two years of making a National Park of part of the Maine woods. The whole of the White Mountain region is of highest scenic interest, and its continuance as such for any length of time is almost entirely dependent upon the preservation of the forests. The same is true of the lake region, the "Maine Woods" of the sportsman. If either or both of these sections were made into a National Park reservation the safety of the forests would be assured. Two or three hundred thousand acres of forest land in the lake region and the mountains have been under consideration, and definite steps may soon be taken toward their acquirement.

The Republican State convention was held June 11, 1902, at Portland. Its platform reaffirmed the doctrines of the Republican party; signified the trust of Maine Republicans in protective tariff; favored government aid in the development of the merchant marine; insisted upon strong legislation, both in the State and nation, to protect laboring men, and to carefully scrutinize and regulate monopolies. It demanded the continuance of the statutes of the State favoring temperance and their faithful and impartial enforcement by the officers of the law.

The Democrats of the State were particularly aggressive during the campaign held in the Fall of 1902, not with any hope of securing the election of any offices, but with the desire to make a strong showing for the effect it would have in reducing the Republican majorities and in encouraging Democrats of other States to make a hard fight. The platform adopted by the Democrats denounced trusts and the Administration in general.

Maryland.

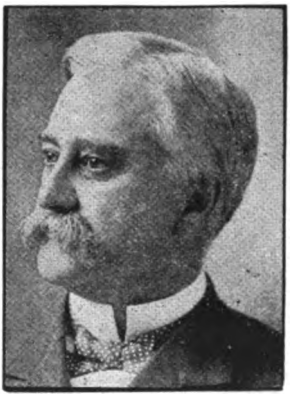
Capital:
ANNAPOLIS.

The first settlement in Maryland was made on Kent Island, Chesapeake Bay, in 1631, by Captain William Clayborne with a party of men from Virginia. The charter under which the first authorized settlement was made was granted Cecilius Calvert, Lord Baltimore, in 1632, and in 1634 he commenced a settlement at St. Mary's, near the mouth of the Potomac. Opposition was met from the Clayborne party, and in 1645 the Calvert Governor was compelled to flee. He returned two years later with a military force and regained his office. In order to conciliate the Clayborne faction, which was made up of Puritans, their settlement was erected into a separate county under the name of Anne Arundel. In 1655 Clayborne once more gained control of the entire colony, but three years later the control was transferred to Calvert, and it was held continuously by the proprietors until the establishment of the Colonial government.

Digitized by Google

Maryland has an area of 12,210 square miles, and in 1901 its estimated population was 1,205,000. The State's most important industry is that of canning and preserving fruits, which has been developed by the excellent agricultural quality of the soil and the shipping facilities afforded by the railroads and seaports. Iron and steel manufacturers occupy second rank, while foundry and machine shop products have third place. In the manufacture of cotton products the State has grown rapidly in recent years, and Baltimore is now the largest producer of cotton duck in the United States.

An extra session of the State Legislature was called in March, 1901, for the purpose of making changes in the ballot laws of the State. It was asserted that under the ballot law as it then stood non-residents imported into the State by campaign managers could not be restrained from voting, and that there was no law preventing the grossly ignorant or undesirable from casting their ballots. The Republicans claimed that the changes in the law were asked simply to throw out the negro Republican vote and to insure the re-election of Arthur Pue Gorman to the United States Senate in 1902.



Gov. John Walter Smith.

The ballot law as finally passed made severe rules to prevent those persons voting who had no bona fide residence in the State, and it formulated a ballot law necessitating a limited amount of proper intelligence on the part of candidates in registration. The law provided that the names of candidates should be arranged in alphabetical order under the designation of the office for which they were nominated, and to the right of each name should be added the insignia of the party which the candidate represented, but no other party emblem or insignia should be placed upon the ballot. So-called straight voting was abolished under the new law, it being declared necessary to make a cross after the name of each candidate voted for. By the new law a voter was compelled to satisfy the election officers that he was blind or otherwise physically disabled before the clerks were allowed to help him. By the old law a ballot could be thrown out only when it was impossible to make a fair guess as to which candidate had been selected by the voter, but under the new law a ballot was to be thrown out generally if it were incorrectly marked in any particular.

The Legislature directed that a new census should be taken of the State of Maryland, to ascertain each inhabitant's length of residence, his color and educational qualifications. A Sewerage Commission for the city of Baltimore was created, with power to adopt and construct a sewerage system for Baltimore.

The elections held in November, 1901, the first under the new ballot law, resulted in a sweeping Democratic victory, the Republicans claiming, however, that their opponents had used fraudulent methods to gain this result. The election was contested, and the case taken to the courts. The re-election of Arthur Pue Gorman to the National Senate was bitterly contested, but he was chosen by a majority of five votes.

One of the most interesting laws acted upon by the Legislature of 1902 was in regard to the "Jim Crow" Car bill. It was offered by Mr. Campbell, chairman of the House Committee on Corporations, and reported favorably by the committee. This bill provided that conductors on railway trains should designate the seats the passengers were to occupy, and that any passenger refusing to accept the seat designated should be guilty of a misdemeanor and punishable by a fine, thus doing away with separate cars for whites and negroes.

Massachusetts.

—

Capital:
BOSTON.

The first settlement in Massachusetts was made on the Elizabeth Islands in 1602 by Bartholomew Gosnold and 32 English colonists, but was soon abandoned. In 1620 about 100 English who had sought religious freedom in Holland, set sail in the Mayflower for the purpose of settling in America. They had made terms with the Virginia Company, which had received important crown privileges on the new continent, and were thus assured of a refuge. They reached Cape Cod November 9 (old style), and after spending some days in exploring, finally made a settlement at Plymouth, where they landed December 11. The colony was increased by the arrival of new settlers and soon grew to be one of the most important along the northern coast. Attacks by the Indians, controversies with the home government, and internal disputes occupied much of its early history. Massachusetts contributed largely in men and wealth in the French and Indian wars, and was the first of the colonies to show direct opposition to British laws, which finally brought on the War of the Revolution.

Massachusetts has an area of 8,315 square miles, and in 1901 its population was estimated to be 2,866,000. It is pre-eminently a manufacturing State, most noted for its cotton mills, though standing second to none in variety of products. The principal advantage which the State possesses is water power, and although changes in the methods of developing power have rendered this less essential than formerly, it is still an important factor. Transportation facilities also have added to the development of the manufactures, and the ease with which fuel and raw material may be obtained, and finished articles exported have been of the greatest benefit to the economical production of manufactured goods.

The energies of the inhabitants of Massachusetts have always been directed largely to industrial channels and a large proportion of the machines which have had so great a part in transforming industrial conditions since the introduction of the factory system were invented in Massachusetts. Worcester, the second city of the commonwealth, is the home of the largest wire mills of the American Steel & Wire Company, now the United States Steel Corporation, and of the largest plant of the United States Envelope Company. The supply of skilled labor which the State can furnish has had much to do with the establishment of large factories in the cities.

The Legislature of 1901 passed a law in the interest of Civil War veterans which provided that ex-soldiers and sailors holding office in the public service of the State, or of any city or town, could not be removed except after full hearings and written orders giving the full reasons for the removal. The Metropolitan Water and Sewerage Board was authorized to borrow in the name of the commonwealth $13,000,000 in addition to the $27,000,000 loan authorized in 1895. The Metropolitan Water Board and the Metropolitan Sewerage Commission were united into one board.

An act for the protection of customers of "bucket shops," enacted that any person who had placed orders to buy or sell securities through a broker, either directly or indirectly, might recover from the broker the amount of the margin placed, providing, however, that no stock had been actually bought or sold by the broker, and that the transaction had been conducted without an actual purchase or sale of securities. City Councils were authorized, provided the act was accepted by the voters in each city, to place on half pay pensions policemen injured in the discharge of their duties. The law has been accepted by nearly every city in the State.

A bill of general interest brought before the Legislature of 1902 provided that no corporation, except railways, should pay its employes in any form of scrip or article of value except legal tender. This bill was aimed directly at the American Steel and Wire Company, which had passed an order making salaries

Digitized by Google

payable in checks. The friends of the measure claimed that the payment of wages in checks acted as a hardship to laborers, who might find difficulty in converting them into cash. The act failed of passage, however, it being shown that the checks were readily accepted at their face value at any place of business in the cities.

An act looking to the comfort of factory employes was passed limiting the time of work for persons under eighteen years of age to ten hours a day, unless the time be lengthened with the object of making shorter the time of work of another day.

Gov. John L. Bates.

The School Committee of the city of Boston was given power to regulate the issuance of licenses for bootblacking or the vending of articles of merchandise by children under fourteen years of age. An act was passed providing for the instruction of the adult blind at their homes, by members of the faculties of the Perkins Institute and the Massachusetts School for the Blind. A sum of $5,000 was appropriated for this purpose. The speed of automobiles on public highways outside of cities was limited to fifteen miles an hour and to ten miles an hour within cities or thickly populated sections of towns. Any one not a member of a labor union, who wilfully wears an insignia of such a union, may be punished by a fine or imprisonment, or both. An act was passed prohibiting the holding in captivity of insectiverous or song birds.

During the week beginning July 27, 1902, the first "Old Home Week" celebration was held in Massachusetts. This week of reunions has been established in other New England States for several years, but it was not until 1902 that the Bay State made any preparation for a formal observance of the season. The Legislature authorized towns to conduct appropriate ceremonies in honor of returning sons and daughters of the commonwealth, and in nearly every town some sort of exercises were held.

In March the freight handlers employed by the railroads and steamship companies in Boston struck, and a few days later a sympathetic strike occurred among the teamsters of the city. The demand of the freight handlers was for a recognition of the union, and the strike of the teamsters was caused by the discharge of seven union teamsters who refused to help unload goods handled by non-union freight handlers. For a week industrial conditions looked bad, and the general movement of merchandise was at a standstill, the only goods received into or sent out of the city being handled by the express companies. An agreement was reached, however, before any extensive damage was done to business interests, each side making concessions.

The State Democratic Convention met September 17, 1902, and nominated Colonel William A. Gaston, an anti-Bryan Democrat, for Governor. The platform adopted attacks the tariff as a shelter of monopolies, demands free raw materials, indorses reciprocity with Cuba, and opposes imperialism in every form. The Republican platform adopted by the State convention of that party indorses the administration, asks for a regulation of trusts and supports President Roosevelt as candidate for President in 1904.

The Republican ticket won generally in Massachusetts State elections, as usual, but the one new Congressman permitted is a Democrat, giving the Bay State 10 Republicans and 4 Democrats in the Fifty-eighth Congress. The surprise of the election was the small vote received in Boston by the Democratic candidate for Governor, Colonel Gaston. His adherents expected him to receive a majority of at least 20,000, but he succeeded in getting only about 12,000 over the Republican candidate. In the Eleventh Congressional district Eugene E. Foss was defeated by John A. Sullivan, a Democrat. Both ran on the same platform, of tariff revision of free coal and iron, and although Mr. Foss was a Republican in a Republican district, and a millionaire, Mr. Sullivan's majority was 1,800. In the Third Congressional district Hon. John R. Thayer, Democrat, was again elected, the third time in six years. This is a strong Republican district in everything but the Congressional vote, and Mr. Thayer's third election surprised every one, including Mr. Thayer. The referendum as to district local option bill for the city of Boston passed for reference at the last session of the Legislature, was defeated by 10,133.

Medicine and Surgery in 1902.

R. STRENSCH LE STRANGE, M. D.

The pronounced ambition of the medical profession of to-day is the realization of the desideratum to have its work recognized as an exact science, and the true workers in all branches of medicine and surgery are striving to advance in that direction. Medical progress rests on progressive science, the basis for progress in science being accurate observation and correct induction. It requires a logical mind which, by love of truth, guided only by original observations, makes correct application of the experience gained and is not misled into pure speculations.

Comparing the last twenty-five with the last two hundred and fifty years in medical science, we are compelled to give credit to that shorter span of time for having advanced the study and practice of medicine so far that we may now speak of "Scientific Medicine," research work having hardly been known in the earlier period. The true spirit of research which is now recognized as the only available factor in scientific progress has, since two hundred and fifty years ago, been represented by a very few men. Albrecht von Haller, who, animated by the discoveries of Vesalius, the founder of human anatomy, gave the first impulse to direct observation in physiology and so became "the Father of modern Physiology," and later, Morgagni, who, at the end of the seventeenth century, published his epoch-making work on "The Seats and Causes of Diseases," investigated by anatomy, thereby at once earning the title of "the Father of Pathology." Those investigators have become men of great mark in the history of medicine, because to them science owes more than to the great mass of theorists and philosophers of many centuries. Their luminous fame is outshone only by the achievements of the father of modern medical science, Rudolf Virchow.

Rudolf Virchow.—The very recent death of our great contemporary has been an event which will forever leave a deep impression upon the memories of the whole civilized world, and will have to be recorded first of all in the medical history of the past year, for Virchow's name occurs at once to the mind thinking of progress in the medical sciences, and is held the highest in the opinion of all medical men. Out of the many tributes dedicated to his memory we must repeat at least one which, in this country, has been expressed by a medical authority such as William H. Welch, of Baltimore: "America mourns with Germany and with all other civilized countries in the loss of this great benefactor of his race, who belongs to all times and to all the world. But more, we rejoice in the rich and abundant fruits of his long and well-rounded life. The fame of Virchow is imperishable, and his name will be held in all ages and by all peoples in grateful affection and honor." (Virchow. A tribute. Philadelphia Medical Journal. Vol. X., No. 11.)

Also, in England, no less a man than Lord Lister did homage to Virchow's unique international position, when he addressed him at a banquet in London, as "our beloved master, the father of Pathology." And cer-

Digitized by Google

tainly was he the father and founder of modern pathology, all progress even of the most recent days resting upon the scientific methods of medical research as followed out by him.

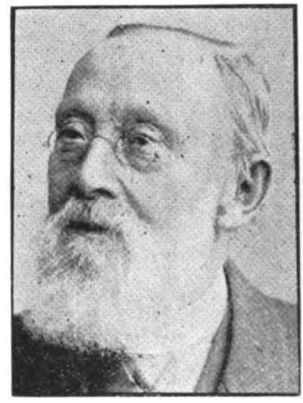
Cellular Pathology.—Virchow promoted pathology to the front rank of the independent sciences by publishing the introduction to his "Cellular Pathology," the basis of which was his statement that "Man is a cell state, in which every cell represents citizenship, the tissues, muscles and bones representing different layers of society. Disease is merely a conflict in this state between the citizens, caused by changes wrought by outside action."

Experimental Pathology.—All the investigators of the last fifty years have followed in the steps of this one genius, and although Pasteur's discoveries and the birth of bacteriology have to be appreciated as independent events in the history of medical progress, their subsequent application was made possible only on the foundation of the facts established by the Cellular Pathology. These well established facts gave the basis to Experimental Pathology, the modern handicraft of the benefactors to humanity (including philanthropists making endowments for medical research), which has become of the greatest practical importance, being the most reliable way of gaining a true knowledge of diseases and of finding the means to their successful treatment.

This is the point at which Medicine and Surgery have arrived at the present moment: "The outcome of the new Experimental Pathology of the last quarter of a century, controlled by clinical observation, applied and tested by clinical experience, has justified us in claiming that at length our work has ceased to be fairly described as groping in the dark, and that in some definite instances Medicine has justified for itself the designation of an exact science." (Sir Thomas Barlow's address at the seventieth annual meeting of the British Medical Association.)

Space does not permit me to recapitulate all the remarkable advances made by way of the new scientific methods of research; how Chemistry has led to the manufacturing of almost an inexhaustible supply of various drugs, new ones being added nearly every week; how Bacteriology made possible the conquering of the dreaded diphtheria, and has become, generally speaking, the originator of serum-therapy; how the sublime power which is in light can now be controlled by human ingenuity and be made serviceable to the noblest art wielded by man, the art of combating and exterminating disease. Great advance has been made in all these branches of medicine also during the past year. Or is it of less import that medical progress has shown how we may successfully protect ourselves and our beloved ones from the ravages of such a fearful enemy of life and health, as consumption? To the enduring work of accurate investigators we owe the now complete knowledge of the theories on malarial fever and have taken a long stride toward a thorough practical knowledge of malta fever and yellow fever It was only some months ago that the observations and studies of the malarial expeditions to all the investigable parts of the world were finished, and their practical application

Dr. Finsen.



Rudolf Virchow.

to prevailing conditions, and for the benefit of humanity has given us complete and reliable means of protection from this blood and nerve destroying scourge. Also we have succeeded during the past year in relieving and, frequently, curing some of those most painful forms of cancer, tumor and skin diseases, while the most frightful diseased conditions directly threatening life, such as acute congestion of the kidneys, or of the larnyx, or perforation of the intestine in consequence of typhoid fever, now yield to the knife of the surgeon, or are cured by means of medicinal preparations very recently perfected.

Materia Medica.—Much work has been done during the past year in bringing these medicinal preparations to perfection and in supplanting known pharmaceutical products by new ones, but when we review the literature of the past year up to date, it is noticeable that less progress has been made in the line of materia medica and internal medications than in any other branch of Medicine. Although it cannot be denied that the manufacturing chemists are constantly bringing out new chemical combinations of old medicinal agents, labelling them as new remedies, mostly with proprietary names, real advances in the knowledge of the physiological action of drugs have been few. The only gain has been, in many instances, that the technique in manufacturing has become almost perfect, the methods in selecting the purest drugs more reliable, the accuracy in dosage unsurpassable. In order to avoid chemical combinations and crude drugs, the medicinal preparations of which used to have irritating and untoward properties or showed unpleasant after-effects, nature is being searched by means of perfected scientific methods with very satisfactory results, and several of the latest pharmaceutical products have come to stay. For example, during the past year, by perfecting the "Dosimetric granules" of the French, there has been introduced a form of administering drugs which insures the promptest action of the true principles and the safest and most reliable dosage, "the alkaloidal granules and tablets."

Organotherapy.—The promises of Organotherapy are still far from being fulfilled, but whatever has been achieved in this line of therapeutics must be highly respected, as it bids fair to open up a great field for future achievements.

When we consider in how many different diseased conditions the extract of the suprarenal gland has proved itself more useful than any other medication employed before—I will only recall the relief of acute inflammations and congested conditions of eye, nose and throat treated with solutions of adrenalin, relief of pain in malignant ulcers as carcinome of the breast, cancer of the esophagus, and tuberculosis of the larnyx, relief of deafness, of internal hemorrhage and of congestion in certain diseased conditions of the heart muscle—furthermore, how the administration of the extract of the thyroid gland is followed by subsidence of the symptoms concomitant with the climacterium, and is of decided effect in the relief of the symptoms of myxoedema, an otherwise incurable malady, we are reasonably justified in expecting undisputed results from the use of other organic extracts as those of the thymus, pituitary and ovarian glands.

Iron Compounds.—The problem of the absorbability of iron compounds has come very near to solu-

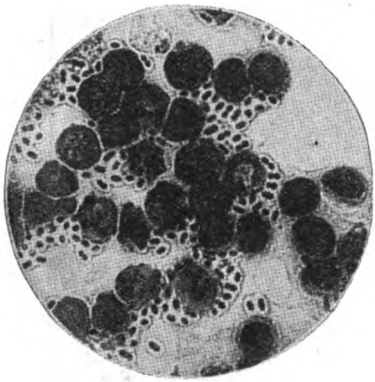
Digitized by Google

tion, and there are at present a line of preparations, as the nucleo-proteid class of compounds, their best representative the nucleinate of iron, besides hematogen, hematose, hemoferrum, hemol, hematol, hemalbumin, ferro-somtose, glycerophosphate of iron, triferrin, which have been employed more largely and tested persistently by authoritative investigators during the recent months, and have given excellent results in suitable cases. This is of especial importance, because all convalescent conditions after most of the acute diseases, and all the chronic diseases, like cancer, tuberculosis, etc., are attended by anemia, i. e., a lack of iron in the blood.

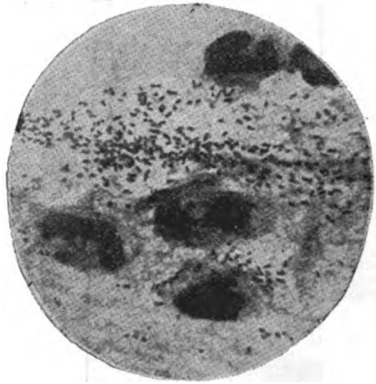
Carbolic Acid.—The use of pure carbolic acid on burns, a drug which itself will cause burns when applied to the unbroken skin, is reported by O. L. Muench to have given better results in three cases, two of which were quite extensive, than any other remedy used formerly, healing taking place not only without leaving scars, but in a remarkably short space of time. The internal use of carbolic acid in dram doses of one to five per cent solutions in glycerine, as first established six years ago by S. H. Dessau, has been continued with admirable success in infectious diseases, especially in influenza, and must be considered as a great advance in therapeutics.

Alcohol.—"Alcohol is now regarded as a positive antidote to carbolic acid, and reports of cases in which it is used with more or less success are constantly being multiplied."—(The Practical Medicine Series of Year Books, Vol. VII., June, 1902.) Dr. F. Pirkner, of Union Hill, N. J., succeeded by his own experiments in corroborating the experiences of the alcohol treatment, and reports a very interesting case of carbolic acid poisoning, drawing his own conclusions, as it were, in American Medicine, May, 1901: "Further experience must show if in such cases, where the pathologic effect of the absorbed acid cannot be (sit venia verbo) 'neutralized' any more, an excess of alcohol might not be a new danger for the patient. I would advise under similar conditions not to repeat the doses of alcohol if it has no chance to exert its specific action, by lack of a corresponding quantity of chemically unchanged carbolic acid in circulation."

Phototherapy.—The most conspicuous progress in practical therapeutics is represented by the Light treatment, or Phototherapy, which, since Finsen's investigations with actinic light several years ago, received a new stimulus through the discovery of the Roentgen Rays, and, during the past year, commanded the attention of the whole scientific world. While the Roentgen Rays have become of inestimable benefit to surgery, allowing a most accurate diagnosis in cases which otherwise would be extremely difficult to understand, as has been most plainly demonstrated through the indefatigable work of Dr. Carl Beck, of New York, especially for the diseases of the bones and fractures, and thus directing the surgeon's knife in a highly agreeable manner, as it were, accurately to the proper spot of disease; the chemical ultra-violet rays, on the other hand, which belong to the group of the actinic rays as first demonstrated by Finsen, of Copenhagen, have from the first been credited especially with a great healing power. It is true we have seen wonderful cures of malignant growths accomplished by the Roentgen Rays, favorable reports in that direction



Bacillus of Pneumonia.



Bacillus of Influenza.

multiplying in every week's literature. But since it has been proven by the highly interesting experiments of Doctors William S. Gottheil and Milton W. Franklin, both of New York, published in their joint article in the Medical Record of April 19th, that the ultra-violet rays received from the electric arc would not alone penetrate the skin, as had been believed heretofore, but could be forced entirely through the human body, we know that in those actinic rays we have received a tremendously valuable agent, if not one superior to any other known to the medical science, for it simply means that those affected with cancer, tuberculosis, smallpox and the most fearful infectious diseases can be treated without pain and suffering and very likely be cured in many instances.

Hydrotherapy.—Of curative methods which scientifically are founded on physics, those more properly known as physical methods have received their share of attention. In the first place Hydrotherapy has been elevated to a scientific basis, and is being studied thoroughly with a view to explaining theoretically its great usefulness which has remained incontestable as long as history of man goes. Almost every advocate of Hydrotherapy recommends his own methods of application, and while this simple suggestion of nature for many years has been held as a panacea for the cure of every disease, it is now being systematized by the scientific physician and successfully employed in a great many pathological conditions. In the August 9th issue of the Medical News, in a very interesting "Note on the administration of water in disease," G. Frank Lydston protests against the too full use of water, concluding that while the ingestion of large quantities of water in various affections is often of great value, the treatment is sometimes extremely detrimental, the nutritive value of the blood being impaired, weak heart, palpitation, nervous irritability, lassitude and exhaustion on slight exertion being the consequences, digestive disturbances, the formation of edema and anasarca being favored and "Renal water habit" arising.

Electricity.—A most ingenious investigation in the branch of physical science led Dr. C. C. Carroll, of New York, to his discovery of short circuiting a nerve by electricity: "A practical application of the theory of short circuiting a nerve popularly comprehensible would be for the reader to imagine a glass electrode V-shaped to fit under the chin with the ends pressing against the skin just back of the ears. No incision is necessary to form the connection between the electrode and the ganglia. Connection is also made with the patient's hand or feet. The oscillator is then set in motion, the nerve action is short-circuited because the oscillations of the electric current are the same as those of the nerve current, and all sensation is cut off from the brain. Only the sensatory nerves are affected. Voluntary muscular action is left normal.

"As no sensation reaches the brain, no pain is perceptible, which is the one great value of the discovery, as short-circuiting will allow of the performance of surgical operations, particularly on extremities and on external surfaces of the body, without pain to the patient and without the necessity of putting the patient under the influence of an anaesthetic.

"Experiments have assured me that this high oscillation proves effective in the treatment of tuberculosis of the joints. The bacillus tuberculosis in the joints is the same as in the lungs. The bacilli are car-

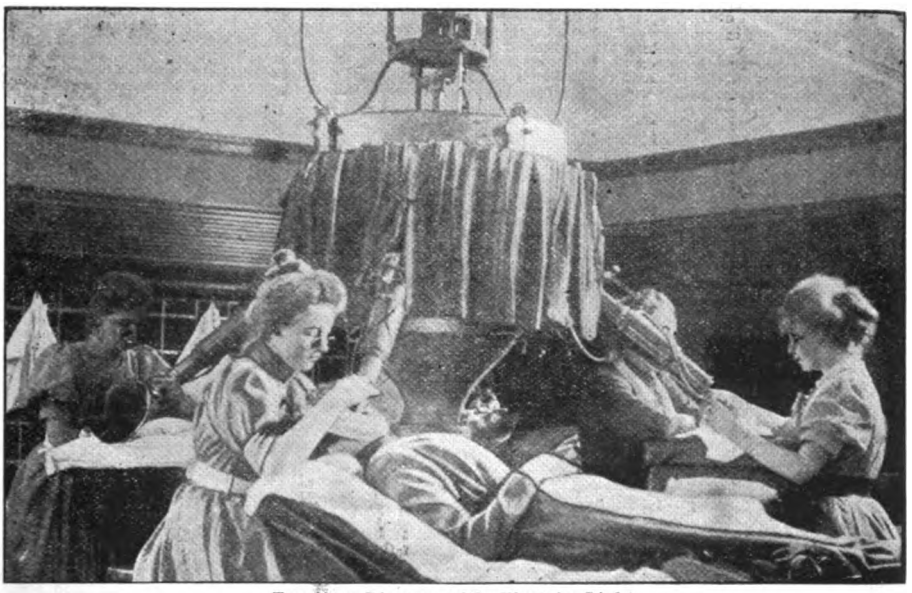
Digitized by Google

ried with the blood and colonize where favorable. High oscillation is also applicable in the treatment of pneumonia, as well as tuberculosis of the lungs, because it arrests congestion and destroys colonies of bacilli. The practical application is made by applying one electrode at the point of congestion and another at a point remote therefrom. The congestion is dissipated by the stimulated circulation."

Dr. G. B. Massey, of Philadelphia, reports nine patients out of fifteen cases of carcinoma and sarcoma as cured by electric sterilization. This new treatment opens a good perspective for those cases not of a desperate nature.

Nerve Vibrations.—Of the mechanical therapeutic measures my own method of "nerve vibrations" has achieved for itself an unquestionable position. By "nerve vibrations" is meant a direct treatment of the nerves by the hand of a skilled practitioner, and no machine can be made to supply the place of the hand with intelligence back of it. As a system complete in itself, without accompaniment of drugs, electricity or massage, its great value has now been recognized and demonstrated. Its direct influence upon the nerve tissue, thus sparing entirely the digestive organs as medium for the action of drugs, is one decided advantage of this treatment.

Dr. H. V. Barclay says in his paper, "The Treatment of Chronic Heart Diseases by Baths and Exercises": "Vibration over the region of the heart, and pressure on the vagus nerve are administered to exert a special influence on the heart itself. Part of this action is, of course, produced by contact with the skin, but the effect is so pronounced that it would be unreasonable to deny that the action is produced by direct influence on the centres of the heart itself, and through them by reflex action on the cardiac and vasomotor centres of the brain." It is reported that especially favorable results are obtained through application of nerve vibrations in diseases of heart and stomach; in neuralgia, sciatica, nervous prostration and locomotor ataxia, the treatment giving new and lasting vitality, combating even approaching death, for as the blood is sent circulating with renewed vigor through the veins, exhausted tissues are replaced by vitalized ones, and the infirmities due to the loss of nerve force are banished. The method has, for instance, proved of the utmost value in tendency to apoplexia, by strengthening the walls of the small blood vessels, regulating the circulation, and preventing thereby any first or repeated stroke of this fearful disease. How powerful this treatment is may be further seen by the fact reported in the New York Tribune, that in three operative cases in Bonn University, Germany, when the patients could not be resuscitated from the influence



Treating Disease with Electric Light.

of ether and chloroform, one of the assistants tried nerve vibrations over the heart for thirty-five minutes. This was done after all efforts had failed, but the patient in each case was actually brought back to life, the heart having resumed its normal action. Dr. F. Pirkner also reports a recent case of chloroform-death in a woman of forty-six years, where nerve vibrations over the heart resuscitated her after she had stopped breathing, and the heart beats could not be heard for ten minutes, and there cannot be the least doubt that we possess in the nerve vibrations a most powerful weapon against the progress of almost all diseases of the nervous system, and a sure cure for most of them, without exhausting or otherwise harmful effects on the patient.

Bacteriology.—In scientific Bacteriology it is the elaboration of details which has brought us more definite knowledge during the past year of the Morphology and Biology of disease-germs, and in connection herewith, Physiology must be credited with an important step forward in having given us more precise information of certain biologic reactions, the result of which must have a great bearing upon the practice of medicine. "Unusual difficulties attend the search for specific agents of infection in the varied bacterial flora of the intestine. It is gratifying to learn," says the editor of American Medicine, in the issue of September 13, 1902, "that these difficulties appear at last to have been overcome in the case of infantile Summer diarrhea, and that, through the work of American investigators, aided by funds from the Rockefeller Institute of Medical Research, the specific infectious agent of this disease has been discovered in the laboratory of the Wilson Sanitarium, in Baltimore, as appears from the brief communication of Messrs. Duval and Bassett in this issue, who have arrived at the conclusion that the Summer diarrheas of infants are caused by intestinal infection with bacillus dysenteriæ Shiga and, therefore, are etiologically identical with the acute bacillary dysentery of adults. It is hardly necessary to emphasize the far-reaching importance of this discovery. Knowledge of the causation of disease is the first step toward the adoption of intelligent measures for prevention and treatment, and it may reasonably be expected that this latest important discovery will bear fruit in these directions."

Epilepsy.—Bra found in seventy out of one hundred cases the microbe which he describes and calls Neurococcus. Rabbits inoculated with it died in clonic convulsions; the number of neurococci increased with an impending seizure and diminished again afterward, until none could be found during the intermissions. (Revue Neurologique, May-June, 1902. "Du parasite trouve dans C Aug., des epileptiques."—Bra.)

Digitized by Google

Rheumatism.—In acute rheumatism the recent researches of Drs. Poynton and Paine seem to have established the existence of a specific diplococcus in the blood, in the valves of the heart, in the pericardial exudation, in the joints, and in the subcutaneous nodules of acute rheumatism. From pure cultures of this organism intravenous inoculations in rabbits have been followed by clinical symptoms and by non-suppurative lesions similar to those with which we are familiar in acute rheumatism. The salicylates are still the remedy which gives the most satisfaction in its treatment.

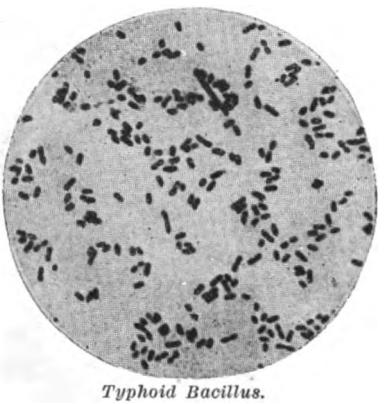
Tetanus.—In dealing with the dread disease known as tetanus, the tetanus anti-toxin has not responded to our expectations in the severe and acute cases; yet, some benefit has been gained in the chronic forms.

Tuberculosis.—The only real advance in our investigations of tuberculosis diseases, within the past year, has been in the definite establishment of the fact that tuberculosis is not a hereditary disease in the sense of the word as formerly accepted, cases of direct hereditary transmission from the parent being exceedingly rare. The question of the relation of bovine tuberculosis to the public health is still being contested and far from being settled. It has been most gratifying to notice the growing interest of philanthropists and public health authorities in the establishment of sanatoria for the consumptive poor, a benefaction for which the public owes gratitude to Dr. S. A. Knopf, of New York, as its strongest advocate.

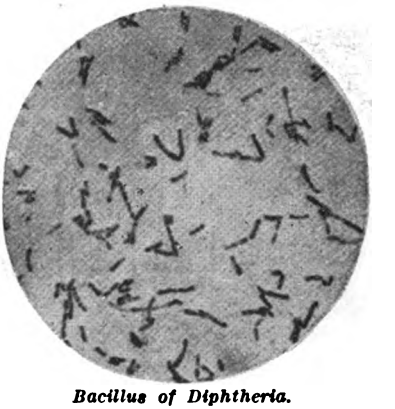
Typhoid Fever.—Dr. A. E. Wright (Lancet, September 14, 1901), has tried preventive inoculation in typhoid fever and advises in every case the injection of a small dose of typhoid anti-toxin, and, provided that this first injection does not cause any constitutional symptoms, to continue immunisation by repeated injections of increased amounts of typhoid vaccine. In "Experimentelle Untersuchungen ueber das Antityphus extract Jez's" (Wiener Klinische Wochenschrift, 1902, No. 3), G. Markl revises the statement of Jez's and arrives at the conclusion that the extracts exhibited from the organs of rabbits, which had before been treated with typhoid bacilli, according to the method demonstrated by Jez and with his original antityphus extract, contain protective agents against the typhoid bacilli which are not antitoxic, but anti-infectious.

Scarlet Fever.—Dr. Moser, of Vienna, announced at the conference of German doctors, recently held in Carlsbad, the discovery of a new serum which has repeatedly proved successful in the treatment of scarlet fever. He makes the statement that in 400 patients, upon whom he used it, the mortality was but 8 per cent, the rate in other hospitals doubling this. (American Medicine, October 4, 1902.)

Lung Surgery.—Putnam, in an article in the Medical News, September 13, 1902, reports a case operated upon successfully of bronchiectatic abcess of the lung and mentions as principal conditions to be differentiated from bronchiectatic abcess: (1) Tubercular cavities. (2) Lung abcess. (3) Gangrene of the lung. (4) Actinomycosis, and (5) Hydatid cysts. In all of these conditions surgical interference has been successful in a number of cases, which would otherwise have been incurable. It is, therefore, of especial interest to



Typhoid Bacillus.



Bacillus of Diphtheria.

take notice of the most advanced opinions on lung surgery as brought out by the chairman's address delivered before the section on surgery and anatomy, at the fifty-third annual meeting of the American Medical Association, from which the following sentences are quoted: "The various operations practised for the relief of tubercular cavities of the lungs are: "(1) Compression of the lung by the injection of nitrogen or other sterile gas into the pleural cavity. (2) Removal of ribs to permit collapse of chest wall and consequent compression of lung. (3) Counter-irritation by cautery. (4) Aspiration and the injection of medicated solutions. (5) Incision and drainage of the cavity (pneumonotomy), and (6) excision of the diseased area (pneumonectomy).

After reviewing the experimental pathology of this subject the orator draws the following conclusions as to human surgery on the lungs:

"(1) With improvement of technic, pneumonotomy will become a practicable operation, even in cavities at the apex. The operation would be especially helpful in the early period of cavity formation, but it is exceedingly difficult at this stage to obtain the consent of the patient, since hygienic and dietetic methods of treatment often result in cure.

"(2) In advanced cases, both tubercular and streptococcic infection are often present; the cavities are usually multiple and the operation cannot cure. It may be employed, however, as a palliative to cough, hemoptysis and sepsis.

"(3) In abcess of the lower lobes, following pneumonia or pleurisy, whether tubercular or not, incision and drainage is to be recommended in any stage.

"(4) Pneumonectomy in our present stage of surgical and diagnostic skill is not advisable in tuberculosis.

"(5) With improved technic, tubercular foci will in the future be eradicated, as we now eradicate tuberculosis in joints and other tissues. An efficient and certain method of producing strong adhesions between the two layers of the pleura at the site of the disease is the most important step in this technic.

"(6) The careful and methodical application of auscultation, percussion and the X-ray for the accurate locating of the diseased focus, is also an important factor in securing a safe operation.

"(7) Pneumothorax is so serious a menace to life that in all operations on the lung, an artificial respiration apparatus, like the Fell O'Dwyer or Matas instrument, should be at hand, together with a full jar of oxygen."—(Journal of American Medical Association, September 20, 1902.)

Kidney Surgery.—Regarding the curative possibilities of kidney diseases we must record the conspicuous progress which the surgical treatment of such diseases has made. J. A. Schmitt, in the Medical Record of September 13, 1902, advocates as surgical treatment of chronic Bright's disease renipuncture or division of the renal capsule proper, capsular nephrotomy. The process is to split the membrane of the kidney and sew it to the muscles of the back. The irritation thus created causes the growth of a new set of

Digitized by Google

blood vessels, and the effect is to imbue the organ with new life. In a few days the swelling disappears, and from that time on the improvement is so rapid that the patient is usually able to leave the hospital in from two to three weeks. The new method is still in the experimental stage, but excellent results have been obtained by its use. Professor Fehleisen, of San Francisco, and Dr. Robert T. Morris, of New York, express the opinion that in certain cases, by dividing the outside covering and relieving the tension, in Bright's disease and stone in the kidney, it is possible to arrest the disease entirely or to relieve all symptoms. The operation is only a trifle more dangerous than that for appendicitis, and the rate of mortality has been very low.

Trepanation.—Rasumowsky in the Archiv fuer Klinische Chirurgie (Vol. LXVII., No. 1, 1902), reports nine cases of trepanation for cortical epilepsy, with four recoveries.

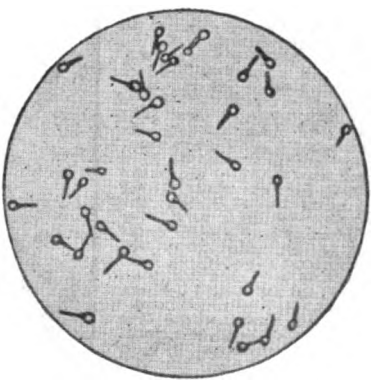
Vertebrae Surgery.—That great patience and stubborn intention may be a more valuable means to achieve the most wonderful result than the knife of the boldest surgeon is warranted by the fact that patients who have, through accident, sustained fractures of the neck not only survive, but recover to such an extent as to find life quite bearable for many years. In cases of fracture of the vertebrae in their anterior part, operative interference for removal of the fragments pressing on the cord is entirely impossible, and no anticipated advance in surgery will make it possible to give the knife access to those deep parts of the neck. In such cases the very old method of extension treatment applied judiciously and perseveringly has proven to give the best prospects for recovery. There are a few cases recorded during the last year, however, where patients who were apparently in a hopeless condition grew better under this treatment and are at present in a fair condition of health.

From practical clinical and pathological observations Eugen Hahn arrives at the following conclusions regarding spinal surgery (in Deutsche Zeitschrift fuer Chirurgie, May, 1902), that, when an arched fracture of the vertebral column occurs, with compression, operation cannot be performed too early. When dislocation and crushing of the spinal cord accompany fracture and compression, all operations are useless. As long as there is any suspicion of contusion, with hemorrhage, an operation is contra-indicated. When there is paralysis with compression and fracture, with narrowing of the lumen of the spinal canal, laminectomy should be attempted to remove the pressure by extirpating the fractured bone. If this fails, then part of the compressing vertebra should be removed. If improvement follows fracture of the body of the vertebra, an operation is not indicated, otherwise operation should be done.

Spinal Cord Surgery.—A most noteworthy example of advance in surgery has been presented to the world in the case of Clara Nichols, who received a bullet wound at the spine. Dr. Francis H. Stewart, of Philadelphia, performed the operation of actually sewing together the severed ends of her spinal cord. He took the chance and he won.

Enterostomy.—In perforation in typhoid fever the outlook for recovery is growing better in propor-

Bacillus of Tuberculosis.



Bacillus of Tetanus.

tion to the number of operations ventured. Dr. George L. Hays, in American Medicine, September 6, 1902, reports his last seven operative cases of perforation occurring in typhoid fever, of which three were successful, the percentage of recoveries in such cases, in which patients always have a very poor chance of recovery, being thirty-one at present. The operation should be done as soon as the symptoms of perforation become apparent. An editorial comment of the Philadelphia Medical Journal, Vol. X., No. 9, 1902, says: "The report in our issue for August 16 of a case of enterostomy, performed in the treatment of typhoid fever with intestinal hemorrhage, has called attention to other recent radical operations in typhoid fever. Dr. Edwin Ricketts, as early as January, 1900, expressed the belief that a surgeon should be associated with the attending physician in every complicated case of typhoid fever."

Dr. Doyle, of Paris, in February, 1902, performed the very remarkable separation of the Hindoo twins successfully. These twins were attached from breast to breast by a flexible bone connection, with visceral attachment below, the connecting membrane containing three large arteries.

Heart Surgery.—The annual address upon surgery of the American Medical Association dealt with suture of the heart. The interest in heart injuries had been revived by the suggestion of Lauder Brunton, of London, that there was a possibility of surgical interference in mitral stenosis. Dr. Nietert in St. Louis applied three sutures to the right ventricle in the case of a knife wound, and the following death of the patient does not dim the brilliancy of the operation. A similar operation was performed by Dr. Forker, of Binghamton, with success in every sense of the word.

Railroad Ambulances.—The Prussian State Railway are introducing an excellent novelty in their ambulance carriages, seventy-seven of which have been ordered and are now in course of preparation. They are to be distributed over the Kingdom, and each will be under the superintendence of a railway medical officer with a special railway servant to have charge of cleaning and repairing the carriage and utensils, and to keep it in readiness to start at any moment should an accident occur on the line. The carriage model chosen is the wide type known as "Corridor carriage." It will be divided into one large and several smaller compartments, the former furnished for lying room for eight wounded and sitting room for four slightly injured persons; the latter to serve as bandaging and operating room. The ward compartment is furnished with eight stretchers on the Prussian Army model, with the requisite girths and with four easy chairs; plenty of blankets being also provided. The bandaging compartment contains an operating table of 1.70 metres by 0.70 metre, two small and two larger wooden seats for the physicians, a washstand, icebox, small gas cooking apparatus and a cupboard containing instruments and bandaging apparatus comprising everything needed for first aid, for the staunching of hemorrhage, etc. There will be no instruments for amputations or other large operations, however, a careful survey having proved that there is no point on the Prussian railways from which a hospital cannot be reached in an hour and a half at the most.—(British Medical Journal, August 9, 1902.)

Mexico.

—

Capital:
CITY OF MEXICO.

Mexico is a republic, occupying the American Continent from the southern boundary of the United States to the northern boundary of Central America. The form of government is broadly similar to that of the United States, the executive resting in a President, elected for four years, and assisted by a Cabinet, while the legislative power is conferred upon a Congress of two houses, a Senate and a House of Representatives.

The President may serve any number of terms. The present executive, General Porpirio Diaz, is in his sixth term, having served five four-year terms previous to his inauguration, December 11, 1900. Under the direction of the President and a council, the administration is carried on by the seven Secretaries of State, in charge of the following portfolios: Secretary of Foreign Affairs, Senor Don Ignacio Mariscal; Secretary of the Interior, Senor General Don Manuel G. Cosio; Secretary of Justice and Public Instruction, Senor Don Leandro Fernandez; Secretary of Finance, Senor Don Jose Ives Limantour; Secretary of War and Navy, Senor General Don Bernardo Reyes; Secretary of Communications and Commerce, Senor General Don Francisco Z. Mena.

The Senate consists of thirty-six members, two from each State, who must be at least thirty years of age. They are elected by the ballot of all respectable males and serve for a term of two years. Representatives must be twenty-five years of age, and are elected for an equal term with the Senators, and in a similar manner. The President is elected by electors popularly chosen in a general election.

There is no state religion in Mexico, and all religious sects are equal before the law. The prevailing religion, however, is the Roman Catholic. No ecclesiastical body can own realty. Since 1863, when all churches were closed and the lands confiscated, many of these buildings have been assigned to serve as hospitals, schools, etc.

Primary education, which is free and compulsory, is carried on mostly at the expense of the States, although the Government makes frequent grants. In 1899 the number of schools supported by the State and Federal Governments was 6,376; by the municipalities 2,989. The cost of these schools was an nually over $6,805,000 (Mex.). The total number of schools was 11,925, with an enrollment of 819,- 550 pupils. There are one naval and one military college.

The largest item in the annual xpenditure has been for the pub- lic debt. This consumed about 46 per cent, 44 per cent representing the expenses of administration. Of the remaining 10 per cent nearly all of it is spent on railroad subventions. In 1903, it is estimated, this ex- penditure will amount to $64,738,- 816 (Mex.). The chief sources of the Mexican revenue are the inter nal taxation, yielding about 45 per cent, and the revenue from cus toms, about 40 per cent. The rev- enue for 1903 is estimated at $64,- 823,600 (Mex.). In 1901 the out- standing gold debt amounted to about $112,398,300 (U. S.), and the silver debt (for 6 per cent currency bonds) to $135,509,271 (Mex.).

Agriculture in Mexico is in a primitive condition. Public lands are continuously sold to the public under the laws of 1863 and 1894, The principal crop is wheat. Great numbers of cattle are raised and shipped to the United States. The minerals found throughout the country make mining a very impor tant industry in Mexico. Nearly all the prominent metals are found and worked. Every producer may have his bullion coined by present ing it at one of the three mints or eight Federal assay offices. The mints receive 4.41 per cent for sil- ver and 4.62 per cent for gold. The total value of imports in 1901 was $65,083,451 (Mex. gold dollars), while the exports amounted to $148,656,338 (Mex. silver dollars).

President Diaz.

The Lower House of the Hun garian Diet on April 29, 1902, rati- fied the Austro-Hungarian commer cial and consular treaty with Mexico, which had lapsed in 1867, when Emperor Maximilian was shot, and had not been renewed. The Austro-Hungarian Minister to Mexico had been appointed in June, 1901.

Definite announcement was made November 11, 1902, that President Diaz had determined to retire from the Presidency of the Republic on the first of January, 1903, and had named as his successor Jose Yves Limantour, his Prime Minister. Diaz has been President since 1877, and is nearly eighty years old, beloved of his people, and his retirement, according to press reports, is due to a desire on his part that the future of the Republic may be assured. His death without provision being made for a strong successor might result in a revolution, and the ascendency of some military man able to gain power through force of arms. The step on the part of the President had been contemplated for some time, and seems to have caused no particular surprise.

Deals have been reported made by American investors and promoters, looking to the establishing of several important syndicates in Mexico. It was said that the American Tobacco Company had been quietly purchasing tobacco and cigarette factories during 1902, with the idea of extending operations into Central America. Another American syndicate is said to have been negotiating for the purchase of a number of electric lighting plants in the northern part of Mexico.

During the period when the volcanoes in Central America and Martinique were most active, Mount Colima, the largest volcano in Mexico, became eruptive and for a time threatened to destroy the town of Colima, situated near its base.

An insurrection on the part of the Yaqui Indians occupied the attention of the army during the early Summer and Spring of 1902, and resulted almost in the extermination of the Indians. The latter claimed that they were peacefully inclined, but were driven to desperation by the Mexicans, who, they said, interfered with their rights to work in peace.

Area and Population.—The area and population, based upon the census of 1900, is as follows:

States and Territories.	Area in Sq. Miles.	Population.	Population. Per. Sq. M.	States and Territories.	Area in Sq. Miles.	Population.	Population. Per. Sq. M.
Gulf States:				Inland States:			
Tamaulipas	32,128	218,948	6.8	Chihuahua	87,802	327,004	3.7

The population of the most important cities is as follows:

City.	Population.	City.	Population.	City.	Population.	City.	Population.
Mexico (Capital)	329,774	Oaxaca	32,437	San Luis Potosi	69,050	Saltillo	26,801
Guadalajara	83,934	Aguascalientes	30,872	Monterey	45,695	Vera Cruz	24,085
Leon	58,426	Durango	26,425	Zacatecas	39,912	Acanceh	22,916
Pachuca	40,487	Tuluca	23,150	Merida	36,935	Zopotlanego	20,270
Guanajuato	39,404	Celaya	21,245	Morelia	33,890		
Queretaro	34,576	Puebla	88,684	Orizaba	31,512		

The Governors of the various States and Territories are:

Aguas Caluntes, C. Sagredo; Lower California, northern territory, A. Sangines; southern territory, C. Sagredo; Campeche, C. G. MacGregor; Chiapas, R. Pimentel; Chihuahua, M. Ahumada; Coahuila, M. Gomez Cardenas; Colima, F. Santa Cruz; Federal District, R. Corral; Durango, J. Santa-Marina; Guanajuato, J. O. Gonsules; Guerrero, A. Mora; Hidalgo, P. L. Rodriguez; Jalisco, L. C. Curiel; Mexico, J. V. Villada; Michoacan, A. Mercado; Morelos, M. Alarcon; Nuevo Leon, P. Benitez; Oaxaca, M. Gonzalez; Puebla, M. P. Martinez; Queretaro, F. Gonzalez Cosio; San Luis Potossi, B. Escontria; Sinabra, F. Canedo; Sonora, L. Torres; Tabasco, A. Bandala; Tamaulipas, P. Arguelles; Tepic, P. Rocha y Portu; Tlaxcala, P. Cahuantzi; Vera Cruz, T. A. Dehasa; Yucatan, F. Canton; Zacatecas, G. Garcia.

Michigan.

—

Capital:
LANSING.

The discovery and early settlement of Michigan are due to the French missionaries and fur traders. The first European settlements within the borders of the State were at Sault Ste. Marie, which was founded by Father Marquet in 1668. Fort Michillimackinac, or Mackinaw, was established three years later, and in 1701 an expedition under Cadillac founded Detroit. From this time until its erection into a Territory of the United States, Michigan made slow progress. In 1763 it came under the dominion of Great Britain, and, with the expulsion of the French, the conspiracy headed by the Indian chief Pontiac, and designed for the extermination of the whites, broke out and involved the settlements in bloodshed. Michigan was first included in the government of the Territory of Ohio, and subsequently formed part of the Territory of Indiana, and was constituted an independent Territory in 1805. In January, 1837, it was admitted to Statehood.

Michigan has an area of 258,915 square miles, and in 1901 its estimated population was 2,457,000. Owing to water and rail facilities the State is well equipped for the development of manufacturing, but is handicapped by the lack of coal supply, the deposits found in the State being of poor quality.

The manufacture of lumber and timber products is the most important industry in the State, though there has been a decline in this industry during recent years, owing to the extravagant and wasteful ex ploitation of the forests. A mission has been recently created to look after the protection of the woods, and public opinion is de veloping in favor of a protective system of forestry.

Governor Aaron T. Bliss.

The manufacture of flour and grist mill products ranks second. These have shown a tendency to centralize at points where shipping facilities are best, and which possess superior water power advantages. The State is also con spicuous as a producer of furniture. Grand Rapids is one of the great furniture markets of the world. Other manufactures of a similar character are those of wagons and carriages and railway cars. Foun dry and machine shop products have increased during the past five years and the manufacture of agricultural implements forms an im portant industry.

The Legislature of 1901 passed several laws of importance to laborers. The then existing laws pro hibiting the employment of women under twenty-one years of age for more than sixty hours a week in manufacturing establishments was extended to apply to women work ing in stores where more than ten persons were employed. The employment of minors between the hours of 6 p. m. and 7 a. m. was forbidden in any manufacturing es tablishment. An act provided that in every city a board should be established for the licensing of plumbers, and to formulate rules for the performance of plumbing and drainage work. An act in the interests of farmers made it unlawful to manufacture or sell an imitation butter, provided that oleomargarine might be sold when not colored to imitate butter.

For the moral protection of de linquent minors, an act provided that no person under sixteen years of age, when under arrest should be confined in a cell with an adult prisoner, or conveyed to or from a prison in the company of adult pris oners, or be present at the trial of an adult.

The act of 1891, directing all candidates for office and chairmen of political organizations to make affidavit of the amount of money expended in campaigns, and to take oath that the money had been used for legal purposes only, was repealed, much to the gratification of politicians. The use of the United States

Digitized by Google

flag for advertising purposes was prohibited. Congress was appealed to under article five of the Constitution, to call a convention to propose an amendment providing for the direct election of United States Senators.

The Democratic State convention met July 31, 1902, adopted a platform which was devoted almost entirely to State issues, the only mention of national issues being an indorsement of the election of United States Senators directly by the people. George H. Durand, a gold Democrat, was nominated for Governor. Mr. Durand was not accepted by the Democratic Central Committee, and declined the nomination. In his place his brother, L. T. Durand, of Saginaw, was chosen.

The Republican State convention was held on June 26. The platform adopted indorsed President Roosevelt and his administration, and especially the conduct of affairs in the Philippines.

Minnesota.

—

Capital:
MINNEAPOLIS.

As early as 1680 Hennepin and La Salle penetrated the wilds of what is now the State of Minnesota, and they were followed by La Hontan and Le Sueur, who established a small trade with the Indians, but attempted no settlements. Early in the nineteenth century the region was thoroughly explored by Pike, Long, Keating and others, and in 1812 the United States assumed authority within the present limits of the State. In 1819 the military post of Fort Snelling was established, and in 1837 lumbering operations were begun along the St. Croix River on a small tract of land obtained from the Indians. On March 3, 1849, Minnesota was made a Territory of the United States, and was admitted to Statehood May 11, 1858.

Minnesota has an area of 83,365 square miles, and the population in 1901 was estimated to be 1,799,000. The development of Minnesota manufactures has been due largely to the immense tracts of white and Norway pine, to the extensive wheat fields and to the State's favorable position for the transportation of products. According to the census of 1900 there has been no marked growth in manufactures in the State. The most important industry is flour and grist mill products, this State leading all others in the value of these products. The rapid development of this industry has been due largely to the introduction of a process whereby the hard outer covering of Spring wheat raised in Minnesota can be separated from the kernel. Minneapolis is the centre of the flour mill industry, the Falls of St. Anthony, on the Mississippi River, being utilized for power.

Samuel R. Van Sant.

The second industry of import ance is lumbering, the quantity of merchantable forest pine in Minnesota being greater than that in any other State. The timber country contains many small lakes and streams, most of them connected with the St. Louis and Cloquet rivers, making transportation easy and cheap. The facilities of St. Paul and Minneapolis for the handling of cattle make slaughtering and meat packing and the kindred industries of butter and cheese making of much importance. Due greatly to the extensive grain fields is the importance of the manfacture of malt liquors.

The Legislature of 1901 passed several laws regarding marriage and divorce that are of general interest. One law passed on this subject provided that persons should not marry in Minnesota within six months after having been divorced, and prohibited the publication of advertisements by attorneys offering to secure divorces or soliciting business to that end. By another law any woman under the age of forty-five and any man of any age, unless he married a woman over forty-five, was prohibited from marrying if he or she were epileptic, feeble minded or insane. Another law provided that a woman should not be liable for her husband's debts, nor a man for his wife's debts beyond those contracted for necessities; but provided that husband and wife should be jointly liable when living together for all necessary household articles and supplies.

A resolution was passed urging the Minnesota Congressmen to vote for the passage of the Grout Oleomargarine bill in Congress, and an act was passed prohibiting the sale in Minnesota of oleomargarine or any oleogenous substance when colored to imitate butter. Cities of over 50,000 inhabitants were authorized to establish free employment bureaus to be under municipal management.

The Primary Election law of 1899 was extended in 1901 to cover the entire State. Only country and city officials are nominated at primary elections, however, State officers being nominated in conventions.

A law was passed prohibiting any person under twenty-one years of age from playing pool or billiards in any saloon or room adjacent to a saloon, or in any restaurant or public place where tobacco in any form, confectionery or drinks except water are sold or given away. Two memorials were presented to Congress, one asking for direct election of United States Senators and the other for additional powers to be conferred upon Congress for the regulation of trusts.

The Republican State Convention, which met on July 1, 1902, adopted a platform indorsing President Roosevelt and his Administration. The Democratic State Convention was held June 25. Its platform declares allegiance to the principles of Democracy as taught by Jefferson and reaffirmed by the latest national convention of the party, approves of the withdrawal of troops from Cuba, condemns the Administration's policy in the Philippines and opposes protective tariff. It also favors the direct election of United States Senators.

Missionary Achievements During 1902

Annual reports presented in 1902 to the several missionary organizations representing the Protestant churches of America were marked in every instance by records of evident progress in the foreign fields occupied. These churches raise great sums every year for the support of missions in lands where there exists only a limited knowledge, if any, concerning the Christian religion. They are represented by an army of preachers, teachers and physicians, the force in the field including a large proportion of women, some of whom are the wives of the missionaries, while there is a numerous contingent of single women engaged in school work, hospital service, and even in the practice of medicine. In some lands the work, which has been going on for generations, has advanced so far that the native helpers, many of whom have been ordained to the ministry, far outnumber their American fellow-workers. In every land the native Christians are contributors both to the support of their own churches, schools and other institutions, and to the funds annually raised for the maintenance and extension of missionary effort. Every year is marked by an increase in the number of organized native churches, and in the number of such churches which have become self-supporting.

One of the noteworthy features in all the reports is the evidence of recovery from the effects of the terrible "Boxer" uprising in China during the year 1900. The missions in that country have been rehabilitated, the work is being prosecuted with renewed and increased earnestness, and it is being met by a most encour-

aging responsiveness on the part of the Chinese people. According to some of the reports the return of the missionaries was attended by a hearty spirit of welcome which was extremely auspicious for the resumption of effort in this vast field. This was especially the case with the Methodists, whose general word from the missionary field is pervaded by a general note of cheer. Notable additions to their church membership are reported from all their missions, and note is made of the satisfactory fact that self-support is making great advances. Japan is one of their most encouraging missions; Korea affords satisfaction in the prospects of ad vance; India has been stirred by earnest revivals; and the work is making excellent progress.

Miss Ellen M. Stone.

The Congregational Church, working through the American Board of Commissioners for Foreign Mis sions, includes in its report of gen eral advance notice of the progress of school work in all of its many missions. The Board perceives a call for advance in China, presented in the conditions now existing there; and it chronicles a good year in Japan and India. Its European missions, and those in Mexico, have proved fertile fields. The only discourage ment expressed is over the work in Turkey, always a source of anxiety.

In the missions of the Presbyte rian churches the year was one of quiet growth and uninterrupted ex pansion. The native churches have made accessions to their membership to an extent unequalled in the past history of the mission board. In the general review of the work the re port says: "One of the foremost features of encouragement in the mission field during the year has been the development of the spirit of Christian Union." And considerable space is devoted to an account of matters indicating this pleasing de velopment.

The Baptist Missionary Union re ports all its stations in China re occupied, and the work going on well. It reports prosperity attending its efforts in Japan also, while the re ports from other missions all indicate that the year was one of gratifying results.

The Protestant Episcopal mis sions make an excellent showing in the annual report, and this church is one of those which has met with em phatic encouragement in the restored order existing in China. The results of its recent work there are spoken of as triumphs. The other strictly missionary fields of the Protestant Episcopal Church are Japan and Africa, in both of which it is making noteworthy progress.

Japan affords most cause for congratulation to the Mission Board of the Reformed Church, the outlook in that country increasing constantly in hopefulness. Renewed interest is reported in China. While India does not show such progress for the missions of this church as they are making in China and Japan, the ad vance there affords encouragement. One feature in the report of this board possesses especial interest in view of the fact that there is a continual plaint in the annual proceedings of the great missionary organiza tions because of the invariable excess of necessary expenditures over the available funds. It is seldom that one of these organizations closes its yearly accounts without having a large balance on the wrong side of the ledger.

It is estimated that the sum raised annually by English-speaking people for the support of missionary work in foreign fields is about $22,000,000. This vast sum is made up mainly of contributions given from time to time by congregations, and in individual donations. Bequests received in any given year, unless de vised to be held as permanent funds or otherwise placed under restriction, are usually expended in the work of the year. Notwithstanding the magnitude of the amounts realized, and the considerable volume of in come for invested funds, the missionary organizations find that their income is seldom equal to the demands upon it. In view of this fact, the Protestant Episcopal Churches inaugurated a movement toward the close of the year 1902 to stimulate the interest of churchmen in the cause of missions, with a view to securing larger contributions for their support.

A special demand upon the generosity of friends of missionary endeavor was created during the year by the unusual incident of the capture of a female missionary by brigands, and the necessity for raising funds with which to pay the ransom demanded. Miss Ellen M. Stone, of Boston, Mass., a missionary of the American Board of Commissioners for Foreign Missions, was passing with a party through the Balkan Mountains in September, 1901, and with Mrs. Tsilka, one of her associates, and a few other companions, dropped behind their escort. They were surrounded by a party of armed men, who compelled Miss Stone and Mrs. Tsilka to go with them. Eventually the brigands made it known that they wanted a ransom of $110,000 for Miss Stone, and that if the money were not forthcoming before October 8, 1901, they would put her to death. The date was several times postponed, and in the meantime the United States Govern ment interested itself in the matter through its diplomatic machinery, while the Turkish and Bulgarian governments made ineffectual efforts to capture the brigands, although the troops kept them constantly in motion. The amount demanded could not be raised, one reason being the unwillingness of the American Board to exert itself in this direction because of the principle involved, namely, that to pay a ransom would be to put a premium upon such deeds. Popular sentiment, however, was not affected by this view of the matter, and although money was subscribed slowly the sum of $75,000 was finally raised. The brigands, besides refraining from the execution of their threat against Miss Stone, modified their demand for ransom to the extent of expressing willingness to accept what could be raised, and the women were released in March, 1902, after a captivity of about six months. During this period they were treated with kindness and consideration by the brigands, and Mrs. Tsilka, who became a mother about the first of January, was given all the care that was possible. The $75,000 which had been raised was paid under conditions imposed by the brigands who, true to their agreement, surrendered the women and the baby in due time to friends who had been deputed to meet them.

Six of the Protestant denominations in the United States are engaged in missionary work in foreign lands. Their respective organizations for this branch of their effort at Christianizing the world are the American Baptist Missionary Union; the American Board of Commissioners for Foreign Missions (Congregational); the Board of Foreign Missions of the Reformed Church in America; the Domestic and Foreign Missionary Society of the Protestant Episcopal Church; the Board of Foreign Missions of the Presbyterian Church, and the Missionary Society of the Methodist Episcopal Church. The statistics of their work are presented in the table, which follows:

Societies.	No. of missions.	No. of stations.	No. of missionaries.	No. of native helpers.	Organized churches.	Church members.	Adherents.	Schools and colleges.	Native contributions.	Cost of missions.	Total cost of work.
A. B. M. U.....	7	99	478	3,325	1,003	111,650	172,780	1,473	$107,107	$464,460.50	$660,150.91

Mississippi.

—

Capital:
JACKSON.

De Soto and his companions were the first Europeans to traverse the territory now within the bounds of Mississippi. They made no settlements, and the death of the leader in 1542 put an end to the expedition. In 1682 La Salle descended the Mississippi River and took possession of the adjacent country and called it Louisiana, in honor of the King of France. In 1716 Fort Rosalie was erected on the site of Natchez. The colony grew slowly, and New Orleans, founded soon after, attracted many of the settlers. The Territory of Mississippi was formed by an act of Congress April 7, 1798, and was admitted as a State with the present boundaries in 1817.

Mississippi has an area of 48,810 square miles, and in 1901 its estimated population was 1,578,000. Although an agricultural State, its manufacturing and mechanical industries have increased to some extent in recent years, the most important being the lumber and timber industry. Lack of capital, of water power and good harbors have prevented the State reaching the manufacturing prominence it might otherwise have attained. The forests of Mississippi constitute the most valuable natural resource, though but little long-leaf pine remains along the coast. The rolling pine lands of the interior have been but little exploited, and these contain about 8,000,000 acres.

The increase in the lumber and timber industry in the decade ending 1900, was, according to the census, 171.3 per cent, the total value of the product in that year being $15,656,110, or 38.7 per cent of the total value of the products of the State. While much of these was timber for building purposes, a great deal was used in the manufacture of cheap furniture, and for boat building and fitting.

The manufacture of cottonseed oil and cake has increased rapidly during the past five years, and this industry ranks as second in the State. Cotton ginning is also among the important industries; while the production of turpentine and rosin ranks fourth. The alluvial lands along the rivers beyond the reach of high water produce some of the finest cotton grown in the South. Much of the cotton land along the Yazoo delta is owned by the State, which employs convict labor on the large farms. The system of working convicts has proved a great success, the profits for 1901 being about $150,000. The plan meets with popular favor in the State, and several counties are adopting a like system for county convicts. The amount raised on these farms is not large enough to affect the price, and there has been no complaint from farmers.

Gov. A. H. Longino.

The Legislature at the session of 1902 passed a general primary law much like that in use in several of the Southern States, but differing in some particulars. The law requires, in brief, that all party nominations shall be made at primaries, and leaves no provisions for conventions of those parties numerically too weak to hold primaries. Candidates are nominated by the direct vote of the people, and, as is the case in South Carolina, the primary nomination is usually equivalent to an election. A test case was brought before the Ninth District Court in June, 1902, to determine the status of the law. A writ of mandamus was asked, directed against the State Democratic Executive Committee of Issaquena County, prohibiting it from issuing a call for a convention, and ordering it to call a primary election instead. The court decided in favor of the law and issued the writ.

The primary system has met with general approval, and the only difficulty in it seems to be that it makes no provision for the adoption of a platform. It has been decided that no committee, convention or body of men is authorized to speak for the people, either in the way of naming a candidate or in enunciating party principles. This will be done altogether by the people, and the selection of a candidate will mean the approval of the particular views of the successful man. The people can shelve a platform or throw overboard an objectionable plank without the slightest difficulty.

The three important candidates in the field for Gubernatorial nomination in 1902 had each a pet platform on which he was running. Senator Noel, the author of the law, made his campaign on this issue, and his success would naturally be followed by an extension of the idea that all political power should come directly from the people. Editor Vardaman entered the race on a platform, the chief plank of which called for a division of the school funds between the whites and negroes on the basis of the taxes paid by each. The adoption of this platform would mean the closing of about nine-tenths of the negro schools. Attorney-General McClurg, another candidate for Governor in 1902, made his campaign on the single issue of the regulation or abolition of trusts in Mississippi.

The only legislation of general interest in 1902 was a change in the liquor laws, providing that incorporated municipalities might grant licenses to sell liquors in from one to five gallon packages.

At the election held in November three Constitutional amendments were put before the people. One, forbidding the Legislature to permit any county, city or town to become a stockholder in any corporation other than a railway company, was passed by a majority of 201. Another, setting a time for the convening of the Legislature was passed, but a third amendment, providing for a form of referendum for future constitutional amendments, was lost.

Missouri.

—

Capital:
JEFFERSON CITY.

The settlement and progress of Missouri were later and less rapid than those of the lower districts of the country originally included in Louisiana, but as early as 1720 its lead mines had attracted attention. In 1755 St. Genevieve was founded. In 1775 St. Louis, originally a depot for fur trade, contained 800 inhabitants. This town was the centre of numerous conflicts between the English and French, the latter claiming the land under a grant from Spain. The general peace of 1783 put an end to hostilities. In the purchase of 1803 Missouri was included in the Territory of Louisiana, with St. Louis as the seat of government. In 1812 it was made a separate Territory, and was admitted to Statehood August 10, 1821, it being the last State to be admitted in which slavery was permitted.

Missouri has an area of 69,415 square miles, and in 1901 its population was estimated to be 3,153,000. The State has kept pace with her sister States in the growth of manufacturing industries, and shows only a small decrease in some special industries, which have been moved to centres further South and West.

Slaughtering and meat packing are the most important industries, and the manufacture of tobacco ranks

Digitized by Google

second. Flour and grist mill products have an important place, due to the extensive wheat fields of the State, though in this industry there has been a decrease in recent years, due to the better transportation facilities offered in States further south and west. A comparatively new industry is the manufacture of shoes, brought about by the natural tendency of a manufacturer to get as close as possible to the source of supplies.

Gov. Alexander M. Dockery.

The Legislature of 1901 passed several acts of importance. In accordance with the suggestion of the Governor a bill was passed taxing franchises at the same rate as actual and tangible property was taxed. The value of a franchise was declared to be the difference between the tangible property of a corporation and the total value of its property. A Board of Mediation and Arbitration was created, to consist of three members, one of whom was to be an employer, another an employe and the third to have no fixed industrial status. The duties of this board were to endeavor to bring about settlements in case of strikes, and should its efforts at conciliation fail it was empowered to publish its findings and its decision. The decision of the board was to be final.

Another labor law provided for the appointment of a factory inspector. An act for the protection of employes provided that all manufactories in the State should pay their employes at least every fifteen days. Eight hours a day was made the legal limit for all miners.

An act of special legislation made it the duty of all public officers in the State, counties or cities who had charge of the erection of public buildings to provide for the reception of bids for stone quarried in Missouri, and to give such bids preference.

An act made it obligatory upon the County Courts to direct all prisoners, except women, to work on the public highways. Kidnaping was made punishable by death or by imprisonment for not less than five years. By an act defining what is meant by the practice of medicine Christian Scientists were debarred, but a special clause was inserted permitting medical practice by osteopaths. Congress was petitioned to call a convention for a constitutional amendment providing for the direct election of United State Senators.

On February 12, 1901, the Supreme Court of the State handed down a decision affirming the constitutionality of the act requiring all electric street cars to be equipped with screens or hoods protecting the motormen from the inclemencies of the weather. It was declared to be a general law in that it aimed to protect the health of all the people of the State who might at any time become motormen on street cars.

In September, 1902, several prominent members of the St. Louis city government were indicted for bribery, it having been alleged that the sum of about $47,500 had been used during 1902 to buy votes of representatives to secure the passage of several franchise bills pending before the Council and House.

The Republicans of Missouri adopted a platform in June, 1902, approving of the course of the Administration and indorsing President Roosevelt for election in 1904. At the Democratic State Convention the platform adopted condemned trusts and disapproved of the Administration.

Monaco.

—

Capital:
MONACO.

Monaco has belonged to the House of Grimaldi since 968. In 1715 it passed to the female line, although the Count of Thorigny, who married Louise Hippolyte, daughter of Anthony I., and heiress to Monaco, assumed both the name and arms of the family. When his wife died, after reigning but a few months, he assumed the throne under the name of Jacques I., and was succeeded by his son, Honorius III., who was forcibly dispossessed by the French Revolution in 1792. In 1814, however, the principality was re-established under the protection of the Kingdom of Sardinia.

The present reigning Prince, Albert I., was born November 13, 1848. He succeeded his father, Prince Charles III., September 10, 1889. He married, September 21, 1869, Lady Mary Douglas Hamilton, and, October 30, 1889, Alice, Dowager Duchess de Richelieu, both of whom were divorced. By his first wife he had one son, Prince Louis, who was born July 12, 1870.

No church except the Roman Catholic is recognized in Monaco. Over this a bishop presides. In 1819 the French Codes were adopted and a Court of First Instance established; there is also a Judge de Paix's Court.

The Principality has its own coinage, which passes current in the countries of the Latin Union, and its own postage issue. There are no lands to cultivate, no trades or industries. Revenue comes from the gambling concessions, which at present yield $2,000,000 per annum.

Nobody in Monaco pays any taxes, the Prince enjoys a handsome income, and the cathedral, with the bishop and clergy, are supported on the proceeds of the gambling. Fifty years ago Monaco was despairing and bankrupt. Then Francois Blanc took the half built Casino with its concessions for 170,000 francs, and since then Monaco has been the most prosperous community in Europe. Europe has supported it.

Prince of Monaco.

The direct expenses of the Casino amount to about $4,170,000 a year, which includes $3,450,000 for the management and 1,600 employes. The gardens cost $125,000, while $205,000 goes toward the theatre and orchestra. About $125,000 is distributed to the press, presumably for past and future silence and incidental advertising. Sixty thousand dollars are set aside each year to pay the travelling expenses of the patrons who are cleaned out. These are the mere expenses of the Casino, a first charge on the bank's winnings, and which are invariably met.

There are other charges. The public service, which includes maintenance of roads, lighting, water, carnivals, races, pigeon shoots and other amusements, takes a considerable sum. The bishop, clergy and schools receive $45,000, and $250,000 is paid to the Prince of Monaco for the privilege of keeping the Casino open. An additional sum of $100,000 is reserved for "body guard, police, law courts and government." During the last year there have been the usual number of announcements of men who have perfected "systems" for breaking the bank at Monte Carlo, but so far there has been no appreciable suffering on the part of the bank.

Montana.

Capital:
HELENA.

The history of Montana is nearly identical with that of Idaho, it having been set off and given a territorial form of government in 1864. Its settlement dates from the opening of the gold mines in that region. By an act of February 17, 1873, a tract of about 2,000 square miles, previously belonging to Dakota, was annexed to Montana, and the capital of the Territory was established at Helena. It was admitted as a State November 8, 1889. Montana has an area of 146,080 square miles, and its population in 1901 was estimated to be 254,000. The manufacturing interests of the State are inconsiderable when compared with mining, stock raising and agriculture, though there has been a marked increase in the past decade. The smelting and refining of copper and lead are the chief industries, the product in 1900 being valued at 60 per cent. of the entire product of the United States. Large deposits of ore, abundant water power within easy reach of the mines, large coal deposits nearby and the great available supply of timber suitable for use in mines have assisted in developing this industry. Hundreds of acres of the finest grazing land make the cattle raising industry of great importance, and the livestock markets of the State rank among the first in the country.

The Legislature of 1901 passed an act limiting the period of labor for miners to eight hours a day, and appointed an inspector of mines to see that all State regulations were carried out regarding precautions to be taken for the safety of workmen. Another act provided that miners might employ, at their own expense, a check weighman, who should have equal rights with the regular weighman, and that both check weighman and regular weighman should subscribe to an oath before a Justice of the Peace to do justice between employer and employe in the weighing of coal. Employers were prohibited from paying em ployes in script, token or anything except lawful money, and also pro hibited the assignment of wages by employes to their employers.

Gov. Joseph K. Toole.

Among other acts was one per mitting the practising of osteopathy by persons passing an exami nation prescribed by a board of osteopathic examiners. A law amend ing the election regulations provided that only those persons could vote at a primary who intended to vote at the subsequent elections with the party holding the primary, and provided also that a cross should be placed by the voter against the name of every person voted for, thereby abolishing "straight ticket" voting, it being stated that corporations interested in the political complex ion of the State had found means by tissue paper ballots and other wise to ascertain how their employes voted.

A resolution introduced into the Legislature for a constitutional amendment by which the Leg islature would be enabled to control contracts between employers and employes failed of passage.

A large part of the session of the Legislature was occupied in trying to elect two United States Senators, to fill the vacancies caused by the expiration of the term of Thomas H. Carter and the resignation of William A. Clark. The Democrats having secured a majority in both branches of the Legislature, William A. Clark was readily elected to fill the long term. It was not until the last day of the Legislative session, after 22 ballots had been taken, that Paris Gibson was chosen for the short term. The re-election of Mr. Clark was brought about by a desire to make his seat in Congress sure. When he was first elected in 1899, charges of bribery were brought against him, and his name was recommended dropped from the rolls of Congress by the Investigating Committee. He resigned from the Senate and was immediately appointed to fill the vacancy caused by his own resignation. The election of 1901 confirmed the appointment.

At a meeting of the Democratic State Central Committee, held September 2, 1902, F. A. Heinze, of Butte, was selected to be nominated for Governor over Senator Clark. At the Democratic State Convention, held September 22, Senator Clark scored a signal victory over Mr. Heinze, retaining absolute control of the party. In retaliation Mr. Heinze organized a new party, known as the Populist party, with the intention of splitting the vote.

The Republican State convention, held September 27, adopted a platform which declares for Roosevelt in 1904 and indorses the administration's Trust policy.

Montenegro.

Capital,
CETTINJE.

The reigning power has remained in the family of Petrooic Njegos since 1697, when Danilo Petrooic, on being proclaimed Vladika of Montenegro, secured the liberty of the country from the Turks. He at once established himself as spiritual and temporal ruler, and a dual power was descended collaterally until 1851, when Danilo I., who had succeeded to the throne at the death of his father, Peter II., abandoned both the title of Vladika and the spiritual functions which were attached to it, adopting, in its stead, the title of Gospodar, or Prince.

Nicholas I., the present ruler, was born October 7, 1841, and was proclaimed Prince of Montenegro, as successor to his uncle, Danilo I., August 14, 1860. In December, 1900, the Prince assumed the title of Royal Highness. On November 6, 1860, he married Milena Petroona Vucoticova (born May 4, 1847), the daughter of Peter Vukotic, Senator and Vice-President of the Council of State. They have had issue:

Morocco.

—

Capital: FEZ.

Little is known of Morocco, its people being fiercely opposed to the in- coming of foreigners. The present Sultan, Mural Abd ex Aziz, born February 24, 1878, succeeded his father, Mural Hassan, at the latter's death, June 7, 1894. He is the fifteenth of the Alides, and the thirty-sixth in lineal descent from Ali, uncle and son-in-law of the Prophet. The Sheriffian umbrella is hereditary in the family of the Filell Sharifs of Tafilet. Each Sultan is sup- posed, previous to his death, to indicate the member of the Sheriffian family who, according to his conscientious belief, will best replace him. The succes- sion is, however, elective, and all members of the Sheriffian family are eli- gible. Generally the late Sultan's nominee is elected by public acclamation at noonday prayers the Friday after the Sultan's death.

The form of government is an absolute despotism, unrestricted by any laws, civil or religious. The Sultan has six ministers, those for Foreign Affairs, Home Affairs and War, the Chief Chamberlain, Chief Treasurer and Chief Administrator of Customs. There is also a Grand Vizier. These he consults or not, as he chooses. His income is estimated at $2,500,000 a year.

The army is composed of 10,000 disciplined infantry, under the command of an Englishman; 400 disciplined cavalry, a few batteries of field guns, and 7,000 irregular cavalry. The navy consists of an old iron screw ship, a smaller one and an armed cruiser.

The imports in 1900 amounted to about $8,200,000 and the exports to about $9,500,000.

The area of Morocco can only southern frontiers, toward the des According to the most recent inves dominion is about 219,000 square ulation of Morocco vary from generally considered to be about the following result by races: Shellah Berbers, 2,200,000; pure 3,000,000; Jews, 150,000; negroes, Tuat and other races, claimed by have recently been occupied by boundary between Moroccan and mined. Dippel.

Miss Emma Eames.

Mme. Calve.

Miss Carrie Bridewell.

Music in 1902.

JOHN PLEASANTS,
New York City.

Notwithstanding the absence of the idolized and irreplaceable Jean de Reszke, the season of grand opera in 1901-2 was one of great splendor. Ternina's work alone was enough to stamp it unique. If the perfection of musical art is to preserve the balance between the emotions and the intellect, how ideally does this great soprano accomplish that result. Reaching the extreme limit of emotional intensity, she seldom violates the slightest jot or tittle of the laws of artistic singing. In the most impassioned moments her phrasing, intonation and use of the legato are usually beyond reproach. Huneker, the well-known critic, said, in reference to her work in Puccini's "La Tosca" and "Die Gotterdammerung"; "Ternina sets standards," and "Her work is epoch-making." At a certain performance of "Tristan and Isolde" the work of this great singer overshadowed that of all other principals.

The statement is made that the skill of the old Italian singing teachers has become a lost art, but Sembrich not only realizes the most exacting ideals of those great masters of bel canto, but is also able to interpret a varied repertoire of all schools, for which these teachers could not have prepared a pupil, and whose merits they probably would have failed to appreciate or comprehend.

With flawless voice and art, her dazzling singing of the great arias in the "Magic Flute," and her intensely sympathetic interpretation of Richard Strauss's great song, "Aller Seelen," affords as great a contrast as versatility can show. Great in opera, she is even greater in recital.

Emma Eames was as lovely as ever. Her singing, acting and beauty improve with time. The fascinating Calve, whose "Carmen" is well nigh unapproachable, gave great pleasure with her singing and superb acting.

And what a tower of artistic strength was Schumann-Heink! What an incomparable voice she has, and what a variety of exquisite tone-colors she can produce!

Many people think that the natural quality of Gadski's voice is unsurpassed; others believe that she has not reached the summit of her powers. But she is a great singer, as well as a great favorite, with a most magnetic and attractive personality. Warming up to her work slowly, when she gets thoroughly started she is hard to equal. As "Eva" in "Die Meistersinger" she is ideal.

Louise Homer, with her voluptuous contralto, is another great favorite. Another contralto, Carrie Bridewell, has shown great improvement, and is now one of the best.

Van Rooy's glorious voice and fine acting greatly strengthened the company. Di Marchi, the best Italian tenore robusto since Tamagno, was a new comer, who made a tremendous success. Gilibert, who sang only minor roles, was also a new comer with a high baritone of rare beauty. Campanari's superb technique, was shown to advantage in the "Magic Flute," and his legato, as well as his acting, were all remarkably fine.

The work of such artists as Edouard de Reszke, Dippel, Van Dyck, Alvarez, Saligmac, Bispham, Scotti, Blass and Reiss is well known. No such remarkable company appears in Europe.

The operatic event of the season was the production of Paderewski's "Manru," a delightful work, original in conception, musical detail and romantic atmosphere.

San Francisco deserves great credit for her season of grand opera, the work of the chorus and orchestra and the staging being remarkably good. Collamarini, a great favorite, gave a unique and highly interesting personation of Carmen, although she defies every known (and unknown) law of artistic singing, and is physically of such vast proportions that the illusion of the character was marred. Dado, who possesses a rich, sonorous bass, was the best singer of the company. New Orleans also had a regular grand opera season.

Gertrude Rennyson, of the Castle Square Opera Company, an organization that made a notable success, is a thoroughly artistic and attractive young soprano with a great future. Nordica, who toured the country in recital, was missed in New York more than any other singer, possibly excepting Jean de Reszke.

Bispham inaugurated a splendid innovation in his Sunday afternoon recitals at popular prices. Lilli Lehmann's recitals gave rare pleasure, her voice still being beautiful while her art is marvellous. She made an impressive figure with her imposing stature and beautiful silvery white hair.

Susan Metcalf scored a great success in her first recital. One critic said that it was a pity that some recitals which would hardly be missed could not be replaced by more of Miss Metcalf's. Among the new singers who will soon be heard in New York, is John R. Bland, a young tenore robusto, who sang successfully last Summer at Bar Harbor musicales.

These last two singers are pupils of Victor Beigel, whose work ranks very high among the many fine singing teachers of the country. During a residence of less than five years, Beigel's high ideals and artistic standards, have caused the best musical people to consider his opinion almost absolute. Anna Lankow has also developed many excellent singers.

Miss Wheeler, the contralto at Trinity, San Francisco, has a most remarkable voice. Of great range and fulness, with a quality velvety, voluptuous and intensely sympathetic, with wonderful low notes, this voice recalls that of Annie Louise Cary's in its prime. Miss Flynn, the soprano of this church, is one of the best church singers in the country.

The Boston Symphony Orchestra maintained its ideal standard. Ffrangcon Davies, the celebrated baritone, once said that he had heard all the best orchestras in Europe, and that nowhere was there such a

The photographs of Calve, Emma Eames and Carrie Bridewell are copyrighted by A. Dupont.

Digitized by Google

unique aggregation of virtuosi as this Boston orchestra. The Philharmonic, under Paur, and the Metropolitan, under Damrosch, both of New York; the Chicago orchestra, under Thomas; the Cincinnati orchestra, under Van der Stucken; the Philadelphia orchestra, under Scheel, and the Pittsburg orchestra, under Victor Herbert, all did good work. The latter has rapidly forged to the front and is now ranked among the best. The Cooper Union orchestral concerts, conducted by Arens, were immensely valuable in educating the public taste. A good band has a similar, and still greater influence. Those conducted by Sousa and Duss are among the best.

Kubelik's violin playing was the sensation of the season. Having by no means reached the height of his powers, a marvellous future lies before this boy. Another successful violinist was Fritz Kreisler.

Among pianists, Paderewski's few recitals but whetted the appetite for more. Gabrilowitsch, Josef Hoffman, Harold Bauer and Fanny Bloomfield-Zeisler were notable successes. The latter, one of the greatest living pianists, plays with great breadth, superb fire and brilliancy, and deep poetic insight.

Wallace Goodrich, one of America's best organists, and who has lately taken the choir and organ at Trinity, Boston, conducted the Worcester festival chorus with virility and breadth. The Cincinnati May Festival kept up its usual good work.

Choral art has been a great factor in moulding public taste. The influence of societies like the Handel

Edouard de Reszke.

Mme. Gadski.

Miss Louise Homer.

and Haydn, and the Cecelia, both of Boston, has been immense. Frank Damrosch has done noble service with his people's singing classes, and Arthur Mees, a most inspiring and magnetic conductor, has also done much to elevate choral art.

The standard of organ playing improves constantly. Guilmant's influence through his pupils has been marked. The American Guild of Organists has also done good work. Lemare, the English organist of the Carnegie Music Hall, Pittsburg, is a great player, the variety of kaleidoscopic effects and colorings he gets in playing orchestral transcriptions being marvellous. Lemare has composed fine and original organ and church music.

Louis H. Eaton, of Trinity, San Francisco, is setting a standard both in recitals and choir work, never before attempted. Dethier, Heinroth, Macfarlane and Carl, all of New York, are among the best of the many fine organists.

What is wanted both in secular and church music is a distinctively national school of composers; men of

Salignac.

Mme. Schumann-Heink.

Kubelik.

Mme. Sembrich.

the calibre of Macdowell, Horatio Parker, Chadwick and Henry K. Hadley, but even more characteristically American. Dvorak and Paderewski, the latter in a most practical manner, recognized this need, and encouraged Americans to compose. Manuscript societies have done yeoman service in this cause.

The modern Russian school, which, excepting Tschaikowsky, is not sufficiently well known, is distinctively national. The original thinking of to-day is being done by these Russians. Scriabine, Withol and many others have written wonderful music.

Original themes, unusual rhythms, bold harmony, and gorgeous coloring characterize these compositions. They are poetic and scholarly, full of latent fire and deep passion, at times sad and sombre, and again wildly fantastic and even barbarous. An able but eccentric German musician said: "They are great students. Some are civil engineers, and when work is done they go home and write symphonies for fun." (He probably had Cesar Cui in mind.) "They write much in the minor, wherein they are wise. There is so much more room."

Church music needs much improvement. Secular, meretricious and trivial music is too common in many churches, both Roman Catholic and Protestant. The standard is gradually improving, but it is not high

The photographs of Gadski, Louise Homer, Salignac and Schumann-Heink are copyrighted by A. Dupont.

Digitized by Google

enough. To have the best and most distinctive church music rendered distinctively and artistically, should be the aim of all choirs.

The widespread use of boy choirs in the Episcopal Church is to be deplored. Good boy choirs, like those at Trinity and Grace, New York, where the facilities are adequate for their maintenance, produce admirable results, but the work of many boy choirs, especially in the solo work of the boys, is often painfully inartistic, and the methods of voice production would in many cases be condemned by first-class singing teachers. That vested mixed choirs are gradually spreading, and that certain ritualistic New York churches have adopted mixed choirs in west-end galleries, are significant signs of a reaction against boy choirs.

Music in the Episcopal Church has suffered from too much English influence. While some English music is dry and uninspired, much of the best church music has been written by English composers of whom Martin, Stanford, Stainer and Barnby are conspicuous examples. But the fault lies more with English organists, who frequently lack temperament, adapt themselves slowly or not at all to American conditions, and who tenaciously hold the erroneous idea that nothing is churchly except what is English. Fortunately American organists are becoming more generally employed.

America is fortunate in having men like Krehbiel, Huneker, Henderson, Finck, Hale, Apthorp and Elson among musical critics. Huneker is witty and audacious, but his honest criticism, frequently following a long tirade, is a model of pithiness, terseness and excellence. The taste of the great music-loving public has rapidly improved, although the fad for popular music, including dialect songs, rag-time and other cheap forms of music, have vitiated the taste of many people. But such perversion of taste is transient and does not materially affect the permanent love for good music. And among all the influences which have helped to elevate the musical taste of the public, none has been more potent than the splendid efforts of the critics. Too much honor, therefore, it seems, cannot be given these men for their untiring labors in behalf of good music.

Nebraska.

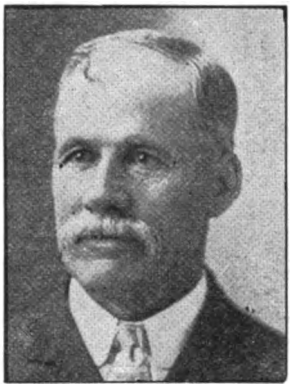
—

Capital:
LINCOLN.

The Territory of Nebraska was formed May 30, 1854, embracing 351,558 square miles. In 1861 16,035 square miles were set off to the Territory of Colorado, and later in the same year 228,907 square miles more were set off to Dakota,, and at the same time Nebraska received from Washington and Utah a triangular tract of 15,378 square miles, reducing the State to its present limits. On March 1, 1867, it was admitted to Statehood, after nearly ten years of agitation. In 1901 the estimated population was 1,067,000.

Though Nebraska is primarily an agricultural and stock raising State, manufacturing industries have steadily increased during the past five years, being stimulated by cheap transportation furnished by the Missouri River and the fifteen railroads entering Omaha. The lack of cheap fuel has somewhat hindered the full development of manufacturing, but the opening of the coal fields in Kansas, Iowa and Missouri have obviated this difficulty.

Slaughtering and meat packing are the most important industries in the State, and South Omaha is now considered one of the great cattle markets of the world. Besides the live stock raised in the State sheep and other cattle are sent from other States to be fattened in Nebraska feed lots. Dependent upon cattle raising and agriculture is the manufacture of butter, cheese and condensed milk, of flour and grist mill products and malt liquors. A creamery at Lincoln is said to be the largest in the country. Omaha is the headquarters of the printing and publishing trade of the middle West, and from this point newspapers are published with "filled" sheets for country papers between the Mississippi and the Rocky Mountains.



Gov. John H. Mickey.

At the session of the Legislature of 1901 much time was spent in the election of two United States Senators, and but little of the usual legislative business was done. An act was passed licensing the practice of osteopathy, providing that the applicants for practice passed satisfactory examinations before the State Medical Examiners. Educational laws were passed providing for the establishment of travelling libraries and compacting the present school system. Congress was applied to to propose a convention for the adoption of a constitutional amendment for the direct election of United States Senators.

The penalty for kidnapping was made not less than one year nor more than twenty years' imprisonment. Stringent laws were made defining and imposing penalties for blackmail and extortion. The first section, applying to public works, is of most interest. It reads: "Any person or persons who shall enjoin, advise or seek to prevent the payment of any account legally and lawfully made for services actually rendered * * * to the State of Nebraska or any division of the State, the same having been contracted for by lawful authorities, with the intention of exacting or extorting money or other valuable consideration from the owner of such bill or account, on the promise of withdrawing, shall be guilty of blackmail, and upon conviction may be imprisoned for not more than three years or less than one year, or be fined not less than $200 nor more than $500." An act was passed prohibiting the making of bets on elections, and the penalty was set at a fine of not less than $5 and not more than $100.

After having balloted almost continuously from the 15th of January to the 28th of March, 1901, the Legislature succeeded in electing two United States Senators—John H. Millard, Republican, to succeed John H. Thurston, for the full term, and Charles H. Dietrich, Republican, to fill the unexpired term of William E. Allen, Populist, appointed by the Governor. Though the Republicans had a clear majority in both branches of the State Legislature, several of the party refused to vote for the caucus nominees. A decision was finally reached by the withdrawal of both the caucus nominees and the selection of the men elected to fill their places.

In October, 1902, the Supreme Court of Nebraska decided that the reading of the Bible and the singing of sacred songs in the public schools are prohibited by the State Constitution.

Governor Savage created a small sensation in the State by announcing in August, 1902, that parties whom he refused to name had attempted to bribe him into allowing certain politicians to name the fire and police boards of the city of Omaha. Any action on the matter was deferred until the Governor saw fit to make public the names.

The Democrats and Populists united on a single ticket at the conventions held in June, 1902, allowing three Democrats and four Populists places on the list. William J. Bryan was nominated for Governor by the Populists, but refused the nomination. The Republican State Convention met June 18, and adopted a platform indorsing the present Administration in the warmest terms.

Nebraska elected an entire Republican State ticket at the elections in November, even the precinct in which William Jennings Bryan lives giving the Republican candidate a majority. Five of the six Congressmen are Republican, the only fusionist being elected in the district in which Omaha is situated. Mickey, the Republican candidate for Governor, ran behind his ticket but was chosen by a safe majority. The Legislature is strongly Republican. There was a claim made after the election that officials of the Republican State Committee had used unfair means to bring about an election of this party's candidate. The dispute seemed to have been due to a fight for United States District Attorney, in which the two political factions were involved.

Nepal.

—

Capital:
KATMANDU.

Nepal is an independent kingdom in the Himalayas, with an area of about 54,000 square miles and a population variously estimated at from 2,000,000 to 5,000,000. The Government is a military oligarchy, all power being in the hands of the Prime Minister, to whom it was delegated by the Maharaja Dhiraj when he came of age in 1896, he having succeeded his grandfather May 17, 1881, when he was but six years old. The country has paid tribute to China since 1791. A frontier outrage in 1814 led to war with Great Britain, but peace was declared and a treaty signed December 2, 1815, since when the relations of the country with the British have been friendly. An English resident lives at the capital, but does not interfere with internal affairs. The religion is Hindooism of an early type. There is a standing irregular army of about 25,000 men with a force of 17,000 regulars stationed at the capital. During the Indian mutiny a detachment of Ghurka troops was sent to assist in suppressing the rebellion in Oudh. The races of Nepal, besides the dominant Ghurkas, include earlier inhabitants of Tartar origin, such as Magars, Guarangs, Wewars and Bhutias. The principal articles of export are cattle, hides and skins, opium and other gums, grain, spices, tobacco and timber. The chief imports are cattle, sheep and goats, spices, sugar, cotton, silk, cotton and woollen goods. The Indian rupee passes current throughout the country.

Netherlands.

—

Capital:
THE HAGUE.

The reigning family of the Netherlands is the House of Orange, which was established by Count Walram, a German, in the eleventh century. Through the marriage of Count Englebrecht with Jane of Polanen, in 1404, the Barony of Breda passed into the hands of the family, which, at that time, settled in the Netherlands. Other successful matrimonial alliances, including that of Willem III. of Orange with a daughter of King James II. of Great Britain, added to the wealth and strength of the family, and it held its position until 1795, when Willem V. was compelled to seek safety in England at the invasion of the French army. In 1813, however, the family returned, and, after much diplomatic negotiation, the Kingdom of the Netherlands was erected, with the son of the late Stadtholder as hereditary sovereign. As the result of this action, Willem I. assumed the throne on March 15, 1816. In 1840 he abdicatedd in favor of his son, who, after a reign of nine years, bequeathed the throne to his heir, who reigned as Willem III. for forty-one years, when he died (1890) and, in default of male heirs, was succeeded by his daughter, Wilhelmina.

Queen Wilhelmina was born August 31, 1880. Although she succeeded to the throne at the time of her father's death, she was not inaugurated until September 6, 1898. On February 7, 1901, she was married to Prince Henry of Mecklenburg-Schwerin.

The Heir Apparent.—The direct heir to the throne is the reigning and unmarried Grand Duke of Saxe-Weimer, whose grandmother, the late Princess Sophia, was the sister of the late King Willem. As his acceptance of the dignity would require the surrender of the grand ducal throne which he now occupies, it is a question if he would consent to make the change, in which case the legal heir would be Princess Marie of Reuss (born January 20, 1849), the wife of Prince Henry VII., of Reuss, and daughter of the late Duke of Saxe-Weimer. They have four children—Prince Henry XXXII., born March 4, 1878; Prince Henry XXXIII., born July 26, 1879; Princess Sophie, born June 27, 1884, and Prince Henry XXXV., born August 1, 1887.

THE MINISTRY.—Premier and Minister of the Interior, Dr. A. Kuyper; Minister of Foreign Affairs, Baron Melvil van Lynden; Minister of Justice, Dr. J. A. Loeff; Minister of Marine, G. Kruys; Minister of Finance, Dr. J. J. L. Harte van Tecklenburg; Minister of War, J. W. Bergansius; Minister of Public Works, Commerce and Industry (Waterstaat), Dr. J. C. de Mares Oijens; Minister of Colonies, Dr. T. A. J. van Asch van Wyck.

Queen of the Netherlands.

THE NATION.—The Nether lands unite to form a constitutional hereditary monarchy, with the ecutive power resting solely in the sovereign and the legislative power resting jointly in him and the States-General, the Parliament. This latter consists of two chambers, the First and the Second. Members to the First, fifty in number, are elected by the Provincial States for nine years; the 100 bers, the First and the Second. are elected by the people for four number, are elected by the Provin the Second Chamber can introduce years. Only the Government and bills.

Religious liberty is complete and constitutionally guarded. The majority of the population, includ ing the royal family, are adherents of the Reformed Church.

For nearly 100 years elementary public instruction has been compulsory between the ages of 6 and 13. There are four universities.

No juries sit in the Netherlands. Justice is administered in 106 Cantonal Courts, 23 District Courts, 5 Courts of Appeal and one of Cassation—the High Court of the Netherlands. There is no poorrate in the Netherlands; vagabond age and mendicancy are considered criminal, and there are few poor houses.

The budget estimates for 1902 show: Revenue, $21,600,898; expenditure, $66,893,270. The nation al debt amounts to about $462,156,180.

The Netherlands are defended by few fortresses, but by piercing the dikes nearly all the approach ing roads can be flooded; the few that are on high ground are well fortified.

The manufactures of the Neth erlands are not of great importance, but its agricultural products are: these include, besides cereals and garden products, tobacco, madder, flax, bulbs, shrubs and trees. The tulip industry is famous.

Colonial Possessions.—The colonial possessions of the Netherlands are entirely island, consisting of the Dutch East Indies and the Dutch West Indies. The former embrace Java and the neighboring island of Madura, and the outposts, which include Sumatra, Borneo, Sunda Islands, a part of New Guinea and a number of small groups and archipelagoes. The Governor-General is the executive head, and, under the native Constitution, has legislative power as well.

The islands are rich agriculturally, having an extremely rich soil. Religious liberty is enjoyed, and there is a public school system.

The revenue is nearly the same as the expenditure. For 1901 it was about $49,975,311, being about $16,850 more than the expenditure.

The Dutch West Indies are not so important as the East. They consist of Surinam (a part of Dutch Guinea) and the colony of Curacao. Surinam is governed by a Governor. The expenditure in 1901 amounted to over $900,000, which was about $93,666 more than the local revenue.

Curacao is likewise ruled by a Governor, assisted by two Councils.

DUTCH COLONIAL POSSESSIONS.

Possessions.	Area in Sq. M.	Population.	Revenue.	Expenditures.
Dutch East Indies:				
Java, Madura and the outposts	736,400	34,090,000*	$59,974,372‡	$59,954,152‡
Dutch West Indies:				
Dutch Guiana (Surinam)	46,060	67,128†	929,600†	1,082,000†
Curacao	403	51,693†	240,000‡	280,000‡
Totals	782,863	34,208,821	$61,143,972	$61,316,152

*1897. †1899. ‡1901.

Events in 1902.—The serious illness of Queen Wilhelmina of Holland in the Spring of 1902 was a cause for alarm and regret throughout the civilized nations. However, the Queen recovered during the Summer, and is now reported to be in excellent health and well able to undertake the cares of State.

During the illness of the Queen there were numerous reports current of an estrangement between Her Majesty and the Prince Consort, but since her recovery these reports have been silenced, and it seems probable that there was but little foundation for any of them. The relationship of the royal couple appears to be upon a peaceful basis.

Nevada.

Capital:
CARSON CITY.

The region within the limits of Nevada forms a part of the Mexican cession of 1848. The Territory was created by an act of Congress, March 2, 1861, from a portion of Utah. A portion of California was included by this act within the Territory, but the State refused its transfer. By an act passed in 1861 a further portion of Utah was added, extending the boundary east of the 115th meridian. Nevada was declared a State October 31, 1864, and a third portion of Utah was added in 1866, extending the eastern boundary of the State one degree of longitude. By the same act the portion of the State south of the 37th parallel of latitude was added to Arizona. The first settlements within the present limits of Nevada were made by the Mormons in 1848 and the two or three years following. The discovery of gold in 1849 attracted some miners, but the real growth of the State dates from the discovery of silver in 1859. Within two years after that time the population had risen from about 1,000 to 16,000, and the mines were in full operation.

Nevada has an area of 110,700 square miles, and in 1901 its population was estimated at 42,000. The census reports show that the manufacturing industries of the State declined steadily from 1870 to 1890, but gained somewhat during the last decade. The decrease in gold and silver mining accounts for the decrease in manufacturing. Car construction and repair shop work were of leading importance in 1900, the products being valued at about $300,000. Flour and grist mills and portant industrial interests. and condensed milk form other im

Gov. John Sparks.

The Legislature of 1901 passed an interesting franchise law, which provides that street railway fran chises may be sold by the officials of the city concerned to the highest bidder, and the bidding corporation is required to file a bond for the due fulfilment of its contract. No franchise may have life longer than twenty years. Another corporation law directs that every foreign cor poration doing business in Nevada shall each year publish in a daily newspaper for one week a state ment of its previous year's business and of its financial condition.

An act to protect grazing lands in Nevada provides that all live stock driven into the State from other States and Territories shall be assessed as personal property, and the tax thereon shall be immediately paid, notwithstanding that taxes may have already been paid in other States or Territories. An act was passed providing for the payment or a bounty to encour age the boring of wells for oil, natural gas and water. The person first producing five barrels of crude petroleum was to receive a bounty of $1,000; the first who discovered natural gas to the extent of 1,000 cubic feet should receive a like sum, and whoever sunk a well to the depth of 1,000 feet and obtained a flow of 60 gallons of water a minute should receive $2,500.

The election law of 1891 pro vided that the voter should mark a cross in black pencil opposite the name of the candidate for whom he wished to vote. This law was amended to make it necessary to stamp the cross with black ink by means of a rubber stamp provided by the election clerks. In this way it was thought to abolish the alleged practice of substituting pen cils other than those provided by law and so invalidating votes.

Several petitions were presented to Congress. One asked that a convention be called to adopt an amendment to the Constitution providing for the direct election of United States Senators. Congress was asked that certain Indian reservations be opened for the mining of gold, silver and copper, providing the Indians were recompensed and that they offered no objections. Another petition was passed indorsing the resolutions of the National Irrigation Congress held at Chicago in 1900, asking Congress to appropriate money for the reclaiming of arid lands, the preservation of forests, the building of artificial reservoirs and the development of artesian and subterranean sources of water supply.

In this connection Congress was reminded that there were many thousands of acres of uninhabited land in Nevada and of no appreciable value, and the expense of irrigating these lands was beyond the means of the State. It was believed also that these irrigation schemes should not be undertaken by private individuals, and that the water of all streams in the arid country should remain subject to public control, and the right to use water for irrigation purposes should inhere in the land irrigated and to be used for the benefit of all the people.

The Silver party and the Democrats of Nevada formed what was practically a fusion party in 1902, dividing the nominations, and ratifying these in joint convention. At the election in November Sparks, the fusion candidate, was chosen Governor by a large majority, and nearly all the rest of the ticket was elected.

New Hampshire.

Capital:
CONCORD.

New Hampshire was first visited by Europeans in 1614 and the first settlements were made at Dover and Portsmouth in 1623. In 1641 the district was annexed to Massachusetts, and in 1679 became a royal province, though it was re-annexed to Massachusetts ten years later. It became a separate province again in 1741 and remained so until the Revolutionary War. Until the English gained possession of Canada the colony was harassed by the Indians, and in 1689 the town of Dover was nearly wiped out of existence. In 1776 New Hampshire made a public declaration of independence and established a temporary government to continue during the war, thereby putting a stop to the claims made by New York to that section of the colony now embraced within the limits of Vermont.

New Hampshire has an area of 9,305 square miles, and in 1901 its population was estimated at 415,000. The abundant water power of the State and the proximity of its southern portion to the business and financial centres of New England have been important factors in the growth of manufacturing, though the barreness of the land, making farming unprofitable, has stimulated the people to efforts along other lines. Boot and shoe manufacturing forms the leading industry, according to the census of 1900, with the manufacture of woollen goods ranking second. Manchester is the manufacturing centre of the State, and some of the finest woollen goods made in the country come from this city. Lumber and timber products, paper and wood pulp, foundry and machine shop goods and hosiery and knit goods stand in the order named.

Digitized by Google

One of the most important acts passed by the Legislature of 1901 provided for the reorganization of the Supreme Court of the State. The then existing Supreme Court of seven judges was abolished and there was established instead a Supreme Court of five judges and a Superior Court of five judges. The Superior Court retains the jurisdiction of the former Supreme Court at trial terms, for the final tribunal on matters of fact, while the Supreme Court has appellate jurisdiction in questions of law. The Governor was given power to nominate the officers of both courts, and the first year nominated all the seven judges of the previous Supreme Court.

Gov. N. J. Bachelder.

Provision was made for the election of delegates in November, 1902, to revise the State Constitution. Under the existing Constitution it is provided that the electors shall vote every seven years on the question whether the Constitution shall be revised. The question was affirmatively voted on in 1900, though there had been no agitation for constitutional revision. The Legislature provided for a convention to meet at Concord in December, 1902, to prepare amendments to be submitted to the voters for ratification. An act to prevent hunting and fishing clubs from acquiring an undue amount of property in New Hampshire provided that thereafter no hunting or sporting clubs could acquire property in the State without first being incorporated by the Legislature. All bodies of fresh water with an area of 20 acres were declared to be waters held in trust for public use, and corporations and individuals were hence forth to be denied any rights to these waters not held in common by all citizens of the State.

An act was passed requiring employment bureaus to be licensed. Towns as well as cities were authorized to provide by ordinance for the regulation of plumbing and the issuance of licenses to plumbers. Upon petition of five per cent. of the legal voters of any city or town it is made the duty of the local school board to maintain, in addition to the other schools required by law, evening schools for the instruction of persons over fourteen years of age. A commission was authorized, to be appointed by the Governor, to investigate the advisability of establishing a State hospital for consumptives, and to report at the next session of the Legislature, to be held in 1903. Penalty for kidnapping was made from five to thirty years' imprisonment. A prominent measure which failed of passage provided that in towns of 2,500 inhabitants and over the question of granting liquor licenses should be submitted to the voters biennially. Congress was petitioned to provide for a constitutional amendment for the direct election of United States Senators.

The platform adopted by the Democrats at their State Convention demands the abolition of all tariff on Trust made articles, free trade with insular territories, independence in the Philippines. The convention refused to favor woman suffrage. The Republican State platform commends the administration of President Roosevelt and declares for protective tariff.

New Jersey.

—

Capital:
TRENTON.

The earliest colony in New Jersey was probably planted at Bergen, between 1617 and 1620, by the Dutch of New Amsterdam, who claimed all the territory as part of New Netherlands. In 1634 Sir Edmund Ployden obtained a grant of land along the Delaware from England, and named it New Albion, and a few years later a small party of Swedes and Finns purchased a section of the same territory from the natives and planted several settlements. The English were driven out by the Dutch and Swedes, and in 1655 the latter were dispossessed by Peter Stuyvesant, who sent most of them back to Europe. In 1664 Charles II. of England granted all the territory between the Delaware and the Connecticut Rivers to his brother, the Duke of York, who began to establish his right by the capture of New Amsterdam and finally of the entire region. Quarrels as to ownership occupied much of the history of the State after the arrival of the Duke of York, and it was not until 1702, when the proprietors surrendered the right of government to the crown, that peace was established among the rival claimants. In 1708 New Jersey received a distinct administration, with Lewis Morris as Governor, and in 1776 adopted a State constitution.

Gov. Franklin Murphy.

New Jersey has an area of 7,815 square miles, and in 1901 its estimated population was 1,932,000. For two decades the State has stood sixth in rank in manufactures, its industrial position being due largely to its transportation facilities and its proximity to large markets. The coal district of Pennsylvania being but about fifty miles from the western border of New Jersey, and there being a good quality of iron found within the State it is natural that the iron and steel industry should rank among the most important, though the first place is occupied by the manufacture of textiles, the capital invested in this industry in 1901 being $75,915,746. In the silk industry, according to the last census, the invested capital was $29,285,792.

The great growth of the silk industry at Paterson began during the decade ending with 1870, and at present this city ranks as the first in silk manufacture in the United States. Petroleum refining, a comparatively new industry, has assumed gigantic proportions within recent years, and is now one of the leading manufacturing interests in the State.

Very little legislation of general interest was enacted by the State Legislature in 1901. At the session of 1902 several acts of importance were passed. The Governor was authorized to appoint a commission consisting of three persons to examine into the advisability of a new primary election law, which was to report its findings to the next session of the Legislature and draft such a law as it might think best. The commission appointed was composed of Edward C. Stokes, George L. Record and Joseph Munn. This commission has taken hold of the question vigorously, writing to the various States in which advanced ideas regarding primary elections prevail, and expects to have a report ready when the Legislature convenes in 1903. An act was also passed permitting the use of voting machines at all elections within the State, a commission of five being appointed whose duty it is to examine all machines offered for use before they are accepted.

Acts were passed revising the statutes relating to marriage and divorce, the changes being chiefly in the manner of procedure rather than in regard to causes and judgments. The Court of Chancery was given jurisdiction over all causes of divorce or nullity and of alimony and maintenance. Another act pro-

Digitized by Google

vided for factory inspectors whose duty it should be to see that the laws regarding the health and comfort of laborers be carried out. The statute permitted the appointment of women to this position, and a lively campaign was carried on by applicants for the appointment. An order was issued by the State Supreme Court in June, prohibiting lawyers from New York City practicing before the courts of New Jersey on the grounds that New Jersey lawyers are not permitted to practice in New York or Brooklyn. This order was rescinded later, however, it being found that it caused too much trouble for the New York attorneys who had corporation business to transact in New Jersey.

On July 28, 1902, election riots took place in Camden at the Congressional primary, caused, it was claimed, by the presence of "repeaters" from Washington and Philadelphia, imported by one of the factions. Two men were killed and several severely injured.

On April 3, Atlantic City, the famous coast resort of the State, was badly damaged by a fire which destroyed several hotels and a number of residences and business places along the "board walk." The damage was estimated at more than $1,000,000. In February and March Paterson was flooded by the overflow of the Passaic River, swollen by the heavy rains of two weeks' duration. Factories were forced to shut down and the main part of the city was several feet under water. To add to the distress fire broke out early on February 9, and the firemen had to work in water to save the city from being destroyed. The property loss amounted to nearly $10,000,000. An area a mile long and a third of a mile wide in the business part of the city was entirely destroyed, the fire burning for a night and a day, and being stopped finally by the free use of dynamite. Although the burned district included residences as well as business houses, and hundreds of families were made homeless, not a life was lost in the flames or through the falling of walls. The only fatality reported was the death of an old woman who fell down stairs in a house where she had been taken for safety. The city was put under martial law and no persons were permitted in the burned section without special permit. Help was rushed from all directions, and as soon as possible after property losses had been adjusted the work of rebuilding began.

On June 18, 1902, serious rioting occurred in the streets of Paterson, as a result of the strike of the silk dyers in all the large mills. The mobs were incited, it is claimed, by the anarchists who make their home in that city. The trouble really began on the morning of April 22, when one of the "boss dyers" of the city received a letter demanding a time limit of 55 hours a week, at 20 cents an hour and 30 cents overtime for the dyers' helpers. This class of laborers had been receiving 16½ cents an hour, or $9 a week. Thirty minutes were allowed the employers to make a decision, and promptly at 9:30 o'clock work stopped. The strikers marched to the other silk mills and by night every one of the 3,700 dyers, helpers and silk finishers had been forced out. For eight weeks there was no serious trouble. The strikers formed a union called the United Dyers, Helpers and Finishers of America, and the boss dyers formed the Silk Dyers' Association. In June, however, the lawless element succeeded in getting control of the people, and under the leadership of two men, the silk mills were attacked and property destroyed. The police force of the city was entirely unable to cope with the mob, and help was asked of the Governor. Troops were sent at once, and upon their arrival peace reigned, and within a week, or by June 25, the strike was declared off.

September 21 the Bamford Silk Company brought suit against the city of Paterson for $2,500 damages, under the Riot act that makes a municipality liable for damage done to property in a riot. In 1885 the city was sued under similar circumstances and mulcted in damages. The act was then declared constitutional by the Supreme Court.

New Mexico.

—

Capital:
SANTA FE.

New Mexico was among the first of the interior sections of North America to be visited by the Spaniards, nearly a century before the English landed on the Atlantic coast. Alvar Nunez reached New Mexico before 1537, the expedition of Marco de Niza followed in 1539 and that under Coronado a year later. About 1581 Augustin Ruiz, a Franciscan missionary, entered the country, but was soon murdered by the Indians. Formal possession of the region was taken by Juan de Onate in either 1595 or 1599, and the missionaries who accompanied his expedition met with much success in Christianizing the natives. Many of the Indian tribes, and especially the Pueblos, were found in an advanced state of civilization, and these latter were among the first to embrace the new religion offered by the Spanish priests. Oppressed by the newcomers, the Indians began to make resistance against them, and in 1680 succeeded in driving the Spaniards from their country. In 1698 Spain regained possession of the country and held it until 1846, when Santa Fe was taken by the United States force under General Kearney, who soon after conquered the whole territory from Mexico. In 1848 it was ceded to the United States by the treaty of Guadalupe Hidalgo. A territorial government was formed in 1850, and since 1875 the question of the admission of New Mexico as a State has been before Congress.

New Mexico has an area of 122,460 square miles, and in 1901 its population was estimated to be 199,000. The aggregate value of the manufactures of the Territory is small, mining and stock raising being the most important indus tries, agriculture ranking next. New Mexico has a larger number of sheep than any other Territory, and several wool scouring plants have recently been established.

The last session of the Legisla ture was in 1901, and several im portant acts were passed. A State Board of Health was created, with power to examine applicants for certificates for the practice of medicine. The act defined the practice of medicine to include the treatment of any physical or mental ailment and the recommending or prescribing of any curative drug, appliance or agency, whether "ma terial or not material," and re ceiving compensation for the same. All persons are prohibited from practising medicine who have not received certificates from the State Board of Health, making it appear that Christian Scientists and osteo paths are debarred.

Gov. Miguel A. Otero.

An act for the protection of children in schools provides that no teacher may be engaged or may continue to teach who has tubercu losis. Teachers before being en gaged are subjected to medical examination. Another act provides that any teacher debarring a child from school on account of race or nationality shall be discharged and forever after prohibited from teach ing in the public schools or from holding any office of honor or profit in the Territory.

It was recommended that Con gress pass a law prescribing that whenever the locater of a mining claim did not perform the assess ment work required by law within ninety days he should forfeit his claim, provided that he might lo cate there again six months after, if his claim had not been pre empted in the meantime. This was suggested as a substitute for a bill introduced into Congress by Senator William A. Stewart at the request of the Governor of Alaska, which provided that if assessment work were not done by the 31st of December of the year in which the claim was located the claim should be forfeited and the locater could not again pre-empt it.

Digitized by Google

Considerable progress was made during 1901 and 1902 in preparing for the irrigation of arid lands. In March, 1901, the Legislature, acting in accordance with a Federal law of 1898, by which 500,000 acres of public domain were given to the Territory on condition that such land be irrigated, passed an act creating a Territorial Commission of Irrigation, vesting it with power to select sites for permanent reservoirs, to advise with the United States Commissioners for the selection of donated lands and to approve contracts made in connection with irrigation enterprises. A contract was awarded for the reclaiming of 50,000 acres of arid land, and by the end of 1902 contracts had been let for nearly all of the 500,000 acres. Corporations constructing the irrigation systems were to be given part of the proceeds from the sale of the donated lands.

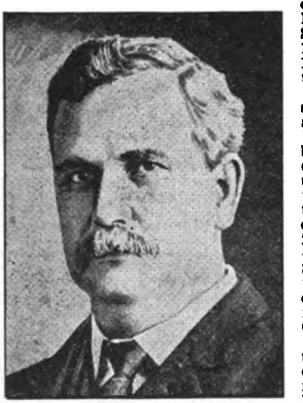
In his annual report for 1901 the Governor of the Territory again made a strong plea for the admission of New Mexico as a State. He said that there was over $150,000 worth of taxable property in the Territory, that the population numbered over 250,000, that the Territory had invested more money in schools per capita than any other Territory or State, that it had more newspapers per capita than any State, and that Statehood had been promised by both large political parties.

New York

—

Capital:
ALBANY.

The first white men to arrive at New York found the country populated by some subordinate tribes of the Algonquin Indians, and by the Five Nations of the Iroquois. The names bequeathed to various places indicate to which tribe they belonged. In July, 1609, Samuel Champlain, having ascended the St. Lawrence River, discovered the lake which bears his name, and on September 6 of the same year Henry Hudson, with his company of fur traders, discovered the bay of New York, and three days later entered the river which now bears his name. In 1614 the first Dutch settlement was made on Manhattan Island, and the name of New Netherlands was applied to that unoccupied part of America lying between Virginia and Canada. The first permanent agricultural settlement was made by the Dutch at Fort Orange, now Albany, in 1623, and by a company of Walloons on Long Island, a short time afterward. In 1626 the island of Manhattan was purchased from the Indians, and in 1629 an aristocratic element was introduced. About 1638 unprovoked assaults upon Indian villages brought about a serious war, which threatened to exterminate the colony, but on the coming of Peter Stuyvesant the Indians were pacified and remained so until the capture of New Amsterdam by the English under Colonel Nicolls, in 1664. The name New York was applied then to the whole province, the English claiming the country as a part of Virginia, under the prior discovery by Cabot. The Dutch engaged in slave trade in 1627, and at the time of the surrender, in 1664, the colony contained more slaves, in proportion to population, than Virginia. In 1688 New York was placed, with New England, under the administration of Andros, and Francis Nicholson was appointed Lieutenant-Governor of New York. In 1689, under the leadership of Jacob Leisler, the colony revolted from the tyranny of Nicholson, seized the government and administered it under the name of William and Mary, Leisler being the nominal head, though never officially recognized. In 1691 Leisler and his son-in-law, Milbourne, were arrested, tried for treason and executed. On the night of February 9, 1690, a party of French and Canadian Indians burned Schenectady and massacred nearly all the inhabitants. The peace of Ryswick, in 1697, concluded the hostilities between the French and English, and troubles with the Indians ceased until 1702, when Queen Anne's war broke out, but from this date on until after the close of the Revolutionary War, settlements in the northern part of the State and near the mountains were subjected to numerous Indian raids. The original grant of New York included all land between the Delaware and Hudson Rivers. In 1664 the proprietor sold the territory included in the present State of New Jersey; the Connecticut boundary was established in 1731; the claims of Massachusetts were finally settled in 1786; in 1790 Vermont was erected into a separate State, and the dispute between New York and New Hampshire was then settled.



Gov. Benjamin B. Odell, Jr.

New York has an area of 49,170 square miles, and by the census of 1900 its population was 7,268,012, and in 1901 it was estimated to be 7,406,000. The population of New York City in 1900 was 3,437,202. According to the census there has been a steady increase in the manufacturing industries of the State during the last decade, though the greatest increase in value of products is shown for the decade ending with 1890. The natural resources which, with its geographical and topographical position, have contributed to make New York a great industrial State are a rich soil, an excellent climate, extensive forests and mineral deposits. Horticulture is favored by the mild climate prevailing in the neighborhood of Lakes Ontario and Erie and the smaller lakes in the central part of the State, and where the land is accessible to the cultivator, as in the higher Adirondack region, the yield of wealth in the form of forests has supported great lumber and paper making industries, and the mineral deposits have furnished material for still other industries. Coal is lacking, but iron is found in several counties. The clay beds along the lower Hudson are the centre of one of the greatest brick making districts, and near them are extensive cement beds. In the production of granite, sandstone, slate, marble and limestone, New York ranked fourth in the United States in 1899, and since 1893 the State has ranked first in the production of salt. Gypsum, talc, graphite, petroleum and natural gas are found in small quantities.

The growing industries nearly all fall in the group of highly finished articles and luxuries demanded by an advancing civilization and a high state of the arts and sciences, and many of them pertain peculiarly to a city civilization. New York now ranks first of all the States in the production of wood pulp for newspaper stock. It is a noteworthy fact that the production of confectionery now exceeds that of iron and steel in the State. The most important industry in New York State is the manufacture of clothing. In 1900 the 4,204 establishments reported gave employment to 90,017 wage earners, or 10.6 per cent of the wage earners in the State. The production was valued at $233,370,447, or 10.1 per cent of the total value of the products of the State. The increase in the value of the products for the decade ending 1900 was 64.4 per cent. As early as 1830 New York merchants began to supply a demand for ready-made clothing in the South and West, and since then the demand and the ability to satisfy it, have grown with extraordinary rapidity. The manufacture of foundry and machine shop products ranks second in the State, and printing and publishing holds the third place. Textile manufacturing, refining of sugar and molasses, distilling of liquors, manufacture of tobacco, and lumber and timber products, flour and grist milling, manufacture of chemical products, men's furnishings, and more particularly, shirts and collars, dairy products, and the manufacture of boots and shoes, rank among the other important industries, in the order named. Of the 78,658 manufacturing establishments in the State in 1900, 62,567, or 19.6 per cent, were located in 106 cities and villages.

The New York State Legislature in 1902 passed several laws of general interest. The indirect taxation of trust and insurance companies was increased and the amount of revenue to be raised by direct public taxation was correspondingly decreased. The Boards of Managers of the State Hospitals for the Insane

Digitized by Google

were abolished and the administration of the affairs of such institutions was transferred to the State Commission on Lunacy. The Governor was directed to appoint a fiscal supervisor for the affairs of all State charitable institutions, whose duty should be to revise all estimates for the maintenance of such institutions. The appropriation for the construction of new highways was increased from $420,000 to $750,000, and a law was passed providing that the State shall pay 50 per cent of all sums levied by towns for highway repairs, instead of 25 per cent as formerly. An act was passed prohibiting the shooting of live pigeons in tournaments. The amount appropriated to rural free schools was increased to $332,500 for the year. An appropriation of $100,000 was made for a New York State building at the St. Louis Exposition in 1903. The right of married women to bring suit against employers for wages due them was upheld by the Legislature, which gave them the right to use their own name for such purposes.

On January 2, 1902, two trains crashed together in the New York Central Railroad's tunnel, leading into the Grand Central Station, New York City, and seventeen lives were lost, while a score or more persons were seriously injured. The wreck seems to have been due to the smoke and fog in the tunnel, which prevented the engineer of the second train seeing the train ahead on the same track. Most of those killed and injured were from New Rochelle, a small town of homes of New York business people. There seemed to be a tendency to put the blame for the accident upon the engineer, who escaped death, but the newspapers, almost without exception, demanded an investigation of the conditions which made the wreck possible. Suits for injuries and death were brought against the railroad company, and up to the time this book goes to press verdicts to the amount of $307,000 had been rendered. The largest single verdict was for $60,000, awarded the widow of Henry G. Dimon. The company is appealing from nearly all the verdicts.

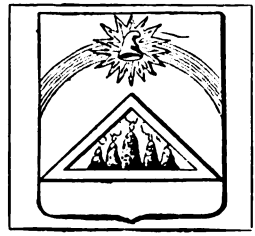
On August 30 a strike was declared by the employes of the Hudson Valley Railway Company, a street railway company doing business in Saratoga County, the men demanding an increase of wages and the recognition of the union. Much violence was shown as the strike progressed, and the Sheriff asked for troops, feeling himself unable to cope with the situation. Martial law was practically declared along the lines of the company's road, and attempts were made to run cars under military protection. On October 17 a committee of the strikers called on the company to effect an agreement for the end of the trouble, but without success. The company offered to take back the old men without regard to membership in the union, with the exception of several considered ringleaders, but refused to deal with its employes other than as individuals. It was promised that the question of increase of wages would be considered after work was resumed. The men refused to accept these terms and the strike continued, with the prospects of lasting all Winter.

The Democratic State Convention was held at Saratoga October 1. The platform adopted declared for tariff revision, condemned the trusts and especially the coal and beef trusts, advocated government ownership of coal mines, territorial expansion without colonization, and reiterated many of the declarations of the Kansas City platform. The Republican State platform, adopted at the convention held September 24, indorsed the administration of President Roosevelt and advocated his nomination for President in 1904, commended the Philippine policy and declared for legislation regulating trusts.

Nicaragua.

—

Capital:
MANAGUA.



From the fact that it offers a ready means of communication between the Atlantic and Pacific Oceans, Nicaragua holds an important position among the Central American Republics. The country, which resembles in shape an isosceles triangle, has an area of about 49,000 square miles. The Caribbean coast measures about 300 miles from north to south, while the Pacific coast is about 200 miles in length.

The topographical features of Nicaragua are largely determined by two mountain ranges which traverse the country in a general direction from northwest to southeast. Between these two ranges lies the great interior basin, comprising an area nearly 300 miles long by 100 wide, in which are situated the two beautiful lakes which form such important features in the physical geography and economic conditions of the Republic. Lake Nicaragua, the ancient Cocibalca, the larger of these, is about 92 miles long and 34 wide, and varies in depth from 12 to 83 feet. The lake receives the waters of the Rio Frio, which has its source in Costa Rica, and of several smaller streams. Its outlet is the River San Juan, flowing to the Caribbean sea, the waters of which and part of whose bed will be utilized for the inter-oceanic canal in case the Nicaraguan route should be selected. Lake Managua is about 32 miles long by 16 wide. It is not so deep as the larger lake, but a line of five steamers is now running upon it.

The fluvial system of Nicaragua lies almost entirely to the eastward of the mountain ranges, and consists of numerous rivers of varying size and volume. The Coco is about 300 miles long, but does not carry an amount of water proportionate to its length. The Rio Grande is of considerable size. For a distance of 100 miles from the sea it averages 100 yards in width and 15 feet in depth, and would be navigable for vessels of considerable size, were it not for the dangerous bar at its mouth, which seldom carries more than eight feet of water. The deepening of the water on this bar will undoubtedly be accomplished in the near future, and this fine river opened to the commerce of the world. The Bluefields River is navigable for large steamers from Bluefields to the Boca de Rama, a distance of about 65 miles. The San Juan River is the most important water course of Central America, forming the outlet through which are discharged the waters of the great hydraulic system of Lake Nicaragua, but its navigation is interrupted at several points by rocks and rapids.

The Republic of Nicaragua is divided into twelve departments. With a productive soil and a salubrious climate it has conditions favorable for sustaining a vast population. The present population is about 380,000. Whenever conditions are fulfilled which will give access to the world to the products of their labor, there will, doubtless, be a large influx of immigrants, as has been the case in other parts of Central and Southern America.

It is claimed that in the whole of Central America the only country which excels Nicaragua in mineral wealth is Honduras. The mines thus far discovered are very valuable, but the mining industry has not developed satisfactorily because of the lack of capital, skilled labor and convenient means of transportation. At present only the gold mines are worked. The famous silver mines which gave such fabulous yieldings in the sixteenth and seventeenth centuries are no longer worked, as they require larger capital and a greater knowledge of the subject of mining than is now available. The total production of gold in the country is estimated at 22,754 ounces annually.

The country enjoys great regularity of temperature, while the trade winds which sweep across the country ventilate it so thoroughly as to produce a climate agreeable to the senses and favorable to health. Reports show a remarkable immunity from disease and sickness, both among natives and those coming from other countries. The atmosphere has a remarkable uniformity of pressure, which is very favorable to the maintenance of good health, and is particularly beneficial to the respiratory organs.

The products of the country are of the most varied character, including coffee, India rubber, bananas, cocoa, sugar, cotton and other articles.

Since 1825 the United States Government has given more or less attention to the investigation of the question of the Isthmian canal. Surveys and estimates of cost have been made and there is now a strong party in this country which favors the construction of such a canal. The commercial problem, which the opening of a canal across Nicaragua would solve is the same to-day as that which stimulated Columbus and his contemporaries and successors to their arduous efforts. It is still the discovery of a direct east and west route for the commerce of the world.

Digitized by Google

The country has 90 miles of railroad, yielding a net profit to the Government of about $700,000.

The form is a sovereign, free and independent Republic, divided into three branches, legislative, executive and judicial. The executive power is vested in a President, assisted by a Cabinet of four members. Slavery is prohibited and the death penalty is inflicted only for murder, assault followed by death, and arson under aggravated circumstances.

The revenue of Nicaragua is steadily increasing, and its total debt is only about $3,000,000.

The religion of the country, as recognized by the Constitution, is Roman Catholic, but no person is molested on account of religious ideas. The country has some 325 schools, one university and one public library.

The commerce of Nicaragua is steadily increasing. The postal service is in excellent condition and its business is rapidly increasing.

Reports show that there had been a decrease in the exportations during 1902, due, generally, to poor crops. The imports from the United States to the Republic also showed a decrease. This latter decrease was also due to poor agricultural conditions, making it necessary for the planters to economize.

On February 2, 1902, Senor Don Jose Santos Zelaga was inaugurated President for the third successive term.

The coffee crop of 1902 was the largest ever produced in the Republic, the value being estimated at about $3,000,000.

The present Cabinet is as follows: Minister of Foreign Relations and Public Instruction, Dr. Fernando Sanchez; Minister of the Interior and Justice, Fernando Abanza; Minister of Finance and Public Credit, Col. Felix Pedro Zelaya; Minister of War and Navy, Gen. Juan B. Saenz; Minister of Agriculture and Public Works, Dr. Leopold Ramirez Mairena.

North Carolina.

Capital:
RALEIGH.

The first attempt at the settlement of North Carolina was made on Roanoke Island by a party under Ralph Lane, sent out by Sir Walter Raleigh. Quarrels with the Indians caused this party to stay but a year and it returned with Sir Francis Drake's fleet. Other colonists were sent out by Raleigh the same year and the year following, but none of them returned and all were supposed to have been killed by Indians. It was not until the seventeenth century that any permanent settlement was formed. In 1663 Charles II. formed the Province of the Carolinas, which he granted to eight noblemen, who were made joint proprietors and vested with jurisdiction over the colonists. A scheme of government was written by John Locke and was made the fundamental law for about twenty-five years. Albemarle, the name then given to what now constitutes North Carolina, was augmented by settlements from Virginia, New England and Bermuda, and by the beginning of the eighteenth century the colony had become noted for its tobacco. About 1711 the Tuscaroras began a war of extermination, but with the assistance of other colonies, the people of North Carolina were able to subdue the tribe in 1713, and later the other hostile tribes were also reduced to subjection. In 1720 Carolina became a royal province, and North and South Carolina became distinct governments. In 1775, an association for the defence of the rights of the colony, was formed in Mecklenburg County, and renounced all allegiance to England, anticipating the action of the united colonies by more than a year.

North Carolina has an area of 52,250 square miles, and in 1901 its population was estimated to be 1,922,000. The manufacturing of the State depends largely upon its natural resources, the cotton and tobacco fields and extensive forests. Transportation is facilitated by the rivers and the extent of sea coast, though the interior of the State, especially in the western part, is mountainous and the roads are bad. The manufacture of cotton goods is the most important industry, having grown with marked rapidity during the past five years. This industry ad vanced 196.7 per cent in the decade ending in 1900.

Gov. Charles B. Aycock.

The lumber and timber industry ranks next in importance. North Carolina pine being used extensively ly in interiors of buildings as a cheap hard wood. Associated some what with this is the production of turpentine and rosin, the State still continuing to hold its position as first in the production of naval stores.

The Legislature of 1901 passed a stringent anti-trust law, repealing the act of 1899. By the new law a trust was defined as a combination of two or more persons, companies or corporations who attempt to restrict trade in any line, to increase or reduce prices; to prevent competition in producing, selling, purchasing or transporting goods; to fix a controlling price for any article; to enter into an agreement not to sell below a certain price, to pool interests so as to affect prices or to sell goods so as to discriminate between the trade of any States or Territories. Such actions are prohibited, and persons found guilty of any of them are to forfeit their charters and their right to do business in the State. Farmers and laborers are specifically excluded from the provisions of this law. The law of 1889 prohibiting the formation of a corporation with a capital stock of more than $1,000,000, was repealed.

There was considerable agitation during this session of the Legislature for the enactment of a law prohibiting child labor. It was shown that children, both black and white, were extensively employed in the cotton mills of the State, and those opposed to the law claimed that the employment of children was necessary on account of the poverty of the families from which they come. Representatives of nearly all the factories presented to the Legislature agreements to the effect that the regular week's work should not consist of more than sixty hours, and that no children under twelve years of age should be employed in a mill during the term of the public school, and furthermore, the factories promised to furnish their share of the taxes necessary to carry on the school system. The Judiciary Committee, to which this matter was referred, reported that the evils of child labor had rapidly diminished and recommended that no child-labor law be passed.

An act on libel provided that if a newspaper publishes libellous statements in good faith, and makes due retraction, the person injured can recover only the extent of his damages in civil cases, and not more than one penny in criminal cases. A person sending a libellous article to a newspaper shall be considered guilty of a misdemeanor. The Legislature gave assent to the acquisition by the Government of as much of the mountain country in the west of the State as might be needed for a national park reserve. Congress was petitioned to propose a constitutional amendment providing for the direct election of United States Senators.

The Democrats won the State election in North Carolina by about 65,000 majority, this being the first election under which the suffrage section of the new Constitution was observed. A disagreement between the white and negro Republicans also tended to keep the vote of this party down. The negroes claimed that they had not been given sufficient recognition at the Republican State convention, and threatened to fight the regular nominees.

North Dakota.

—

Capital:
BISMARCK.

Dakota originally formed a part of Minnesota Territory, which was organized in 1849, being a portion of the Louisiana purchase of 1803. In 1854 the Territory of Nebraska was formed, comprising a portion of what is now the Dakotas. The Territory of Dakota was organized March 2, 1861, and included the present Territories of Montana and Wyoming. The first permanent settlements of whites were made in 1859, in what are now the counties of Clay, Union and Yankton. On November 2, 1889, the Territory was divided into North and South Dakota, which were admitted as States at the same time.

North Dakota has an area of 70,795 square miles, and in 1901 its population was estimated to be 330,000. The principal industries of the State are agriculture and stock raising, though there has been an increase in manufactures during the last few years. Its manufacturing interests are dependent upon neighboring needs, and except in the case of flour and grist mills products nearly the entire product of the manufactures is consumed at or near the point of production.

The North Dakota Legislature met in January, 1901, and adjourned in March. Amendments were made to the existing divorce laws of the State with the view of destroying ground for criticism for the State's laxity in the matter of granting divorces. The law, which provides that "the effect of the judgment decreeing a divorce is to restore the parties to the state of unmarried persons," was amended by adding, in 1901, the qualification "except that neither party may remarry within three months." Although the Legislature did not modify an other divorce law, which decreed that divorces might be obtained for desertion, cruelty, intemperance and for various other reasons, it did add that divorce could no longer be granted for "incurable insanity."

Gov. Frank White.

An act was passed making it a misdemeanor to sell adulterated or unwholesome food, or food which is an imitation of another food, so that the product deceives the purchaser. The special intent of this law was stated to be to curtail the sale of oleomargarine. It was provided that the State Board of Equalization shall assess, at their actual value for purposes of taxation, the franchise and property within the State of telephone, telegraph, express, freight line and equipment companies. Another tax act provided that a board of equalization should in 1902 and every year thereafter levy a tax in addition to all other taxes equal in amount to one-thirtieth of the bonded indebtedness of the State, so as to provide for its ultimate redemption. A railroad law provides that every railroad shall stop all its passenger trains at county seats, except that interstate trains need not be stopped at county seats of less than 500 inhabitants. A like law passed by the Legislature of Illinois was declared unconstitutional.

Religious property was made exempt from State taxation for the first time, although property used for charitable and educational purposes had previously been exempt. Religious real property, however, to be exempt must not be more than one acre in extent. A libel law enacted that a newspaper should be liable for actual damages only if it appeared that the libel was published in good faith and retraction had been made. In case of libel against a candidate for any political office the retraction must be made editorially at least three days before the election. Libel against any woman was made a criminal as well as a civil offence.

A State Farmers' Institute was created to arrange for and to hold not less than fifteen farmers' institutes each year, at which farmers should be instructed in maintaining the fertility of the soil, improving crops, in dairying and in stock raising. An act for the regulation of barbers provided for the appointment of a Board of Examiners to issue certificates to barbers to practise their trade on proof that they had practised for at least three years, were possessed of the requisite skill and had also sufficient knowledge regarding the common diseases of the skin to avoid the exaggeration and spreading thereof. The law of 1895, allowing a bounty of $1 on every 100 pounds of starch manufactured from potatoes raised in North Dakota, was repealed, it being claimed that the financial condition of the State demanded the strictest economy.

The Democratic State Convention met in Fargo August 1, 1902. The platform indorsed old national issues of the party, favored the direct election of United States Senators, a primary election law, an equitable taxation of corporations. The Republican party was condemned for being dominated by railroad interests, and government by injunction was denounced.

Ohio.

—

Capital:
COLUMBUS.

The first explorations in the territory which now constitutes the State of Ohio were made by the French, the discoveries of La Salle in this region dating from about 1680. These French adventurers were soon involved in quarrels with the English, who claimed most of the country under a grant from their sovereign. The French kept possession of the country until Canada and the whole country west to the Mississippi was surrendered by the treaty of 1763. It was in the war that broke out on account of these conflicting claims that Washington was first heard of. After the Revolutionary War disputes arose between several of the States respecting the right of soil in this territory, which were only allayed by the cession of the whole section to the Federal Government. Virginia retained claim over about 3,000,000 acres near the rapids of the Ohio River for her State troops, and Connecticut reserved a tract of nearly the same size near Lake Erie, known as the Western Reserve. In 1800 jurisdiction over these two tracts was relinquished to the Federal Government, the States retaining their rights to the soil and disposing of it in small lots to settlers, while the Indian titles to the rest of the States were bought up by the Government. In 1799 the Northwest Territory was organized, and shortly afterward Ohio was given a separate government. It was admitted to Statehood in 1803.

Ohio has an area of 41,060 square miles, and in 1901 its population was estimated at 4,212,000. Within the past decade there has been a large growth in manufacturing in Ohio, toward which the great commercial advantages of the State have contributed. Water communication with the Atlantic seaboard, the Great Lakes and the Ohio River makes the problem of transportation easy, and the development of railroads has opened up the interior of the State, but the great manufacturing centres are located on the waterways. Among the natural resources of Ohio are a fertile soil, extensive hard wood forests and an abundance of coal and natural gas.

Gov. Geo. K. Nash.

The most important industry in the State is the manufacture of iron and steel, Ohio leading all States west of the Allegheny Mountains. Natural gas is used as fuel in a few of the rolling mills and steel works, and the coke needed is furnished by Pennsylvania and West Virginia, the Ohio coal not being adapted to the manufacture of coke. Local ores are used in some sections of the State. The manufacture of foundry and machine shop products has the second rank among the industries. In 1900 Ohio led all other States in the manufacture of metal-working machinery.

Flour and grist milling is one of the oldest industries in the State, flour having been sent to New Orleans as early as 1803. Ohio is the easternmost of the corn belt States, and much of the corn raised there is milled within its borders.

The Legislature of 1902 passed but few laws of general interest. An act was passed to require corporations to file annual reports to the Secretary of State and to pay annual fees therefor. Every corporation organized under the laws of the State for profit is required to make a report in writing to the Secretary of State annually, during the month of May, containing facts regarding the location of its principal office, names of officers, date of election, amount of authorized capital stock, nature and kind of business in which it is engaged, and any changes that may have taken place since the preceding report. Upon the filing of the report the Secretary of State shall charge and collect from each corporation a fee of one-tenth of 1 per cent upon the subscribed or issued and outstanding capital stock. Foreign corporations were placed under the same law. Corporations organized in the State, not for profit, are required to make annual reports and to pay fees ranging from $1 to $10, according to the nature of the business done by the corporation and provided for by statute. Failure to pay these fees or to make the reports at the specified time is punishable by fine.

The Legislature exacted that an employer shall be responsible for personal injury caused to an employe by reason of any defect in the condition of machinery or appliances with which the employe had to deal, which arose from or had not been discovered or remedied owing to the negligence of the employer or of any person in the service of the employer intrusted with the duty of inspection and repair of apparatus.

The Democratic State Convention, which met at Sandusky, September 3, 1902, adopted a platform indorsing the principles of the Kansas City platform, "regarding these principles as opposed to imperialism and colonialism, as opposed to trusts, as opposed to monopoly and as opposed to all other legalized monopolies and privileges." Mayor Tom Johnson, of Cleveland, was chosen chairman of the convention, and the platform adopted was largely of his drafting. The Republican Convention adopted a platform which indorsed trade unions, "believing that it is necessary that labor should be intelligently organized." Proper and reasonable trade concessions to Cuba were asked of the Government. The Sherman law is indorsed as an adequate enactment for the control of trusts, and the policy of protection and the status in the Philippines were also commended.

Ohio went Republican at the State election in November, Mayor T. L. Johnson, of Cleveland, being defeated for Governorship by a large majority. A feature of Mayor Johnson's campaign was the use of a large circus tent for speaking purposes, the candidate going from place to place, erecting his tent and delivering his addresses to the voters.

The greatest gains for the Republicans were shown in the counties containing the large cities, while in the rural districts the Democratic gain was unusually large. There seemed to have been a general apathy shown by Republicans in the country districts, who appeared assured of the result of the election.

The Democratic managers claimed that the large Republican majority was brought about by unfair election methods pursued in Hamilton County, in which is Cincinnati, and that the Democratic gains in Cuyahoga County were sufficient to encourage the party. In this county the majority of the Democratic ticket was elected, and it was claimed that in the case where this party lost it was due solely to personal preferences, and involved no local political principles.

The complexion of Ohio's Congressional representation remains the same, 17 Republicans and 4 Democrats. The Republicans lost in the Twelfth district, but gained in the Thirteenth. The total vote for the State was about 800,000.

The centennial of the organization of the city of Cincinnati was celebrated March 5, 1902, with appropriate exercises. A banquet was given by the Chamber of Commerce, at which were present many prominent men who have been directly or indirectly concerned with the growth of the city.

The law passed by the State Legislature in 1896, extending street railway franchises to a uniform date of 1946, or fifty years from the passage of the act, was declared unconstitutional by the Supreme Court in August. A suit was brought by a taxpayer to test the law, and the decision was given by the Court on the grounds that the law arbitrarily and unreasonably classified street railway and municipal corporations, and that it was not of uniform and equal operation. The street railways involved filed an answer, setting out defences which were not passed upon. The railways are operated under lease by the Widener-Elkins Syndicate, which obtained them from the Consolidated Street Railway Company and the Cincinnati Street Railway Company in 1899.

Oklahoma.

—

Capital:
GUTHRIE.

Historically treated, Oklahoma as a Territory is of recent origin, but as a portion of the great tract of Southwestern country it has a history dating back to the days of the Spanish explorers. When Indian Territory was created as a home for all the Indian tribes, with the intention of making there some day a great Indian State, most of what is now Oklahoma was included within its bounds. Some time in the early seventies the name of Oklahoma first appears in political history, the occasion being a bill introduced in Congress to create a Territory out of a portion of the Indian Territory, to be known as Oklahoma. The measure failed of passage, and for more than a decade nothing was heard of the country. In March, 1889, an amendment was tacked on the Indian Appropriation bill, providing for the opening to homestead settlers of the little area of land embracing less than 3,000,000 acres, and lying in the centre of what is now the great Territory. The land was opened in April, 1889, and the first rush of Oklahoma "boomers" took place. In June, 1890, the Territorial Government came into existence, and by the same act of Congress a strip of land known as "No Man's Land," embracing 3,681,000 acres, was added as Beaver County. Other sections were opened from time to time until now the Territory has an approximate area of 38,830 square miles. The population was estimated in 1901 to be 432,000.

Oklahoma is primarily a stock raising and agricultural country with indications of becoming a mining section before another decade has passed. Gold, lead, zinc and copper have been found, but not in paying quantities and surface sandstone and gypsum are widely scattered over the territory. The most promising mine industry of Oklahoma at present seems to be that of salt, of which there is said to be enough on hand to supply the nation. In manufacturing there has been a large increase during the past decade, but the total is insignificant. The rapid development of the cotton raising industry has been attended by a like advancement in the manufacture of cotton-seed oil and cake.

Gov. Thos. B. Ferguson.

The Territorial Legislature of 1901 passed an act creating a Board of Agriculture, to consist of thirteen members, to collect and publish statistics concerning agriculture, horticulture, animal husbandry and kindred industries. The Councils of all cities of not less than 5,000 inhabitants were given authority to establish free public libraries and reading rooms, and levy an annual tax for this purpose, not to exceed one mill on the dollar. Authority was granted for the establishment of high schools in counties having 6,000 inhabitants, and a university preparatory school was created. Additional buildings were granted for the University of Oklahoma.

A law was passed prohibiting the selling or giving away or the bringing into the Territory for that purpose of any cigarettes, cigarette paper or substitutes therefor and making violation of this punishable by a fine of not less than $10 or more than $500.

Agitation continued during 1901 and 1902 for the admission of Oklahoma to Statehood, either with or without coincident admission of Indian Territory. Both the Republicans and Democrats recommended in 1900 that Oklahoma be admitted as a State, and prior to this time several bills had been presented to Congress. The Territory lays stress on the fact that her population is several times greater than that of any Territory ever admitted to Statehood.

One of the first acts of the first legislative assembly in the Territory was to enact comprehensive laws for the establishment and support of a public school system, and it appropriated $50,000 to assist in supporting it. To-day the public school system embraces rural, town and city systems, together with higher educational institutions, including a university, agricultural college and normal school. The average length of the school term in 1901 was four and one-half months. The schools are entirely free, and a uniform system of text books has been in use for ten years. Indian schools are supported by the Federal Government. Among these may be mentioned as chief the Chilocco Industrial Training School, a splendidly equipped institution, which aims to teach the Indian youth of the Territory practical agriculture and mechanical and domestic arts. There are fourteen reservation boarding schools and one day school for the Indians of the Territory. Five mission schools are conducted by various denominations.

The demand for labor has always been good in the Territory, and during the past two years has been far in excess of the supply. The Governor, in his report for 1901, called attention to the fact that it was impossible for farmers to get enough men at wheat harvesting season, and hundreds of men who had been at work on the railway construction deserted their railway work to take positions on the farms. Immigration into the Territory has been largely of well-to-do farmers and business men, and but a small per cent of foreigners.

Public lands subject to entry under the homestead laws have been rapidly taken up during the past three years and at the close of 1902 there was very little public land left suitable for agricultural purposes, though there were about 4,000,000 acres still vacant in the Territory. All but one of the counties of the Territory are reached by railroad, though the areas of the country are so great that there are many sections demanding railroad facilities.

Oman.

—

Capital:
MUSCAT.

Oman is an independent State of Southeastern Arabia, with an area of 82,000 square miles, and a population of 1,500,000. The capital was occupied by the Portuguese until the seventeenth century, and after various vicissitudes it was taken in the eighteenth century by Ahmed bin Sa'eed, of Yemenite origin, who was elected Iman in 1741, and whose family have since ruled. On the death of the Sultan in 1854 Zanzibar was detached from Oman and placed under the rule of the second son, and subsequent troubles curtailed the area of the State in Asia. The revenue of the Sultan amounts to about $250,000. In 1901 the exports were valued at $1,359,893 and the imports at $3,365,883. There is a weekly mail to and from Bombay.

The closest relations have for years existed between the Government of India and that of Oman, and a British Consul and Political Agent resides at Muscat. The revenue of the Sultan amounts to about $250,000. The number of vessels entered and cleared at the port of Muscat in 1900-01, the last year for which reports are obtainable, including the native craft, was 464 of 193,380 tons, of which 242 of 165,237 tons were British. The telegraph cable was extended to Muscat during the past year.

The principal items of export were: Dates, $808,297; cotton fabrics, $4,640; fruit, $40,000; pearls, $55,000; mother-o'-pearl, $117,180; salt, $2,024; fish, $6,992; linen, $15,790. Of the imports the leading features were: Rice, $700,150; coffee, $98,188; sugar, $59,423; piece goods, $372,753; twist and yarn, $216,357; silk and silk goods, $89,772; cereals, wheat and other grains, $193,738; oils of all kinds, $50,611; glue, $80,684; arms and ammunition, $997,730.

Orders and Decorations of Europe.

The chivalric orders and orders of merit recognized by the heads of the various governments in the world are so many that a mere list of them would fill a number of pages in this volume. Admission to them, in the case of monarchies, goes by royal favor, with a few possible exceptions, and some of them are so highly esteemed that the right to wear their insignia enhances even the honor supposed to be derived from noble birth. Even republican governments possess them, and the United States is the only nation of importance possessing no gift of this character to bestow upon its distinguished citizens or upon foreign celebrities whom it may desire to honor. Of these many orders there are three which are regarded as of the highest dignity, each admitting only nobles of the highest rank in the realm wherein it exists, and only sovereign princes or members of reigning families from among foreigners. The Order of the Garter is the most ancient of the three, and it is also the one most coveted. There is no certainty concerning its origin, which some authorities trace to the latter part of the twelfth century. The commonly received story of its origin makes King Edward III. of England its founder, and the year 1344 the date. The King, according to this story, picked up a garter dropped by the Countess of Salisbury at a ball, and rebuked the curious glances of his courtiers as he handed it to its owner by saying: "Honi soit qui mal y pense" (Evil be to him who evil thinks). The fact that a representation of a garter bearing these words is the feature of the decoration representing the order seems to confirm the truth of the story, although the figure of St. George and the Dragon, pendant from the collar worn by the Garter knights, would give support to the claim that the order was originally established as that of St. George and the Dragon. Next in antiquity to this highest of British orders comes the Order of the Golden Fleece, claimed by both Spain and Austria. It was instituted in 1429 by Philip le Bon, Duke of Burgundy, and was divided in 1700, each of the two nations now in possession of it claiming that it has the original. The Order of the White Elephant, the third in this select list, is Danish, and is said to be of great antiquity, but is specifically assigned to the period of Christian I. (1462), and is said to have been reorganized by Christian V. in 1693. The membership is limited to 30 knights besides members of the royal family, and no person can become a knight who has not already become a member of the Order of the Danebrog. The last named order therefore comes naturally next in rank to the three highest. Its institution is assigned to the year 1219, which would make it antedate the British Order of the Garter. Its history properly begins, however, with its revival, after a long suspension, in 1671, since which time it has undergone several modifications. The Order of the Annunciation, the highest in Italy, is another of the older and most honorable in the long list. Under its present name it dates from 1518, when it superseded the Order of the Collar. This carries its origin back to 1362, when its predecessor was founded by Amadeus VI. of Savoy. Orders abound in Germany, every kingdom, principality and duchy in the empire having one or more. The most distinguished is the Order of the Black Eagle, which is conferred only upon such aspirants as can show a lineage on both sides extending back four generations. It was instituted by the Elector of Brandenburg when he was crowned King of Prussia as Frederick I. on January 17, 1701. Russia, which also is a country of many orders, holds above the rest the one named in honor of the country's patron saint—the order of St. Andrew, founded by Peter the Great in 1678. There is a British Order of St. Andrew, but it is better known as the Order of the Thistle, a very ancient one, founded in honor of the patron saint of Scotland, and frequently renewed and reorganized. While Austria holds the Golden Fleece as highest in its list of decorative honors the Order of St. Etienne is one of the most illustrious in the old world, having been founded by Maria Theresa in honor of the first King of Hungary. Until quite recently it was reserved for persons whose noble lineage is traceable far back in history, but its traditions were ignored when the Emperor Franz Josef conferred the order upon President Carnot of France in 1894.

The Pope of Rome has in his gift a decoration originally conferred only upon queens who had distinguished themselves by deeds done for the Church. It is not strictly an order, although sometimes thus designated, but is a token of Papal approbation, and consists of a cluster of roses and buds upon a single stem, all wrought in solid gold, whence its title, the Golden Rose. Pope Leo XIII. has, in recent years, conferred it upon others than queens, including some Americans. There is a Papal Order of the Rose, not connected with the Golden Rose, however, the decoration of which was conferred upon the late Eugene Kelly, a New York banker whom Pope Leo thus honored in recognition of his many benefactions to the Catholic Church. Mr. John D. Crimmins, of New York, is another American whom Pope Leo has visited with signal approbation, bestowing upon him the Order of St. Gregory. A number of other Americans have received similar honors from the Vatican.

Of all the various orders none is better known nor more highly appreciated than that of the Legion of Honor, the ribbon of which commands the respect of a Frenchman wherever he sees it. The order is not an old one, as compared with many others which exist, but it is one which has survived through many political changes in France, and which, from certain points of view, must be regarded as the one which, more than any other, confers genuine honor. It is one which is attained through merit only, and from which none are debarred for lack of ancient or noble lineage. France has had many orders, but this one alone survives, esteemed alike by royalist and republican, by Bonapartist and Orleanist, and abroad as well as at home. The Legion of Honor is the successor of the Order of the Eagle, founded by Napoleon in 1802, which Louis XVIII. and subsequent royal rulers of France continued as the Order of the Holy Ghost, until it was given its present title. This it carried through the Second Empire, and has retained ever since. France has only one other order, known as Le Ordre du Merite Agricole, which was founded for the purpose of relieving the pressure for admission to the Legion of Honor. It is sometimes alluded to as the "Order of the Leek" by persons inclined to facetiousness, but its decoration is highly appreciated by those who receive it, some of whom proudly assert their preference for it.

There are a number of orders which have been especially instituted for women, who are not, as a rule, eligible for admission to the others, except, as in the case of the late Queen Victoria, their position as sovereigns making them the legitimate head of such as exist in their domains. It is an interesting fact that there is one woman who wears the cross of an order instituted for the recognition of great military prowess. Ex-Queen Marie of Naples was admitted to the Russian Order of St. George as a reward for her heroic defence of Gaeta, the last of the Bourbon strongholds. This order was founded in 1769 by the Empress Catherine II. to be conferred only upon a commanding general who has defeated an army of 50,000 men, or captured an enemy's capital, or brought about an honorable peace. Of the orders which may be said to belong to women one of the most illustrious is the Nishani-Shepakat, founded by the Sultan of Turkey in 1878, in recognition of assistance rendered the fugitive non-combatants of the Russian war, just ended, by prominent English ladies. Two American women—Mrs. S. S. Cox and Mrs. Lew Wallace—were given the decoration of this order, a compliment indicative of the Sublime Porte's appreciation of the representation of the United States by the respective husbands of these ladies. England has the Order of the Royal Red Cross, the Order of the Crown of India, and the Royal Order of Victoria and Albert for the benefit of women, who are barred from all the other high orders. In the one last named membership is limited to sovereigns and princesses of the highest rank. As Queen Wilhelmina of Holland was one of the latest admitted to this order, it is apposite to mention here the fact that the young ruler was the first to confer upon a woman the cross of the Lion of the Netherlands, an honor which is one of the most enviable of such distinctions in that kingdom. The woman to whom it was awarded was the Mother Superior of the Sisters of Mercy. Portugal has a Royal Order of Saint Izabel, instituted in 1801, which has been conferred upon few women outside of that country, Queen Alexandra of England being one of the few. Not counting the royal fomally of Portugal and foreign royal ladies, the order must contain 26 ladies of title, each 26 years old, or married, each of whom is bound to visit in turn every week the Foundling Hospital. Every member must attend church on the feast of St. Izabel, unless absent from the kingdom, or prevented by illness from such attendance; and must afterward go to the Foundling Hospital with the Queen. The most recent of orders instituted for women is that of St. Elizabeth, founded by the Emperor of Austria in memory of his wife, the Empress Elizabeth, who was assassinated at Geneva, Switserland, September 10, 1898. It is conferred upon women who merit distinction in the various callings of life, or in special religious, humanitarian and philanthropic work. Austria possesses the oldest of the eleven orders designed for women which exist in various parts of the world. It is known as the Austrian Star Cross Order.

Among the orders of special character there is one which claims attention because of its isolation. It is conferred upon none but Free Masons of the higher degrees, for whom it was instituted in 1811 by Charles XIII. of Sweden, whose name it bears.

Two British orders which must be included in this selection of the most prominent among the great number, are the Order of the Bath and the Order of St. Michael and St. George. The former is supposed to have been instituted by Henry IV. on the occasion of his coronation, and is conferred upon distinguished soldiers and statesmen. The latter is made up of men of distinction in the various colonies, and it is the order conferred upon all those Canadians who, during the reign of Queen Victoria, were raised to the dignity of knighthood.

A Spanish order which exists at the present time, but which is doomed to extinction by the logic of recent history, is the Order of Isabella the Catholic. It is known also as the Royal American Order, and was instituted in 1815, to reward those among Spain's American colonists and dependents who distinguished themselves by conspicuous loyalty to the crown of Spain. The elimination of Spanish rule in America renders this order now meaningless.

Oregon.

Capital:
SALEM.

The name Oregon was long applied to all territory claimed by the United States on the Pacific coast, extending from latitude 42 degrees to 54 degrees 40 minutes, north. Under the treaty of 1818 it was jointly occupied by the United States and Great Britain until 1846, when the latter abandoned all claim to the territory north of the 49th parallel of latitude, and the name Oregon was restricted to the region south of that line. The history of the territory may be said to begin with the discovery of the Columbia River by Captain Robert Gray in 1792. In 1811 the Pacific Fur Company, of which John Jacob Astor was the leading member, established a trading post at the mouth of the Columbia, and called it Astoria, but it was very soon after sold to the North-west Fur Company. In 1848, 1849 and 1850 many settlers were attracted to the country by the California gold fever. The Territory of Oregon was organized by an act of Congress August 14, 1848, and in 1859 it was admitted as a State with its present boundary. Oregon has been troubled by many Indian wars, the most serious being the Modoc war.

Oregon has an area of 96,030 square miles, and in 1901 its estimated population was 424,000. During the last decade the industries of this State have been practically at a standstill. In 1900 Oregon stood thirty-eighth in the United States in the point of population and thirtieth in manufacturing. The extensive forests and excellent water power makes the manufacture of lumber and timber the leading industry, while the Columbia River furnishes nearly all the canned salmon used in the United States. The industry of fish canning is carried on almost entirely by the Chinese, and the centre of this work is at Astoria, near the mouth of the Columbia. During recent years stringent laws have been passed looking to the prevention of wholesale and indescriminate slaughter of salmon, and the industry promises now to be on a paying basis for years to come.

Gov. George E. Chamberlain.

One of the most important acts passed by the Legislature of 1901 was that providing for the submission to the people at the general election in 1902 of an amendment to the Constitution, proposed by the Legislature of 1899. This amendment provides for the initiative and referendum. The terms of the initiative are that on petition of 8 per cent of the voters any law proposed in the petition or any proposed amendment to the Constitution must be submitted to the people for adoption or rejection, and on petition of 5 per cent of the voters any bill enacted by the Legislature must be submitted to the people for acceptance or rejection. The amendment was accepted at the election held June 2.

One of the important labor laws passed by the Legislature requires street railway companies to provide vestibules on their cars for the protection of their employes, from the first of November to the first of April. It was made a misdemeanor to carry on the business of barbering on Sunday. All persons appointed to purchase supplies for public institutions were required to buy, when possible, those grown, manufactured or produced in Oregon. An act provides that all deaf mute children, unless taught at home or in a private institution, shall be required to attend the deaf mute school established by the State for at least six months each year. Congress was petitioned not only to re-enact the Chinese immigration law, but to make it extend to Japanese and other Mongolian or Asiatic races. A petition was also sent to the Federal body asking the passage of the Grout Oleomargarine bill, on the grounds that the proper fostering of the manufacture of oleomargarine, and the prohibition of calling it imitation butter would add much to the industrial wealth of the Northwestern States.

A bill that practically provides for the direct election of United States Senators states that the names of candidates for the United States Senate shall be placed on the ballots at the time of the regular election, and when the Legislature convenes the Clerk shall announce the candidate receiving the highest number of votes, and then the Legislature shall proceed to elect the Senator as required by the Federal Constitution. The queer section of Oregon's Constitution declaring that no free negro or mulatto not residing in the State at the time of the adoption of the Constitution (1857) should become a resident of the State, hold real estate or make contracts, was presented to the people for abrogation, though, of course, it had been void since the passage of the Fourteenth Amendment to the United States Constitution.

At the State election held June 2, 1902, the Democratic candidate for Governor, George L. Chamberlain, was elected by a small majority, the other candidates elected being Republicans. The race was one of the most exciting ever held in the State, and factional feeling ran high.

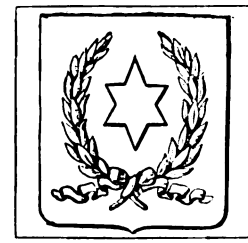
Paraguay.

—

Capital:
ASUNCION.



The Republic of Paraguay is an inland State enclosed between Brazil, the Argentine Republic and Bolivia. While under the rule of Spain it was called the Province of Paraguay, and included all the territory east of the Andes and south of Brazil, but when the Spanish yoke was thrown off, in 1811, the new nations of the Argentine Republic, Uruguay and Bolivia arose and Paraguay was left nearly in its present shape. At the end of the war against the allied forces of Brazil, the Argentine Republic and Uruguay, in 1870, Paraguay was forced to cede 1,329 square miles of its territory to Brazil as a war indemnity. In 1876 the Province of Bermejo was ceded to the Argentine Republic

Paraguay proper has an area of 148,000 square miles. Western Paraguay lies on the west bank of the Paraguay River and is mostly a desert.

The general appearance of Paraguay is described as far more attractive than either Uruguay or the Argentine Republic. Although it has no seaboard there is a certain compensation in its great fluvial system. From the banks of the Paragury River to the eastern frontier there is one continuous panorama of gently undulating plains, bordered by verdure-clad hills. The interior of the country is not yet well known. The country possesses two first-class fluvial ways of communication which place it in relation with the rest of the world. The Parana River has a length of 2,043 miles from its source to its junction with the Uruguay. It would be navigable throughout its entire length for vessels of the largest size were it not for the cataracts of Urupapunga and Guayra. The Paraguay River is 1,800 miles long, its average width is 360 yards and its mean depth about 20 feet, but the volume of water is only about one-twentieth that of the Parana. The lakes of Paraguay are numerous, the most important being the Upua, which is about 100 square miles in extent.

The climate of the country is warm and dry and not subject to sudden variations. The mean temperature is from 75 to 76 degrees Fahrenheit, and the average rainfall is about five feet. During the longest day the sun shines 13 hours and 34 minutes, and in the shortest 11 hours and 26 minutes. Daily observations from 1877 to 1883 showed that in each year there had been almost invariably 79 rainy days, 72 cloudy and 214 clear and bright. The climate is remarkable for its salubrity.

Little can be said about the mineral resources of Paraguay, not because of any scarcity of wealth in this respect, but because of the undeveloped condition of these resources owing to the absolute and exclusive preference which has been given to agricultural pursuits. It is said that iron, copper, manganese, gold, marble and building stone of the best quality are found in abundance.

Agriculture is the country's principal source of wealth. The fertility of the soil is almost inexhaustible, and manure is neither used nor needed. The sugar cane grows freely, and tobacco is one of the principal products of the country. Cotton is indigenous, and can be raised of the longest staple without difficulty. Cattle raising is very profitable.

The manufactures of the country consist chiefly of cotton and woollen fabrics, which the people use not only for underclothing, but also for dresses of both men and women. The manufacture of sugar is a very promising industry, but has received no more attention than has been necessary to provide for home consumption. Tanning is carried on to a considerable extent.

The present population is estimated at about 450,000, consisting of whites, Indians, negroes, the offsprings of whites and Indians, and the children of whites and negroes, or of Indians and negroes. The current of immigration is weak, but efforts are being made to strengthen it.

Since November, 1870, Paraguay has had a constitutional government, republican in form. The administration is vested in three co-equal powers, the legislative, executive and judicial.

The religion of the State is Roman Catholic Apostolic, but the free exercise of all other forms of worship is allowed. Primary instruction for children of both sexes is compulsory. Secondary instruction is provided by four colleges. There is a national university at Asuncion and also a seminary for young ladies.

Following is the Cabinet: Minister of the Interior, Guillermo de los Rivo; Foreign Affairs, J. Cancio Flecha; Finance, ——; Justice, Pedro Bobadilla; War, J. A. Escarra.

The President receives a salary of $9,500 a year, the Vice-President $4,800, and the Ministers each $3,000 a year, but the total administrative expenses are said not to exceed $25,000 a year. The country is divided into twenty-three counties, which are governed by chiefs and justices of the peace, assisted by municipal councils. The legislative authority is vested in a Congress of two houses, a Senate and a House of Deputies, elected directly by the people, the former in the ratio of one to every 12,000 inhabitants, the latter, one to 6,000, though in the case of the sparsely populated divisions a greater ratio is permitted. The Senators and Deputies receive each $1,000 a year. The expenditure for 1901 was estimated at $8,065,782. The revenue is derived mainly from customs. Of the expenditures $1,846,567 was for internal administration, $2,469,663 for finance, $2,118,640 for justice and public instruction, $645,852 for war and marine. The outstanding debt, according to the latest figures, amounts to about $5,000,000.

Patent System of the United States.*

It is not clear to whom is due the credit for the clause in the Constitution which vested in Congress power "to promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." It was not in the original draft of the Constitution presented to the convention by Mr. Pinckney, May 29, 1787, but on the 5th of September the committee reported five clauses which it was proposed to incorporate in the Constitution, the fifth being the patent and copyright clause as it appears in the Constitution. In the discharge of the duty thus laid upon Congress the organic patent act of April 10, 1790, was passed.

In 1793 a new patent act was passed, which, with certain amendatory acts, remained in force until the act of 1836, when the patent system, virtually as it exists to-day, was established. Prior to 1836 there was no critical examination of the state of the art preliminary to the allowance of a patent application. Since the act of 1836 there have been various enactments, modifying and improving the law in matters of detail; in 1839 an inventor was given the right to use his invention prior to applying for a patent therefor, for a period not exceeding two years; in 1861 the term for a patent, which had been fourteen years, was increased to seventeen years, and extensions were prohibited except as to patents granted prior thereto, and in 1870 the patent law was revised, consolidated and amended; but in its salient features the patent system of to-day is that of the law of 1836.

The first patent granted by the General Government was to Samuel Hopkins, July 31, 1790, for an improvement in pot and pearl ash manufacture. The last patent granted for the year 1889, at the close of the first hundred years of patent issues, was to Wilhelm Dreyer, No. 418,664, of December 31, 1889, for an electro-magnetic typesetting machine. These two patents are suggestively symbolical of the progress of the century in invention and manufactures—the first akin to the primitive industries of a new country and the last serving the exacting demands of a highly organized industrial system.

*Prepared from the special Patent Bulletin issued by the Census Bureau.

Digitized by Google

The total number of patents issued during this century of invention was 428,621. The following is a comparative table showing the growth in number of patents issued during each decade to citizens of the United States and to citizens of foreign countries:

THE GROWTH OF PATENTS.

There is an inter-relation between patents and the manufacturing industries of the closest kind, and a remarkable parallelism may be drawn between the two. As the industries have flourished, so have the patents, while, on the other hand, the increasing patents have made possible (because profitable) new and greater industries. Just how closely this inter-action is operative may be traced in the following table:

COMPARATIVE TABLE OF PATENTS AND MANUFACTURES: 1850 TO 1900.

Year.	Patents.				Manufactures.					
	No. issued during the decade.	Per ct. of increase.	No. of live patents.	Per ct. of increase.	No. of establishments.	Per ct. of increase.	Capital invested.	No. of wage-earners.	Wages.	Gross value of products.

When the Japanese Government was considering the establishment of a patent system, which was created by their patent act of March 1, 1899, they appointed Mr. Korekiyo Takahashi a special commissioner and sent him to the United States to gather the data obtainable in regard to our patent system. Answering a question of the examiner of designs, who had been helping him in his research and who had inquired of him its purpose, Mr. Takahashi said: "I will tell you. You know it is only since Commodore Perry, in 1854, opened the ports of Japan to foreign commerce that the Japanese have been trying to become a great nation, like other nations of the earth, and we have looked about us to see what nations are the greatest, so that we could be like them; and we said, 'There is the United States, not much more than a hundred years old, and America was not discovered by Columbus yet four hundred years ago;' and we said, 'What is it that makes the United States such a great nation?' And we investigated and we found it was patents, and we will have patents."

PATENTS IN FOREIGN COUNTRIES.

(From the latest report of the United States Patent Office.)

The following table shows the number of patents issued by the United States, as compared to foreign countries, from the earliest period to December 31, 1901. (Foreign figures for 1901, estimated):

Countries.	To 1870, inclusive.	1871 to 1901.	Total.	Countries.	To 1870, inclusive.	1871 to 1901.	Total.
Argentina	83	4,249	4,332	Luxemburg	.....	4,643	4,643
Austria	.....	25,173	25,173	Malta	.....	36	36

Pennsylvania.

—

Capital:
HARRISBURG.

Delaware Bay and River were first explored by members of the Dutch West India Company, from 1609 to 1624, when forts were erected and military jurisdiction exercised. Until 1864 the Dutch continued in actual possession of both sides of the bay without much colonization. In 1638 a colony of Swedes settled along the west bank of the Delaware River and carried on improvements until their surrender to the Dutch in 1655. In 1681 the territory west of the Delaware was granted to William Penn, who colonized it and founded Philadelphia in 1682. Under the charter granted Penn the present area of the State of Delaware was included and called the lower counties. These were granted a separate Legislature in 1699, but the two colonies continued under the same Governor until the beginning of the Revolutionary War, in 1776. After Penn's colony was founded a most successful peaceful policy was inaugurated with the savage tribes in contact with the white settlers, who were, in the lower counties, chiefly Swedes and Friends, or Quakers. Large accessions to the population were made by the arrival of German and Scotch-Irish settlers, and the admixture of these peoples made the inhabitants of Pennsylvania among the most noted in the country for zeal toward right and steadfastness of purpose. The colony became the seat of learning, wealth and refinement long before the Revolution, and entered vigorously into the war that freed the colonies. From 1682 to 1776 the public affairs were administered under the government framed by William Penn. In 1776 a provisional constitution was prepared by a convention of which Benjamin Franklin was president, and the first formal constitution was adopted in 1790.

Pennsylvania has an area of 45,215 square miles, and in 1901 its estimated population was 6,302,115. During the past decade there has been a decided growth in the manufactures of the State. Since 1850 this State has held the second rank in the United States for manufactured products and first since 1870 in the amount of power used in manufacturing. Various causes have contributed to this, first among them being the favorable location for marketing manufactured products. No other State touches the Atlantic sea coast, the Great Lakes and the navigable waters of the Ohio-Mississippi valley. The first steam vessel launched on these latter waters was built at Pittsburg in 1811, and regular communication was established between that city and the Southern States. Raw material also abundant, the State ranking for all sorts of manufactures is tanbark, tobacco, cereals, crude pe- high in the production of lumber, troleum, iron ore and coal. Natural gas has been used in the State for manufacturing since 1874. Though the gas fields are nearly exhausted, Pennsylvania still ranks second in its production.

Samuel W. Pennypacker.

The most important industry in the State is the manufacture of iron and steel, the total products being valued, in 1900, at $434,445,- 200. The most important centres for this industry are Pittsburg, Mc- Keesport, Duquesne, Johnstown and Newcastle. Local ores are used almost entirely, though recently there has been an increased use of the Lake Superior ores, which is changing the localization of the iron industry. The manufacture of textiles ranked second among the industries of the State in 1900, the manufacture of silk standing first. Silk culture was encouraged and recommended very early in the State's history and under the pat ronage of Benjamin Franklin a filature for reeling cocoons was opened in Philadelphia in 1750. The carpet industry has shown a remarkable growth in the past de- cade, as have also the worsted goods and knitting industries. There were 2,712 establishments engaged in the manufacture of tobacco in the State in 1900, the chief product of these being cheap cigars made of domestic tobacco.

One act of the Pennsylvania Leg islature of 1901 attracted wide- spread attention and subjected the members of that body to consid- able adverse criticism. This act, or rather, series of acts, was passed in May and June, and gave to rapid transit companies, upon the ap- proval of local authorities con cerned, the right to construct and operate without franchise compen sation to city, county or State, railways on, above or beneath the ground along the course of any street not already occupied by rail ways, in any town or city in the commonwealth. The first bill approved enacts that five or more persons may form a company to construct and operate a street railway on any street where there was no such railway at the time of the approval of the act. The company, obtaining the charter and the approval of the local authorities, might sell or lease their road or franchise or parts thereof to traction or motor companies or any company operating passenger railways. No street railway company was to be permitted under any circumstances to connect its tracks with those of any steam railway or to interchange cars or form a continuous route with any locomotive railway company.

The second bill approved stated in addition to the above that any company might obtain a charter with the consent of local authorities to build a road either elevated or below ground, or part elevated and part below ground above or below or across the routes occupied by any other company, and might sell or buy franchises as provided in the first act. The right of eminent domain was expressly conferred upon such companies, with the sole exception of property used for burial purposes and places of worship. A third act permitted any company to build roads either above, below or on the surface of the ground. On June 20, after a large number of valuable railway charters had been granted by the Secretary of State in accordance with these acts, a further act was approved, declaring that no further charters for elevated or underground railways would be granted unless the route selected was through thickly settled regions and the application was approved by a board consisting of the Governor, the Secretary and the Attorney-General.

These railroad laws were approved on June 7, and in Philadelphia, which was the principal city affected, fourteen rapid transit ordinances were introduced into the City Council on June 12 giving the consent of the local authorities to charters given out at Harrisburg. These ordinances gave to Representative Robert H. Feorderer and others the right to build about 120 miles of street railways in the city of Philadelphia, and they were signed by Mayor Ashbridge on the night of June 13. They were given freely and without cost, and aroused an unusual amount of opposition. Albert L. Johnson offered to give three-cent fares on all the roads in the city and free franchises, if these were not granted, and John Wanamaker offered the city $2,500,000 in cash for the rights vested in the first petitioners. Both these offers were voted down by the Council. Later Mr. Wanamaker renewed his offer to the city, and then made the same proposal to the company owning the charters

A factory law passed provides that no minor and no woman shall work in a manufacturing or mercantile establishment more than twelve hours in any day nor more than sixty hours any week. No child under thirteen can work at all in any such establishment and none under sixteen without the consent of its parents. Another law provides that in every city of the first or second class a house of detention shall be provided for juvenile offenders awaiting trial and for neglected and dependent children under sixteen. Criminal prosecution for libel shall not stand when the object was a public officer or candidate for office and the

Digitized by Google

statements were not maliciously or negligently made, nor shall civil suits lie if the publication was found to have been substantially true and prepared for public information.

Several amendments were proposed to the Constitution and accepted by the voters in November, 1901. They dealt chiefly with the qualifications for voting and the methods of conducting general elections. One amendment provided that "laws regulating and requiring the registration of voters may be enacted to apply to cities only, provided that such laws be uniform for cities of the same class." Another provides that "all elections by the citizens shall be by ballot, or by such other method as may be prescribed by law, provided that secrecy in voting shall be preserved."

The Democratic State Convention was held at Erie June 25, 1902. For the third time in twenty years ex-Governor Robert Pattison was nominated for Governor. The convention adopted a platform dealing entirely with State affairs, national issues not being mentioned. It promises a clean administration, the banishment of the lobbyist, bribe-giver and franchise robber, and assures the business interests of absolute exemption from "pinch legislation." It states that "the selection of a United States Senator (at the session of the Legislature in 1901) was accomplished in a carnival of corruption and bribery." The Republican State Convention was held June 11, and nominated Judge Samuel W. Pennypacker, one of the Quay faction, for Governor, in spite of a strenuous fight put up by the Elkin faction. The platform adopted heartily indorsed the administration of President Roosevelt, and called for his renomination in 1904. The Union party held its State Convention September 3, and marked the event by a general fight over the indorsement of both the Republican and Democratic candidates for Governor. Both tickets were nominated, but no vote could be taken owing to the wild confusion that reigned throughout the session. The Socialist-Labor party nominated a full ticket, the candidate for Governor being William Adams, a paper carrier.

In the State Legislature at the last session was presented a resolution providing for the compiling of a political history of Pennsylvania, in order, it was claimed, to refute the many statements regarding dishonesty of political methods in the State. If the history should be published it is probable that its use will be made mandatory in the public schools. Senator Quay is quoted as saying that the work of preparing such a history would devolve upon the State Librarian, to the appointment of whom he intended to give his personal attention.

At the election held in November Judge Samuel W. Pennypacker was elected Governor by a safe majority, defeating ex-Governor Robert Pattison, the Democratic candidate. Judge Pennypacker is a Republican of the Quay machine.

Pensions of the United States.

In the history of nations there has been no government which has treated its disabled, its wounded or its superannuated veterans with the liberality of the United States. That this liberality has been abused is undoubted. It was to be expected that, out of the million of so veterans who survived the civil war there should be some who would use the opportunities given them for taking an unfair advantage of the Government. On the whole, however, the system has worked admirably, and many a family has been saved from want and distress by the generosity of the nation toward those who had been its defenders.

The report of the Commissioner for the fiscal year ending June 30, 1902, shows those on the pension rolls to be classified as follows: Revolutionary War—Widows, 4; Daughters, 4; War of 1812—Survivor, 1; widows, 1,317. Indian wars—Survivors, 903; widows, 3,320. Mexican War—Survivors, 6,828; widows, 8,017. Service after March 4, 1861, general laws—Army invalids, 277,465; army widows, 87,046; navy invalids, 4,360; navy widows, 2,263; army nurses, 634; act of June 27, 1890, army invalids, 426,188; army widows, 148,201; navy invalids, 15,953; navy widows, 6,977. War with Spain, general laws—Army invalids, 6,282; army widows, 2,727; navy invalids, 329; navy widows, 127. A grand total of 999,446. Since 1898 the number of pensioners of the War of the Revolution has decreased by 4; of the War of 1812, 1,092; of the Indian wars, 1,863; of the Mexican War, 3,310; while there has been an increase of 2,536 in the number of civil war pensioners, the pensioners of the Spanish War are, of course, all new.

The number of death notices of old soldiers not now in the service, received by the bureau during the year, was 50,128, but only 27,043 of them were pensioners. It is expected that the death rate among the pensioners during the year ending June 30, 1903, will be about 40,000, and the losses to the roll from other causes will be about 6,000. Owing to the new laws enacted by Congress the pension roll will probably pass the one million mark during the current year.

Ohio has the largest number of pensioners, 104,060. Pennsylvania comes next with 103,697. Illinois next with 72,026, and New York next with 88,269. Alaska has the smallest number, 87.

The disbursements for pensions from July 1, 1790, to June 30, 1865, were $96,445,444. Since the latter date there has been paid out a total of $2,804,408,857, at an expense for maintenance and expenses of the bureau of $91,654,718. There was paid out in pensions during the past year, $137,504,268, at a cost of $3,831,379.

The average annual value of a pension is $132.23, and over one-half the pensions are of $10 a month or less. The classification and the number in each class, was as follows: $6 a month and under, 143,181; from $6 to $8 inclusive, 348,197; from $8 to $10, 71,919; from $10 to $12, 293,605; from $12 to $14, 22,969; from $14 to $15, 3,777; from $15 to $16, 10,132; from $16 to $17, 42,996; from $17 to $18, 790; from $18 to $20, 7,370; from $20 to $24, 25,570; from $24 to $25, 3,245; from $25 to $30, 17,513; from $30 to $36, 2,551; from $36 to $45, 2,228; from $45 to $50, 1,404; from $50 to $72, 1,945; from $72 to $100, 48; at $166.66 2-3, 4; at $208.33 1-3, 1; at $466.66 2-3, 3.

The work of the bureau is carried on by ten divisions, each having separate duties, which are carried on under the control of the Commissioner and his two deputies. To these are added five adjudicating divisions, the Eastern, Middle, Western and Southern, and the old War and Navy divisions.

By the acts of July 14, 1862, and March 3, 1873, it is provided that any officer, soldier, sailor or marine, disabled by reason of wound received or disease contracted in the service and in the line of duty, may be pensioned for such disability during its continuance. In case of his death from causes originating as above set forth, his widow or his child or children under sixteen years of age become entitled to pension. If he left no widow, or child under sixteen years, his dependent mother, father, or orphan sisters or brothers are entitled in the order named.

The act of June 27, 1890, provided that any officer, soldier, sailor or marine who served 90 days or more in the military or naval service of the United States during the late War of the Rebellion, who has been honorably discharged therefrom, and who is suffering from disability of a permanent character not the result of his own vicious habits, which incapacitates him from the performance of manual labor in such a degree as to render him unable to earn a support, is entitled to pension under this act, of not less than $6 a month nor more than $12 a month. In case of the death of any person named above, his widow becomes entitled to pension provided she married him prior to June 27, 1890, and that she is without other means of support than her daily labor. If she remarries or dies the child or children of such soldier under the age of sixteen years becomes entitled.

The act of May 9, 1900, which is an amendment of the act of June 27, 1890, provides that in determining inability to earn a support each and every infirmity shall be duly considered, and the aggregate of the disabilities shown be rated. It is also provided that a widow may have title to pension if she is left without means of support other than her daily labor, and an actual net income not exceeding $250 per year.

By the act of August 5, 1892, all women employed by the Surgeon-General of the army as nurses during the late War of the Rebellion for a period of six months or more, and who were honorably relieved from such service, are granted a pension provided they are unable to earn a support.

There is no law granting service pensions to any person for service rendered since 1858.

Note.—The detailed account of the business transacted annually by the Pension Bureau will be found in the American Year Book.

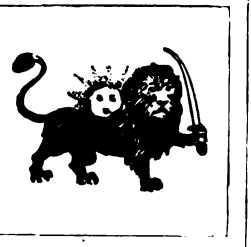
Persia.

—

Capital:
TEHERAN.



The reigning Shah of Persia is Muzaffan-ed-din, born March 25, 1853, and the second son of Masr-ed-din, whom he succeeded May 1, 1896. He has six sons and twelve daughters. The royal family is very numerous, there being some thousands of princes and princesses, but the official year book only mentions two uncles, two aunts and about great uncles and cousins of the Shah. The present Shah is the fifth of the dynasty of the Kajars, which took possession of the crown after a civil war, extending from 1779 to 1794. It is within the power of the Persian monarchs to leave the crown, without regard to the natural heir, to any member of their family, preference being usually given to a prince whose mother was a Kajar princess, which the mother of the present Crown Prince is not. The form of government is similar to that of Turkey. All the laws are based on the Koran. The Shah is regarded as Vice-General of the Prophet, and as such claims implicit obedience.

His Executive Cabinet is composed as follows: Chancellor and Chief of the Cabinet, Son Altesse Atabekazam (Aliasghar Khan); Minister of Foreign Affairs, His Exc., Mochired-Dovlet (M. Nasrollah Khan); Minister of War, His Highness Spehsalar; Minister of Finance, His Excellence, Vezire Daflar; Minister of the Telegraph, Mokhberev Dovlet; Minister of Public Works, Mohandessal Mamalek; Minister of Public Instruction, His Excellence, Neyerol-Molk; Minister of Commerce, Vekelol-Molk; General Administrator of the Custom House and Posts, His Excellence, Naus.

The country is divided into thirty-three provinces, which are governed by Governors-General.

The country, which extends about 700 miles from North to South, and 900 miles from East to West, contains 628,000 square miles, a vast portion of which is an absolute desert. The population in 1900 was estimated at from nine to nine and a half millions, of whom not over 1,000 were Europeans.

Of this population about 8,000,000 belong to the Shah's faith. 800,000 are Sunnis, 9,000 Parsis, 35,000 Jews, 45,000 Armenians and 25,000 Hectorians.

Shah of Persia.

There are a great number of colleges, supported by public funds, in which students are instructed in religion and Persian and Arabic literature, as well as in a certain amount of scientific knowledge, and many schools for children, while private tutors are very common. The bulk of the population are taught only to read the Koran.

The revenue for 1900 is estimated at about $7,500,000, while there is no recent record of expenditure.

The Persian army numbers about 105,000, but of these only half are liable to be called upon for service, while the standing army does not exceed 24,500.

The product of the country, besides grain, is chiefly silk. The pearl fishery, of which there are records, is also an important industry. The mineral products are considerable, but want of good roads and distance from markets have prevented any considerable development of them.

In 1901 the imports were valued at $25,535,000 and the exports at $14,465,000.

A railway six miles in length was opened in 1888, and is in the hands of a Belgian company. The River Koran, at the head of the Persian Gulf, has been opened to foreign navigation as far as Ahwaz. There is a system of telegraph with about 4,800 miles of line. The first regular postal service was opened in January, 1877.

During the past year an Austrian millionaire named Daray, obtained an important concession to work the oil belt in Southern Persia, and surveys were begun for a pipe line 360 miles long. The Russian Government is making strenuous efforts to control the trade of Persia, but England is bound to maintain her rights in the country, and the rival efforts may result in a serious clash between the two countries.

The Shah visited England at the time of King Edward's coronation and was found to be anything but an agreeable guest. It was difficult to amuse him, and about the only things which seemed to amuse him were the circus and Maxim's gun works. He was gloomy and dispirited and seemed unhappy. He endeavored to buy the wife of a peer to add to his harem, but when the husband told him that she was afflicted with homicidal mania he withdrew his offer. In the conflict between Great Britain and Russia for control of Persian affairs, it is thought that this visit of the Shah was a strong point in the former's favor, but what the result will be remains to be seen.

Peru.

—

Capital:
LIMA.

When Pizarro discovered Peru he found a great nation enjoying a second epoch in civilization. Of the first but little has been told in the traditions of the Incas. Those inspired monarchs had found and submerged it beneath the new and more refined religion of the divine light and the sublimely perfect communism they brought with it. Constant employment of the people in systematic labor and organized recreation, without oppression or tyranny, with no rank of wealth, among a race too gentle to be ambitious, too docile to be vicious, produced a state in which the Spanish adventurers who conquered the land, found industry, virtue and contentment. It was the highest type of civilization yet reached on this hemisphere, and probably the highest of which the aboriginal American was capable.

In the beginning of the present century Peru had become the centre of Spanish power on this side of the Atlantic. The more distant provinces of Chili and Buenos Ayres were first able to throw off the Spanish yoke, but the destruction of Spain's power was essential to their continued independence. The conquest of Peru depended on the command of the sea, and in 1818 a fleet of six vessels was fitted out, and in 1820 an army landed on the Peruvian coast and marched on Lima, where they were enthusiastically received, and on the 28th of July, 1821, the independence of Peru was declared. From this on there was a succession of revolutionary outbreaks, at intervals of from two to fifteen years, until 1855, from which time, with the exception of a local insurrection of little importance, there was peace in Peru until the outbreak of the Chilian war in 1879. The present Constitution was formed in 1856, and revised in 1860. Slavery and the Indian tribute of the mita, only another name for slavery, were abolished by its provisions. The unexpected declaration of war by Chili in April, 1879, found Peru totally unprepared on land and sea for the conflict. She fought for five years, however, the people showing unexampled patriot-

Digitized by Google

ism and devotion, when, the Chilians being successful, a treaty of peace was signed and was ratified March 8, 1884. A Constitutional Congress met at Lima on the 30th of May, 1886, and General Caceres was unanimously elected President of the Republic. His task was a most distressing one. The country was utterly ruined. The pall of death covered every household. The loss of the flower of the country's manhood on the field of battle had greatly reduced the population. The treasury was empty. The army was reduced to an effective force of 2,400 infantry, 600 cavalry and 500 artillery. For police there was a gendarmerie of 2,400 men, while the navy was reduced to two small vessels. Both branches of the service are in excellent hands. The administration of General Caceres was a constant struggle with adverse circumstances, and he succeeded in restoring perfect order in all parts of the Republic and in every department of the Government. He retired August 10, 1890, and since then, as during his incumbency, Peru has been in possession of a firm and stable government, under the influence of prudent, far-sighted statesmen, who devote themselves to the material development of the country and the elevation of its people.

Measured as a meridian, Peru is about 9,000 miles long, while its shore line is nearly 2,000 miles. Its width, which is extremely irregular, averages 500 miles, and it has an area of 695,733 square miles. Progressing eastward across the cordillera of the Andes, there are four habitable zones, separated by the loftiest mountains of the hemisphere, of which three distinct ranges traverse the entire length of the Republic. The rainless coast desert of Peru is traversed by fifty rivers, only one of which, the Chena, in the north, is navigable. Generally these streams are raging torrents after the mountain rains of February and March, after which the waters sink away, entirely disappearing by June. The coast has a few bays, forming well protected harbors, but the anchorages of the greater part of the coast must be in open roadsteads, which are made safe by the immunity of that section from storms. Rivers flowing into the Pacific generally rise in the Sierras, between the coast and the central Andesan ranges. Those rising east of the central cordillera are all tributaries, more or less remote, of the Amazon. The ultimate head of this great river rises in the little lake Lauri Cocha, and flows northwest, nearly parallel with the Pacific coast. The affluents of the Amazon constitute a vast system of inland navigation in the forest region of Peru. The most famous lake in South America, and, indeed, of the world, being at the greatest elevation of any water the subject of commerce, is the lake Titicaca, 120 miles long and 60 wide, lying in a basin of the Puma, 300 miles long and 100 wide, at an elevation of 12,545 feet above the sea, from which it is 150 miles distant. At this time its waters are navigated by three steel steamers.

While the peaks of the Andes rise to a height of more than 22,000 feet, there is no active volcano in all the territory. The snow line of Peru is from 16,000 to 17,000 feet, according to the latitude. The Andes consist of stratified material, which was deposited at the bottom of a sea, the highest portions having been submerged at some former time. It is claimed that Peru is the richest territory of the earth in mineral deposits.

The Peruvian fauna comprises 40,000 different specimens, including birds of passage, while the waters of the Pacific coast teem with excellent fish.

There are about 1,200 miles of railroad in the country, either built or in process of construction, the cost of which is estimated at about $126,000,000. There are several steamship lines on the coast, and two important steamship companies compete for the coast trade of the Southern Pacific and for the trade with Europe and the United States. Several lines of street railway are operated in Lima and other cities. In the city of Lima and in Callao may be found carriages and other wheeled vehicles, but nowhere else in all the Republic. Telephones and the telegraph are in general use throughout Peru, and the coast is traversed by a submarine cable.

The principal agricultural products of the country are sugar and cotton. When the war with Chili broke out Peru had the largest sugar-producing plant in the world. Part of it was destroyed, but this has been replaced, and the exports of the product are now increasing yearly.

The Ministry of Public Works is now endeavoring to attract immigration to develop the public lands in the interior. The immigrant will enjoy the same civil rights as the native Peruvian. He may become the proprietor of mountain, forest or coast lands conformably to law. In order to encourage immigration the Government offers the colonist all kinds of exemption from taxes. Wages are more remunerative in Peru than in the neighboring countries, on account of the scarcity of labor.

During the year 1902 commerce and trade were very flourishing, the principal nations of the earth having uninterrupted commercial intercouse with the country. Several valuable mining concessions were made, which will undoubtedly bring about the distribution of large sums of money.

There has been a constant and progressive increase in the general revenues since 1896.

The pending questions at issue between Bolivia and Peru are to be settled by arbitration, a treaty to that effect having been agreed to.

The Cabinet is made up of the following: Prime Minister and Minister of the Interior, Dr. Alefandro Deustua; Minister for Foreign Affairs, Senor Don Anibal Villegas; Minister of War and Marine, Colonel Manuel F. Diez-Canseco; Minister of Commerce and Finance, Senor Don J. P. Rainoso; Minister of Justice and Education, Dr. Jose Viterbo Arias; Minister of Encouragement and Public Works, Senor Don Teodoro Elmore.

Philippine Islands and the American Policy.

EDWIN WILDMAN,
Former Vice Consul
at Hong Kong.

The Philippine revolution, which we inherited from our war with Spain, was an abortive struggle for independence by a people whose principal equipment for national life was their warlike propensities. Unable to free themselves from a corrupt colonial system dominated by religious corporations, they took advantage of the defeat and destruction of Spanish naval and military forces in the archipelago and, assuming the attitude of friends of American occupation, accepting moral espionage and physical support, they organized a strong military force and attempted to hold positions and territory in which they had, during the interim between the battle of Manila and the signing of peace with Spain, intrenched themselves; and they further demanded of the United States and the World Powers, recognition of their national independence and their sovereignty over the ceded Spanish territory. Though every argument known to logic was employed, and every precedent established by international law quoted, the uncompromising leaders of the revolution refused to accept peaceful proposals that did not look to autonomy and independence. President McKinley, at last despairing of convincing the revolutionary politicians of their untenable positions, ordered, by armed force, the establishment of American sovereignty over the territory ceded by Spain. Though the leaders of the revolution, whose superiority over their race was due to the existence of Spanish or Chinese blood in their veins, were men of ability, education and craft, the Filipinos, as a race, possessed little that recommended them to an independent national life. Having only the most meagre rudiments of any education, imbued with fanatical beliefs, naturally indolent, neither artisans, woodworkers nor independent farmers, and dependent upon Chinese tutelage for what knowledge of the arts of industry they possessed, these people, as a whole, were totally unfit for the responsibilities of citizenship; nor had they the mental endowment essential to the conduct of a peaceful and commercially successful independent form of government. As to the wisdom of assuming the task of conquering and subsequently bestowing upon them a liberal form of government, there is no occasion for discussion. The archipelago became a possession of the United States, and the conduct of the war marked a new epoch in the attitude of a conquering nation. The greatest liberality was shown to the subdued people, their chosen leaders recognized and their rights under our constitution established.

The fittest will survive and the generations to come will reap the benefit. There are no racial reasons why the Filipinos should not develop national strength and, under a representative civil government, attain, eventually, a larger measure of self-government than any of the Eastern peoples. The benefits accruing to the United States from its policy in the Philippines may be largely indirect, though none the less marked and valuable, both politically and commercially.

THE STORY OF THE WAR.

The Philippine Islands, an archipelago in the Pacific Ocean, southeast of Asia, separated by the China sea from China and the Indo-Chinese peninsula, became a possession of the United States in 1899, in accordance with terms of the Treaty of Paris of that year, arranging peace between the governments of the United States and Spain. These islands, said to exceed 1,400 in number, had been under Spanish dominion for centuries, since their discovery by Magellan in 1521. The Bay of Manila, upon which is located the city of the same name, the capital of the islands, was the scene of the first engagement in the Spanish-American War, the American squadron on the Asiatic station, under command of Commodore Dewey (now Admiral), attacking and destroying the Spanish squadron, commanded by Admiral Montijo, in the morning of May 1, 1898. At the close of the war the islands were ceded to the United States, as agreed on in the peace negotiations, in consideration of the payment to Spain of the sum of $20,000,000. The natives of the islands, known as Filipinos, had been for some time in rebellion against Spain when the war began, their principal grievance being against the religious orders who, it was alleged, used their power with the Spanish authorities to extort money and gain absolute power over the natives of the islands. Having signed a compact with the Philippine authorities, accepting promises of reform and a large sum of money, twenty of the leaders of the revolution surrendered and took up their abode in Hong Kong. The insurrection, however, continued, and when Admiral Dewey destroyed the Spanish fleet, a large number of armed Tegalogs surrounded Manila. Aguinaldo and his chieftain in Hong Kong, taking advantage of the presence of the American squadron, were eager to return to the islands as friendly allies of the Americans. Consul-General Wildman, of Hong Kong, and Consul-General Pratt, of Singapore, were visited by the insurgent chieftain, and it was arranged with Admiral Dewey to permit Aguinaldo and the chieftains to return to the Philippines aboard the American ships. Dewey was without land support, the American force not having arrived, and it was deemed expedient to establish friendly relations with the Filipino army laying siege to the blockaded port. Under promise that Aguinaldo would place his forces under command of the American Admiral and Generals, Consul-General Wildman placed the insurgent leader and his suite aboard an American vessel one week after the naval battle of Manila harbor. The insurgents were permitted to try and land arms and soon had a formidable force in the field, taking some seven thousand Spanish prisoners and occupying most of the territory outside of Manila, establishing a dictatorial government and assuming a national independence. When the

General Grant.

General MacArthur.

terms of peace with Spain were made known to the Philippine people and American sovereignty was declared over the archipelago, Aguinaldo and the Filipino leaders demanded the recognition of the Filipino Republic, the expulsion of the friars and asked for American naval protection. For months the tension between the American forces under Generals Green, Merritt and Otis and the Filipino army had grown until the smoldering hostility culminated in the outbreak of February 4, 1899. Aguinaldo proclaimed war against the United States, and a battle occurred, with terrible loss to the Filipinos, their main forces being driven back several miles from Manila.

The principal events of the struggle which followed, ending with the pacification of the islands and the substitution of civil for military control, are chronologically recorded in the following diary of the insurrectionary war:

1899.

FEBRUARY 5.—Flight of Agoncillio, the Filipino envoy, from Washington to Canada.
6.—Paranaque taken by Americans.
7.—Admiral Dewey's fleet shells Caloocan, and the place is stormed by American troops.
8.—Aguinaldo requests suspension of hostilities, General Otis ignoring the request.
10.—General Miller captures Iloilo. Filipinos again driven from Caloocan after a battle.
17.—Order for the release of Filipino prisoners held by Spain issued by the Spanish Government.
18.—Filipino insurgents driven out of Negros Island by natives who voluntarily hoist the flag of the United States.
21.—General Otis cables to Washington news of a Filipino order for a massacre in Manila.
22.—Manila fired by insurgents within the city.
24.—Cebu Island taken possession of by the Navy.
MARCH 4.—San Jose village and other suburbs of Malabon shelled by U. S. S. Bennington, many insurgents being killed.
6.—Attempt of Filipinos to capture Manila waterworks meets with repulse.
9.—General Lawton arrives in Manila.
18.—Americans capture Pasig.
14.—Pasig burned by insurgents. Pateros taken by Americans, who advance as far as Taguig.
15.—Another rout of insurgents at Pasig.
16.—Cainta taken by Americans. Repulse of insurgents near Santa Barbere, and near Iloilo.
17.—Desperate fight at Polo won by Americans.
25.—General advance of Americans begins.
26.—Action near Malinta, in which Colonel Harry C. Egbert is killed. Americans bombard Malabon.
27.—Insurgents suffer a repulse at Marilao, and defeat at Bulacan.
31.—Malolos, the Filipino capital, assaulted and captured by American troops.

Agoncillo.

Admiral Dewey.

Pedro A. Paterno.

General Chaffee.

APRIL 1.—Dagupan bombarded by the U. S. S. Charleston.

4.—Conciliatory proclamation to the insurgents issued by the United States Philippine Commission (appointed January 17, by President McKinley to investigate conditions in the archipelago, with a view to supplying the Government with reliable data upon which to base its policy in dealing with the inhabitants). This Commission was composed of President Jacob Gould Schurman, Cornell University; Admiral George Dewey, U. S. N.; Major-General Elwell S. Otis, U. S. A.; Hon. Charles Denby, of Indiana, and Dean C. Worcester, of the University of Michigan.

7.—Aguinaldo is reported as lying intrenched with the main portion of his army at Calumpit.

8.—General Lawton, with 1,500 men, leaves San Pedro Macati, and ascends Pasig River to the head of Laguna de Bay, Santa Cruz being his objective point.

10.—Intrenched force of insurgents obstinately resists landing of Lawton's troops. Gunboats shell woods through which troops advance upon Santa Cruz, attacking the place at sunrise. House to house fighting when the city is entered results in 10 Americans being wounded and 93 Filipinos killed. Near Malolos insurgents made desperate efforts to destroy means of communication between General MacArthur's forces at Malolos and the city of Manila.

11.—General Lawton defeats Filipinos at Santa Cruz. Insurgents attack Minnesota volunteers at Boccave, and are repulsed.

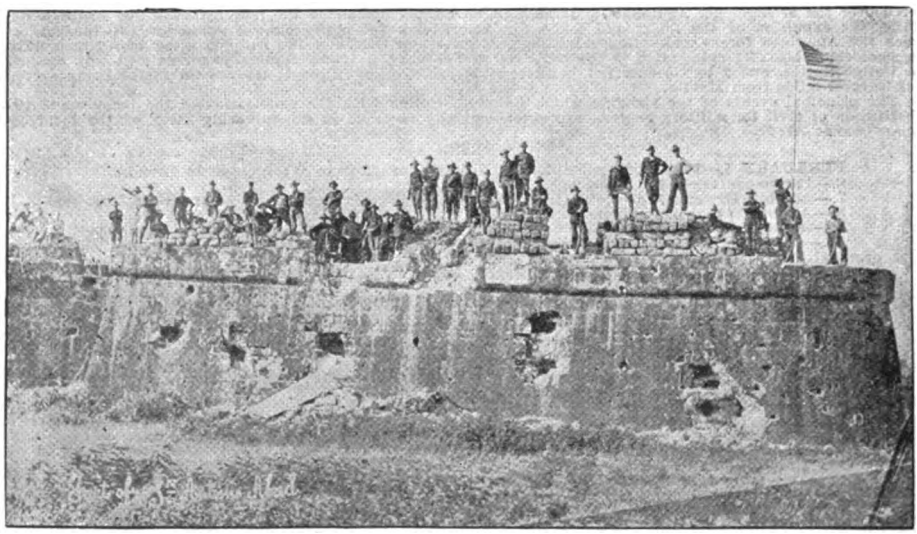
12.—Insurgents driven from Santa Maria by Pennsylvania and Oregon troops. Gunboat Yorktown, arriving off Baler, on the Pacific coast of Luzon, to relieve a small Spanish garrison which has been beleaguered for a year, sends out a cutter with 14 men, under Lieutenant J. C. Gillmore, to make soundings. Going beyond the protection of the Yorktown's guns, they are attacked by natives and captured.

13.—Lawton captures Paete. Night attack on the Third Artillery near Malolos results in 3 Americans being killed and 20 wounded.

17.—Return of General Lawton from Santa Cruz to Manila, and withdrawal of troops from places captured in Laguna de Bay.

22.—General Lawton, with brigade of 2,500 men, marches northward from Manila to join General MacArthur at Calumpit.

23.—Filipinos intrenched in the brush at Guinguinta, near Malolos, attack Major Bell, who is in peril until reinforced by General Hale from Malolos. Among the Americans killed in the fighting were six officers. The wounded numbered more than 40.



Fortifications at Manila After Dewey's Bombardment.

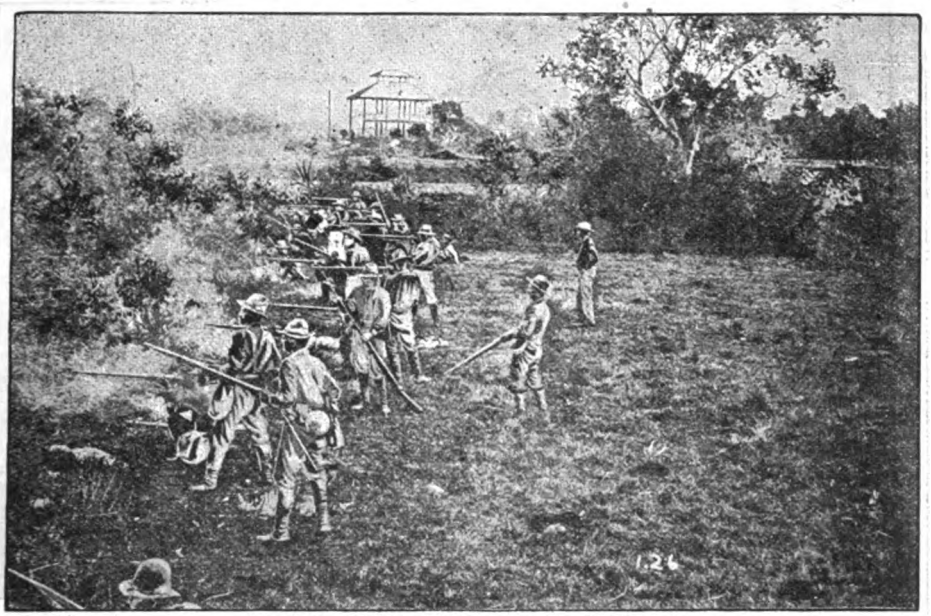
24.—Calumpsit invested by Hale and Wheaton.
25.—Outer trenches of Calumpsit taken by Americans.
26.—Town of Calumpsit taken and occupied by American troops. General MacArthur recrosses the Rio Grande, advancing upon Apalit, and completely routing the enemy. During these operations Colonel Fred Funston, Twentieth Kansas (now Brigadier-General, U. S. A.), won fame by crossing the river in the face of the enemy.
28.—Two officers of General Luna's staff enter General MacArthur's line beyond Calumpsit, to ask a conference with the Commander-in-Chief. Sent to Manila, they ask General Otis for a suspension of hostilities, to allow time for the assembling of a Filipino Congress, to consider the question of peace or war. General MacArthur refuses to recognize the existence of a Filipino government, but promises to hear the envoys on the following day.
29.—Colonel Manuel Arguelles and Lieutenant Jose Bernal, of the Filipino General Luna's staff have a second meeting with General Otis, President Schurman, of the U. S. Philippine Commission, being present. They state that Aguinaldo wants to give up the struggle without humiliation, and ask a fortnight's truce, which is refused. The Filipinos are informed that "a written guarantee of amnesty to all insurgents was the most that could be given" in case they lay down their arms.

MAY 1.—Insurgents routed by General Lawton at San Rafael.
2.—Anti-Imperialistic pamphlets by Edward Atkinson, of Boston, Mass., ordered to be intercepted from the Pacific mails. Colonel Fred Funston promoted to be Brigadier-General of Volunteers.
3.—Colonel Arguelles and another Filipino envoy visit General Otis again, presenting a letter from Senor Mabini, Filipino Minister of Foreign Affairs, to which Otis refuses to reply, denying also the petition of the envoys for an armistice.
4.—San Tomas taken by Americans. Filipinos defeated at Minalin and near San Fernando.
5.—Americans take San Fernando unresisted.
8.—Rear Admiral Watson ordered to report to Admiral Dewey to relieve him of the command of the Asiatic fleet.



American Soldiers Fighting in the Philippines.

12.—Filipinos driven from San Ildefonso by General Lawton.
16.—General Lawton takes San Isidro, the new insurgent capital.
20.—General Otis refuses another request for an armistice. Admiral Dewey sails from Manila for Hong Kong.
22.—Aguinaldo's envoys have an interview with President Schurman, of the Philippine Commission, who submits to them certain propositions in writing, formally approved by President McKinley, and outlining a form of government for the Philippine Islands, subject to the action of Congress. The envoys regard the propositions unfavorably, and no result is reached.
24.—General Lawton reaches General MacArthur's lines, after a march of 120 miles, during which he had 22 fights and captured 28 towns, with a loss of 6 killed and 35 wounded. Insurgents repulsed at San Fernando. Spanish garrison evacuates Zamboanga, Mindanao Island, and has a fight with Filipinos.
27.—Captain Tilley, of the Signal Corps, murdered by Filipino marauders.
29.—Courts of justice in the Philippines, closed from the date of American occupation, reestablished by an order reviving all the Spanish systems, without conflicting with the sovereignty of the United States. Native justices appointed.
30.—American naval forces blockade the port of Sulu.

JUNE. 1.—General Lawton recalled to Manila to take command of an expedition against insurgents under General Pio del Pilar on the shore of Laguna de Bay.
3.—Macabebe burned by Filipinos.
4.—Americans sweep Morong Peninsula, win two battles, and take the towns of Morong and Antipolo.
8.—General Luna assassinated by Aguinaldo's guard.
10.—Insurgents driven from the isthmus south of Pasig River as far south as Paranaque, which town is bombarded and captured. Gunboat Napidan mows down a flanking party of Filipinos near Taguig.

Digitized by Google

13.—Cavite Navy Yard attacked by insurgents with artillery; their positions shelled by the American fleet. General Lawton routs insurgents at Los Pinas with great slaughter; they abandon the coast and retire to Imus.

14.—Oregon troops, the first to leave the islands, sail from Manila for San Francisco. Bacoor taken by Americans.

15.—Filipinos driven from Imus by American troops, who occupy the town.

16.—Unsuccessful attack upon Americans at San Fernando. More than 50 insurgents killed, and 14 Americans wounded.

19.—Filipinos attack an American reconnoitering expedition near Peres das Marinas and are repulsed with slaughter.

20.—Peres das Marinas occupied by American forces. Admiral Watson arrives at Manila and takes command of Asiatic fleet.

22.—Repeated attacks upon General MacArthur's forces. Peace Envoy Arguelles sentenced by Filipinos to twelve years' imprisonment.

26.—General Otis reports insurgent forces broken up and the people desirous of protection.

28.—Filipinos at Mantinlupa shelled by Gunboat Napidan and driven away by cavalry.

30.—Night attack during rainstorm on north line of American forces at San Fernando results in three hours' fighting; insurgents retire with small loss; 2 Americans wounded.

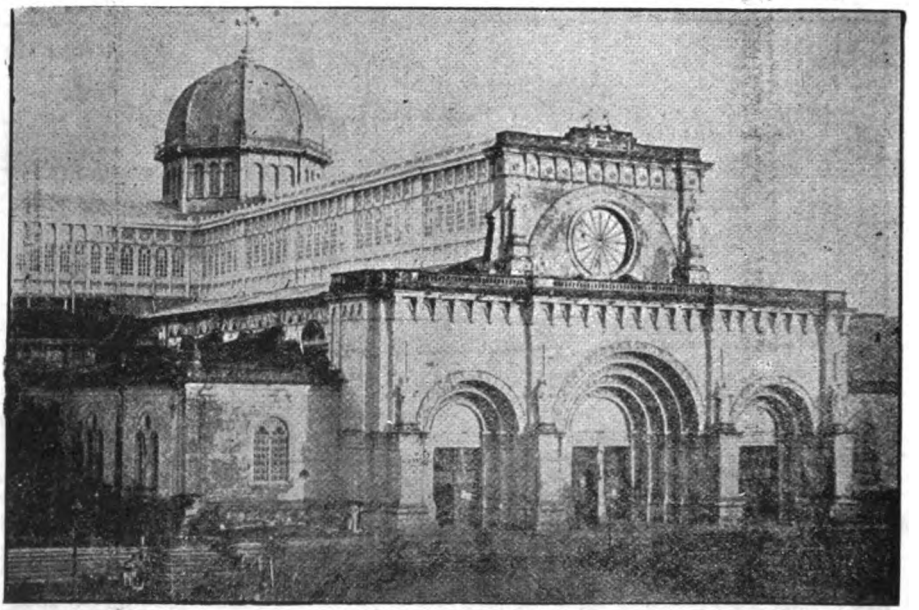
JULY 1.—Attack on California troops embarking from Negros Island.

6.—First order for enlistment of volunteers for the Philippine War is published: 10 regiments called for.

11.—American troops numbering 135 engage 500 insurgents intrenched near the shore at Mantinlupa, on the south shore of Laguna de Bay, and, with the assistance of the gunboat Napidan, drive them to the hills; 2 Americans wounded; insurgents lose 10 killed and several wounded.

21.—Captain Byrne, Sixteenth Infantry, with 70 men, surprises 400 Babylones at Bobong, Negros Island, killing 115 and wounding many; American loss, 1 killed and 1 wounded.

27.—Aguinaldo issues appeal to the Powers for recognition of Philippine independence.



The Cathedral, Manila.

28.—Insurgents routed in Cebu Island.

(During July an expedition under General R. H. Hall captured Calamba, a considerable trading town on the south shore of Laguna de Bay; the gunboats Napidan and Oeste co-operated.)

AUGUST 9.—Force of 4,000 under General MacArthur attacks and defeats 6,000 Filipinos within six miles of San Fernando. American loss, 5 killed and 29 wounded; insurgent loss, 100 killed and 300 wounded.

12.—General S. B. M. Young's brigade routs Filipinos at San Mateo, losing 3 killed and 13 wounded. The Filipinos, 300 or 400 strong, retreat to the hills and cannot be dislodged. Insurgents attacking San Luis, on the Rio Grande, repulsed by two companies of the Twenty-second Infantry in garrison there.

14.—Insurgents defeated between Bustos and Quingua.

16.—Colonel Smith, with 10 companies of the Twelfth Infantry and two guns of Battery F, First Artillery, attacks 2,500 insurgents intrenched at Angeles, drives them out and takes the town.

17.—Insurgents intrenched before Calulet driven out after a hard battle. Unsuccessful attempt by insurgents to retake Angeles. President McKinley issues a call for ten more regiments of volunteers.

20.—Intrenched force of Filipinos north of Angeles driven out.

22.—Mayor of San Pedro Macati, appointed by U. S. Military authorities, brought as prisoner to Manila, charged with using his office as an insurgent recruiting station.

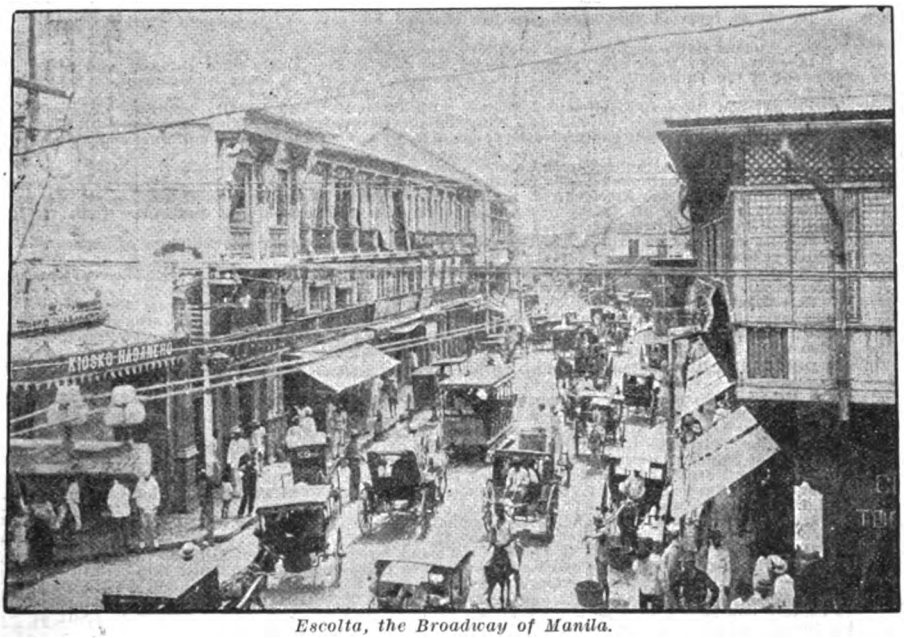
26.—Insurgents in Zamboanga Island defeated by Dato Mundi, a native chief.

31.—Native bandit stronghold of Argegula, near Iloilo, destroyed by troops.

SEPTEMBER 2.—Ineffectual fire opened on Americans at Angeles by insurgents, with two Krupp guns.

13.—Gunboat Paragua destroys a Filipino schooner after a sharp engagement at Balemao.

Digitized by Google



Escolta, the Broadway of Manila.

14.—Gunboat Paragua disperses insurgents at San Fabian, on northern coast of Luzon.
22.—General Snyder takes seven insurgent forts in Cebu.
23.—Town of Olangapo, on Subig Bay, an intrenched Filipino position; bombarded by the Charleston, Monterey, Concord and supplying ship Zafiro; landing party captures large Krupp gun. Gunboat Urdenta grounds in Oran River, is looted by natives, and crew is made prisoners.
28.—General MacArthur evacuates Porac.
29.—Americans evacuate Porac.

OCTOBER 1.—Aguinaldo makes a third effort to confer with General Otis as to terms of peace, but Otis replies to the envoys that he cannot receive such a commission, as that would be in the nature of a recognition of Aguinaldo's government.
2.—Insurgents attack Imus, but are repulsed with heavy loss. American loss, 5 wounded. Preceding this there had been three or four days of desultory fighting, in which a captain and a corporal of the Fourth Infantry were killed and 8 men wounded.
4.—Additional warships are ordered to the Philippines, the armored cruisers Brooklyn, New Orleans and Nashville, and the Badger and Bancroft.
6.—General Frederick D. Grant, with three companies of the Fourteenth Infantry, drives the insurgents from the entire west bank of the Imus River. American loss, 3 men wounded; Filipino loss, 10 killed, wounded not found. Afterward, two companies cross the river and rout a small body of insurgents, of whom 6 are killed.
8.—General Schwan, with Thirteenth Infantry, one battalion of Fourteenth Infantry, two troops cavalry, and Captain Riley's battery of the Fifth Artillery, advance from Bacoor and occupy Cavite Viejo and Noveleta, losing 1 officer mortally wounded and 2 officers and 9 privates wounded. The gunboats Wheeling, Petrel and Callas throw shells into Noveleta and Santa Cruz, and afterward land a force of marines who advance toward Noveleta, fighting, and at length burn the town. Captain Cowles's battalion of the Fourth Infantry drives insurgents from near San Nicolas. American loss, 4 men slightly wounded; Filipino loss, 6 killed, wounded not found.
9.—General Schwan's force advances to Malabon, the stronghold of the insurgents in that province, garrisoned, as reported, by 5,000 of the enemy. From La Loma Church, 4 miles from Manila, a body of insurgents opens fire on the Twenty-fifth Infantry, and in an hour's engagement at 1,200 yards distance, one American is wounded and the enemy retreats. General Schwan's column enters Malabon.
12.—General Young takes Arayat.
13.—General Schwan's command reoccupies Imus, which town was evacuated subsequent to its capture, June 15.
17.—Insurgents driven out of Porac by Colonel Bell's regiment.
18.—General Otis receives an offer purporting to come from General Pio del Pilar, offering to surrender Aguinaldo and the Filipino army for $500,000. Macabebes disperse insurgents at San Mateo.
19.—General Young occupies San Isidro after hard fight at San Fernando.
26.—Insurgents defeated by General Young at Tuboatin River.
27.—Tulisanes bandits near San Carlos defeated and dispersed by Captain Simond.
28.—General Young takes Santa Rosa.
30.—Major Ballance's battalion takes Cabanatuan.

NOVEMBER 2.—Aguinaldo issues a proclamation.
4.—Bongbong taken. About 800 Filipinos enter the town of Vigan and attack Lieutenant-Colonel Parker's force of 153 sick and footsore men, and a four hours' fight ensues before they are driven out, leaving 40 dead and 32 prisoners. American loss, 8 men killed and 3 wounded.
5.—General Young, with a strong force of infantry, cavalry and artillery, encounters the enemy 12 miles east of Vigan and drives them eastward.
7.—General Wheaton lands his force, 2,700 men, on the shore of the Gulf of Lingayen, against considerable opposition, and takes up his line of march for Dagupan.
8.—General MacArthur occupies Mabacalat.

Digitized by Google

10.—It is reported that Aguinaldo has changed his seat of government from Tarlac to Bayombong.

12.—Colonel Bell's regiment and a small cavalry force occupy Tarlac.

14.—Five miles from San Fabian, Colonel Howe, with the Thirty-third Infantry and a detachment of the Thirteenth, with a Gatling gun, have a sharp two hours' engagement, in which Major John A. Logan and 6 men are killed and 1 officer and 12 men are wounded.

15.—At San Nicolas, Lieutenant Johnston, with Troop M, Third Cavalry, captures 12 barrels containing the wardrobe of Aguinaldo's wife and the records of the Filipino Secretary of War. At Tayug, Colonel Wessels captures a large quantity of foodstuffs, Filipino uniforms and Mauser shells.

18.—General MacArthur occupies Gerona.

20.—General Wheaton's advance guard enters Dagupan.

24.—Senor Bautista, President of the Filipino Congress, presents himself to General MacArthur and renounces all further connection with the insurrection, and defections from the cause seem to multiply rapidly.

25.—General Lawton captures $75,000 at Tayug and releases from the Filipinos a number of Spanish prisoners.

26.—Rear Admiral Watson announces to the Secretary of the Navy the unconditional surrender of the insurgents of the province of Zamboanga, Mindanao, on November 18.

27.—Colonel J. Franklin Bell, with a strong force, after a forced march from Mangalaren, comes upon the advance guard of the enemy in the province of Pagasinan, 2,000 strong, and the entire force flees, leaving in Bell's possession some pieces of artillery, many Mauser and Remington rifles, 1,000 rounds of ammunition and other spoils.

DECEMBER 2.—Lieutenant Munro, with a troop of 50 men of the Fourth Cavalry, captures Bayombong.

5.—General Young, with 3 companies of infantry and 3 troops of cavalry, on his way to Vigan, encounters General Tino, commanding a numerous army between Narvadan and San Quinto, strongly posted, and after five hours' fighting, during which he was reinforced by a battalion of the Thirty-third Infantry, he routed the enemy, who left 25 dead, many rifles and thousands of rounds of ammunition. American loss, 1 man wounded.

9.—Major March's battalion of the Third Infantry, sent in pursuit of General Pio del Pilar, encounters his force and totally defeats it, inflicting a loss of 70 killed and wounded. American loss, 1 killed and 6 wounded.

11.—General Tirona, commanding for Aguinaldo in the rich province of Cayagan, surrenders the entire territory to Captain McCalla, of the U. S. Navy.

18.—Colonel Hare's column of Young's command rescues Lieutenant Gillmore and his men, at Bauna, in North Ilocos, who had been in wretched imprisonment since April 12th.

19.—General Henry W. Lawton, U. S. Volunteers, having started the night before from Manila, with the Eleventh Cavalry and battalions of the Twentieth and Twenty-ninth Infantry, to capture San Mateo, held by a force of 300 Filipinos, is shot dead while standing in front of his troops, the enemy being concealed.

26.—General Young appointed Military Governor of Northwestern Luzon, with headquarters at Vigan.

1900.

JANUARY 1.—General advance of American troops southward begins. Generals Schwan and Wheaton, with separate columns, attack insurgents on the shores of Laguna de Bay. Engagements are frequent throughout the month.

12.—General Otis reports that all Cavite Province is occupied by his troops.

FEBRUARY.—During this month President McKinley appointed a new Philippine Commismission, consisting of Judge William H. Taft, of Ohio (president); Professor Dean C. Worcester, of the University of Michigan; General Luke E. Wright, of Tennessee; Henry C. Ide, of Vermont, and Professor Bernard Moses, of the University of California.

MARCH.—There was continued activity among the insurgents during this month, and it was stated that lack of troops made it impossible to keep garrisons in all the towns taken by the American forces.

27.—Order issued by the Secretary of War making the Philippine Islands the Military Division of the Pacific, with four Departments. General Otis placed in supreme command.

APRIL.—Early during this month General Montengro, commanding insurgent troops, surrendered to Colonel Smith, of the Seventeenth Infantry, in the province of Pagasinan.

From the 15th to the 22d the Filipinos lost in various engagements 378 killed, 12 officers and 244 men captured, and many wounded. Americans killed numbered 3.

7.—General Otis relieved from command in Philippines at his own request, General Arthur MacArthur succeeding him.

MAY 6.—General Pataleon Garcia, a prominent Filipino leader, captured at Jaen, near San Isidro.

7.—General Young reports the return of Aguinaldo to the field of operations. Five hundred insurgents attack 25 scouts of the Forty-eighth Infantry at San Jacinto, but are routed, losing 10 killed. American loss, 2 killed.

14.—Eighty men of the Fortieth Volunteer Infantry, commanded by Captain Elliott, rout 500 insurgents at Agusan, killing 52 and capturing rifles and ammunition.

18.—Near Malibicong, Ilicos, American troops fight a force of Filipinos, killing Captain Tinio, nephew of General Tinio, and 23 men, and capturing some prisoners, with rifles, horses and saddles. The Americans sustain no loss.

22.—Two companies of insurgents surrender to Colonel Emerson H. Liscum, at Tarlac. The prisoners number 169, including a major, a captain and 4 lieutenants, who give up 168 good rifles with ammunition.

27.—At Cuyapo, 3 insurgent officers and 56 men surrender.

29.—Insurgents attack the American garrison at San Miguel de Mayamo, kill 5 of them, wound 7 and take Captain Charles D. Roberts prisoner.

30.—The insurgent Governor of Benguet, a devoted friend of Aguinaldo, is captured at Allit.

JUNE 6.—Capture of General Pio del Pilar, falsely reported killed on December 9, 1899; he is taken at San Pedro Macati, near Manila.

10.—Orders are issued for the formation of four troops of native cavalry (Macabebes), to be commanded by American officers.

12.—General Fred Grant reports the capture of an insurgent stronghold in the mountains east of Samiguet, Luzon. General Hizon is captured near Mexico, and General Cavestany near Alcala—both important persons.

21.—General MacArthur issues a proclamation of amnesty with unconditional pardon for Filipino insurgents who surrender within 90 days.

30.—Reported that within the past week a number of small engagements have taken place, that General Tino's barracks have been burned and his correspondence captured, and that at Angeles, General Aquino has surrendered to General Fred Grant. Loss on both sides but slight.

Digitized by Google

JULY 4.—A detachment of United States troops, in pursuit of insurgents, kill 12 near Delta Rio Grande, and lose 3 killed and 2 wounded. During the week ended July 8, 11 Americans are killed and 16 wounded; Filipinos lose 160 killed.

21.—Report published giving facts as to a band of Filipino conspirators discovered in San Miguel, engaged in planning an uprising in Manila against the Americans.

AUGUST 1.—Colonel Grassa, with 1 major, 6 captains, 6 lieutenants and 160 men, having more than a hundred rifles and 50 bolos, surrenders to Colonel Freeman of the Twenty-fourth Infantry, near Tayug.

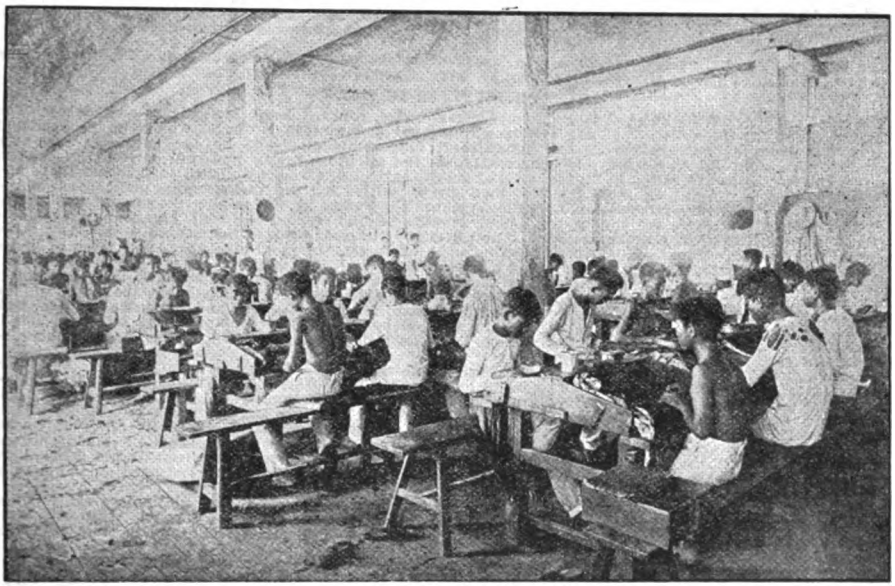
SEPTEMBER 16.—During the past two weeks, 10 natives in Luzon and the Visayas have been killed by hostile Filipinos because they favored American rule or were members of the municipal governments established by Americans. To-day 1,000 insurgents and 134 men of the Fifteenth and Thirty-seventh United States Infantry have a desperate engagement at Siniloan, in which the Americans lose 24 killed, among them Captain David D. Mitchell and Lieutenant George A. Cooper; 19 wounded and 5 missing, believed to be dead. Insurgent bands are active in attacking small garrisons and outposts, destroying small villages friendly to the Americans, cutting telegraph lines, etc.

19.—General MacArthur reports a number of small affairs in Isabella Province, Ilocan Province, and elsewhere.

28.—Captain Devereux Shields, Twenty-ninth Infantry, with 52 men, is reported as captured after a fight of several hours at Boag, Marinduque Island.

OCTOBER 15.—General MacArthur reports success of an expedition to Marinduque by General Hare, and the rescue of Captain Shields and his men.

DECEMBER 2.—Oath of allegiance to the United States taken by 2,200 fighting insurgents.



In a Philippine Cigar Factory.

1901.

The war had become a desultory contest, with guerillas in the less accessible parts of the islands, in 1901. The Federal party, organized among the Filipinos late in 1900, to favor American rule, petitioned Congress in January to authorize the President to establish civil government in the Philippines. Aguinaldo was captured on March 23, and took the oath of allegiance on April 2. Municipal civil government was established at Manila May 3. On June 21 President McKinley promulgated an order establishing civil government in the islands and appointed Judge William H. Taft Governor. The civil government was inaugurated at Manila with imposing ceremonies on July 4. On the same date Major-General MacArthur turned over the military authority to his successor, Major-General Chaffee. In his annual report to the War Department, dated July 4, 1901, General MacArthur stated that between May 5, 1900, and June 30, 1901, there were 1,026 meetings between American troops and insurgents, with the following causalties: Americans killed, 245; wounded, 490; captured, 118; missing, 20. Insurgents killed, 2,854; wounded, 1,193; captured, 6,572; surrendered, 23,095.

1902.

The pacification of the Philippines was declared complete during the Summer of 1902, and President Roosevelt formally declared the restoration of peace, issuing at the same time, on July 4, a proclamation extending general amnesty to the insurgents in the words which follow:

> Now, be it known that I, Theodore Roosevelt, President of the United States of America, by virtue of the power and authority vested in me by the Constitution, do hereby proclaim and declare, without reservation or condition, except as hereinafter provided, a full and complete pardon and amnesty to all persons in the Philippine archipelago who have participated in the insurrections aforesaid, or who have given aid and comfort to persons participating in said insurrections, for the offences of treason or sedition, and for all offences political in their character committed in the course of such insurrections pursuant to orders issued by the civil or military insurrectionary authorities, or which grew out of internal political feuds or dissensions between Filipinos and Spaniards or the Spanish authorities, or which resulted from internal political feuds or dissensions among the Filipinos themselves during either of said insurrections.
>
> Provided, however, that the pardon and amnesty hereby granted shall not include such persons committing crimes since May first, nineteen hundred and two, in any province of the archipelago in which at the time civil government was established, nor shall it include such persons

Digitized by Google

as have been heretofore finally convicted of the crimes of murder, rape, arson, or robbery by any military or civil tribunal organized under the authority of Spain or of the United States of America, but for which special application may be made to the proper authority for pardon by any person belonging to the exempted classes, and such clemency as is consistent with humanity and justice will be liberally extended; and further.

Provided, that this amnesty and pardon shall not affect the title or right of the Government of the United States or that of the Philippine Islands to any property or property rights heretofore used or appropriated by the military or civil authorities of the Government of the United States or that of the Philippine Islands organized under authority of the United States by way of confiscation or otherwise; and,

Provided further, that every person who shall seek to avail himself of this proclamation shall take and subscribe the following oath before any authority in the Philippine archipelago authorized to administer oaths, namely: "I, ———, solemnly swear (or affirm) that I recognize and accept the supreme authority of the United States of America in the Philippine Islands and will maintain true faith and allegiance thereto, that I impose upon myself this obligation voluntarily without mental reservation or purpose of evasion, so help me God."

Given under my hand at the city of Washington, this fourth day of July, in the year of our Lord, one thousand nine hundred and two, and in the one hundred and twenty-seventh year of Independence of the United States. THEODORE ROOSEVELT.

By the President; Elihu Root, Secretary of War.

COST OF THE WAR.

The war, closed with this mark of clemency extended by the head of the nation to the insurgent wards, taken from under the despotism of Spain, cost much in life and treasure. The number of American troops sent to the Philippines was 4,135 officers and 123,803 men. The deaths among officers numbered 139, and among men, 4,016. Officers killed or dying of wounds, 69; men, 936. There were 190 officers and 2,707 men wounded, and the totals of those killed, wounded or dying from other causes than disease are: Officers, 282; men, 4,470.

The total money cost of the war, from the insurgent attack on Manila, February 4, 1899, to the time of the proclamation of peace, was, in round figures, $170,000,000.

THE PHILIPPINES IN 1902.

The chief products of the Philippines are hemp, sugar, coffee, copra, tobacco leaf, cigars and indigo. The land is farmed out to the natives, and the cultivation of sugar and tobacco is almost wholly in the hands of Germans, Spaniards and Englishmen. The agricultural implements employed by the natives are of the crudest type, and artificial fertilization is unnecessary, as the soil is so fertile and rain so plentiful that in many sections two crops are raised in a year. A Bureau of Agriculture was established in October, 1901, and is now conducting investigations as to the best methods of cultivating the various crops indigenous to the islands and in disseminating information regarding them. The extent of the mining resources is unknown, though it is certain that there are widely distributed deposits of gold, copper and coal, together with smaller deposits of iron, lead, sulphur, granite, marble and petroleum. Rich gold fields in the mountains of Luzon have been recently reported. There are about 50,000,000 acres of forests in the Philippines, and most of these contain excellent hardwood timber. Their value has been placed at $500,000,000. In October, 1901, it was announced that the Philippine Commission had authorized an extension of coastwise trade so that shipowners of any nationality might engage in it. Heretofore this trade has been a monopoly in the hand of the Spaniards, but by the new order a large number of German, English, Chinese and Japanese traders took advantage of the opportunity. Trade conditions are affected by the difficulty of procuring laborers, and it has been suggested by members of the Commission that the strict exclusion laws of the United States be modified to fit conditions in the archipelago.

According to the report of the Bureau of Insular Affairs of the War Department, issued December, 1901, the imports into the islands rose from a little more than $79,000,000 in 1899, to more than $30,000,000 in 1901. During the same period custom duties on merchandise rose from $4,411,680 to $8,164,466. The twelve principal articles, in the order of their importance, exported from the United States into the islands in 1901, were malt liquors, wheat flour, iron and steel and their finished forms, paper in its different forms, distilled spirits, glassware, cars, carriages and bicycles, oils, cotton goods, woods and its manufactures, leather and its manufactures, and watches and clocks. Of the exports, Europe received 57 per cent, Asia, 22 per cent, North America, 19 per cent. The export of hemp to the United States showed an increase of over a million dollars between 1899 and 1901.

At the time of the American occupation, of the eight millions of people in the Philippines six millions are of the Roman Catholic religion, 300,000 Mohammedans, and the balance heathens and Asiatics. Since American occupation, however, there has been a rapid growth of other forms of faith, and in May, 1902, the

The Surrender of Pasig.

Protestant Episcopal Bishop of the Philippines, Rev. Dr. Brent, announced that $100,000 had been donated for the erection and establishment of a cathedral at Manila. The Episcopal Board of Missions already owns land upon which a cathedral may be built, and a large endowment fund has also been raised. On October 27 the Catholic Church of the Philippines was inaugurated by dissenters from the Roman Church. A Bishop was installed and fourteen junior bishops and a large lay council instituted. The movement is hardly considered serious, though Aguinaldo has been named as lay official of the Church, and is said to have expressed his approval of the movement. The Philippine Commission has devoted considerable attention to the four monastic orders in the islands, the members of which are colloquially known as friars. The natives of the islands have shown much hatred of these orders, and the work of the Commission was instituted with the view of arriving at some solution of the problem these friars offered. Governor Taft visited Rome for that purpose and it has been practically settled that the United States will purchase the lands owned by the orders, and that objectionable friars will be withdrawn.

Education has made rapid advance since American occupation. Throughout the islands schools, with American teachers, have been established and about 2,000 native teachers have been employed. There is a training school for teachers, recently established in Manila. Charges made in the United States that the schools are being used to the prejudice of Catholicism are denied in the report of Frank H. Bowen, acting Superintendent of Public Instruction in the Philippines. The only departure from absolute non-sectarianism is the permission given ministers or priests of any established church to teach religion for not more than one and a half hours a week to those school children whose parents express a desire for such instruction. The authorities of the Philippine Church have been urged by members of their own denomination to send a number of young priests to America to study educational methods in this country. In June, 1902, four school teachers from America were attacked from ambush by a party of Filipinos, near Cebu, and killed. Their bodies were discovered July 24 by native police, who killed the leader of the band of murderers and captured eight other alleged participants in the crime.

Early in 1902 cholera broke out in Manila and neighboring towns, proving particularly fatal to the natives, but affecting the Americans but slightly. A letter from Governor Taft, dated October 4, to the War Department, said that the material conditions of the country were alarmingly depressive. Cholera had destroyed thousands of lives and prevented the natives from working, with the result that but little food had been raised, and what wheat crops had been planted were destroyed by locusts. The rinderpest had reached the cattle and thousands have been killed during the year. The Chief of the Bureau of Insular Affairs was directed to purchase large supplies of wheat and flour to be distributed among the Filipinos, not to be included in the $2,000,000 food purchase of the Philippine Commission and the distribution of rice by the civil Governors.

General James Smith, formerly a leading lawyer of San Francisco, has been appointed a member of the Philippine Commission, to succeed Bernard Moses, who retires January 1, 1903. General Smith has been Collector of Customs for the islands and has shown marked administrative ability. He accompanied Governor Taft to Rome in the matter of the friar lands. In October, Professor Jeremiah Jenks, of Cornell University, who had visited English and Dutch insular possessions at the instance of the Bureau of Insular Affairs, made public his report. He recommends that employers be permitted to introduce Chinese laborer in the Philippines under contract for a period of not more than three years, and suggests that the employers be required to give bonds for the proper care of the Chinese. Nowhere in the dependencies of France, Great Britain or Holland, he says, has there been granted so great a measure of self-government as the United States has already given the Philippines.

Under the date of September 30, 1902, the War Department issued a valuable book on the Philippines—"A pronouncing gazetteer and geographical dictionary of the Philippine Islands." It contains maps, charts and illustrations, and the complete law of civil government in the Philippines as passed by Congress and approved by the President, July 1, 1902. The introduction tells the scope of the work.

"The great number of inquiries addressed to the War Department from all parts of the United States calling for information regarding the Philippine Islands has indicated that a printed compendium of such information would be practically useful to the American people." A feature of the book is the spelling and pronunciation of local geographic names. The value of letters affected by symbols of sounds is phonetically explained, as also the etymology of words

Aguinaldo as Commander-in-Chief.

whose origin, whether foreign, Spanish, Tagalog or native, is indicated. Beside giving general encyclopedic articles on the islands, there are special articles on each province and town, giving population and important features of the places. A brief description of the city of Manila, as given in the Gazetteer, may be of interest: "The city of Manila is situated at the mouth of the Pasig River, the outlet of the great Lagu na de Bay, on the east shore of Manila Bay and 32 miles from its entrance. The aboriginal form of spelling Manila was 'Maynila,' a Tagal word, meaning a species of shrub which grew on the site of the city when founded by Captain Miguel Lopez de Legaspi in 1571.

Gov. William H. Taft.

"The city possesses modern facilities not excelled in the Far East. The streets are wide and were so arranged by the founder as to have one side always in the shade. There are fine plazas, public squares, gardens and promenades. About the middle of the eighteenth century, due to the beneficence of a public-spirited private citizen, almost every street was furnished with its own standpipe for water supply, which remained in use until 1880.

"The population of Manila is made up of Americans and representatives of European nationalities, Spaniards predominating among the foreigners, and Filipinos, principally Tagalogs, Mestizos, Indians, Chinese, Malays and a few from the South Islands of the archipelago, Japan and India. The city is not only the seat of insular government, but the centre of foreign and domestic commerce, mercantile, financial and professional activity and mechanical industry. It is also the focus of the highest type of the people of the archipelago.

"The church at Manila was the second place of Christian worship in Malaysia, dedicated in 1571 as 'Conversion of St. Paul, the Apostle.'

"The buildings for military, civil, religious, educational and other public purposes are commodious and in some instances possess no inconsiderable claims to architectural style. The River Pasig divides Manila in two parts, that on the south being occupied by the military defences and on the north by the commercial, mercantile, manufacturing and residential quarters and suburbs. Two parallel dikes for breakwaters define the entrance of the Pasig River from Maniola Bay.

Photography: A Modern Art.

GEORGE G. ROCKWOOD.

No art or science has ever attained to such importance in the world as the art of Photography. It has its votaries in every civilized country, and in all the channels of trade or travel the camera is a familiar object. The outcome of this still growing interest has been decisive and important. Art, letters, education and commerce have been in a degree advanced by it.

For the last half century, photography, electricity and steam have been making wonderful progress in the development of the human race. Electricity has abolished time and binds the ends of the earth together. Steam is the great economizer of human effort and energy; a power that is more or less in evidence in every step of progress in civilized humanity. Photography, at first dealing with the emotional or aesthetic element in our nature, truthfully recording the beautiful, has now become one of the most practical of the arts. Its many applications in practical things are amusing to the layman or such persons as have given it only a passive thought.

In coupling electricity with photography, I bring to mind a fact that may not be generally recalled, which is that Professor S. F. B. Morse, who gave to the world the electric telegraph, was also the first to bring to America the silver image, as he was the personal friend of Daguerre. Morse was at that time (1839) in Paris, exhibiting his telegraph. Brother artists and inventors, each was invited to examine the other's inventions. Morse was a portrait painter as well as an inventor, and was enthusiastic as to the future of the new invention and earnest in his desire to introduce the daguerreotype into America. He returned in the Winter of 1839-40. Daguerre made his first image on the sensatised plate in 1832. There is here a coincidence of dates of natural interest to the present writer, who has given his life to the art which was conceived the year he was born.

The first decade of the art was devoted, so to speak, to aesthetic or sentimental uses. We then looked for nothing more important than portraits of those we held in esteem or fond remembrance. To describe the steps from that point to photography on glass and paper, and finally to the processes of photo-engraving, though interesting, would require a volume. At the opening of the twentieth century we find the art not only used enormously for portrait use, but as almost the universal means of illustration in books, magazines and newspapers. It is easy within my remembrance when one of the great publishing houses of New York employed not less than forty or fifty artists and engravers to prepare illustrations from two to six weeks in advance for their periodicals. In that establishment to-day I question whether there is one engraver on the staff, and in this change quality has not been lost. Added to superior artistic results is the inestimable value of fidelity, both to the work of the artist or the presentation of nature. No such pictures or illustrations were ever known in books, periodicals or newspapers as now greet us, and all done by photography; and here we couple electricity with our art.

Digitized by Google

But a small portion of the work on illustrated papers are made in daylight; the electric light has taken the place of the God of Day, and the work goes on regardless of time or weather. The glare of light in the upper stories of the great newspaper buildings tells the story to the initiated that photography aided by the fierce light of the carbon pencil is doing its perfect work. By a device of the writer, I have been able to place a sitter under the light of my studio and in seventeen (17) minutes had a positive picture ready for the half-tone process operator, who in a half hour or less would have the printing plate ready for the press. It is no unusual thing to see the scene of a banquet or other gathering reproduced in our morning paper. The scene is first instantaneously photographed by flash light (by the burning of magnesium in powder), and then by what are now familiar processes transferred to the printing plate. The use of photography by the press and in book making is possibly the most important branch of the art to-day.

A noted English publisher, learning that one of his books had been republished in America, announced with great positiveness that the American edition was full of errors, believing very naturally that it would be impossible to put into type large volumes without some typographical errors. His contention was that it would require experts of as much skill and experience in the realms of science and literature to read the proofs accurately as to write the original articles. So he was much confused when informed that the entire volume, page for page, had been photo-engraved, with not a touch of an engraver or a type lifted.

Until a comparatively recent period, photography has failed almost entirely to interpret the colors of nature or art, or to give the proper monochromatic value to them. For instance, yellow and red and all of their combinations would photograph dark, while blue, violet and their shades would develop white. Of late, however, we have what is known as ortho-chromatic or color sensitive plate, which translate the colors in their proper values as between white and black, or, technically, the mono-chromatic scale of colors.

Naturally follows the question, Do we expect to reproduce the natural colors? The problem is not yet solved, yet we see announcements and discussions almost every week concerning the discovery at last of "Photographs in the Colors of Nature." This leads the non-expert or layman to believe that the colors of nature are recorded in one operation and the direct image so received is visible to the eye. This is an error. We are not within gunshot of it; no nearer than in the early days of the daguerreotype.

Study of a Child.

TYPES OF MODERN PORTRAITURE.

Of late stellar photography has been making wonderful progress. A serious attempt is now being made to secure a complete map of the midnight sky, and there is no doubt of its accomplishment, so far as the sky can be seen from the continents of the globe. At various points of the earth there are observatories where skilled experts are engaged with telescopes especially adapted to the purpose of making photographic negatives of the stellar universe. Millions of stars not before known to exist have been recorded on the delicate sensitive plates.

Announcement is made in some of the foreign journals that miscroscopic maps are proposed for war purposes. This was done as long ago as the War of the Rebellion. I then made some experiments in that line for Major Meigs, of the Engineer Corps. Some maps were made by me and were awaiting the examination of Major Meigs, when the latter was shot and killed. Some successful balloon photographs have recently been made, which in actual warfare in South Africa seem to be of the greatest use.

As legal evidence photography is growing in constant favor and use. Many times experts have been called to photograph localities where accidents have happened. Some time ago a question of responsibility was settled in court concerning two steamboats which had been in collision. One boat, which had received the blow of the other, had been at once repaired by the owner, but not until a series of photographs had been made, unknown to the owner. At the trial some pretty tall swearing took place, when, to the surprise of the witnesses they were put face to face with the art that cannot lie—photography—and the case went against them.

One would naturally ask, "Can the camera see better than the human eye?" In many ways photography has the best of it. In fine distinctness of color the sensitive film will often determine questions where the human expert fails. In old faded manuscripts, in which many letters and words are not legible from the close approximation of the color of the paper to the faded ink, the photograph will often define the characters and unravel the mystery of time and bad chirography. Many other important legal cases have of late years been decided by this means.

The secrets of the microscope as revealed and recorded by photography are truly wonderful. Many facts in nature and science have been demonstrated which could have been accomplished in no other manner. Ex-

Digitized by Google

perts have secured negatives and excellent photographs of what are known to exist, but which few can resolve by the microscope, to wit, the invisible or white blood corpuscles.

Almost every large manufacturer has a photographic department, where are copied all plans, models and specifications and a complete record made of them. Very recently a camera was introduced into one of the largest life insurance companies, and now all important letters, documents, etc., are duplicated in permanent photography in order to guard against loss or fading of the original manuscripts.

The very first move by Mr. John B. McDonald and his sub-contractors in the tunnel was to have the sites of the intended excavations photographed and recorded as indisputable evidence of the original condition of the places.

Practically every executive department in Washington has its official photographer, whose work consists of the preparation of illustrations for Government publications, the recording of phases of botanical and zoological life, the physical characteristics of various regions, etc. Fortifications, ordnance, uniforms and so on are faithfully reproduced by the photographic division of the War Department, and the negatives and prints are filed for future reference. Vessels under construction or being repaired, marine apparatus, armament, uniforms and coast topography are reproduced by the photographer of the Navy Department.

A new and important development of the application of photography is in the perpetuation of the Government records. It will consist of the preparation of greatly reduced negatives of the tons of State papers, which now encumber the Government files. In many instances ten or a dozen of these papers can be photographed on a single negative. A comprehensive index will be kept, and a print of the required document, of any desired size, can be made at any time. In this way negatives which will occupy cubic inches can be made of papers which occupy cubic yards, and only in the rarest instances will it be necessary to refer to the originals.

My space is too limited to do more than mention a few of the many applications of photography to the arts. To sum up, it is used in portraiture, architecture, illustration, reproduction, criminology, astronomy, decoration, relief work, records, glass staining, pathology and other ways in a larger degree in exact science and the useful arts than in its aesthetic application. It has created a new and mighty industry, which will continually extend, as new fields and applications are constantly opening. It has lessened the cost of books marvellously and thus become a great educator. It has created what might properly be called a mighty kindergarten system of object lessons. By it our children have been made as familiar with scenes of interest in all parts of the world as old travellers. It brings to them and us noted people, objects of historic and artistic value and record of events. School children will identify a view of the Coliseum of Rome as promptly as one taken of the Aquarium at the Battery. Thus it is a great educator, and I can close as I began, by describing it as one of the great trinity of forces in the present era—electricity, steam and photography.

Porto Rico.

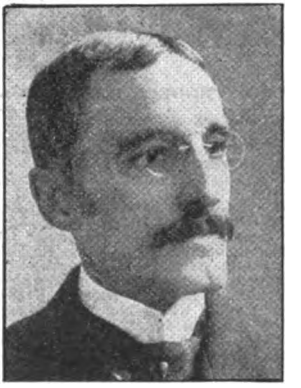
—

Capital:
SAN JUAN.

Porto Rico, the smallest of the Greater Antilles, was discovered by Columbus in 1493, and invaded in 1509 by the Spaniards under Ponce de Leon, who, in a few years, exterminated the natives, some 600,000 or 800,000 in number, and established Spanish settlements, more or less permanent. It remained under the dominion of Spain until December 11, 1898, when it was ceded to the United States by the treaty which ended the Spanish-American War. It now constitutes a body politic under the sovereignty of the United States, called The People of Porto Rico.

Porto Rico, like all the islands of the West Indies, is built upon a foundation of central mountains, which tower to a height of several thousand feet and render the atmosphere cool and comfortable the year around. The summits of some of the mountains reach almost to the snow line and are covered from base to peak with a deep, rich soil, devoid of rocks and suitable for cultivation of products of both the tropic and temperate zones. There is scarcely an acre of ground on the island that is not suitable for cultivation, and the population could be safely doubled or trebled without causing danger of famine.

The government of Porto Rico is administered by a Governor and Cabinet appointed by the President of the United States. The members of the Cabinet, together with five other persons, constitute an executive council of eleven members, of whom at least five must be natives, and this executive council constitutes the upper board of the Porto Rican Legislature. The House of Delegates, or lower legislative house, consists of thirty-five members, elected, five each, from the seven districts of the island. The executive council, may, as a co-ordinate branch of the Legislature, refuse to accept acts passed by the lower house. The Governor has the usual power of veto over the acts of both bodies, and the Congress of the United States retains absolute power of veto over all acts of both the legislative and executive branches of the insular government. The franchise is restricted by a small property qualification and an easy educational test. The island has an area of about 3,600 square miles and an estimated population of about 970,000, of which the negroes number about 70,000 and mulattoes about 240,000. By the last census, San Juan, the capital and principal city, had a population of 32,048; Ponce, 27,952, and Mayaguez, 15,187. The present Governor of Porto Rico is William H. Hunt, of Montana, who was appointed by the President to succeed Charles H. Allen, of Massachusetts, resigned. The appointment took effect September 1, 1901.



Gov. William H. Hunt.

Agriculture is practically the only industry in Porto Rico. Of the total population of the island, as given by the census of 1899, 78.6 per cent were returned as living in the rural districts, and nearly all of these depend upon agriculture for a living. Sugar, coffee and tobacco are the principal products, though fruits and vegetables are raised in quantities for export as well as for home consumption. The sugar crop has increased largely since the re port for 1898-1899, due to the mar kets afforded by the United States and the more peaceful conditions in the island. The crop for 1901-1902 was estimated at 100,000 tons. The coffee plantations have not yet en tirely recovered from the hurricane of 1899, though in 1901 especial efforts were made to get out a large crop, the severe storms of that year preventing the efforts being fruitful. The total crop for 1901 was be tween 60,000 and 70,000 bags. The greater part of the crop is marketed in Europe, where Porto Rican coffee is better liked than it is in the United States. A great deal of the tobacco crop is now marketed un manufactured, in the United States, though prices have been low for the last two years. In several places citizens of the United States have started orange tree, pineapple and vegetable plantations.

It seems that the great diffi culty in developing the agricultural conditions of the island and further ing the well being of the people is that the laborers are not in absolute need of anything more than they have. With the recent exchange of insular coin for that of the United States, the wages of the field labor ers and those on the coffee planta tions have been raised to 50 cents in gold per day, and with the bet tered methods of cultivation and increase of invested capital, it is hoped that conditions will be im proved. Hitherto, moreover, the staple crops of the island have not been capable of paying more than the smallest wages, and there has been no opportunity for the laborer to better his conditions. There are salt works on the island, yielding about 10,000,000 pounds annually, and these pay fair wages to their workmen.

For the year 1901 the Commissioner of Education for Porto Rico reported that the average daily attendance in the elementary schools was 23,435, out of a total population of school age numbering 322,393.

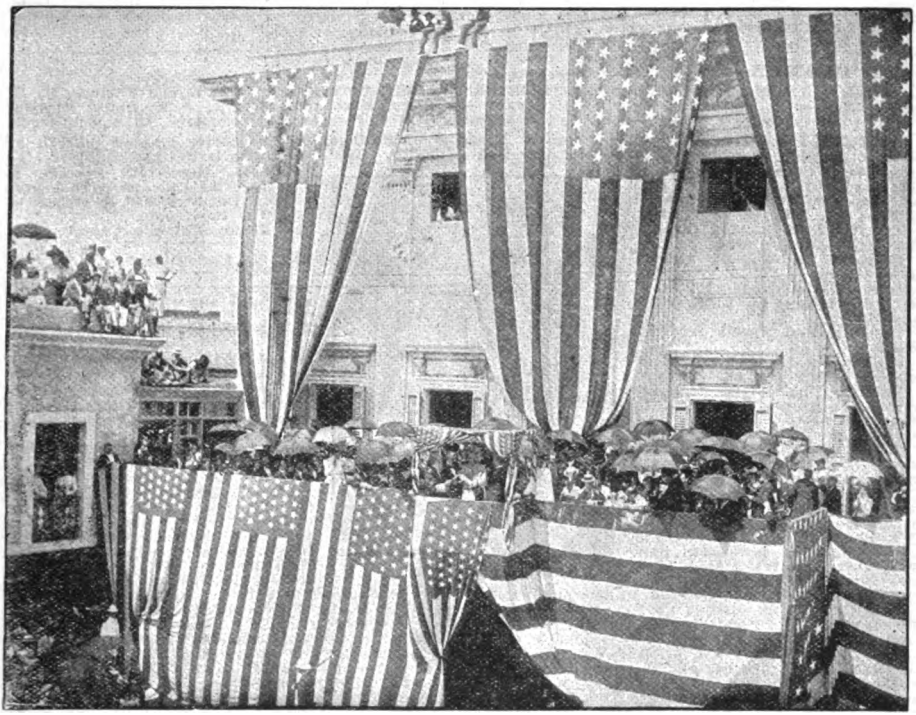
BORMAY & CO., N.Y.

The enrollment during the year was 33,802, of which 15,542 were white and 5,695 colored boys, and 8,763 white and 3,802 colored girls. The number of buildings in use for schools was 120 in towns and 387 in rural districts. During the year a normal school was opened in San Juan and was attended by over 800 teachers. The same year a number of Cuban and Porto Rican teachers visited the United States and attended the sessions of the Harvard Summer School at Cambridge, Mass. Owing to the poverty of the peasant class and the inadequate means of transportation, it seems that a school system extensive enough to cover all of the territory to the best advantage cannot be established for several years.

Several acts were passed by the Porto Rican Legislature in 1901 that are of general interest. In accordance with a recommendation of the Governor, trial by jury in criminal cases was instituted where the defendant was on trial for a crime punishable by death or more than two years' imprisonment. A juror, to qualify, must be a citizen of the United States or of Porto Rico, must be conversant with the Spanish language, and own property in Porto Rico assessed to the value of at least $200. Jacob H. Hollander, treasurer of the island, prepared an act providing for a new system of taxation, which was passed by the Legislature. Under the Spanish system both the direct and indirect taxes fell heavy on the poor and lightly upon the rich people. The Hollander act repealed the Spanish taxes and provided for a tax on real and personal property not to exceed 1 per cent for both municipal and insular purposes, excise taxes and a graded inheritance tax.

A special session of the Legislature was held July 4, 1901, to ask that free trade with the United States be granted Porto Rico. The Foraker Act, passed by the United States Congress in 1901, directed that all duties on imports from the island should cease after March 1, 1902, or as soon as Porto Rico was able to pay her own bills. It was found that ample insular revenues were being collected under the Hollander Act, and so the Legislature made a special request that free trade be declared on July 25, 1901, as the anniversary of the first landing of American troops on the island. The request was granted, and since then



Inauguration of the First American Governor of Porto Rico.

trade between the island and the United States has been continually increasing, and the shipments from Porto Rico in the fiscal year ending June 30, 1902, amounted to nearly $10,000,000.

Two political parties tend to keep Porto Rican politics at an interesting stage. Serious outbreaks are reported to have taken place between the Republicans and the Federals during the recent campaign in the island. The Republicans, representing the faction which opposed Bryan in the United States in 1900, are in power, and have been ever since civil government was instituted under Governor Allen. The Federals claim that they are deprived of the right to vote by arbitrary rulings of Republican election officers. On September 4 a party of Republicans attacked the Federal section of the town of Caguey and a bloody riot followed. It was stated in press dispatches that the police sided with the Republicans and refused to restore order. On October 2 the Executive Council, consisting of four nominal Republicans and three Federals, issued an order to the effect that the election judges should consist of one Federal and two Republicans. When the time for registration came, it was claimed that Federals were arrested by the wholesale in order to prevent their voting, and that the entire registration was a farce.

Prison Statistics for Porto Rico were received too late for tabulating. In the penitentiary and the five jails of the island, on September 30, 1902, there were 998 prisoners incarcerated for various crimes. Following are the crimes and the number of prisoners for each:

Abduction, 1; arson, 34; assault and battery, 181; attempt at robbery, 2; assault, 2; assassination, 41; carrying arms, 2; counterfeiting, 4; cruelty to animals, 1; damages, 3; drunkenness, 1; embezzlement, 3; false denunciation, 1; false pretense, 2; forgery, 2; fraud, 14; gambling, 4; homicide, 76; intimidation, 2; insulting, 4; offense against public peace, 100; offense against public health, 1; robbery and homicide, 6; robbery by conspiracy, 52; robbery, assault and battery, 6; robbery and theft, 17; riot, 2; recklessness, 1; slander, 1; possession of counterfeit coin, 1; perjury, 1; parricide, 3; contempt of court, 9; passing counterfeit coin, 3; theft, 126; threats, 20; violation of military laws, 3; violation of postal laws, 3; violation of United States statutes, 4; social crimes, 33.

Portugal.

—

Capital:
LISBON.

The House of Braganza, the reigning dynasty of Portugal, dates from the latter part of the Fourteenth century, when Alfonso, an illegitimate son of King John I., was created Count of Barcellos by his father, and, later, Duke of Braganza by King Alfonso V. When the House of Avis, the old reigning family, became extinct by the death of King Sebastian's successor, Cardinal Henrique, the throne passed to Philip II., of Spain, but even the fact that he was a descendant of a Portuguese princess did not make the people feel kindly towards their Spanish rulers, and after sixty years of dissatisfaction they revolted and proclaimed Don John, Duke of Braganza, King. The present ruler is descended from this monarch, King John IV., whom historians have surnamed "The Restorer."

King Carlos I., who was born September 28, 1863, was the son of King Luiz I., and Queen Maria Pia, daughter of the late King Victor Emmanuel II., of Italy. He succeeded to the throne October 19,1889. On May 22, 1886, he married Princess Marie Amelia, the daughter of Philippe of Orleans, Comte de Paris. Their children are:

Name.	Born.	Died.	Married.	Born.	Date of Marriage.	Issue.
1. Prince Louis Philippe, heir apparent..	1887	....				
2. Prince Manuel.....	1889	....				

THE MINISTRY.—The Ministry is composed as follows:

Premier and Minister of the Interior, E. R. H. Ribeiro; Minister of Foreign Affairs and Finance, F. M. Santos; Minister of Justice and Worship, A. Campos Henriques; Minister of War, L. A. P. Pinto; Minister of Marine and Colonies, A. T. de Sousa; Minister of Public Works, Industry and Commerce, M. A. de Vargas.

THE NATION.—The basic principle of the Kingdom of Portugal is the charter granted in 1826 by Pedro IV. In the sovereign is vested the moderating authority. The Legislature is in two chambers, the House of Peers and the Hall of Commons. Hereditary Peerage is being gradually abolished; at pres ent the King can appoint not over fifty peers besides those of royal blood. Deputies to the House of Commons are elected every four years by the people.

The State religion is that of the Roman Catholic Church. All other faiths are tolerated.

Education is nominally compul sory; in the primary schools, only nominally

Justice is administered first in the comarca courts, one to each dis trict. Above these are three courts of appeal and the Supreme Court, at Lisbon.

The estimated revenue for 1902 was $57,521,327; expenditure, $59,- 658,928.

Portugal is fortified at Elvas, Angra (in the Azores), and Lisbon, the last having the only modern fortresses.

Nearly one-half of the territory of Portugal (45.8 per cent) is waste land; about 15 per cent in crops, 7 per cent in fruit trees, 27 per cent in pasture and 2 per cent in vineyards. Cotton spinning and weaving and the fishing industries are important.

King of Portugal.

THE COLONIES.—Portuguese colonies are to be found in Africa and Asia. The Cape Verde Islands and Madeira are integral parts of the Kingdom. In Asia the colonies are Goa, on the coast of Malabar; Damaun, on the coast of India, north of Bombay; Diu, a small island west of Damaun; Timor, an island in the Indian Archipelago, and Macao, at the mouth of the Canton River—a total of about 9,000 square miles. Goa, with a fine coast transportation business, is a thriving and prosperous prov ince, and nearly pays its cost to the mother country; Macao more than does so, having a large rev enue form an enormous opium trade. Portuguese possessions in Southeast Africa include Lorenzo Marquez and Mozambique, two important colonies, running from Tonga- land (British) to the British Central Africa Protectorate. The Mozambique and The Nyassa Companies, both of which hold royal charters, administer over half of this territory. They have built up important supply and good trade stations, besides doing a very lucrative transportation business. There are two rail- ways of 240 miles total length. The West Africa colonies include parts of the coast of Guinea; the adja- cent islands of St. Thomas and Principe; the provinces of Landana and Cebena, between the French Congo and the Free State, and the vast province of Angola, to the left of the Congo River. In Angola there are over 300 miles of railway and 250 of telegraph wires. None of these provinces pay for themselves.

THE PORTUGUESE POSSESSIONS.

Possessions.	Area in Sq. M.	Population.	Exports.	Imports.
Africa:				
Cape Verde Islands.....	1,480	147,424	$356,000	$2,844,000
Guinea.....	4,440	820,000	332,980	950,840
Prince's and St. Thomas's Islands.....	360	42,103	2,038,000	3,526,000
Angola.....	484,800	4,119,000	5,370,000	7,268,000
East Africa.....	301,000	3,120,000	6,428,000	11,100,000
Asia:

Totals.....	801,060	9,267,444	$29,415,649	$46,218,105

According to census results the proportion of the population, including children, that could not read was 82.4 per cent in 1878, and in 1890 it was 79.2 per cent. In 1890 there were 5,339 public and private primary schools, or 10.6 per 10,000 of population, the number of pupils being 237,791, or 471 per 10,000 of population. There were 175 primary schools for adults with 6,774 pupils. In 1899 there were 4,483 public primary schools. Normal schools for the training of teachers are being gradually created in the chief towns. For higher instruction there are polytechnic schools at Lisbon and Oporto, schools of medicine at Lisbon, Oporto and Funchal, a school of agriculture at Lisbon, a naval school, a military school, a high school of letters, schools of fine art at Lisbon and Oporto, and a musical and dramatic conservatory at Lisbon.

FOUR PRETENDERS TO EUROPEAN THRONES.

Pretenders to European Thrones.

The right of several reigning European sovereigns to the thrones they occupy is openly questioned by claimants who dispute the right directly by the personal assertion of their individual claims, or indirectly through adherents, who, in some cases, are avowedly or secretly organized with a view to eventually restore to power the dynasty for which they assert the right to reign by reason of legitimacy. It is a striking illustration of the liberal spirit of the present age that the so-called legitimatists carry on their propaganda to a certain extent in the very countries affected by their claims, without falling under that ban of law and authority which, a few generations back, would have sent them to dungeons or to the scaffold. Besides existing thrones which are coveted for soi-disant legitimate heirs, there is one, and possibly there are two republics, successors of monarchies, wherein it is hoped to set up anew the overturned throne. Were it not for the immense power of the United States as an independent nation it is possible that this republic also might be included in one of the efforts to "restore the king to his own," should that particular one ever advance to the stage of practical action; and this fact is forcibly suggested by the existence here of branches of the organization which are working in what it believes to be legitimate interests.

This, together with the close connection of our national history with that of England, gives first place in American interest to the claim made that the British throne for years has been occupied by a family of usurpers. The Legitimist Jacobite League is an organization, with headquarters in London, and branch organizations elsewhere, including one in Boston, Mass., and one in Philadelphia, Pa., which is making constant increase in membership and bears upon its rolls some names included in the British peerage. The aim of this league is the restoration to the throne of a royal line more direct in its descent from the Stuarts than is that represented by King Edward VII. Although organized during the later part of Queen Victoria's reign, the league has evidently regarded as inauspicious any movement for ousting that loved and honored sovereign, or her popular successor; but, with the strength of numbers and of sentiment which it is developing, it may make trouble for the present heir apparent, even to the extent of depriving him of the succession. Members of the league profess not to recognize the reigning house, but confer upon the wife of Crown Prince Louis of Bavaria the title of "Mary IV., Queen of England," giving to her oldest son, Prince Rupert, the title "Prince of Wales." The Princess gives no open countenance to this movement in her favor, although she makes tacit acknowledgment of the legitimacy which underlies it. She is the daughter of the ex-Duke of Modena, who lost his throne in 1860, when his dominions were incorporated in the kingdom of Italy, and who resided thereafter in Vienna, recognized by the Austrian Court as an Archduke of the House of Hapsburg. When Emperor Francis Joseph invited the then Prince of Wales to represent Great Britain at the opening of the International Exhibition of 1873, the ex-Duke of Modena lodged a protest, declaring that he alone, as the lawful king of England, was entitled to that honor. In reply to the argument that his rights had been annulled by the Act of Settlement of 1701, which vested succession to the crown in the Protestant House of Hanover, he denied the validity of the act, which, it is of importance to note, was passed by the British Parliament by a majority of only one vote out of 385. The Princess was born Archduchess of Austria-Este-Modena, July 2, 1849, and was christened Mary Theresa Henrietta Dorothea. She became the wife of Prince Louis on February 20, 1868, and they have had thirteen children, of whom twelve are living. Her father died in 1875. The Princess is descended in a direct line from Mary Stuart, Queen of Scots, through James I., and the unfortunate Charles I., who lost his head as well as his crown. The Electress Sophia of Hanover, in whom the Act of Settlement vested the succession to the British throne, and from whom Edward VII. is descended, through George I. and his successors, came from a side branch of the royal line, and in legitimate right of succession stands more than 600 numbers down on the list of living persons who are included in the line and its branches. A curious averment made by the Jacobites, who are, of course, opponents of democracy in every form, is that if the Stuarts had not been deprived of their royal heritage George III. would not have become king, the American War of Independence would not have been waged, and what is to-day the Republic of the United States of America, would be, instead, a portion of the vast kingdom of Mary IV., Queen of England.

Incidental to this statement of the legitimate claims to the throne of England, mention must be made of the fact that Kaiser Wilhelm II. is reported to have held, at the time when the present Prince of Wales was likely to die without an heir, that in accordance with the principle of succession which gave the throne to Queen Victoria, instead of to her uncle, the Duke of Cumberland, the right of succession was vested in Queen Victoria's oldest child, the Princess Royal of England, who renounced her right when she married Crown Prince Frederick of Prussia; which renunciation, according to the Kaiser's alleged claim, did not affect his right of succession as her oldest child, but left him still in precedence of his uncle, the present king. The substantiation of such a claim would transfer the crown of England from the House of Hanover to the Hohenzollerns, and it would pass to the lineal descendants of the Kaiser, reverting to the Guelphs only in case of the Hohenzollern line dying out.

Next to claimants for the English throne the pretentions of those persons who assert their right to rule as monarchs in France are of interest to Americans, partly because of the ancient friendship existing between the two nations, but chiefly because France is a republic, like our own country. There are two recognized pretenders to the throne which the French people relegated to the list of extinct institutions when Napoleon III. lost his prestige through the disastrous consequences of the Franco-Prussian War, in 1870. One represents the House of Orleans, which maintained the same attitude toward the Second Empire which it has maintained toward the republics preceding and following the reign of Napoleon III. The other of the two represents the Bonapartist dynasty, twice driven from power by a popular sentiment arising from the humiliation brought upon France by the unsuccessful issue of foreign wars. There are two other claimants, who are scarcely to be considered, as neither has any following worthy of mention. One of these assumes the title of Duke of Anjou, and bases his pretence upon Bourbon descent. The other is the so-called Duke of Normandy, who, although engaged in the plebian occupation of a wine merchant in

Digitized by Google

Paris, asserts himself to be the grandson of the Dauphin, son of Louis XVI. and Queen Marie Antoinette thus discrediting both the historical account of the murder of the Dauphin and the claims of the present Orleanist pretender. The latter is Prince Louis Philippe Robert, Duc d'Orleans, son of the late Comte de Paris. He was born in England, February 6, 1869, and married, November 5, 1896, the Archduchess Mary Dorothea of Austria. He is enormously rich. Prince Napoleon Victor Jerome Frederic, commonly called Prince Victor Bonaparte, receives equal recognition with the Duke of Orleans at European courts as are accorded to royal personages in retirement. Prince Victor was born in Paris, July 18, 1862, makes his home in Brussels, where he is given rank immediately after Prince Albert, the Belgian heir apparent. He is married, but his wife, to whom he is devoted, is a young Belgian of humble origin. They have two children.

In natural sequence the disputed legitimacy of the regnant family in Spain comes next in order. Young Alfonso XIII. must make himself extremely popular in order to preserve his throne from being overturned by the republican element among his subjects, or turned over to Don Carlos. This prince, whose full name is Carlos Marie de los Dolores Jean Isidore Joseph Francois Quirin Antoine Michel Gabriel Raphael, and whose title is Duke of Madrid, was born March 30, 1848. He is wealthy and is treated as a royal personage in Venice, where he resides. He has always been active in assertion of his claim; and in his son, Don Jaime, there is a future pretender who is likely to be even more assertive. Don Jaime is the son of the pretender's first wife, who was a Bourbon princess. The present Duchess of Madrid is not of royal blood. Don Jaime, born at Vevay, Switzerland, June 27, 1870, is an officer in the Russian army.

The Portuguese throne is occupied by Dom Carlos I., but the legitimacy of his reign is questioned by Dom Miguel, Duke of Braganza, head of the royal line, displaced by the marriage of Queen Maria II. and Ferdinand, Prince of Saxe-Coburg-Gotha, in 1836, the latter becoming king under the title Ferdinand II. Dom Miguel was born September 19, 1853, married twice, and has one son, Francis Joseph, born September 7, 1879, the issue of his first wife.

For the Italian crown, now worn by Victor Emmanuel III., there is a claimant in the person of the Duke of Parma, but the pretence is deemed of so little moment by the reigning house that not only is the Duke permitted to reside in Italy, but the late King Humbert was in the habit of extending financial aid to needy members of the rival royal line. There is also a pretender to the throne of Naples, a kingdom absorbed by Italy in the new era of her existence inaugurated by Garibaldi; but the so-called Count of Caserta is unlikely to make any trouble for the reigning house, although it is possible that his family of twenty-two children might eventually produce an active claimant. The ex-Grand Duke of Tuscany is another who regards the Italian crown as a lost heritage which may be eventually restored to him or one of his posterity.

In completion of the list of pretenders, the Duke of Cumberland, great-granduncle of the German Kaiser, is claimant to the crown of one of the kingdoms included in the German Empire. His claim is for the right to reign as sovereign of Brunswick. The Duke is a principal personage at the Austrian Court, having precedence of all the archdukes. His wealth is vast, and he makes a lavish display of it on state occasions and when visiting England and other countries.

Psychology: Its Mission and Development.

LIVINGSTON FARRAND, A. M., M. D., of Columbia University.

Psychology is the science which deals with states of mind or consciousness, but without concerning itself with the nature of mind it limits its subject matter to the way in which the mind works, or, more exactly, to mental processes. In other words, the task of psychology is the accurate description of mental operations and the formulation of the laws under which such operations take place. In the pursuit of this end the science has branched out in many directions and as a consequence has developed different methods of research which stand out prominently in its history. The earliest, and for centuries practically the only, method of psychological inquiry was what is known as the introspective, that is, where the psychologist observes and describes his own states of mind as accurately as possible, the inference being that what is true for one will be true for others. Toward the middle of the nineteenth century, however, the attempt was made to apply the methods of the physical laboratory, with their greater accuracy, to mental phenomena. Limited at first to experiments on simple sensations and the stimuli which caused them, the method was soon extended to higher mental functions such as perception, attention, memory, etc., and much light was thrown on operations which had theretofore baffled inquiry. The new method spread rapidly and has given rise to the modern experimental psychology

A Test of Endurance.

CHILD STUDY IN PSYCHOLOGY.

Digitized by Google

which, with its well equipped laboratories, holds sway in our colleges and universities to-day. As an offshoot of experimental psychology came the attempt to discover by the new method the connection between the mind and the body, more particularly the brain. That some connection did exist had long been admitted, but little was known as to its nature. This attempt involved as its main feature the study of the physiology of the brain and nervous system in their relations to mental processes and in developing this field has produced the physiological psychology of the day.

In the meantime, with the spread of the Darwinian doctrines of evolution and development, the attention of a large school of psychologists had been turned to the study of the differences between the minds of groups and races and species in an attempt to show how the minds of civilized men have developed from those of more primitive levels and of lower orders.

In this line much progress has been made by comparing the results of observations on the mental life of savages and of lower animals and the term comparative psychology is commonly used to describe this field. As a phase of this comparative psychology the investigation of children's minds as distinguished from those of adults has been actively pursued, and in the application of its results to methods of education is attracting widespread attention. One of the best ways of clearly understanding the normal, healthy mind is to observe it under extreme conditions, say those of disease, and recognizing this truth much admirable work has been done in the field of abnormal or pathological psychology, which embraces the phenomena of insanity, idiocy, hypnotism and similar states. In this connection, too, might be mentioned the researches in so-called mind reading, thought transference, spiritism and the like, which have caused much discussion and interest, but have as yet led to no certain results. In this particular field the position of the best authorities with regard to the alleged phenomena is one of scepticism or of reserved judgment.

As is evident from what has been said the science of psychology has developed a number of aspects all included under the general head, but each one practically forming a science by itself with specialists devoted to its investigation and with methods of research peculiar to its field.

Viewing the science as a whole, the most striking feature of the present day is the increasing emphasis of the comparative and developmental aspect mentioned above, which brings psychology into line with the other biological sciences of the times.

INSTRUMENTS USED IN THE PSYCHOLOGICAL LABORATORY.

Psychological Laboratory Work: The Study of Man.

During the first session of the Fifty-seventh Congress several bills were introduced by Senators Hoar, Nelson, Bacon, McComas, Quay, Penrose, Money and Pettigrew, and by Representatives Ray, of New York, and Henry, of Connecticut, to authorize the establishment of a laboratory for the study of the criminal, pauper and defective classes. The bills were referred to the Committee on Judiciary, and several hearings were held, at which was present Arthur MacDonald, to whom the fact of the bills being presented was largely due. He presented to the committee a plan for the study of man which was ordered printed. The question of the establishment of a laboratory has not yet come before Congress for decision.

Professor MacDonald is a specialist in the United States Bureau of Education, a member of the Societe d'Hypnologie et Psychologie de Paris, and author of "Abnormal Man," "Le Criminel-Type," and "Experimental Study of Children." He has probably made a more complete study of the abnormal classes than any other man in the United States, finding his data in jails and workhouses, reformatories and industrial schools, and in the homes of murderers and thieves. The general purpose of the bills presented to Congress through his suggestion is a sociological and scientific study of the abnormal classes, as a development of work already begun under the Federal Government. The term "laboratory" is employed in the broadest sense, not only including the use of instruments, but the gathering of sociological data, the investigation of anarchistic criminals, mob influence and like phenomena, in order especially that the causes of social evils may be sought out with a view to lessening them. It is purposed to combine and summarize the data gathered by the State institutions, making the work of these latter more useful to the country at large.

The most rigid and best method of study of both children and adults is, according to Professor MacDonald, that of the laboratory with instruments of precision, in connection with sociological data. Such inquiry consists in gathering sociological, pathological and abnormal data as found in children, in criminal, pauper and defective classes, and in hospitals. It is necessary to first study the individual in order that the class may be known, and this is what is proposed, if such a laboratory be established.

As to the utility of such a work on the part of the Government, Professor MacDonald pointed out that while considerable money is spent for the arrest and conviction of criminals, no recognition is generally given to the causes which make criminals, nor to the fact that conditions and training, as well as birth, may make moral imbeciles. Until an offense has been committed the law does not recognize the offender.

Professor MacDonald's plan presented to the Congressional committee gives a complete exposition of the methods to be employed in obtaining data from which to make work, together with the results of a number of questionaires he conducted himself.

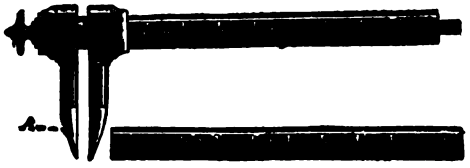
Professor MacDonald occupied the attention of the committee for some time in explaining work which he and his colleagues had done in connection with Washington children, whose parents came from all parts of the United States and who might safely be taken as generally representative of American environments and conditions. Some 20,000 children were investigated as to their mental ability in relation to sex, nationality, sociological conditions, abnormalities and defects, and the results obtained showed some of the advantages of such study. In the entire list, without regard to social position of the children, all the boys

Digitized by Google

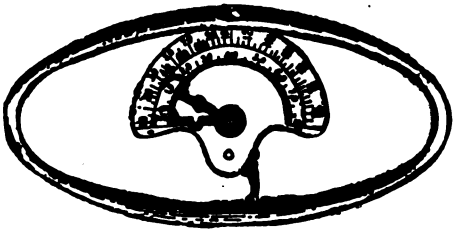
and all the girls showed the same per cent of brightness, but the girls showed five per cent less dulness. Children of American parentage appeared to be brighter than children of foreign parentage or foreign and American parentage. Children of non-laboring classes, including the professional and mercantile, showed a larger per cent of brightness than children of the laboring classes, indicating that the advantages of good social conditions are favorable to mental activity.

Boys of non-laboring classes showed a much higher per cent of sickliness and nervousness than boys of the laboring classes. The opposite was true in the case of girls of both classes. The percentage of laziness was much higher among boys of both classes than among girls, as was also the percentage of unruliness. In general the boys showed a much higher percentage of defects than the girls, though the defects in the girls were more serious and more significant than in the boys. As a parallel, Professor MacDonald showed that in prisons and reformatories there are four or five males to everyone female. It was generally concluded that children with abnormalities are inferior not only in mental ability, but in weight, height and the circumference of the head.

Sensibility to heat, pain, location, strength of hand grasp, and the various anthropometric measurements, are the principal tests for which instruments of precision are used in the work Professor MacDonald carries on. For testing sensibility to heat two thermometers are used, one of which can be heated elec-



Aesthesiometer, Used to Determine the Sense of Locality.



Dynamometer, Used to Measure the Strength of Hand Grasp.

trically, about 20 deg. These two thermometers are placed against the skin of the subject and are read at the instant when the subject fails to appreciate a difference of temperature between the two. This instrument is called the thermaesthesiometer.

For testing sensibility to location an instrument consisting of two points, one of which may be moved along a scale, is used. The points are separated and placed against the skin of the subject and the distance at which the subject is unable to tell whether he feels one or two points, is read on the scale. For measuring susceptibility to pain, two instruments are employed. One measures the amount of pressure at the time electrical sensibility to tingling or pain is felt. The other consists of a steel bar sliding in a brass cylinder and engaging a spring to which is attached a marker moving against a scale. The end of the rod is placed against the temple of the subject and pressure is applied gradually until the subject feels it to be disagreeable. In making experiments upon both sexes it was found that women were more susceptible to pain than men.

By means of these instruments the difference in sensibility between normal and abnormal types can be determined. For example, with the instrument for measuring pain, a maximum pressure of 4,000 grams can be given, which range was amply sufficient for normal classes, but in experiments on criminals the pressure of 4,000 grams was found to be not at all disagreeable.

A score or more members of Congress have expressed themselves as favoring the work, and many scientific journals have given editorial space to the advantages and needs of such work.

Railroads in the United States.

The first railroad of which there is any record was built in 1672, at the collieries, near Newcastle-upon-Tyne, England. Wooden rails were used and four-wheeled carts were drawn upon them by horses. Iron rails were first used at Whithaven, England, in 1738. In 1814 George Stephenson built his first locomotive, which travelled at the rate of six miles an hour, and in 1829 he built the Rocket, which weighed 4 tons and 3 cwt., and which was good for 35 miles an hour.

The first railroad in America was projected by Gridley Bryant, a civil engineer, in 1825, and was built by him and Colonel T. H. Perkins in 1826. It was designed to carry granite from the quarries at Quincy, Mass., to tide-water. It is still in operation and is known as the Quincy Railroad. It is four miles long, including branches, and its first cost was $50,000. It was laid to a 5-foot gauge. It was supplied with the first time table ever used, which was designed by Mr. Bryant. He also constructed the first eight-wheeled car ever used. The second American railroad was built in 1827, from the coal mines of Mauch Chunk, Pa., to the Lehigh River, and with its turn-outs and branches, was 13 miles long. The first locomotive for railroad purposes, and the first used in the transportation of passengers on this side of the Atlantic, was built by Peter Cooper in 1830. It weighed only about a ton, but with it a speed of 18 miles an hour was attained. The successful use of locomotives, both in this country and in Europe, gave an extraordinary impetus to the construction of new lines of railroads upon the principal routes of intercommunication. From 1832 to 1837 so great was the enterprise throughout the United States in the projection and construction of railroads that at the end of that time the completed lines exceeded in number and length those of any other country. Since then, with occasional interruptions arising from financial crisis and the civil war, the multiplication of railroads has kept pace with the extraordinary increase of population and wealth, and now the mileage of railroads in this country is more than four times as great as in Great Britain, and far in excess of that of all the rest of the world.

Owing to the fact that our railroads have largely been constructed to meet local needs, and have been under no general supervision, no standard gauge has been adopted, although that of 4 feet 8 1-2 inches is the one mostly in use. Several thousand miles of narrow gauge road have been constructed, the width being generally 3 feet. The advocates of this gauge claim for it cheapness of construction and maintenance, and relatively greater capacity for traffic than the wide gauge roads.

The remarkable development of electric science in the past few years have caused electricity to be seriously considered as a substitute for steam in furnishing the motive power for railroads. The subject has been more thoroughly investigated in Germany than in any other country. There a speed of 120 miles an hour has been obtained, with satisfactory conditions as regards safety, cost, etc. An electrical expert of this country, Mr. Sydney H. Short, predicts that in fifteen years electricity will supersede steam as a motive power, that the trunk line railroads will be running trains at 125 miles an hour, and that trains will run from New York to Chicago in 10 hours. We have now trains running between these two points in 20 hours, developing a speed at times of 95 miles an hour, while a train is run between the Atlantic and Pacific seaboards in 88 hours.

In railroads, as in other lines of business, the tendency has been of late years to work a consolidation of interests, and a well posted railroad man maintains that in time, and that not far off, the entire system of the country will be controlled by three roads. This was John W. Gates, who said to an American representative: "In a very few years all the railroads will be comprised in three or four great systems. The Vanderbilts will own one, the biggest; Harriman will be at the head of another, and James Hill, the greatest of all railroaders, has his own railroad. Stocks will become so valuable, that they will be wiped out of the market." With the recent great mergers of railroad interests this prediction seems now in a fair way of realization.

The following statement, compiled for Poor's Manual of Railroads shows the equipment, financial operations and traffic operations of all the railroads of the United States for 1901, the latest year for which completed information is obtainable: Mileage of railroads, 195,887; second track, sidings, etc., 76,105; total, 265,992; locomotives, 39,729; passenger cars, 27,144; bags, mail, etc., 8,667; freight, 1,409,472. Liabilities—Capital stock, $5,978,796,249; bonded debt, $6,035,469,741; unfunded debt, $312,225,536; current accounts, $456,798,012; sinking and other funds, $143,670,983; total, $12,926,960,521. Assets—Cost of railroad and equipment, $10,777,752,155; other investments, $1,976,548,412; sundry assets, $390,112,441; current accounts, $223,616,024; total, $13,308,029,632. Excess of assets, $381,068,511. Miles of railroad operated, 199,975; passengers carried, 600,485,790; tons of freight moved, 1,084,066,451. Total revenue, $588,663,541; total payments, $477,355,347; surplus, $111,308,194.

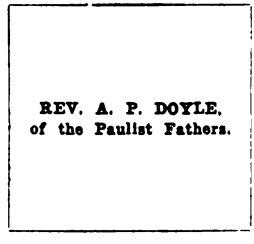
The preliminary report of the Interstate Commerce Commission on the income account of railways in the United States for the year ended June 20 last contains returns of railway companies operating 165,945 miles of line, or probably 98 per cent of the total railway mileage of the United States.

The passenger earnings of these railways were $472,429,165, and the freight earnings $1,200,884,603.

Including these and other earnings from operation, gross earnings amounted to $1,711,754,200, or $8,736 per mile of line; and operating expenses, $1,106,137,405, or $5,645 per mile of line; showing that net earnings were $605,676,795, or $3,091 per mile.

The net earnings were $51,395,421 greater than during the previous year.

Religious Progress: A Roman Catholic View.



REV. A. P. DOYLE, of the Paulist Fathers.

The year 1902 in the Catholic Church has been one of quiet, yet of healthy and vigorous growth. There are no accurate statistics to tell just the size of this growth, but there are many signs of a strong heart action, of throbbing pulses, of increasing activity in various departments and of a vigorous, energetic progress throughout the entire system. The Catholic Church presents at the close of the present year an organization well equipped to do its work. There had been some frictions and contentions, but much of this has been eliminated and there has been during the past year a positive progress in harmonious and unified action among the leaders. Two of the Archbishops have died—Most Rev. P. A. Feehan, in Chicago, and Most Rev. M. A. Corrigan, in New York—leaving the two most important sees vacant. New York was quickly filled by the selection of Most Rev. J. M. Farley, while the see of Chicago is still unoccupied.

There were three new bishops appointed during the year: Rt. Rev. W. J. Kenny, to St. Augustine, Fla.; Rt. Rev. J. J. Keane, to Cheyenne, Wyo., and Rt. Rev. J. N. Stariha, to Lead, S. D.

The most important ecclesiastical event of the year was the sending of the Taft Commission to Rome to treat with the Vatican about the lands of the Friars in the Philippines. While the Commission did not secure all that it desired yet it was received at Rome by the Vatican authorities in a spirit of conciliation and helpfulness, and negotiations were entered into which will ultimately result in securing the advantages desired. Mgr. Guidi was appointed Apostolic Delegate to the Church in the Philippines. The importance of the Taft Commission may be estimated from the following considerations: First, it is the primary step on the part of the Government at Washington to treat directly with the Vatican; second, while the question at stake was largely a matter of business—the selling of the possessions of the Friars—yet the settlement re-

Digitized by Google

sulted in the inauguration of certain diplomatic relations which cannot but ultimately redound to a better understanding and, therefore, more harmonious action between the authorities in both Church and State.

Another matter of some importance was the adjudication by the International Tribunal of The Hague of the question of the Pious Fund between the Mexican government and Archbishop Riordan, representing the Church in California. This question has been pending for many years, and its solution resulted in favor of the claims of the Church in California, whereby the Mexican Government was condemned to pay to Archbishop Riordan an award of $1,420,682.00 in Mexican money, together with an annual interest of $43,051.

While these events have their importance, probably the most significant event of the year was the turning of the first sod of the Apostolic Mission House on the grounds of the Catholic University at Washington. The ceremony was performed by Cardinal Gibbons in the presence of the Archbishops and a large gathering of ecclesiastics on the afternoon of November 13. The significance of this ceremony is the official recognition given by the hierarchy to the new and vigorous and aggressive movement which has for its purpose the preaching of Catholic truth to the great throngs of the unchurched in this country. This movement was started by the Paulist Fathers a few years ago and it has grown with such rapidity that there are now more than fifty missionaries engaged exclusively in the work. It is the purpose of the movement to institute in every diocese a band of missionaries who will address themselves principally to the non-Catholics who are outside the churches and lay before them a plain statement of Catholic teaching. This will create a body of four or five hundred active missionaries whose special business will be to dissipate prejudices and present the claims of the Church in a most attractive way to the unchurched masses. The Apostolic Mission House at the Catholic University is designed to be the training school of the missionaries for this work. The immediate fruit of the movement has been a better understanding of Catholic teaching, a higher appreciation of the Catholic position and the reception of many thousand converts into the Catholic Church. Heretofore, the movement has been inspired by the enthusiasm of a few, but the ceremony of November 13 is the official recognition by the Church. The turning of the sod by the Cardinal in the presence of the Archbishops means the placing of the plant in the chosen nursery of the Church in order that it may there be fostered. Ultimately about the Apostolic Mission House will gather the missionary energies of the Church in the United States.

There have been many other events of minor importance, but all cumulatively taken indicate that the Church is faced to the rising sun. She now numbers by the claims of her leaders at least 14,000,000 adherents, though actual returns gave her but 11,000,000. It is claimed that these statistical returns are below the reality. There are no dissident or heretical movements within her to mar the compactness of her doctrinal professions and there is every indication of a healthy, vigorous growth.

Religious Progress: A Unitarian View

REV. ROBERT COLLYER,
of the Church of the Messiah, New York City.

Progress in the religious world means, as viewed from the standpoint of Unitarians, so far as it is my privilege to speak in their name, a broadening of both views and sympathies, together with a larger interest taken by people in those things which tend toward moral and spiritual growth. We have been getting along in this direction for many years; and while the lines of demarcation between the various denominations are not obliterated, they stand no longer like solid walls that the spirit of fellowship may not penetrate, and across which the handclasp of good will must not be given. The spirit of controversy has been banished in a very large degree, and there is a growing number of essential things in religious thought and work upon which all the churches are agreed. These constitute a broad platform, whereon there is absolute fellowship, and, in certain directions, they create a practical union of all denominations in a common cause. The strengthening of effort for denominational growth is not out of keeping with this idea. While each branch of the church universal holds its banner high and proclaims the Gospel strenuously in its own interpretation of it, it is no longer considered necessary in the work of saving souls to try to prove that the other churches cannot save them. Even the Unitarians have almost forgotten how it seems to be denounced as heretics by their Protestant brethren, who, in their turn, are regarded by the Roman Catholic Church with all the tolerance which its constitution permits. So we are gradually coming together in religious things, if not in the articles of religious belief. Creeds continue to hold us apart in a way, but even creeds are becoming modified, and perhaps the most noteworthy sign of religious progress during the year 1902 is embodied in the changes which the Presbyterion body has made in that direction. For years the Presbyterion Church had clung, as a church, to tenets of belief which many of its most devoted and influential members either rejected wholly, or accepted with such mental reservation as would once have constituted heresy, if openly expressed. Such, for instance, was the dogma concerning the hopeless condition of the souls of deceased infants. The elimination of this horrible theory from the professed belief of Presbyterians is a victory both for the cause of religion and for one of the tenderest sympathies of the human heart. Creeds, no matter how true they may be in the light of theology or of philosophy, contribute nothing to the development of religious life if they antagonize the best and sweetest and purest sentiments of human nature, and it is strange that this idea of infant damnation ever found its way into the doctrines of the Presbyterian Church, and remained there so long, in the face of that invitation which Jesus uttered—"Suffer the little children to come unto Me, and forbid them not, for of such is the kingdom of heaven." Naturally the elimination of this or any other item from the doctrinal system of any denomination lessens by just so much its differentiation from other denominations, and the promise of religious progress as seen in such things lies in the strengthening of the bonds of sympathy existing between the various churches as points of antagonism disappear. Then, as churches draw closer together in fellowship of the spirit, they may still retain their peculiarities of organization, and their specialties of ceremonial, and all those other things which few of their adherents would claim to be really essential, even though they are wedded to them in a way; they may still be Episcopalians or Methodists, Presbyterians or Baptists, Universalists or Unitarians, but they will find much work to do in common and will do it. And they will learn more and more to love all the other churches for what is good in them rather than to criticise and oppose them because of that which is not exactly in accord with their own conceptions in that particular direction.

There is a wonderful agreement upon the value of that church life which tends to advance Christianity along the practical lines of improved character in people and in the development of that universal brotherhood which means the betterment in every way of the conditions of living. The creed which proves its fidelity to the teachings of Jesus by making their effect evident in individual and social life is the one which will be most widely accepted as the world proceeds in its march of progress. It is scarcely possible that it will ever be set forth in one common form, but it is no mere optimism which leads many people to see, somewhere in the future, a period when all the truly uplifting creeds will be essentially one. The points wherein they differ will not afford ground upon which the adherents of any of them will stand in antagonism to other Christians; nor will they establish any ecclesiastical circle within which any body of believers will find room for the conceit that they alone are the true disciples of Him from whom Christendom derives its name. Of course there will always be churches which will possess the idea that somehow they have discovered something more of everlasting truth than is embodied in the doctrines of other churches; and these will always attract to their membership many people whose study of their formulated statements may establish conviction as to their reasonableness. But even such people will realize more and more that, even as the tree is judged by its fruit, any church will grow or die only as it may possess or lack the spirit of Christ's teachings and example.

Religious Progress: An Orthodox Protestant View.

REV. THOMAS B. GREGORY.

The year of our Lord nineteen hundred and two closes with the horoscope as bright as could be desired for orthodox Protestant Christianity.

We live in an age of splendid hospitalities, and the acerbities of former days would now be impossible. We have learned the Christly virtue of tolerance, and upon the soil of the great Republic all phases of religious belief dwell together in peace.

Protestantism—and, of course, I mean orthodox Protestanism, the Protestanism of Christianity—is more than holding its own.

The tidal wave of unbelief which, naturally, perhaps, followed the publication of the "Origin of Species," and the more or less universal acceptance of the doctrine of "Evolution," has passed over us, and our American human nature, as is the case with human nature the world over and the ages through, is earnestly casting about for something to tie to amidst the storm and stress of life and death.

It is apparent, even to the most casual observer, that the great American people is on the eve of a wonderful spiritual awakening. Unless all signs fail the period of religious indifference is nearly over.

In fact, the year 1902 has witnessed a marvellous growth in orthodox Protestant Christianity in this country. This or that denomination may show signs of weakness in certain localities, but, upon the whole, all denominations have materially increased their strength during the year.

Statistics are tiresome, but it may be truthfully affirmed that the future for Orthodox Protestant Christianity in this country never looked brighter than it does to-day.

Our friends of the mother Church, as well as our friends of the extreme left in the Christian fold, have no little to say in the disparaging view of the "New Orthodoxy," but it is becoming more and more apparent every day that the new orthodoxy is both Protestant and Christian.

The so-called "higher criticism" which has made so much noise in the world and of which so much has been heard during the year 1902, has spent itself without materially harming an essential of the Protestant concept of Christian faith.

The new orthodoxy is, in every true sense of the word, Christian orthodoxy, and it is around this that the orthodox Protestants are rallying in good earnest.

The year just closed witnessed a wonderful tendency throughout the Protestant world toward the unification of the sects, and it is confidently believed by many that the time is not far distant when between all denominations of Protestantism there will be a spiritual, if not an organic, union.

The most noted event in the Orthodox Protestant world during the year 1902 was the splendid movement among the Presbyterians in the direction of the solidification of its various branches into one organic whole.

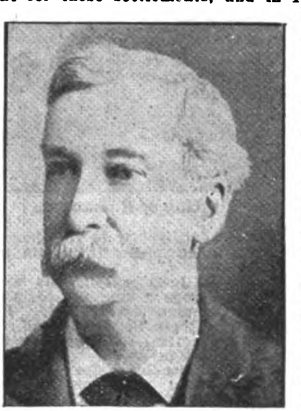
Notable, too, is the fact that during the year just closed the Methodists practically secured their great $20,000,000 Twentieth Century Missionary Fund—an achievement which, of itself alone, shows that orthodox Protestant Christianity is, in the best sense of the word, a militant affair.

In a word, it may be said that the year 1902 closes upon an Orthodox Protestantism that is full of hope, vigor and victory. The apathy of a generation ago has passed away, and all things would seem to indicate that the year 1903 is destined to be the brightest that Protestantism has seen in all its history.

Rhode Island.

Capital:
PROVIDENCE.

There is but little doubt that the first European to land on the soil of Rhode Island was Verrazzani, who, in 1524, coasted eastward from what is now New York harbor to what is now Narragansett Bay, and anchored in Newport harbor. It has also been claimed that this region was the Vinland of the Norse explorers, who may have landed on the American Continent four centuries before Columbus. Rhode Island was first settled at Providence, in 1636 by Roger Williams, who was banished from Massachusetts for maintaining religious and political opinions at variance with those of the rulers of that colony. In 1638 William Coddington and others, also banished from Massachusetts, purchased from the Indians the island of Aquiday, afterwards called Rhode Island, and established settlements at Newport and Portsmouth. A third settlement was founded in 1643 at Warwick, by a party among whom John Greene and Samuel Gorton were prominent. In the same year Roger Williams obtained a patent from the English Government for these settlements, and in 1647 Charles II. issued a charter to the colony of Rhode Island and Providence Plantations. Rhode Island suffered much from the Indian wars of 1675 and the following years and was relieved only at the death of King Philip in 1676. Rhode Island took a prominent part in the War of the Revolution and furnished several prominent officers. The State was the last to accept the Constitution of the United States. In 1901 the Massachusetts Legislature revoked the edict of banishment against Roger Williams.



Gov. L. F. C. Garvin.

Rhode Island is the smallest State in the Union, having an area of only 1,250 square miles. In 1901 its population was estimated at 438,000. Manufacturing is the leading industry of the State, Rhode Island being noted for her varied products, among which cotton and woollen goods stand first. In 1900 she ranked second in the United States in the manufacture of cotton goods, and third in the manufacture of woollens, though this latter industry has decreased during the past five years. In the production of worsted and knit goods, however, there has been a rapid increase in the last decade. Since the invention of a method of "filling" gold with cheaper metals, Rhode Island has stood first in the manufacture of cheap jewelry, and nearly one-fourth of this product in the United States is sent out from Providence. The manufacture of silverware is allied to this and forms an important industry. Other industries are the manufacture of files, rubber and elastic goods, malt liquors and electrical apparatus and supplies.

Brown University, at Providence, received two large gifts during 1902. One was a bequest of $500,000 from George L. Littlefield, of Providence, to go to the university upon the death of his widow, Mrs. Harriet M. Littlefield, to be used to found a chair to be known as "The George L. Littlefield Professorship of American History." The other was a direct gift from Paul Bajnotti, Italian Consul-General at Liverpool, England of a memorial clock tower to be erected on the campus, and to cost not less than $30,000, and to be suitably inscribed to the memory of his wife, Carrie Brown Bajnotti.

On June 8, 1902, a strike was declared by the employes of the United Traction Company of Providence,

Digitized by Google

operating the principal street railway lines in that city and Pawtucket. In Providence the tie-up of the car lines was not complete, not more than 50 per cent of the motormen and conductors going out, but in Pawtucket the strike was much more effective. Several riots took place in both cities, and for two days the streets were filled with military called out by the Governor. The rioting seems to have been caused by the Traction Company engaging deputy sheriffs to protect the non-union men and strike-breakers employed to run the cars. Dynamite was used by the rioters with effect, and a number of police men and deputies were severely handled by the mobs. On July 5 the Providence strike was declared off, the men going back to work at the old terms. It was claimed by the labor leaders that as there had been so many strike-breakers it was deemed best to allow the men to resume their positions rather than let them risk losing work altogether. In Pawtucket, however, the strikers voted to stay out until concessions were made by the Traction Company. The strike was caused by a demand for a ten-hour day at eleven hours pay, and recognition of the union.

The Democratic State Convention was held October 1, 1902. The platform adopted was devoted entirely to local issues, the Democrats deciding to go before the people chiefly upon the street railway strike issue. The Republican State Convention was held October 10, and the platform adopted reaffirms that of the National Republican Convention of 1900, expresses approval of President Roosevelt and his policies, and favors his nomination for President in 1904. It lauds the wisdom of the "American protective system" and declares that the question of the revision of the tariff can safely be left to a Republican Congress. The evil growing out of aggregations of capital should be summarily dealt with.

Rhode Island elected a Democratic Governor and Lieutenant-Governor at the election in November. Dr. Lucius F. C. Garvin, the Democratic candidate, received a plurality of 6,358. The Republicans elected the other State officers and carried the Senate by a large majority. The House of Representatives was fairly well divided between the two parties.

Dr. Garvin is a Tennesseean, born at Knoxville, November 13, 1841. He has figured conspicuously in Rhode Island politics for the past twenty years and has several times been elected to the House of Representatives, where he was generally the leader of his party. He is known as a champion of shorter hours for working people. It was thought that his election was due largely to the action of Governor Kimball in calling out the militia during the Providence-Pawtucket street railway strike in the Summer of 1902, an action which made the Governor unpopular with members of labor unions throughout the State.

Daniel L. D. Granger, who was elected to Congress from the First District, is one of the most popular Democrats in the State, and was Mayor of Providence during 1902.

Roumania.

—

Capital:
BUCHAREST.

The first ruler of Roumania was Colonel Cuza, who had been elected Lord of Wallachia and of Moldaria in 1859. Upon the union of the two principalities, December 23, 1861, he assumed the reins of government with the title of Prince Alexandru Joan I. In February, 1866, a revolution forced his abdication, and Prince Carol I. (born April 20, 1839), son of the late Prince Karl of Hohenzollern-Sigmaringen, was elected Lord of Roumania. On March 26, 1881, he was proclaimed King. On November 15, 1869, he married Princess Elizabeth von Neurvied, who was born December 29, 1843. As they remained childless an act was passed settling the succession to the throne upon the King's elder brother, Prince Leopold of Hohenzollern-Sigmaringen, who, however, renounced his right in favor of his son, Prince Wilhelm. In 1888 Prince Wilhelm renounced his right in favor of his brother, Prince Ferdinand, who, by royal decree, was created Prince of Roumania on March 18, 1889.

Prince Ferdinand was born August 24, 1865. On January 10, 1893, he married Princess Marie, daughter of the Duke of Saxe-Coburg-Gotha.

King of Roumania.

Roumania has been an independent kingdom since 1877, when the people assembled at Bucharest and proclaimed themselves free from the rule of Turkey. The executive is vested, under the constitution, in a council of eight ministers, with the Prime Minister (with or without a portfolio) at their head. The Legislature consists of two chambers—the Senate, of 120 members, elected for eight years, and the Deputies, of 183 members, elected for four. The King has a suspensive veto over the acts of the two chambers

The principal religions of Roumania, in the numbers of their followers, are 5,408,743 in the orthodox Greek Church, 269,015 Jews, 168,276 Catholics and Protestants, and about 43,740 Mahometans. Only the clergy of the national orthodox church are recognised and paid by the State. The Jews are much persecuted.

Instruction is in a very backward condition, although it is free and supposedly compulsory in the few public schools there.

The estimated revenue for 1902 is placed at $43,700,000, the expenditure being the same. The public debt in 1901 amounted to $286,403,103.

Of the total area of Roumania about one-half is under crops, in the cultivation of which about 70 per cent of the population is employed. The principal exports are cereals and fruits, fuel, chemicals and woods. In 1900 the exports amounted to $56,000,086, and the imports to $43,397,176.

Of all the countries of Europe there is none which has been so cruel, so unconsciously false to its own ideals, in persecuting the Jews, as has Roumania. It was on the plea that it was being denied religious liberty in Turkey that Roumania was allowed by the Powers to set up an independent government, yet it is the denying to a large section of her own countrymen of this very fundamental right which makes Roumania to-day the foulest blot on the European international escutcheon.

In September, 1902, the conditions of the Jews in Roumania became so intolerable that a note was sent by the United States to the Powers of Europe asking for co-operation on their part to find a means of putting a stop to the attacks by the Roumanian Government. The note met with general favor, though it aroused comment in several countries. Great Britain joined readily with America in the protest, but Russia and Germany preferred to remain inactive, showing some resentment at interference. The Roumanian Minister in London, M. Catargi, denied in an interview that Hebrews in Roumania are subjected to disabilities different from those imposed upon other foreigners, and stated that the Hebrew emigration was due not to persecution, but to agricultural depression. From press dispatches it appeared that the note sent by the United States, instead of benefitting the Jews, had the effect of making conditions harder, in that the Roumanian Government refused to grant emigration passports, without the tax of $4 being paid.

The Ministers of State are as follows: President of the Council and Minister of Foreign Affairs, Demetre A. Stourdza; Minister of Interior, P. S. Aurelian; Minister of Finance, G. D. Pallade; Minister of Justice, C. J. Stoicescoc; Minister of Public Instruction, S. C. Haret; Minister of Public Works, J. J. C. Bratiano; Minister of Agriculture, Industry and Commerce, B. M. Missir; Secretary of the Council, N. Soultso.

Russia.

—

Capital:
ST. PETERSBURG.

The reigning family of Russia traces its descent, in the male line, from Duke Karl Friederich, of Holstein-Gottorp, who (1700) was of a younger branch of the House of Oldenburg; and, in the female line, from Michael Romanof, who was elected Czar in 1613, upon the extinction of the House of Rurik. This union was the result of one of the greatest projects of Peter I., who was ever scheming to bring Russia into closer contact with the rest of Europe.

Nicholas II., the present Czar, who is the eighth ruler to represent the House of Romanof-Holstein, was born May 6 (New style, May 18), 1868, and was the eldest son of Emperor Alexander III. and Princess Dagmen, the daughter of the present King of Denmark. He ascended the throne October 20 (New style, November 1), 1894, and, four weeks later, was married to Princess Alexandra Alix, daughter of Grand Duke Ludwig IV., of Hesse. Their children are:

Name.	Born.	Died.	Married.	Born.	Date of Marriage.	Issue.
1. Grand Duchess Olga	1895	....				
2. Grand Duchess Tatiana	1897	....				
3. Grand Duchess Marie	1899	....				
4. Grand Duchess Anastasia	1901	....				

THE HEIR PRESUMPTIVE.—According to a decree of Emperor Paul, in 1797, the law of succession to the throne of Russia is that of regular descent, by the right of primogeniture, with preference given to male over female heirs. If the present Czar, therefore, should fail to leave a male heir, the throne would pass to his brother, Grand Duke Michael, who was born November 22 (New style, December 4), 1878.

The Committee of Ministers is composed as follows:

Minister of the Imperial House and the Imperial Domains, Gen. W. Freedericksz; Minister of Foreign Affairs, Privy Councillor Count Lamsdorf; Minister of War, Gen. Kuropatkin; Minister of the Navy, Vice-Admiral Tyrtoff; Minister of the Interior, Privy Councillor Sipyaghin; Minister of Public Instruction, Mr. Lenger; Minister of Finance, Actual Privy Councillor Witte; Minister of Justice, Privy Concillor N. V. Mura- vieff; Minister of Agriculture and State Domains, Actual Privy Coun cillor Yermoff; Minister of Public Works and Railways, Auctual Privy Councillor Prince Khilkoff; Depart- ment of General Control, General Lobko; Procurator-General of the Holy Synod, Actual Privy Councillor Pobedonostzew; Minister and State Secretary for Finland, Actual Privy Councillor de Plehwe.

Czar of Russia.

THE NATION.—Russia is an absolute hereditary monarchy. Its government is the will of the Czar, in whom rests the entire legislative, executive and judicial power.

The Emperor of the Russian Em pire is the head of the Church, which is the orthodox Graeco-Russian, and to which he and his family must adhere. Restrictions are laid only on the Jews. All other religions may be freely practised.

There were, in 1898, 78,699 ele mentary schools in Russia, of which 73,046 were under the Ministry of Instruction. There are nine State universities and numbers of high schools.

Under the law of 1864 justice is administered through assize courts, with juries, elective justices of the peace, assemblies of justices (appeal), appeal courts for non-jury cases, and a Court of Cassation.

The estimated total revenue for 1902 was $894,241,003, the expendi- ture being the same. Of this reve nue over $30,000,000 was appropri- ated to meet extraordinary expen diture. The national debt is about $3,230,000,000.

Russia's great frontier contains four principal strongholds—one at Novogeorgievsk, on the right bank of the Vistula; Warsaw and Svan- gorod, on either side of it, and Brest-Litovsk, on the Bug.

Russia's enormous expanse con tains every species of industry. Her cereal products are those most valuable of all, but her textile manufactories are fast becoming a leading factor in her trade.

Having such an extensive frontier, Russia finds it necessary to carry out an elaborate system of defense. On the west, Poland is defended by four strongholds, sometimes called the Polish quadrilateral. Other important fortifications are in the Finland, the Vilna, the Odessa and the Caucasus districts, forming a chain of fortresses nearly encircling the country and thoroughly defending the frontiers.

Since January 13, 1874, military service has been obligatory for all men above twenty-one years of age. Certain privileges are granted on account of education, and clergymen, doctors and teachers are exempt. The period of service is, in European Russia, five years in active service, eighteen years in the two reserves; in the Asiatic dominions, seven years in the active army and six years in the reserves; in Caucasia, three years in the active army and fifteen years in the reserves. In case of need the Minister of War has the right to keep the men for another six months under the colors. There are separate regulations for the Cossacks and the Finnish troops. The peace strength of the Russian army is about 42,000 officers, and more than 1,000,000 men. On a war footing the army may consist of 4,600,000 men and officers.

The navy is divided into four entirely distinct fleets, each with its own organization. The entire strength of the fleets, excluding training ships and ineffective vessels, is 9 first-class battle ships, 15 second-class battle ships, 2 third-class battle ships, 8 coast defense vessels, 2 armored cruisers, 24 protected cruisers, 41 gunboats, 8 old armorclads and armor gunboats. Besides these, there are 21 destroyers in commission, several submarines, 45 first-class torpedo boats and about 150 second and third-class boats.

Previous to the Emacipation Act of 1861 all peasants were serfs of the State, of the Crown or of the Nobility. In 1861 the State bought of the serf-owners the land upon which the serfs were settled, and has since liberated the serfs and sold the land to them on consideration of 49 annual payments, each amounting to 40,000,000 roubles. In many cases the serfs acquired the land independently of any desire to do so, the price being fixed by the State, or by special commissions in which they took no part. About 9,000,000 peasants redeemed the land, with the aid of the Government, about 87,000,000 acres in all being reclaimed.

Besides cereals and potatoes, flax, hemp, hay, grapes, tobacco, cotton, rice and silk are raised in Russia and her provinces. The Government conducts 68 experimental farms, under the direction of the Ministry of Agriculture.

In European Russia forests cover a territory of more than 474,000,000 of acres. The State is the largest owner of forests in the country, and allows concessions to timber cutters. But little has been done, however, in exploiting the timber forests.

The soil of Russia is rich in minerals and the mining industry is steadily increasing. Gold is found chiefly in Siberia and the Ural Mountains. Other metals found plentifully are silver, platinum, copper,

Digitized by Google

maganese, iron, mercury and zinc. The salt industry flourishes chiefly in South Russia, though large exports are sent from the Northern provinces. The petroleum industry is extending rapidly and the total quantity of crude oil and residuum consumed in Russia may be estimated at 6,450,000 tons.

There are now about 37,000 miles of railway in Russia, about 60 per cent of which are worked by the Government. The Great Siberian Railroad is about 1,885 miles long, of which 1,600 miles are in Chinese territory. The total cost of construction probably exceeded $500,000,000. The length of telegraph lines is about 100,000 miles, with about 300,000 miles of wire.

THE DEPENDENCIES.—Finland is the only European dependency of the Russian Empire. It is, in form, a grand duchy, with the Emperor for the Grand Duke. Of the population of 2,595,000, 2,230,000 are Finns, 350 Swedes, 12,000 Russians and 3,000 Germans and Laps. The Lutheran is the nearly universal religion. Education is well looked after in elementary and preparatory schools and one university.

The poor are supported by the municipalities; the paupers amount to 2½ per cent of the population.

Finland's budget for 1900 shows estimated expenditure and receipts, both, of $17,501,376. The public debt amounts to $22,289,993.

Finland's imports in 1900 amounted to $54,151,000, while her exports for that year were $39,546,000—not a bad showing, considering that 13 per cent of the country is under water.

In Central Asia, Russia owns the State of Bokhara, south of Russian Turkestan, and the State of Khiva, south of the Aral Sea. These States are ruled respectively by an Ameer and a Khan. The Czar exacts a money tribute from the Khiva. The religion in both States is Mohammedan, and foreign residents are prohibited except by permission of the Czar.

Russia has leased from China for twenty-five years Port Arthur and Ta-lien-wan, which have been incorporated into the Territory of Kwang-Tung.

THE RUSSIAN DEPENDENCIES.

Dependencies.	Area in Sq. M.	Population.	Imports.	Exports.
Finland	144,255	2,592,778	$92,558	$38,062
Bokhara	92,000	1,250,000		
Khiva	22,320	800,000		
Kwang-Tung	79,456	29,706,249		
Totals	338,031	34,348,027		

Events in 1902.—The early part of the year saw serious riots in the Russian cities and provinces. These riots, brought on ostensibly by the forceful drafting of university students for service in the national army, were, in reality, but a forceful expression of the growing social discontent in the Russian Empire. They terminated in the assassination of M. Sipiaguine, the Russian Minister of the Interior, by a student from Kieff, who, in company with some of his fellow students, had been drafted into the army and placed on duty at Saratoff. Attempts at other assassinations and frequent serious riots in which the populace and the military clashed took place before the disturbance subsided.

The most important change in her foreign affairs was that by which she concluded a treaty with France as a safeguard against the Anglo-Japanese alliance.

As stated above, Finland is now a part of the Russian Empire. But this is in fact only, not in spirit, for Finland strongly resents the attempts Russia has been making to bring her under the Imperial yoke. Arbitrary and harsh measures have been resorted to, the Finns protesting at every step. Of all the measures, that forcing military service in the Russian army by conscription of the Finnish youth is, perhaps, the most unpopular. On account of these attempts to Russify Finland, great numbers of her people have migrated to this and other countries.

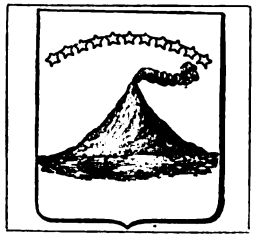
Salvador.

Capital:
SAN SALVADOR.



Lying between Guatemala and Honduras on the north, east and west, and the Pacific Ocean on the south, Salvador, the smallest of the South American Republics, is the only one of the five not having a coast line on the Atlantic Ocean. Except along the coast the country is chiefly mountainous, the great chain of the Sierra Madre stretching along its northern frontier and sending great spurs toward the centre of the Republic. From these the land descends in undulations until it rises again toward the Coast Range, which throws out spurs toward the sea and the interior. Nine volcanoes form part of the latter range. The highest, Chicontepec, 7,683 feet above sea level, had been extinct for centuries before the history of the Republic began. On the slopes of this volcano, in the Province of San Vincente, are several geysers which admit great volumes of steam, accompanied by a noise that can be heard for a distance of two miles. The two principal lakes within the Republic are Guija and Ilopango, and there are several smaller bodies of water which are chiefly of volcanic origin. In 1880 Lake Ilopango was the scene of a very remarkable volcanic phenomenon, which was preceded by a severe earthquake in the surrounding country. The waters of the lake suddenly rose four feet above their usual level, and flowing into the bed of the Jilva, a stream which forms the usual outlet from the lake, increased it to the proportions of a broad and raging river, which soon made for itself a channel 30 to 35 feet deep. A rapid subsidence of the level of the lake was thus produced, and in three months the surface was 34 feet below its maximum. Toward the centre of the lake a stony island, 500 feet in diameter, rose to a height of 150 feet, and the water adjacent to it became very hot.

In the Summer of 1524 the Spanish conquerors, having subjugated Mexico and turned their attention to the countries lying to the south, passed across the La Pax River into what is now the Republic of Salvador. At first received hospitably by the natives, the Spaniards soon found their advance resisted more desperately than before. Alvarado received an arrow wound which rendered him lame for life, but he took ample revenge, and of all the multitude of half naked, poorly equipped warriors who opposed him, not one was left alive. It was not until 1525 that Cuscatlan, the capital, was captured and Salvador became a part of the vice-regal kingdom of Guatemala. For nearly 300 years it remained under Spanish dominion, the natives wasting away and diminishing as they tilled the soil or worked the mines for their captives. In 1811 there were heard the first mutterings of a storm, but it was not until 1821 that the successful termination of the struggle for liberty, made by Mexico, inspired the people of the southern colonies to shake off the Spanish yoke. On the 15th of September, 1821, the Province of Guatemala was declared free and independent, and in the following year an attempt was made to annex it to the Mexican Empire. The Province of Salvador resisted, but finally had to submit to a Mexican force and be incorporated in the Empire as a part of Iturbide. In 1824 the Central American Confederation was formed, an impracticable operation, for party jealousies and personal ambitions brought turmoil and strife, and in spite of all efforts to maintain order and preserve the union, the Confederation was dissolved in 1839, and Salvador became one of the five independent States. Since 1842 several republics have made efforts to re-establish the Central American Confederacy, but without avail, and in 1886 the Constitution which remained in force eighteen years was promulgated. As this book goes to press the President is Tomas Regaldo.

Notwithstanding the disadvantages under which Salvador labors, of having no ports on the Atlantic coast, and no outlet for merchandise in that direction, the commerce of the country has been always active, due largely to the high prices that are obtained for the agricultural products. Within the last two or three years, however, the decrease in the price of coffee, and the low rate of silver, have tended to cause a decline in the receipts. Coffee is the "money crop" of the Republic. The Government reported in 1902, 50,000 hectares of land planted in coffee trees, and there still remains in an uncultivated state about 20,000 hectares of virgin land suitable for the growing of coffee. The average bearing life of a Salvador coffee tree is given as thirty years, and the average production is 350 grams. The average yearly export is estimated at 50,000,000 pounds, and the average cost per kilogram, delivered at the maritime ports, is 9 cents in American gold. In 1902 the coffee crop of the Republic did not exceed 40,000,000 pounds, a decrease of 15,600,000 pounds from 1901. The falling off was due chiefly to the unseasonable weather, the rains which fell early in the year causing the trees to blossom prematurely, the bloom being afterward destroyed by the north winds.

On May 1, 1902, the President of the Republic, Tomas Regaldo, delivered an interesting message to the National Congress, in which he stated that the political, economic and social affairs of the nation were in a satisfactory condition, and that peace and tranquility prevailed. Discussing the foreign relations of the Republic with the rest of the world, he noted the fact that the diplomatic relations existing between Salvador and the United States are unchanged, and the countries are bound together by closer bonds of friendship and good will than have ever existed before. During the past year the cause of education has received the especial attention of the Government. The number of teachers assigned to the primary schools has been considerably increased, and a notable improvement has occurred in the general efficiency of elementary instruction. The colleges and universities of the nation continue to be largely patronized and well managed.

Salvador seems to have advanced beyond her sister republics in Central America in municipal improvements and in the production and importation of articles of convenience or luxury. Telephone and telegraph service is excellent, considering the percentage of poor in the cities and towns, and in 1902 Francisco Bogen, a German resident of San Salvador, made a contract with the Government for the establishment of an automobile service, the vehicles to be run by alcohol power.

According to the census of 1901, the population of Salvador was 1,006,848, of which 772,200 were white and 234,648 Indians. Attracted by the possibilities of coffee culture and by the encouragement offered by the Government to commerce of all sorts, many Americans have settled in the country in recent years, coming chiefly from other Central and South American countries. The greatest difficulty against which a foreigner has to contend is the climate, and Dr. David J. Guzman, in a work on the physical aspects of Salvador, gives some valuable hints to immigrants and non-acclimatized persons visiting the country. He says: "When the European lands on our shores he soons feels the moist heat which prevails, particularly in the wet season. His strength begins gradually to fail and his appetite soon languishes, his habitual energy declines. He should avoid the immoderate use of fruits and take extraordinary precaution to provide against sudden changes of temperature. The skin should be kept in good condition, as perspiration, which is active in warm countries, should be unobstructed. Care should be taken to avoid sleeping in low and damp places. Clothing should be loose, so as to admit free circulation of air. Food should be a properly proportioned mixture of animal and vegetable substances."

Salvador has a long, and, what might appear to be a rather prohibitive, tariff schedule on imported goods, for revenue only, and not for the fostering of home industry. Internal taxes are placed upon some commodities, also, and in May, 1902, the President promulgated a decree imposing taxes on coffee and salt produced in the District of La Paz, the proceeds of which are to be used in the construction of a bridge over the Jibora River. The revenues collected during 1901, according to a statistical table published in the official newspaper of San Salvador, shows that the collection of revenue from all sources, from January to September of that year, amounted to $4,835,064.06, exceeding the sum for the first nine months of 1900 by $282,375.72. Of these revenues, the amount of $2,542,967.51 was from duties on imports; $526,396.56 on exports, and the remainder came from internal revenue taxes and sundry Governmental taxes.

The Ministers of State in Salvador are: Dr. F. A. Reyes, Minister of Foreign Affairs; Dr. Ruben Rivera, Minister of Interior, War and Navy; Dr. J. Trigueros, Minister of Charity and Public Instruction; Dr. F. A. Novoa, Minister of Finances, Public Credit and Public Works. The President of the Supreme Court is Dr. David Castro, and the head of the Roman Catholic Church is A. Perez.

San Marino.

The small republic of San Marino, which is located in the hills near Rimini, on the Adriatic, is unquestionably one of the oldest states in Europe. It was founded in the fourth century by a pious mason of Dalmatia, and since that time has maintained its independence against many attacks, its situation, on the slope of Mt. Titan, being practically impregnable. The total area of San Marino is 23 square miles, and its population will not exceed 11,000. It has a standing army consisting of 38 officers and 950 men; no public debt, and sufficient revenue from its exports of wine, cattle and stone to meet all expenditures.

The executive power of San Marino rests in the Great Council of Sixty composed of 20 nobles, 20 townsmen and 20 peasants, of whom two are elected to serve for six months as Regents, after which they are ineligible for office for three years.

The present ministry is composed as follows: Secretary of Interior, G. Belluzzi; Secretary of Foreign Affairs and Finance,, D. Fattori; Commissioner of Justice, J. Gianini; Commander of Militia, F. Gozi; Treasurer, C. Bonelli; Director of Posts, G. Bonelli; Director of Telegraphs, G. Fattori.

Italy and Great Britain are the only nations which maintain diplomatic relations with San Marino.

Servia.

Capital:
BELGRADE.

The Obrenovitch dynasty, of which the present ruler of Servia is the fifth representative, was founded by Milos Sodororic Obrenovitch, the leader of the Servians in their war of insurrection against Turkey. When the treaty of peace was signed in 1829, Obrenovitch assumed the title of Prince of Servia, and in 1830 a Firman of the Sultan made this dignity hereditary in his family. Prince Milan, the fourth of his line, was the first to adopt the title of King, which was done by proclamation after the Treaty of Berlin, in 1878.

The present ruler, Alexander I., was born August 14, 1876, and succeeded his father, King Milan I., upon his abdication, March 6, 1889. At that time Alexander was in his minority, so a regency was established to last until he should attain his eighteenth year. When but 17, however, he overthrew the regency and assumed the royal prerogative upon his own authority. On August 5, 1900, he married Draga Maschin, who was born September 23, 1867.

The Constitution of the Kingdom of Servia bears date of 1901, superseding those of 1869 and 1888. Under it the executive vests in the King and a council of eight Ministers. The legislative authority is shared by the King on one hand, and the Senate and National Assembly on the other. The Senate is composed of fifty-one members, the majority of whom are appointed by the King, and the Assembly of 130 Deputies elected by the people.

The State religion is the Greek Orthodox, but liberty of conscience is unrestricted.

Primary education in Servia is compulsory and free, under a Ministry of Education.

The King appoints the judges, who serve in twenty-three Courts of First Instance, a Court of Appeal, a Court of Cassation and a Tribunal of Commerce. There are no poorhouses in Servia and no need for them, even the poorest people owning property.

The estimated annual revenue is $14,803,614; the expense, $14,798,508. The public debt is about $84,480,537.

A series of forts being built and partly (9) completed will protect Servia's frontier.

Servia is principally an agricultural country, each peasant cultivating his own freehold. The industries are unimportant.

King of Servia.

Of slight importance was an alleged attempt to reinstate the Karageorgevitch dynasty, which has not been in power since 1858, when Servia was taken under protection of the European Powers. It was immediately suppressed, the leader having been killed. Prince Alexis Karageorgevitch, the direct descendant of that line, denies that he was a party to the ill-timed attempt.

In 1901 several important changes were made in the Constitution, by decree of the King, which resulted in several small revolts on the part of the subjects. By the new Constitution the power of the King was increased in many points and more clearly defined in others. A system of a two-chamber Legislature was constituted, the Lower House to be elective, the Upper to be composed of 30 appointive and 18 elective members, to be controlled by the King, who maintains a certain right of veto over the Lower House. The throne was made hereditary through the female as well as the male line. The King's right of decree was much curtailed. There seemed to be an attempt to secure a more complete balance of power between the executive and legislative branches than that existing under the old Constitution.

Measures of legislation must receive the assent of both Chambers. The State Council consists of fifteen members, appointed by the King from amongst the members of the Senate. It decides complaints of injury to private rights resulting from royal and Ministerial decrees; questions of administrative competence and obligations; matters relative to departmental and communal contracts and loans, and the transfer of their real property; the appropriation of private property for public purposes; the final settlement of debts due the State, and which cannot be collected; the outpayment of extraordinary sums sanctioned by the budget, and exceptional admissions to the privilege of Servian citizenship. This body is always sitting. The National Assembly is composed of 130 Deputies elected by the people. Every male Servian, with the exception of officers and soldiers under the colors, twenty-one years of age, and paying fifteen dinars in taxes is entitled to vote. Servians thirty years of age, paying 60 dinars in direct taxes, are eligible to the Assembly, provided they reside permanently in Servia and are able to read and write.

Military service in Servia is compulsory from the age of 21 years, and when fully mobilized the army consists of about 110,245 men, formed in five divisions. Outside of the division formation are a brigade of cavalry, a mounted battery, one munition column, a body guard, six batteries of mountain artillery, besides special troops, field artillery and engineers corps. The State possesses but one steamer, which is used exclusively for military purposes.

It was reported in the Fall of 1902 that Servia was about to follow the example of Monaco and farm out the country to a gambling society. The syndicate, it was reported, had already agreed to part of the contracts, and was to pay the kingdom 25 per cent of the profits, with a guarantee of 1,000,000 francs in gold per year.

Intermittent quarrels between King Alexander and Queen Draga have occupied the attention of the royal family and nobility of Servia during the past year. The reports make both of the rulers out to be of quick temper and inclined to interfere with each other's business.

Shipping Interests of the United States.

Half a century ago American shipyards were building very nearly as many merchant vessels and of a tonnage almost as great as that of Great Britain. The Civil War put a check to this, however, and three years ago our tonnage was less than in 1861, while that of Great Britain had increased and multiplied. But in 1899 there began for this country a new era in shipbuilding. The demand for American-built vessels had so increased that the tonnage capacity of our shipyards had grown very largely. The building of our new navy was an important factor in this growth. Cramp's yard, in Philadelphia, had it not been aided by Government contracts, would probably never have reached its present importance as a builder of merchant ships. It has demonstrated its capacity for turning out as fine and as fast ships as were ever built on the Clyde.

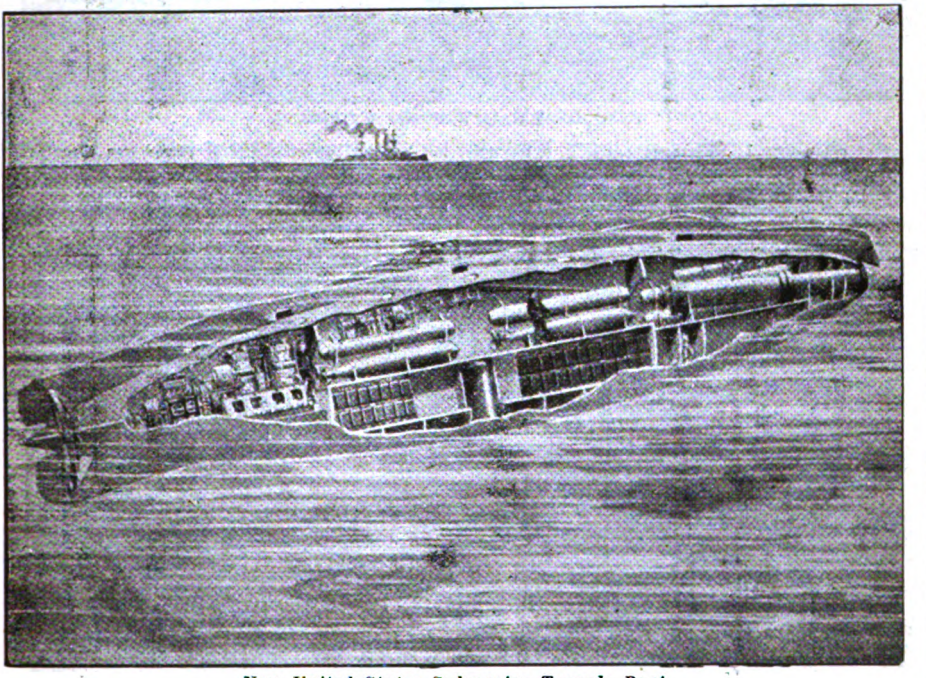
The great yards at Newport News can build steel merchant ships in competition with English builders and still make a handsome profit. This establishment has been in existence but a few years, but it has a magnificent equipment, and is prepared to undertake work of any kind and to any extent.

Roach's yard at Philadelphia, the old established, is also doing much work, and is turning out vessels equal to the best.

The growth of the business of the Harlan & Hollingsworth Company, at Wilmington, Del., has also been remarkable. Here have been constructed a number of vessels for the navy and important additions to our merchant marine.

The yards at Bath, Me., too, are very busy. In 1899 they sent out the first American steel sailing ship built of American steel. It is believed that the minimum of cost at the English yards has been reached, while it is expected to decrease at the Maine yards. The cost of their product per ton is even now less than of similar work in England.

On the Pacific Coast the shipbuilding industry is assuming greater proportions yearly, while the grain



New United States Submarine Torpedo Boat.

and ore carrying trade on the Great Lakes keeps up a constant demand for vessels built at the Cleveland, Bay City, Duluth and other yards.

There are now nearly a hundred shipyards in the United States. In addition to supplying our own ships these yards have supplied war vessels for several foreign nations, which shows that we have reached a point in naval construction where we have nothing to fear from competition.

In the opinion of those best posted the great shipyards of the future are to build on the South Atlantic and Gulf coasts. This prediction is based on the fact that in the States bordering on those coasts there are great deposits of coal and iron, and the steel for ships can be made at a price much lower than elsewhere, while the cost of transportation to the yards will be proportionately less.

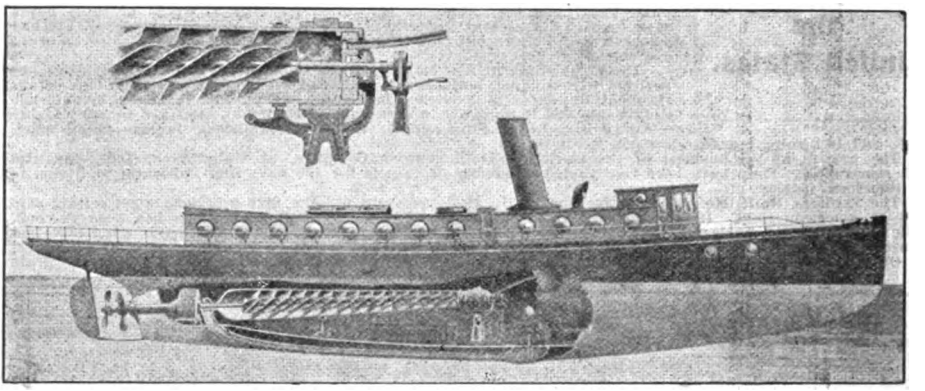
The most important event of the year in shipping circles was the consolidation of Atlantic lines under the management of Mr. J. Pierpont Morgan. The lines included in the combination are the White Star, American, Red Star, Atlantic Transport, Leyland and Dominion. These lines comprise 107 ocean going steamers, with a total tonnage of over 880,000 tons. The capitalization was fixed at $200,000,000. The negotiations had covered a period of many years, and Mr. Clement A. Griscom, president of the International Navigation Company, was interested in the project as far back as 1884. "The consolidation," said Mr. Griscom, "will result in better transatlantic service, steadier and more uniform rates. American manufacturers will be able to distribute their products on through bills of lading, and avoid the expense of transshipments which they now incur. In a word, it is intended to reduce transportation charges as far as possible to everyone and to improve facilities, and the company expects to make its increased profits over the conditions of the past from economical management. To what extent these new services will be conducted by steamships built in this country and sailed under the American flag depends upon Congress."

The combine proposes one great terminal in New York for its lines, and has made a request of the Dock Department for more room. Their plans include a strip of water front extending from West Houston to West Twenty-third street, on the North River. This would cost over $8,000,000, and authority has been

Digitized by Google

given by the Legislature to the Dock Commissioners to acquire this land. Plans are also made for the construction of new docks in London.

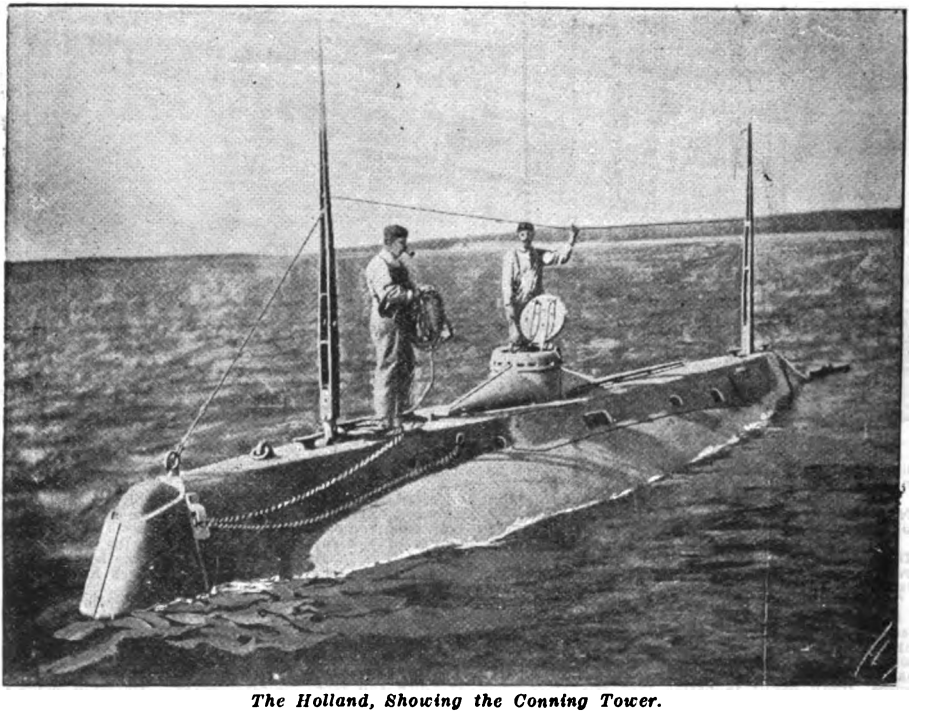
This movement aroused much opposition in England. It was viewed as a threat to take away England's prestige on the seas. Oddly enough, two leading figures in England's fight for and against the trust were women. In favor of it was Mrs. W. J. Pirrie, whose husband is the managing director of Harlan & Wolff, who are heavy stockholders in the White Star line. While opposed was the widow of Thomas H. Ismay, who owns millions of stock and who dominates her son, Mr. Bruce Ismay, prominent in the management of



John Jacob Astor's Marine Turbine.

the great company. It was made not only a business, but a social question. Mrs. Pirrie was threatened with social ostracism, but persisted in her stand and was finally victorious.

A British anti-Morgan shipping combine was threatened, which was to include the Cunard and a Canadian line, backed by the Canadian Pacific Railroad. It was to be liberally subsidized by the British and Canadian Governments, and was thought by many to be essential to the preservation of the British shipping position on the North Atlantic. The scheme has not yet materialized, but may do so in time.



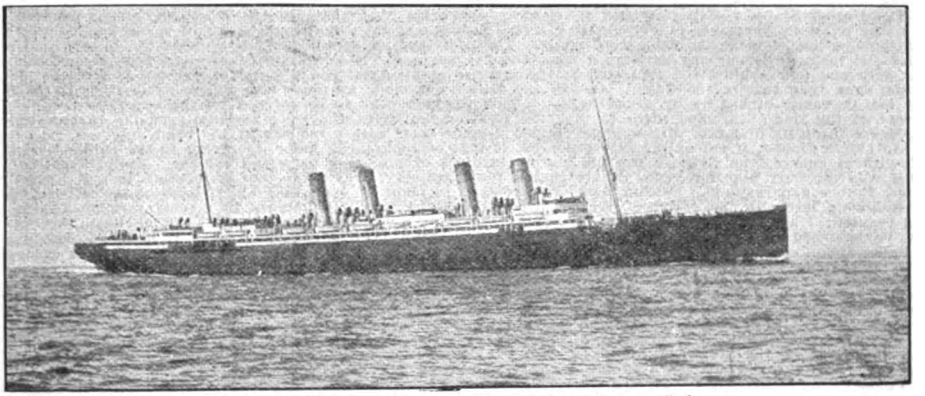
The Holland, Showing the Conning Tower.

The United States Shipbuilding Company was organized in the Spring of 1902. Its object was to acquire the plants and equipments of the following companies: Union Iron Works, San Francisco, Cal.; Bath Iron Works and Hyde Windlass Company, Bath, Me.; Crescent Shipyard and Samuel L. Moore & Sons' Company, Elizabethport, N. J.; Eastern Shipbuilding Company, New London, Conn.; Harlan & Hollingsworth Company, Wilmington, Del.; Canada Manufacturing Company, Cardeno, N. J., and the Bethlehem Steel Company. It has a capital stock of $45,000,000.

Digitized by Google

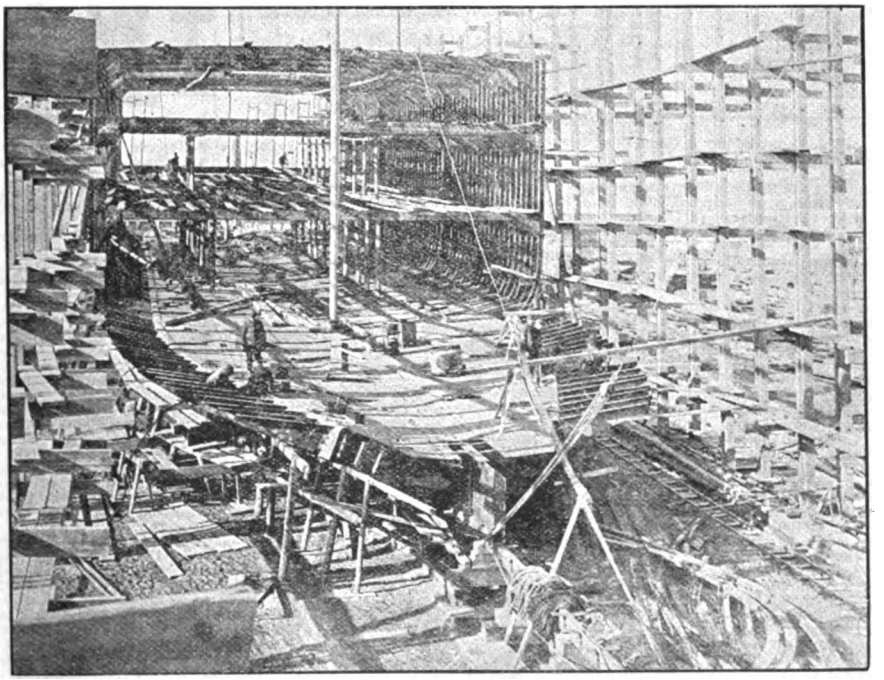
Another combination was talked of to include the Cramp works, the Newport News yards, the Union Iron Works, of San Francisco; the Columbian Ironworks, of Baltimore, and the Bath (Me.) Iron Works. These plants are the only ones in the country capable of turning out large warships, and should such a trust be formed, it would have the Government at its mercy, but it has not yet come into being.

One of the most interesting features of naval architecture of recent years has been the development of the submarine idea. The first practical boats of this class for any navy were built in this country. Many unsuccessful efforts had been made, both at home and abroad, to build and operate submarine craft, but it



The Deutschland, a Type of the Modern Ocean Palace.

remained for Mr. John P. Holland to perfect a structure which would obey man's will and sink into or float upon the water, move ahead or back, manoeuvre and sail a course by compass, and finally discharge successfully a torpedo tube of such effectiveness as to destroy the greatest battleship afloat. England and France have each devoted much attention to vessels of this class, but none of those made by them has been perfected, and the United States, which is possessed of half a dozen boats of the Holland type, is thus the owner of vessels unique among the navies of the world. Lewis Nixon, proprietor of the Crescent shipyard



In a Modern Shipyard; the Steel Structure of an Ocean Steamer.

(By Courtesy of World's Work.)

at Elizabeth, N. J., an acknowledged authority on such matters, asserts that these boats will practically revolutionize the principles of naval warfare. The blockading of ports, as practised under our present system, will be well nigh impossible. A few submarine boats will be able to clear any harbor of attacking ships of war. Against their stealthy attacks a battleship can have no defence but flight. A battleship cannot attack one of these naval sharks for the reason that it presents no target. It will undoubtedly be necessary to devise some type of war vessel to withstand these boats, but what this type will be no one can

Digitized by Google

yet say. At the Congress of The Hague a proposition was made to forbid, by international law, the use of submarine torpedo boats. The Holland boats are built of steel throughout, and are divided into three compartments—one for the machinery, one for the conning tower and its equipment, and one for the storage battery, water ballast and water tanks, etc. Their cost is about $170,000 each. When above water the power is derived from a 150 horse power gasoline engine; when below from a 70 horse power electric motor. The speed is about eight knots an hour when submerged, and ten when not. The armament consists of one torpedo expulsion tube and five Whitehead torpedoes, with which it is claimed five battleships can be destroyed without the exposure of the boat.

The United States to-day possesses the fastest submarine boat afloat in the Moccasin, which received its water trials in November in Peconic Bay. The Moccasin made a maximum speed of seven and twenty-eight-hundredths knots on its submerged trials. This unlooked-for speed was made under the electric batteries and motor, without any assistance from the gas engine. The Moccasin made eight runs submerged, four with and four against the tide, and to the surprise of all developed a speed of five one-hundredths of a knot more than that of the Adder. One of the allegations made by those who oppose submarines is that they can be easily picked up by a battleship. This would appear to be refuted by the experience of observers on the shore stationed there to take the time of the boat, who were absolutely unable to pick up the Moccasin on its first run, although she carried a guide mast with a red flag at the head.

An action almost, if not quite, unprecedented, is that of John Jacob Astor, in giving to the public freely and without charge, the right to use his marine turbines or machines to propel vessels. Their invention, which was the only aim for years of his genius for machinery, was protected by patents in the United States, France and England. Colonel Astor relinquished in favor of everybody his title to these patents in the following letter to the editor of the Scientific American: "All my patents in marine turbines having been granted, I hereby present them to the public, in the hope that the development of the ideal turbine may be hastened thereby. The following appear to me the principal advantages: 1. Reduced weight; 2. Higher steam efficiency; 3. Higher mechanical efficiency, by reason of the reduced size enabling the ports to be fitted more perfectly, permitting the diminution of friction, and also the reduction of the leakage loss; 4. Such a turbine would seem to be particularly suitable in central station work for generating electricity, in which case the field and armature may be driven in opposite directions. This would improve the efficiency of the dynamo and increase its output for a given weight. This principle is obviously also applicable to gas engines. Further details and particulars concerning pumps, condensers, etc., may be obtained from the Patent Office at Washington by ordering a copy of patent No. 690,821, granted to me on marine turbines, or from the office of the Scientific American, No. 361 Broadway, New York City, through which agency I obtained my patents. The French patent is dated September 28, 1901; the English patent October 1, 1901."

Colonel Astor's invention was inspired by the use of Parsons's in the Turbina and King Edward classes of vessels in England.

Siam.

—

Capital:
BANGKOK.

The reigning King of Siam is Chulalongkorn I., born September 1, 1853, who succeeded to the throne on the death of his father, Mahah Mougkut, October 1, 1868. He has two daughters, three sons, a brother and twenty half-brothers. The royal dignity is nominally hereditary, but does not descend always from the father to the eldest son, each sovereign being invested with the privilege of nominating his own successor.

The executive power is exercised by the King advised by a Cabinet consisting of the heads of the various departments of the Government, Foreign Affairs, Interior, Justice, Finance, Public Instruction, Public Works, War, Marine, Police, etc. Most of the portfolios are held by the King's half-brothers and sons. The law of May 8, 1874, constituting a Council of State, has now been superseded by the Royal Decree of January 10, 1895, creating a Legislative Council. The latter is composed of the Minister of State and others not less than twelve in number, appointed by the Crown. The total membership is now fifty-one.

Kedah, Patani, Kelantan and Tringganu, in the Malay Peninsula, acknowledge the sovereignty of Siam and send revenues to Bangkok. The Laos States of Chieugmai, Lakon, Nan, Lampouchi, Pree and others, stand in a similar position toward the Government in Bangkok.

The trans-Mekong portion of the State of Luang Prabang is now under French protection. The remainder is still Siamese.

The Siamese dominions are divided into forty-one provinces or districts, each having a Commissioner, deriving authority direct from the King, and having under him subordinate Governors over the various parts of his district.

The total area of Siam, exclu Mekong and the Annam Hills, now is estimated at about 244,000 miles being in the Malay Penin tion are still more imperfectly tory, and the difficulty of arriving on account of the Oriental custom latest foreign estimates give the the French annexation, as follows, mese, 1,000,000 Chinese, 2,000,000 immigrants of other nationalities 000. In the late Summer and Fall of 1902 a revolution was in progress in the upper part of Siam, in the protectorate of Laos, about 500 miles from Bangkok. The country of Laos has been under the protectorate of Siam for about seven or eight years, and the native officials were replaced by Siamese, who also took charge of the garnet and amerythyst mines, the principal industry of the province. These mines were worked by Shans, a sect of people living between Upper Burmah and the Salween River. When the mines were closed by order of the Siamese Government early in 1902, the Shans were thrown out of work, and small insurrections were started by agitators among them. An arrest of some of these agitators brought about open revolution, the Government soldiers, few in number, were fired upon and the village of Muang Pea taken. The native Laos Governor was captured and made to swear allegiance to the secret order of which the Shans form a part. At Lakwan the rebels were repulsed and finally captured by a force sent from the frontier. The leaders were executed and most of the rebels banished. The revolution caused consternation among the foreign residents of Laos, consisting of missionaries and a few traders, and they fled to the British Consulate at Chieng Mai. The Governor of Lakwan was implicated in the trouble and was brought before the Siamese courts for trial.

The chief product of the country is rice, there being 26 large mills in Bangkok. The cutting of teak is an important industry. The mineral resources of Siam are extensive and varied, including principally gold, tin, coal and iron. In some places diamonds have also been found. The imports in 1900 amounted to $12,882,700, and the exports to $15,438,395.

In 1900 454 vessels of 380,477 tons entered, and 450 of 378,073 tons cleared. The country has about 250 miles of steam railway, and there is an electric road of 6 miles in length in Bangkok. There are telegraph lines of 2,900 miles now in operation, and a postal service in Bangkok, while in 1885 Siam joined the International Postal Union.

The King is anxious to induce investment of capital from this country to develop agricultural and manufacturing interests, and there are said to be favorable openings for its use in many directions.

The King's palace is one of the most remarkable buildings in the world. It is inclosed in dazzling white walls over a mile in circumference. Within these walls are temples, public offices, seraglios, stable for the sacred elephant, accommodation for 1,000 troops, cavalry, war elephants and an arsenal. There is also a very fine theatre, where English, French and German companies frequently perform before the royal household. The King is extremely fond of theatricals.

During the Fall of 1902 the Prince of Siam visited this country, with the institutions of which he professed himself much pleased. He has spent nine years in England.

The King of Siam is soon to come here as the guest of the nation. He has long desired to visit this country, and his Council has authorized the expenditure of about $600,000 for the purpose. He will be the first reigning sovereign to visit us as our guest.

Socialism in America.

ALGERNON LEE,
Editor of
The Worker.

No word has been more abused and misunderstood than the word "Socialist." The Socialist is not an Anarchist; they are opposed in theory and practice. The Socialist does not propose to destroy the family, abolish religion, or "divide up" property. Nor does he seek to carry out his ideas by riot and bloodshed.

The Socialist maintains that, with the present high development of machinery, the private ownership of the means of production involves the division of society into a possessing and non-producing capitalist class and a producing and non-possessing class of wage-workers, whose interests are opposed; and that the competitive system of industry naturally leads to monopoly, the contrasts of extreme wealth and poverty, class rule and class strife.

The Socialist appeals to the working class to unite and use their political power to remove these evils by doing away with their cause—private ownership in the means of production.

In a single phrase, Socialism means public ownership of the means of production and working-class control of the government; a chance to work for all who will, and to all workers the full value of their product.

No adequate statement of the Socialist position can, of course, be given within the necessary limits of such an article as this. But readers who desire further information can easily obtain it, for there are in the United States more than a score of weekly papers and several monthly magazines devoted exclusively to explaining and advocating Socialist principles, besides a large number of labor and other papers in sympathy with the movement; the works of Bax, Bellamy, Deville, Engels, Ferri, Gronlund, Hyndman, Kautsky, Marx, Morris, Simons, Vail and many other Socialist writers may be found in any good public library; and Socialist speakers are to be heard in every considerable city or town in the land.

Whatever may be thought of the truth or fallacy of the theories advanced by the Socialists or of the wisdom or folly of their propositions, all thoughtful men agree that it can no longer be ignored.

Until recently Socialism was commonly regarded as a thing of foreign birth and nature. It is true that the movement first took definite form in Germany, and that there it has still its greatest strength. But it has sprung up and grown also in France, in England, in Italy, in every country of Europe, in the United States, and even in Japan. Socialism is international. It arises wherever modern industry takes root.

The first national campaign of the Socialists in this country was in 1888. They polled only 2,068 votes. Not discouraged in the least, they redoubled their activity, and in the congressional elections of 1890 increased their vote to 13,331. In 1892 the vote rose to 21,157; in 1894, to 33,133; in 1896, to 36,564; and in 1898 to 91,749.

At this point there came a division in the Socialist ranks. One faction, impatient of what they thought the excessive conservatism of the trade unions, inaugurated a systematic attack on these organizations, with the object of destroying them and thus "clearing the ground" for unions on new lines. This faction keeps the old name of Socialist Labor Party.

The other branch of the movement is known nationally as the Socialist party, and in the State of New York as the Social Democratic party. This body, while holding itself free to criticise the trade unions, maintains fraternal relations with them, supports them in their battles, and seeks to influence them by methods of discussion and education.

In the national election of 1900 the anti-union Socialist Labor party polled 34,191 votes. The Socialist (or Social Democrat) party, with Eugene V. Debs and Job Harriman as its candidates, had 96,918.

The State and congressional elections of 1902 give the Socialist party about a quarter of a million votes. They have three members in the Massachusetts Legislature and Aldermen or other officers in a large number of cities and towns in Massachusetts, Pennsylvania, Indiana, Michigan, Wisconsin and Iowa.

It is the fixed policy of the Socialists to avoid "entangling alliances," never fusing or compromising in order to gain votes. This policy accounts for the slow but steady and solid growth of the party in the United States as well as in other countries.

The Socialists believe that all the forces of industrial evolution are working together toward the downfall of capitalism and the establishment of the co-operative commonwealth. They are satisfied, therefore, with apparently small immediate results.

The typical Socialist—in distinction from the wild-eyed and bushy-whiskered creation of the cartoonists—is a rather quiet and thoughtful working man, serene in time of trouble and self-contained in the day of victory. He realizes that the world will move on very well after he is dead, but remembers that while he lives it is his business to help the world move. He considers himself an ally of eternal laws of nature and is proud to do his little part in the great cause.

Society in the United States.

CHOLLY KNICKERBOCKER.

The state of New York society to-day is as different from that of fifteen or even ten years ago as social conditions then were dissimilar from those existing in Colonial times. There has been a silent but effective revolution. A few old fogies shake their heads sadly over the present conditions and deplore other times and other morals; but this does not allow an inference for a minute that society has deteriorated. On the contrary, it has vastly improved, and to-day it is on an equality with that of London or any of the great capitals of Europe. In fact, with the Anglo-Saxon only two sets of society are now recognized—that of London and that of New York. This is merely representative, because London means England and New York stands for America. There is no doubt that blood and lineage play an important part in Continental society, and Vienna and parts of Germany to-day are as aristocratic and as exclusive as ever. But there is a general tendency to be democratic and to seek new blood from the rank and file. Berlin is military, and wealthy bankers have also bought their way in, and Italy, since Rome has become the capital, has been flooded with new titles and new people. Spain is very small, indeed, and Russia is still a bit barbaric. The society of Paris is more mixed to-day than that of London, and the Faubourg Saint Germain is simply a tradition. The old aristocratic families have married with those of the Bourse, and so entangled have these different alliances become that nobles of the last Napoleonic creation are considered old aristocrats. The world of London is well known. The King is intensely democratic, and his own set is composed of people who are amusing and who can entertain, regardless of tradition.

All this has had its effect on America and on New York. If one takes up any of the social chronicles of ten years ago one will understand the change. New York was more provincial in those days than many of the Southern and Western cities, and it has only outgrown this provincialism by being taught by those who have come from other centres and settled in New York or at Newport that there were other places except Manhattan where people "knew a thing or two." For years San Francisco had been called the little Paris. Society there was very cosmopolitan. Many of the California girls had married abroad and in noble families. New York was a mere shopping place, a city to stop in for a few days—nothing more. The Chicago people likewise found New York a bit insular, and they preferred England and the Continent. These long European sojourns had their influence, and when the West came to New York, as a kind of social capital, or to Newport, as the best and most amusing of the Eastern watering places, it was very well prepared not only to cope with society as it found it, but to surpass it in the luxury of living and in the charm of entertaining.

A very strange thing about New York is that the greatest successes have been made there by those who are not New Yorkers.

Ten years ago society was ruled by the late Ward McAllister. He was a Southerner, from Savannah, but his family were well known on the Pacific coast. His brothers had lived there, and one of his sons still resides in San Francisco. Mr. McAllister had broader ideas than the majority of New Yorkers. It can be well seen how small a village New York was, from a social point, when it allowed a stranger to come in and rule it. Mr. McAllister was a humorist. Originally a man fond of good living, with artistic perceptions and a genius for entertaining, he assumed without election the social leadership of New York. And it was given him without a dissenting voice. It is true he had two charming women on his side—Mrs. Astor and the late Mrs. August Belmont. His reign was absolute for a while, until he found himself opposed by a very clever woman, who by a single snub managed to dethrone him.

If one looks over the list of Ward McAllister's Four Hundred, compiled twelve years ago, one will find that nearly all the names were representative New Yorkers of at least a generation. Already the Knickerbockers and old Dutch families were retiring and forming a set of their own. The new families

of the McAllister regime were the Vanderbilts and the Wilsons. Most of the intermarriages made by wealthy families and those in society were with Southern women and men, with a little sprinkling from the West. The first great California marriage in New York was that of Ogden Mills to Miss Livingston, the daughter of Mr. and Mrs. Maturin Livingston and one of the celebrated Livingston twins. These young women had been great belles abroad, and while in London and in Paris had met with many California people. Already at that day the Misses Parrott were married in old French families. Miss Sharon was Lady Hesketh, and so on. The wedding of Ogden Mills and Miss Livingston was one of the notable events of a little over twenty years ago. The christening of Mrs. Ogden Mills's twin daughters took place at Newport eighteen years ago, the first Summer that the Millses had a cottage there. Shortly after the Mills-Livingston wedding other Californians came to live in New York and take their place in society. Mr. and Mrs. Heber R. Bishop were among these. Mr. Bishop is a man of intense artistic temperament. His house on Fifth avenue contains a beautiful ballroom, which in itself is a work of art, and his picture gallery is famous. His splendid collection of jade has been given to the Metropolitan Museum of Art. Two of Mr. Bishop's daughters have married into old New York families. The marriage of Miss Livingston, representative of the old Dutch aristocracy, to Ogden Mills precipitated the revolution. Mrs. Ogden Mills did not care to be dictated to by Ward McAllister any more than did Mrs. Oliver H. P. Belmont, then Mrs. William K. Vanderbilt. Mrs. Mills gathered around her a small and very exclusive set, and with a large fortune she was able to establish herself immediately as a leader.

The Crockers were the next family to adopt New York as their home. Fourteen years ago Charles B. Alexander married Miss Crocker. Mrs. Alexander is a handsome woman who has travelled a great deal and who had passed a part of her girlhood abroad. The Alexander mansion on Fifty-eighth street contains some exquisite works of art, and it is decorated and furnished in a lavish but thoroughly artistic manner. Mrs. Alexander has her cottage at Tuxedo, and she occasionally goes to Newport. She is very fond of Europe, and last Spring chartered a yacht, and, with a large party, cruised along the Riviera. Her niece, Miss Crocker, married Francis Burton Harrison, the son of Mr. and Mrs. Burton Harrison, and a future Congressman. Mrs. Alexander drew about her the entire artistic element of New York. Her entertainments have been delightful and she has shown that there are other things in life except the mere stupid conventionalities of society.

Twelve years ago there came to New York Mrs. Fair, then the wife of ex-Senator Fair, one of the great millionaires of the Far West. Mrs. Fair had with her two beautiful young daughters. The eldest, Miss Tessie Fair, was highly accomplished and educated, and her beauty was such that she immediately became the reigning sensation in New York. At first the Fairs did not aspire in the least to society. Hermann Oelrichs, one of the great beaux of New York, and possibly the most popular clubman there, fell desperately in love with this charming California girl. At the same time, the late Duke of Marlborough met her and paid his court to her. She could have been a duchess, but Miss Fair was a sensible young woman, open hearted, frank and very American. Besides, she was a Roman Catholic and the Duke was a divorced man. She married Hermann Oelrichs, and the Duke made a duchess of Mrs. Hamersley.

Mrs. Hermann Oelrichs has been from the first an emphatic social success. Her very independence has won for her many friends. Her first season at Newport was not spectacular. She made no effort whatever to storm the portals of society. Her husband's position was unquestioned, but there was still an opposition on the part of a few New York women to what they called the "Western element." Mrs. Oelrichs gave a large ball for the debut of her sister, Miss Virginia Fair. One New York woman who was very powerful in Newport society wrote her asking her to invite another woman who was also supposed to wield great influence, and to be a social promoter. Mrs. Oelrichs replied that she would ask exactly whom she pleased, and as she did not like the woman, refused to give the invitation. At first all sorts of dire things were prophesied for Mrs. Oelrichs, but she gave the ball to which all Newport went and which was the success of the season. In her own home on Fifth avenue she gives delightful entertainments. She has had the aid of two devoted friends, Mrs. Oliver H. P. Belmont and Mrs. Stuyvesant Fish. Both of these women are clever and not in the least insular. Mrs. Fish has lived in Chicago and in other Western cities, as well as abroad. She is frankness itself, and her lineage, from a Knickerbocker point of view, cannot be questioned. The wedding of Miss Virginia Fair and William K. Vanderbilt, Jr., took place a few years after Miss Fair's debut. Nearly every parti in New York was at the young Californian's feet, and there was great alarm among the mothers who had daughters concerning the Western invasion.

Mrs. R. T. Wilson, Jr.

Then from Chicago came Mrs. Potter Palmer. Mrs. Palmer never does things by halves. She took the William Waldorf Astor villa at Newport, which before then had been occupied by the family of the late Calvin Brice, another Westerner, who had introduced to Newport the afternoon vaudeville and elaborate dinners and musical entertainments. Mrs. Potter Palmer's season in Newport was a veritable triumph, and it ended with the wedding of her niece, Miss Julia Grant, the granddaughter of the late General Grant, with the Prince Cantacuzene.

Six years ago there was another alliance which established the union of the East and West, and which strengthened the influence of society beyond the Rockies in the very stronghold of conservative New York. It was that of Clarence Mackay to Miss Kathryn Duer. Miss Duer was a very beautiful and extremely clever girl. On her mother's side she was the granddaughter of the late William R. Travers, the greatest wit known in the history of New York. Here also she was related to the Wadsworths and several historical families, and to the Reverdys. Her father was the descendant of Lord Sterling, one of the last colonial governors, and also of a line of old patrons of the Dutch regime. Miss Duer had made a brilliant debut, and there were few young women who attracted as much attention. She inherited the wit of her grandfather and her epigrams were the delight of the salons and clubs.

Clarence Mackay was the only living son of the great Bonanza King. He had been educated abroad. His mother has had a remarkable social career in Paris and in London. His half sister married into one of the oldest Roman families. But Mr. Mackay is a representative Western man. His wife, since her marriage, has assumed much of the breezy, independent manner, and has completely revolutionized matters in New York society. When the Mackays emerge from their mourning for the late John Mackay, they will take their places at the very head of New York society. Nothing Mrs. Mackay loves so much as to be odd and original. She will throw aside all the absurd narrow ideas cherished by New Yorkers who are not sure of their position. If she finds people talented, amusing or clever, she does not care whether they have money or not—this is the very last consideration with her. She is continually surprising society, and she does exactly as she pleases. She is a devoted wife and mother, and she makes her husband's interests her own.

Newport, and consequently, New York, had been conquered. And the effect has been most refreshing. Now there comes again from the Middle West a number of millionaires who are to make New York their home, and who will give to it a still more cosmopolitan character.

The effect of the Western invasion of New York society has been healthy. It is true that Henry Watterson fulminated against society this year, and a clergyman at Newport did the same two years ago. This thundering is not new. The Rev. Dr. Morgan Dix hauled society over the coals ten years ago in a most sensational sermon, and he was followed on the same lines by the Rev. Dr. Huntington, of Grace Church. Still, society has not deteriorated. It seemed to be much wickeder ten years ago than now. It can be said of the Western element that it has brought to it no scandals, that the influence has been healthy. Society cannot be judged from any other standpoint but its own. It makes a business of pleasure. It has unlimited means, and it wants to be amused and to enjoy itself. This is the modern acceptation, and this the interpretation found abroad as well as in this country. With these premises, one must look at society fairly and squarely. The Western invasion has made New York and Newport less insular, less provincial. It has been a patron of arts and it has done much to support the opera and to make the Metropolitan Museum one of the greatest art galleries in the world.

Taking the box holders of the opera, one will find among the stockholders Ogden Mills, D. O. Mills, Whitelaw Reid, who married Miss Mills; Mrs. Hermann Oelrichs, Mrs. William K. Vanderbilt, Jr., Heber R. Bishop, Charles B. Alexander, James C. Haggin, Senator Clark, of Montana; Charles Yerkes, the millionaire; Clarence Mackay, and others less known. And the invasion still continues and New York is broader. There is no one set, there is no Four Hundred. Mrs. Astor holds a traditional leadership by reason of brevet rank, but Mrs. Clarence Mackay, Mrs. Ogden Mills and Mrs. Cornelius Vanderbilt are also leaders. Every day New York becomes more like London, where on any night of the season one may "pass on" from one entertainment to another, and where there will be several balls and dances and crushes and musicales being given on the same evening. The night of one entertainment is over. Society has been taught that in a great metropolis it should be cosmopolitan. The mere presence of a titled man means nothing to-day, where ten years ago the very visit of a marquis would throw the entire Four Hundred into a state of excitement bordering on frenzy. New York has become the American city, the general clearing house for the rest of the nation.

Mrs. Fred. D. Grant.

South Carolina

—

Capital:
COLUMBIA.

The first attempt to colonize the territory now comprised in South Carolina was made by Jean Ribault, a Frenchman. The province of the Carolinas was created in 1663, and the first permanent settlement in South Carolina was made on the banks of the Ashley River in 1670 by English colonists, who moved later to the present site of Charleston. In 1680 a large number of Huguenots and a little later large numbers of Swiss, Scotch, Irish and German emigrants found homes in the territory. The colony at various times suffered severely from Indian depredations, and was engaged with Georgia in the contest with the Spanish settlement in Florida. During the Revolutionary War the State was the scene of severe warfare. In 1832 South Carolina, in convention, declared the tax law passed by Congress to be "null and void and no law, nor binding upon this State, its officers and citizens," and forbade the payment of duties on imports. An ordinance of secession from the Union was passed on December 20, 1860, and the first hostilities of the civil war began by the firing on Fort Sumter, in Charleston harbor, by General Beauregard.

South Carolina has an area of 30,570 square miles, and in 1901 its population was estimated to be 1,360,000. No State in the South has shown a more marked increase in manufacturing during the past decade than has South Carolina. With scarcely a cotton mill in the State in 1895, the increase has been so rapid that now in number of spindles and extent of output this State ranks near the first in the United States. In 1900 the products of cotton manufacturing industries were valued at $29,723,919. The manufacture of lumber and timber ranks second in importance, while the manufacture of fertilizers from phosphate rock has the third place. The cultivation and preparation for market of tea has been tried in Summerville, and is now no longer an experiment. The tea grown on the plantations in this region equals the best of that imported from China and Ceylon, and the improved methods of manufacture and the proximity of the fields to the markets have resulted in creating a demand far exceeding the supply.

Gov. D. C. Heyward.

The Legislature in 1901 passed several laws of general interest. Among them was one prohibiting the carrying, manufacture or importation of pistols less than twenty inches long or weighing less than three pounds. The State gave consent to the acquisition by the Federal Government of such land as it deemed necessary for the Appalachian Forest Reserve Park. The office of State Geologist and Board of Entomology were created.

A bill tending to restrict the employment of child labor in the cotton mills was passed by the Senate, but rejected by the House. This bill provided that no children under ten years of age should be employed in any manufacturing or mercantile establishment after May, 1901; none under eleven after May, 1902, and none under twelve after May, 1903. The mill operators were opposed to this bill on the grounds that it would tend to drive negro families to other States where no such law was in operation. A like bill was presented to the Legislature of 1902, and met with the favorable opinion of the public, but failed also of passage.

In 1901 Senators Benjamin R. Tillman and John L. McLaurin created considerable excitement by each resigning and daring the other to do likewise. Senator Tillman represented the faction of the Democrats who believed in the principles he promulgated in 1892 and subsequent years while he was Governor of the State, while McLaurin represented what is termed the "new" Democracy, which the old Democrats refuse to recognize as anything other than Republicanism. Governor McSweeney refused to accept the resignations of either of the Senators, and the matter was dropped, though during a session of Congress in the Spring of 1902 the two Senators attempted to settle their differences by personal encounter on the floor of the Senate, and were separated only with difficulty by their colleagues.

In the Democratic primaries, held August 28, and which, in fact, constitute an election in South Carolina, Congressman A. C. Latimer was chosen to be elected to the short term of the Senate, to fill McLaurin's place, his term having expired. This primary showed a marked change in the sentiment of the voters by the utter overthrow of those representing the Tillman idea in the State and the choice of men from the former "straight out" or "Bourbon" Democrats.

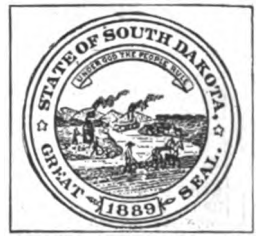
The South Carolina Interstate and West Indian Exposition, held in Charleston from December 1 to June 1, 1902, proved a complete success artistically and industrially, though a failure financially. The attendance was smaller than had been anticipated, due to bad weather conditions and lack of publicity, but it resulted in arousing a new interest in this section of the South and in showing the advance made since the war in spite of the adverse conditions existing.

Land in many parts of South Carolina may be purchased at remarkably low prices. In November practically the entire town of Calhoun Falls, in the Western part of the State, was sold for $14,000, with the intention of forming there a land investment company to exploit the timber supplies of that region.

South Dakota.

—

Capital:
PIERRE.



South Dakota became a State December 2, 1889, when the Territory of Dakota was divided into two States. The capital is Pierre. The area of South Dakota is 77,650 square miles, and in 1901 its population was estimated to be 401,570. As a separate State it has no history dating farther back than 1889, and, of course, its earlier history is identical with that of North Dakota (q. v.).

Agriculture and mining are the principal industries of South Dakota, though the census of 1900 shows an increase in manufactures since 1890, limited practically to "neighborhood" industries. Agriculture supplies the raw material, and the most important industry is the manufacture of flour and grist mill products. The making of butter, cheese and condensed milk ranks second.

The Legislature of 1901 proposed several constitutional amendments to be voted upon by the people at the election in November, 1902. One provided that the constitutional provision that a county seat once located could not be relocated by a two-third vote, should be amended to provide that a county seat not on a railway line might be so located by a two-third vote. Among the laws passed by the Legislature was one

Digitized by Google

providing that a uniform system of education should be established under the Superintendent of Public Instruction, and the previous school laws were co-lined. It was directed that a course in the humane treatment of animals should be given in the public schools for at least ten minutes a week, and "no experiments on live animals to demonstrate facts in physiology" should be permitted in any schools in the State.

Gov. Charles N. Herreid.

An act to prevent the fusion of parties provides that if any candidate is chosen by two parties for the same office he must take his choice of which nomination he will accept, and he cannot appear on the ballot as the nom inee for the same office in both parties. An act of 1891 making it unlawful for any person to sell or give firearms or ammunition to any Indian or half-breed who had not renounced his tribal re lation, was repealed. The office of Food and Dairy Commissioner was created, and it was made the duty of the commissioner to enforce all existing pure food laws to regulate the manufacture and sale of all the products of the dairy, to encourage the organization of creameries and cheese factories by disseminating infor mation as to the best market for their products, and by other means.

A sweeping and discriminating act against the sale of oleomargarine was passed. This act directed that every place where oleomargarine was sold at whole sale or retail, including boarding houses, hotels and lunch rooms should display a white placard at least 10x14 inches square and bearing these words: "Oleomargarine sold here," and no other words.

The use of the United States flag for advertising purposes was prohibited. The penalty for kid napping was made imprisonment for life, or a minimum of 10 years. For the establishment of school libraries a tax of 10 per cent per capita for each child of school age was directed to be levied, and at the same time it was directed that in cities of the first and second class a tax of 2 mills might be levied for the pur chase of books and the erection of libraries.

The requirements for the admission of candidates for the practice of medicine were increased by requiring them to either pass a sufficient examination or to be graduated from a medical college having a four years' course. Applicants for the practice of dentistry were directed to present a diploma from a reputable dental college or to pass examinations and to show at the same time that they had studied or had been engaged in the practice of dentistry for at least three years. Congress was petitioned to establish a school of mines in each State, and was also petitioned to call a convention to propose a constitutional amendment providing for the direct election of United States Senators.

The Democrats and Populists of the State held State conventions June 26, 1902, and agreed to form a fusion party to be known for the single year as the Democratic party of South Dakota. The Populists reserved the right to continue their organization and to act independently at any time. The Populists adopted a platform reaffirming the Sioux Falls platform of 1900, expressing faith in the leadership of William J. Bryan, and commending the campaign of education and the adoption by the Democratic and Republican parties of part of its platform. The platform favors the election of United States Senators by direct vote, and denounces the Fowler bill for the retirement of silver. The platform adopted by the Democrats reaffirms the principles of the Kansas City platform, denounces the Fowler bill and the workings of the Text Book trust within the State. It favors Government control of railroads and public utilities and the direct election of United States Senators.

At the State elections held in November the Republican Congressional ticket was elected by a large majority, and this party also succeeded in electing all but half a dozen members to the State Legislature. Charles N. Herreid, Republican candidate for Governor, was elected by a large majority.

The National House Committee on Public Lands reported favorably in 1902 on the bill of Congressman Martin, providing for the establishment of a National Park to cover the country about the Wind Cave, in the vicinity of the Black Hills, South Dakota. Should the bill eventually pass, the Wind Cave will soon stand with Niagara Falls, Yellowstone Park and the Mammoth Cave of Kentucky as one of America's most wonderful freaks.

Eighteen years ago, in the Summer of 1884, three cowboys riding across the prairies of Dakota, heard a strange hissing sound proceeding from near the foot of a small hill. One of them turned back to make an investigation and found that the noise came from a clump of bushes. Cutting away the underbrush, he saw a dark hole some distance away. When he was within ten feet of the opening he felt himself hurled toward the gaping mouth by a terrific draught of air. Grasping the shrubbery about him he barely saved himself, and with difficulty crawled back from the dangerous spot.

Several days later he, with his companions, returned to the place and made a hasty investigation of what proved to be an enormous cave. Owing to a lack of lights and ropes they were afraid to venture far into it, but saw enough to assure them that they had discovered a new wonder.

Explorations of the cave were made by several parties, and recently a thorough investigation was conducted by the United States Geological Survey, with the assistance of agents of the United States Land Office.

Spain.

—

Capital: MADRID.

The present reigning House, that of Bourbon, has been active in the Government of Spain for more than two centuries. Succeeding the House of Hapsburg, on the accession of Felipe V., in 1700, it remained in power until 1869, with the exception of the six years during which Spain was ruled by a Bonaparte. The short reign of the House of Savoy was followed by the republic, but, on the restoration of the monarchy, in 1875, it was a Bourbon, Alfonso XII., who occupied the throne.

The present ruler, Alfonso XIII., was born May 17, 1886, after the death of his father, and at once succeeded to the throne, which, in the meantime, had been occupied by his sister, Donna Maria de las Mercedes, who was born September 11, 1880, and who married Prince Carlos of Bourbon, February 14, 1901. At the birth of the infant King, his mother, Queen Maria Christina, the daughter of the late Archduke Karl Ferdinand of Austria, took oath as Regent, a position which she held until the King reached his majority, May 17, 1902, when he assumed charge over the kingdom.

According to the Constitution of 1876, the monarch is inviolable, but his Ministers are responsible for his acts, and all his decrees must be signed by at least one of them. It is also provided that the Cortes must approve the King's marriage before he can contract it, and he is expressly forbidden to marry any one who would be excluded by law from succession to the throne.

The Heir Apparent.—If the present king should die without offspring the throne would revert again to his eldest sister, the Infanta Donna Maria de las Mercedes.

Spain is a constitutional monarchy, so declared by its Constitution, adopted 1876. The executive rests in the King, together with the Cortes, or two-chambered Legislature. The upper chamber consists of not more than 360 Senators, one-half elected by the States for five years; the other half consists of Senators, by the right of their family or official position, and 100 appointed by the King. The Congress, or lower house, is composed of Deputies, one for every 50,000 of population. The initiative in making laws rests with the King and either house.

King of Spain.

The national church in Spain is the Roman Catholic, and to this faith nearly the entire nation adheres. Liberty of worship is somewhat restricted.

Education is shamefully neglected in Spain. At the last educational census it was shown that over 65 per cent of the population could neither read nor write. There are, however, numerous public schools and some fine academies and universities. Primary education is nominally compulsory.

In 1901 the actual revenue was $170,998,000, and the expenditure, $174,752,000. The outstanding debt July 1, 1901, was $1,930,300,661.

About 80 per cent of Spain is productive—one-third of this being devoted to agriculture, 20 per cent each to grass and fruits, 3½ per cent to vineyards and 1½ per cent to olive culture. Spanish industries are still small. Cotton manufactures lead; woollen and silk goods are next in importance. Other works include cork, beet, paper and glass. The mining industries are valuable, and the sardine fisheries greatly so. In 1900, imports and exports, including precious metals, were, respectively, $161,886,406 and $129,398,465.

Since the cession of her principal island possessions to the United States and Germany and the relinquishment of Cuba, Spain's colonial territory is only about 253,000 square miles in Africa. Under this scheme, the Canary Islands are, administratively, a part of Spain. For the year 1902 the cost of these possessions to the Spanish Government over and above the receipts from them was $400,000. In case of sale, Spain has given France the right of pre-emption over these colonies.

THE SPANISH POSSESSIONS.

Colonial Possessions.	Area in Sq. M.	Population.	Revenue.	Expenditures.
In Africa:				
Rio de Oro and Adrar	243,000	100,000		
Rio Muni	9,000	....		
Fernando Po, Annabon, Corisco, Elobey and San Juan	850	30,000		
Totals	252,850	130,000	$25,500	$411,500

For administrative purposes the Canary Islands are also considered a part of Spain. They possess an area of 2,808 square miles, and their population (1897) was 334,521.

The Army.—The regular army is organized in eight army corps, of which two contain each three divisions of infantry, three contain each two divisions, and three contain each one division. Of cavalry three of the army corps have each one division, and two have each one brigade. All Spaniards past the age of nineteen are liable to be drawn for the permanent army, in which they have to serve three years; they then pass into the first or active reserve, and for six years into the second reserve. They can purchase exemption for 1,500 pesetas.

Events in 1902.—The most important events in Spain in the last year was the coronation of King Alfonso XIII., which was most successfully accomplished in the early Summer. This brought to an end the regency of the Queen-Mother, and has thus far proven a beneficial change for Spain. The young King, who is no weakling, has succeeded in shelving some of the most troublous of his courtier-advisers, and, determined to feel for himself the popular pulse, has succeeded in making more popular the policy of the Government. The Carlist and religious riots enacted in Barcelona and other parts of the kingdom have not been repeated since the young King's accession.

Street Railways in the United States.

W. G. THOMAS,
"The Street Railway Review."

The street railway has become one of the most important and gigantic industries in the United States, and contributes so materially to the welfare of the people that the time is not far distant when the surface of the country will become an interlaced network of such car lines. The day o fthe horse and cable cars is practically past, for modern conditions demand a transportation service which shall be in keeping with the swift progress of the times. The up-to-date electric street car is a "palace on wheels," compared with the horse coach of twenty-five years ago, and yet the standard of construction and equipment grows ever more substantial and expensive.

The tendency nowadays is to forsake the crowded life of the city for the comparative freedom of suburban homes. Before any suburb can be developed, however, it must be made easy of access, and at a low rate of transportation. This is what the electric car line accomplishes, and many sections which a few years ago were vacant lots or mudholes are the sites of detached houses, comprising beautiful little communities.

The adaptation of electricity to other than street cars is another sign of progress, for "L" roads everywhere are now adopting such equipment. Much has been expected, too, of the use of electricity by steam roads, and threatened competition by a parallel trolley line has decided more than one steam road to adopt electricity on passenger service at least, for the frequent service and lower fares possible with electric operation make competition by steam roads difficult and expensive.

The electric express service has developed rapidly and grows in popularity, postal car service on street railways has proved even more successful than was anticipated, and the operation of funeral cars in those cities where the location of cemeteries and electric lines renders such a service practicable has been found highly desirable and appropriate, furnishing, as it does, transportation with which the ordinary carriage service is not to be compared from point of economy.

Wherever public parks and places of amusement are to be found the efforts of the authorities in that direction are supplemented by the street railway manager, who supplies attractions that would otherwise be lacking. The employment of electric cars for excursions, trolley parties and the like has become general, while the popularity of observation cars is undiminished. How long before we will be bowling across the continent in our private electric coaches is only a matter of speculation. Already we have the "Special Limited" on most of the interurban lines, which makes no stops except at the towns en route and saves the business man thirty minutes in thirty miles.

Digitized by Google

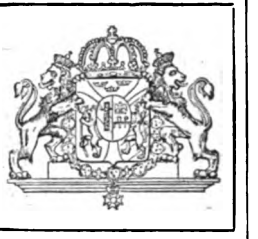
The tendency toward consolidation of trolley lines grows rapidly, and the facility with which combinations are made by the willing surrender of stock in old concerns for that in new corporations with enlarged capital and facilities shows the growing recognition among investors of consolidation as a profitable investment. A conservative estimate places the amount of investment in trolley lines in this country as $1,500,000,000. Twelve years ago it was $108,000,000. At that time electric mileage was in the minority, there being 3,009 miles of electric railways to 5,443 miles of horse car lines. To-day the horse car mileage is 832; electric lines, 22,063. Perhaps the story of progress can be told in so few words no other way, and incidentally it may be stated that America is justly regarded as representing the latest developments in modern methods of transportation, for its electric railway apparatus is adopted as standard in all parts of the globe.

Interurban and suburban street railway lines have developed a new pleasure, that of "trolley excursions," and in those sections of the East and Central States where there are long distance lines, many of the street railway companies issue guide books of trips to be taken on their lines and those of connecting companies, with descriptive matter of scenes along the routes.

Sweden and Norway.

Capitals:
STOCKHOLM.
CHRISTIANIA.

The reigning family of Sweden, or the House of Ponte Corvo, is descended from Marshal Bernadotte, Prince of Ponte Corvo, who was made heir apparent to the Crown by a vote of Parliament, August 21, 1810. On February 5, 1818, he succeeded to the throne and reigned, under the name of Carl XIV., until his death, March 8, 1844. His son succeeded him, as Oscar I., and when he died, in 1859, his son, Carl XV., assumed the throne. His premature death, without male children, in 1872, left the throne vacant, and his brother, the present ruler, was elected by the vote of the two Diets.



King Oscar II. was born January 21, 1823, and assumed the throne September 18, 1872. On June 6, 1857, he married Princess Sophia (born July 9, 1836), the daughter of the late Duke Wilhelm of Nassau. They have issue:

Name.	Born.	Died.	Married.	Born.	Date of Marriage.	Issue.
1. Prince Gustave, heir apparent	1858	....	Princess Victoria of Baden	1862	1881	3
(1.) Prince Gustavus Adolphus	1882	....				
(2.) Prince William	1884	....				
(3.) Prince Eric	1889	....				
2. Prince Oscar Bernadotte	*1859	....	Lady Ebba Munck	....	1888	....
3. Prince Charles	1861	....	Princess Ingeborg of Denmark	1878	1897	2
(1.) Princess Marguerite	1899	....				
(2.) Princess Martha	1901	....				
4. Prince Eugene	1865	....				

* Renounced his right to the succession to marry one of his mother's maids of honor.

THE MINISTRY.—The Council of State for Sweden is composed as follows:

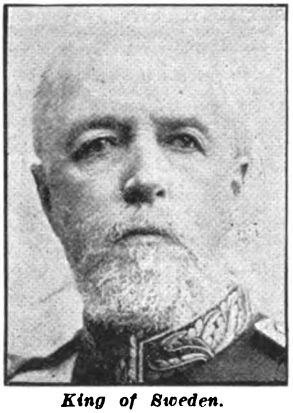
Minister of State, Eric Gustav Bostrom; Minister of Foreign Affairs, Carl Herman Tehedor Alfred Lagerheim; Minister of Justice, Ossian Berger; Minister of War, Jesper Ingewald Crusebjorn; Minis ter of Marine, Adolf Arnold Louis Palander; Minister of the Interior, Hjalmar George Westring; Minister of Finance, Ernst Fredrik Wilhelm Meyer; Minister of Education and Ecclesiastical Affairs, Carl von Frie sen; Minister of Agriculture, Al brecht Theodore Odelberg; Ministers without portfolios, Karl Sigfried Husberg and Johan Olof Ramstedt.

The following is the Council of State for Norway:

Minister of State, Otto Albert Blehr; Department and Ecclesiasti cal Affairs and Public Instruction, Vilhelm Anfreas Wexelsen; Depart ment of Justice, Soren Tobias Ar stad; Department of the Interior, O. A. Blehr; Department of Public Works, Jorgen Gundersen Lovland; Department of Agriculture, Wollert Konow; Department of Finance and Customs, Elias Sunde; Depart ment of Defence, Lieut-Col. Hans Georg Jacob Stang; Department of Revision of Public Accounts, W. Konow.

The delegation of the Council at Stockholm is composed as fol lows:

Ore Anton Ovam, Minister of State; Sigurd Ibsen and Gunner Kundsen.



King of Sweden.

THE NATION.—With the elec tion in 1814 of the King of Sweden to the throne of Norway, and the proclamation, the next year, of the Riksakt, or national charter, the two kingdoms became bound in a union, indissoluble and irrevocable. They are, however, interdependent.

SWEDEN.—In Sweden the King exercises legislative power only in matters of political ministration. In all other cases it rests in the Diet, or Congress. This consists of two houses, both elected by the people, the 150 in the First Chamber for terms of nine years and those in the Second Chamber for terms of three.

The King must be a member of the Lutheran Protestant Church, the State religion. Full religious liberty is enjoyed.

Public primary education is compulsroy and free. It is well enforced. There are two large universities. The Kingdom comprises 208 district courts, three high courts. In 1899 there were 1,850 institutions for the relief of the poor.

Estimated, the revenue for 1902 was about $39,035,750, and the expenditure the same.

NORWAY.—Under the constitution of Norway, which bears the date, 1814, the legislative power vests in the Storthing, with limited veto power in the King. The Storthing has 114 members, thirty-eight from towns and seventy-six from rural districts. They are elected every three years; when sitting, three-fourths of them form the Odelsthing, or lower house, and one-fourth the Lagthing, or upper. In religion and education Norway has the same general features as Sweden. Primary instruction is compulsory between the ages of 6½-7 years and 14 years.

Norway has 109 District, three Superior and one Supreme Court. Its paupers are cared for in the respective counties.

The estimated revenue and expenditure for 1902 were each about $24,325,000.

The coast line of Sweden and Norway is well fortified; the interior, less so.

In Sweden 8.6 per cent of the area is under cultivation, and about 50 per cent is in valuable forests, which furnish a large trade industry. Of Norway, 22 per cent is forest, and 3 per cent under cultivation. This timber is Norway's most valuable production. In Sweden the mines are important, but not so in Norway. The fisheries are valuable. In Sweden the imports in 1900 were $142,362,580, the exports, $104,877,512. In Norway, in 1900, the imports were $83,255,031, and the exports, $43,615,687.

Digitized by Google

The Swedish army, during the period between 1902 and 1907, is composed of three distinct classes of troops, the Varfvade, or enlisted troops; the Indelta, which compares with the United States volunteer service in the time of war; and the Varnpligtige, or conscription troops, drawn from the male population between the ages of twenty-one and forty years. The total peace strength of the Swedish army consists of about 37,200 officers and men of the permanent army, and 1,424 in the reserves.

The Swedish navy is maintained wholly for coast defense.

The principal agricultural products of Sweden are wheat, rye, barley, oats, pulse and potatoes. A large number of cattle are raised for home consumption and export.

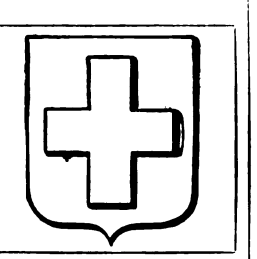
The troops of the Kingdom of Norway are raised mainly by conscription, and to a small extent by enlistment. All young men past the twenty-second year of age are liable to conscription, and every man capable of bearing arms and between the ages of eighteen and fifty is in time of war liable to service. The number of troops of the line, actually under arms, cannot exceed 18,000 men, even in time of war, without the consent of the Great Court, the legislative body of the Kingdom.

Like the Swedish navy, that of Norway is maintained solely for coast defense. The navy numbers about 120 officers in active service, and about 70 in reserve, and about 700 petty officers and seamen on permanent engagement.

Switzerland.

—

Capital: BERNE.



On the first of August, 1291, the men of Uri, Schwyz and Lower Unterwalden entered into a defensive league. By 1353 the league included eight cantons, and in 1513 there were thirteen. Various associated and projected territories were acquired, but no addition was made to the number of cantons forming the league until 1798, when, under the influence of France, the Helvetic Republic was formed with a regular constitution. This failed to satisfy the league, and in 1803 Napoleon, in the Act of Mediation, gave a new constitution and increased the number of cantons to nineteen. In 1815 the perpetual neutrality of Switzerland and the inviolability of her territory were guaranteed by the powers of Europe, and the Federal Pact which had been drawn up at Zurich, and which included three new cantons, was accepted by the Congress of Vienna. The Pact remained in force until 1848, when a new constitution, prepared without foreign interference, was accepted by general consent. On May 29, 1874, this was superseded by the constitution now in force.

The supreme legislative and executive powers are vested in a parliament of two chambers, a "Staenderath," or State Council, and a "Nationalrath," or National Council. The first is composed of forty-four members, chosen and paid by the twenty-two Cantons of the Confederation, two for each Canton. Three of the Cantons are politically divided, each division sending one representative to the State Council. The "Nationalrath" consists of 147 representatives of the Swiss people, chosen by direct election, at the rate of one deputy for every 20,000 of population. The members are paid from Federal funds at the rate of 20 francs for each day on which they are present, and 20 centimes per kilometer for travelling expenses. The Federal government is supreme in matters of peace, war and treaties; it regulates the army, the postal and telegraph systems, the coining of money, the issue and repayment of bank notes, and the weights and measures of the Republic. It legislates in matters of civil capacity, copyright, bankruptcy, patents, sanitary police in dangerous epidemics, and it may create and subsidize, beside the Polytechnic School at Zurich, a Federal university and other higher educational institutions. There has also been intrusted to it the authority to decide concerning public works for the whole or greater part of Switzerland, such as those relating to rivers, forests and the construction of railways.

The President of the Confederation and the Vice-President of the Federal Council are the first magistrates of the Confederation. Both are elected by the Federal Assembly in joint session for the term of one year, from January 1 to December 31, and are not eligible for re-election to the same offices until after the expiration of another year. The Vice-President may be, and usually is, elected to succeed the outgoing President. A general election of representatives takes place by ballot every three years. Every citizen of the Republic who has entered his twenty-first year is entitled to vote, and any voter not a clergyman may be elected a deputy. The first step toward legislative action may be taken by means of the popular initiative and laws passed by the Federal Assembly may be vetoed by popular voice. The President for 1902 was Joseph Zemp, and the Vice-President, A. Deucher.

Each of the cantons or demi-cantons of the Republic is "sovereign" so far as its independence and legislative powers are not restricted by the Federal constitution. Each has its local government, different in its organization in most instances, but all based on the principle of absolute sovereignty of the people. In a few of the smallest cantons the people exercise their powers direct without the intervention of any parliamentary machinery, all male citizens assembling together at stated periods, making laws and appointing their administrators.

A general census of Switzerland was taken in 1900, and the legal population was found to be 3,315,443 and the actual population present 3,325,023. In the middle of 1901 the population of the principal towns was as follows: Zurich, 152,942; Bale, 111,009; Geneva, 105,139; Berne, 64,864; Lausanne, 47,039; Lucerne, 29,633. The German language is spoken by a majority of the inhabitants of 18 cantons; the French in 5; the Italian in 1 and the Roumanish in 1. Of the 3,816 emigrants in 1900, 3,341 went to the United States. According to the constitution of 1874 there is a complete liberty of conscience and of religious creed. No one can incur any penalties whatsoever on account of his religious opinions and no one is bound to pay taxes especially appropriated to a creed to which he does not belong. No bishoprics can be created on Swiss territory without the approbation of the Confederation, and the Order of Jesuits and its affiliated societies cannot be received in any part of Switzerland. The population of the Republic is divided between Protestantism and Roman Catholicism, about 59 per cent adhering to the former and 40 per cent to the latter. The government of the Protestant Church, Calvinistic in doctrine and Presbyterian in form, is under the supervision of the magistrates of the various Cantons, to whom is also intrusted the superintendence of public instruction. In the educational administration of Switzerland there is no centralization, the civil authorities of the Cantons having charge of the primary schools. In all the Cantons primary instruction is free, and in most of them it is compulsory. The expense is borne sometimes by the Cantons and sometimes by the Communes and Cantons together. Besides the public primary schools, there are improvement schools for recruits, private schools for boys and girls, commercial schools, and technical schools. There are five universities, organized on the model of those of Germany; a polytechnic school, and an academy.

The Confederation has no power to levy direct taxes, and its chief source of revenue is the customs. A considerable income is derived from the postal and telegraph establishments, and from the Federal alcohol monopoly. Various Federal manufactories yield considerable revenue also. Laws are administered by the "Bundes-Gericht," or Federal Tribunal, which sits at Lausanne. This tribunal has two sections, to each of which is assigned the trial of suits in accordance with regulations framed by the tribunal itself. It has original and final jurisdiction between the Confederation and Cantons, between Canton and Canton and between the Confederation or Cantons and corporations or individuals, when the value of the dispute is not less than 3,000 francs. It is also called upon to decide many classes of railway suits. It is a Court of Appeal against decisions of other Federal authorities, and also tries persons accused of treason or other offences against the Confederation. Each Canton has its own judicial system for ordinary civil and criminal trials.

The fundamental laws of Switzerland forbid the maintenance of a standing army within the limits of the Republic. The Federal army consists of all men liable to military service, and both the army and war

Digitized by Google

materials are at the disposal of the Confederation. Every citizen of the Republic of military age, not exempt on account of bodily defect or other reason, is liable to service. In the first year of service every man undergoes a recruit's course of training, which lasts from 42 to 80 days, and during the remainder of his service he is called up once every two years for 16 days' training. Rifle practice and cavalry exercise, however, take place annually. The troops are divided into three classes, the Elite, consisting of all men able to bear arms, from the age of twenty to thirty-two; the Landwehr, comprising all men from the thirty-third to the completed forty-fourth year, and the Landsturm, which can be called out only in time of war, and consisting of all not otherwise serving and between the ages of seventeen and fifty, or, in the case of ex-officers, fifty-five. The effective strength of the Elite, Landwehr and Landsturm in July, 1901, was 518,265 men of all grades. A general muster of the militia is held annually. The Swiss army system, according to foreign military attaches who have been stationed in the Republic, is among the best in the world. Major G. R. Cecil, who has been United States Military Attache in Switzerland for the past three years, is quoted as saying that the evolutions of 1902 were a revelation and that it would take the armies of Europe to defeat the militia of this Republic on the battlefield.

The soil of Switzerland is very equally divided among the population, it being estimated that there are nearly 300,000 peasant farmers, representing a population of 2,000,000. Of the total area 28.4 per cent is unproductive, 35.8 per cent is under grass and meadows, 29 per cent under forests, and the remainder given up to agriculture. Rye, oats and potatoes are the chief crops, but the bulk of the food crops consumed in the country is imported. The chief agricultural industries are the manufacture of cheese and condensed milk, while about 30,448 hectares of vines under cultivation furnished 2,103,255 hectoliters of wine. The Swiss Confederation has the right of supervision over the police of the forests, and of framing regulations for their maintenance. In 1876 it was enacted that the forest reserve should never be reduced.

In 1900 there were 2,362 miles of railway within the Republic, and 200 miles of tramway, track and cable lines, open for traffic. On February 20, 1898, it was finally decided that the railways should be acquired by the State, and the financial operations for the transfers of the lines are now proceeding. In 1900 118 steamboats and 87 motor boats were in use on Swiss lakes. The tunnel connecting Switzerland and Italy, under the Simplon Pass, is the biggest thing of the kind yet attempted. It is to be, when completed, more than twelve miles long, consisting of two single-track tunnels, connected by air passages.

The Ministers of State are: Secretary of Interior, J. Rellstab; Secretary of Justice and Police, A. Reichel; Secretary of Military Department, S. Gutzwiller; Secretary of Finance, H. Imboden; Chiefs of Commerce, Industries and Agriculture, Dr. A. Eichmann, Dr. F. Kaufmann, Dr. F. Mueller; Secretary of Postal Service and Railways, Dr. H. Muggli.

Tariffs: The Existing Systems Defined.

One of the matters of vital importance to every person engaged in commerce is the system of tariff affecting the value of the markets of any one country to the people of any other. At the present time the four great commercial countries of the world—Great Britain, Germany, France and the United States—are each using a different system of tariff regulations for the goods which they import. Great Britain may be said to be practically without a tariff; Germany uses a multiple tariff, made up of a general and a conventional schedule; France uses a multiple tariff, composed of a maximum schedule, and the United States may be said to use a general tariff which is applied to imports without discrimination as to their origin.

The systems, therefore, may be classed under three heads, namely: (1) The general tariff system; (2) the general and conventional tariff system, and (3) the maximum and minimum tariff system.

Tariff systems, therefore, may be classed under three heads, namely: (1) and consists in having a single schedule of import duties, which is applied to the goods of all countries without distinction. Such a tariff system is altogether an act of the legislative branch of the government. It takes account only of the needs of the home country, and recognizes foreign commercial relations only in so far as the latter are in harmony with home interests. It is difficult to maintain where the schedule contains many high protective duties, owing to the fact that foreign countries will endeavor to make with each other commercial treaties to mutually guarantee tariff concessions, while the State using the general tariff cannot make such treaties and is not in a position to secure a share of those advantages. Some countries have sought to solve the problem by making treaties and then placing the concessions in the general tariff, where they would apply to all nations.

The system of general and conventional tariffs, however, makes a distinction between goods which come from different countries. The fact that nations which make use of a general tariff often find themselves compelled to change this tariff when they later make commercial treaties is evidence of how difficult it is to maintain such a tariff intact. But since modern nations are practically compelled to have more or less close commercial relations with each other, some way of regulating these relations must be found, and the usual method of securing this end is by means of a mutual understanding between the countries in question. Generally one nation declares itself ready to grant some concession or reduction in its tariff if a corresponding concession is offered in return. If an agreement is reached, a treaty is then made, and as a rule the willingness is expressed to make further treaties with other countries under similar conditions. Such a treaty will usually introduce new tariff rates. If the State substitutes these rates for those in the general tariff, then no change in the system takes place. The usual course, however, is for the State to now maintain two columns in its tariff schedule; the first for those countries enjoying the "most-favored-nation" treatment, which is called the treaty or conventional tariff, and the second containing the original rates, for those countries not receiving this treatment, and termed the general tariff.

The rates of the conventional schedule are, of course, rather higher than those of the general schedule. It may be, however, that one nation regards it of importance that a certain rate, a reduction of which is refused by the other power, should not be increased during the period for which the treaty is made. The making of an agreement that rates shall not be changed is termed "binding" such rates. That is, the conventional tariff schedule is composed of reduced and "bound," or fixed rates. The general schedule may be changed at any time without breaking any of the conditions of the treaty, but the conventional schedule can only be changed by the consent of both parties.

The general tariff is framed with the acknowledged purpose of being the basis for the negotiations of commercial treaties. A conventional schedule is drawn up in these treaties, and, by the action of the most-favored-nation clause, the conventional tariff becomes so extended in application that, as a rule, it is the exception to apply the general tariff. For this reason the general tariff is regarded mainly in the light of a preliminary sketch of the real tariff. As a consequence, the rates in the general schedule are not infrequently made rather high, so that they can readily be reduced and concessions demanded in return. There is always the possibility, however, that the negotiations may be broken off for some unforseen reason, and the undesired high rates become actual rates. This possibility generally exerts a restraining influence in the framing of the general tariff. The course which events in the field of commercial policy may take will always exert considerable influence in the formation of such tariff schedules, but the main consideration must always be the needs of the home producers.

The maximum and minimum tariff system is distinguished from the above system, first of all, in its form. Instead of having two rates for a few articles it has two rates on most articles on which duties are imposed, and for this season is frequently called the double tariff system. In the application of these rates the maximum schedule corresponds to the general schedule and the minimum schedule to the conventional schedule of the system just described, since the minimum rates are given only to those countries which receive the most-favored-nation treatment. The characteristic difference between the two systems, however, arises from the difference in their origin. The minimum schedule is not drawn up by negotiations between the executives of two countries, but is framed by the legislative body at the same time that the maximum schedule is made. That is, the legislative power fixes two rates of duty on each article in the tariff. The higher rate is the one which fixes the maximum extent to which those articles may be taxed on entering the country; the lower, or minimum rate, is the one which fixes the minimum extent to which the duty may be lowered. If it is desired to make commercial treaties at any time, these two rates show the exact limits between which the treaty rates are to be fixed.

Tennessee.

Capital: NASHVILLE.

The name of Tennessee is derived from the Indian name Tanassee, given to the Little Tennessee River. De Sota probably visited the spot where Memphis now stands, but the first settlement was attempted by a party from North Carolina, in 1754. These were soon driven out by the Indians, and in 1756 the first permanent settlement was made, and Fort Loudon built on the Tennessee River, about 30 miles from the present site of Knoxville. In 1760 the fort was attacked by the Indians, and the whites capitulated upon condition that they be allowed to return to North Carolina. On the second day of their march they were overtaken by the Indians and many of them butchered, the survivors being returned to captivity. In 1761 an armed force from Virginia and North Carolina succeeded in subduing the savages, and settlements increased rapidly along the Watauga and Holston Rivers. From 1777 to 1784 the territory formed part of North Carolina, and in 1790 it was organized, together with Kentucky, as a Territory south of the Ohio. In 1794 a distinct Territorial government was given Tennessee, and in 1796 it was admitted to the Union as a State.

The seat of Government of Tennessee was originally at Knoxville, and was changed at various times to Kingston, back to Knoxville, to Nashville, again to Knoxville, to Murfreesboro, and, in 1826, to Nashville, where it remained.

The General Assembly of the State was convoked in extra session January 7, 1861, to consider what action should be taken by the State in view of the impending difficulties between the South and the North. In East Tennessee the people were opposed to secession, while those in the Western part of the State were in favor of a separation from the Union. The Governor, Isham G. Harris, actively favored the Southern cause

Digitized by Google

and refused to honor the President's requisition for troops from that State when Fort Sumter was fired on. In May, 1861, a military league was formed with the Confederate States by Commissioners appointed for that purpose, and was ratified by the Legislature. On June 8, by a majority vote of 57,675, it was decided to withdraw from the Union.

Eastern Tennessee formed the arena for some of the hardest fighting of the civil war, and it was not until the latter part of 1864 that this section began to be free of soldiers and raiding parties. In January, 1865, a convention assembled at Nashville and proposed amendments to the constitution, abolishing slavery, annulling the military league, the State declaration of independence, the ordinance of secession and all acts of the Confederate Government. These amendments were ratified by the people February 22, 1865.

Tennessee has an area of 42,050 square miles, and in 1901 its population was estimated to be 2,048,000. The manufacturing industries of this State have increased rapidly during the last decade, due largely to the exploitation of its mineral deposits including coal, iron and copper ores. Flour and grist mill products rank of first importance in the State, while the manufacture of lumber and timber has second place. Tennessee also produces some of the finest tobacco grown in the United States, being famous for the bright tobaccos of Greene County and the fine red shipping tobaccos of the Clarksville district.

Gov. James B. Frazier.

The Legislature of 1901 passed an act amending the act of 1893, changing the age at which children might be employed in any wo:k-shop, factory or mine from 12 to 14 years, and directed that employers be required, instead of simply permitted, to discover the actual age of the children employed. Mine foremen or assistants were required to have certificates issued on recommendation of the State Board of Mine Examiners, created under the same act. To obtain such certificates the applicants were required to pass a satisfactory examination and to show that he had had at least five years of actual mining experience.

Laws were passed for the purpose of making the education of whites and blacks absolutely separate. One of these acts prohibited the teaching of whites and blacks together in any school or college, and prohibited instructors, under penalty of fine and imprisonment, from teaching both whites and blacks in the same school. A bill introduced into the House to require street railway companies to furnish separate cars for negroes, failed of passage.

A labor act made it unlawful for any employer to bring laborers of any kind either from another State or from any other part of Tennessee to his workshop, factory or mine by "false representation" concerning the conditions of work to be done and payment to be given for the work. "False representation" was to be construed, among other things, to include the failure of an employer to inform them of a strike, lockout or other labor trouble at his works, if there were such.

It was provided that a tax should be levied upon all Pullman cars and all other cars except passenger cars owned by companies outside the State but operated within the State. Street car companies were directed to equip their cars with vestibules from the 1st of November to the middle of March for the protection of motormen. It was made a misdemeanor for any person or corporation to sell or to bring into the State for the purpose of selling or giving away any cigarettes or cigarette paper or substitute therefor. Congress was petitioned to provide for the establishment of a school of mines in every State not having such an institution, and also to call a convention to propose a constitutional amendment providing for the direct election of United Stats Senators. Several amendments to the State constitution were proposed looking to the reduction of State expenses.

The Democratic State Convention met May 29, 1902. The platform adopted reaffirms the Kansas City declaration, denounces trusts, imperialism and the Ship Subsidy bill. It declares for a tariff for revenue only, and one plank favors the union label on State printing. The Republican State convention was held June 18, and a platform was adopted indorsing the administration of President Roosevelt. A full State ticket was nominated.

At the State election held in November, James B. Frazier, the Democratic candidate, was elected by a majority of about 50,000. The anti-Saloon League, which was an important factor in the State legislative campaign, was surprisingly successful, the House of Representatives going overwhelmingly its way, while in the Senate the League has a small majority. Both Houses are largely Democratic.

Texas.

—

Capital:
AUSTIN.

In 1685 a colony of French emigrants, led by La Salle, landed in Matagorda Bay and erected Fort Louis on the Lavaca. In 1689 an expedition was sent out by the Spanish to drive the French away, and the little garrison at Fort Louis was compelled to scatter. The next year the mission of San Francisco was established at the site of Fort Louis. In 1714 the French again attempted to effect a settlement within the limits of what is now Texas. Missions were established by the French and Spanish, but owing to the attacks of the Indians and internal dissensions, these declined, and in 1765 there were not more than 750 European inhabitants in the territory. The feud between France and Spain was settled by the cession of Louisiana to the former power, and in 1803, when the United States bought this territory from France, there had been no well defined boundary agreed upon between this and the Spanish territory to the west. This led to controversy between the United States and Spain, which did not end until the Mexican War, whereby the United States gained possession of the entire region.

Texas has an area of 265,780 square miles, and in 1901 its population was estimated to be 3,142,000. In manufacturing this State has shown a marked increase during the past decade, its industries depending upon the development of the natural resources. Lumber, cotton and wheat are produced in abundance, and the large area of the State and heavy freight charges tend to increase the manufacture of products for local consumption. The most important industry is the manufacture of lumber and timber products, while the manufacture of cotton seed oil and cake ranks second, to which is allied cotton ginning. In these latter Texas ranks second in the United States. In 1900 Texas was sixth among the wheat producing States, and as a consequence of this the grist and flour mill products have steadily increased. The recent discovery of apparently inexhaustible oil fields in the State has provided a cheap fuel for local use, and has brought an enormous increase of capital to Texas.

A drastic anti-trust law passed in 1900, was amended by the Legislature in 1901, authorizing citizens of Texas to form corporations to do business in Mexico, Cuba, Porto Rico and the Philippines, and foreign countries, and the object of the law was stated to be that Texas should not be deprived of "the legitimate revenues that should be derived from the business enterprise of her citizens." Another corporation law, in-

Digitized by Google

tended to prevent black-listing, provided that while a corporation or firm might, upon application, give in writing a statement of the reasons why an employe was discharged, it should not anywhere publish a statement to prevent any employe who had voluntarily left the corporation from obtaining similar or other employment elsewhere.

Another law provided that no tickets or checks convertible into checks should be negotiable in cash was made, to the effect that cor monthly might in the interim grant and request of the employes.

An industrial institute and col girls in the arts and sciences was literary courses, it was to provide professional and domestic lines. An any attorney who should directly or should agree to loan or give money case he were selected as attorney, a truthful account of proceedings tive or legislative proceedings or and fair criticism of official acts not be construed as libel; and in to be permitted to give in evidence and any public retraction that had the statements, were to be taken gress was permitted to call a con amendment providing for the direct

In its platform the "initiative and referendum" were made the principal issues. The name, "Allied People's Party," was adopted for the party in Texas. The platform of the St. Louis Convention was indorsed.

Theosophy: The Universal Brotherhood.

MRS. KATHERINE RICHMOND-GREENE.

Theosophy is the philosophy of the soul. Its ethics are based upon the eternal verities. Scientific and not theoretic or speculative, it treats only of universal laws, changeless and absolute. This science of the spirit is the root from which has sprung all the diversity called the religions of the world. Starting as truth, and passing through the alembic of the human mind, "The truth becomes obscured by that which is not true, and therefore all creatures are led astray." Hence the creeds, the sects, are results of the "I think" of man.

The test of Theosophy is that it explains all phenomena. Through its teachings man learns his true place in the universe and his relation to it; while all the doubt, darkness and mystery that enshrouds human existence resolves to certainty, light and consciousness. It assures the perfectibility of man, and proof is not denied to the earnest student, who, obedient to the law, leads the life which quickens the spiritual powers latent in all men. Theosophy protests against the abuses of the law, and it protests against the perversion and loss to man of his glorious heritage of the divine.

Christ as "the only begotten Son it took Him out of the universal. evolution, He became at last a are no more referred to in any pul related to the human save through lutionary process, and the final de the varied experiences called life. meaning when he said: "Know temple of God?" The human conditions, con- comprehensible in the light of The- ever condition or environment, are

The Theosophical movement in this period was established in 1875. Its object was to form a nucleus for universal brotherhood. To prove brotherhood to be a fact in nature. Two subsidiary objects were added: "To study and investigate ancient religions, and to demonstrate the value of the same; and, object third, to quicken the physical powers latent in man.

The society openly receives all who apply for membership, without any distinctions whatsoever. As the instruction given and knowledge gained affects the evolution of every member, tending to quicken the latent spiritual powers, those who think deeply enough may realize a danger that may arise from this process and harmful results too often follow from those steps that should be taken sacredly and utterly free from motives of selfishness. Obedience to law is strenuously insisted upon, and this obedience and the strict the department, which covers the entire cost pretty thoroughly.

following of the law necessitates a leader who leads. This leader must be one whose higher evolution is attained and who stands as transmitter between the visible and invisible worlds. The Theosophical Society has had three such leaders—Madam Helena Petrovna Blavatsky, William Quain Judge, and the present leader, Katharine Tingley. In February, 1898, at the congress in Chicago, Katharine Tingley established the Universal Brotherhood and made the Theosophical Society one of its departments. This change caused a few of the members to leave the ranks.

While the Theosophical Society has lodges all over the world its headquarters are now established at Point Loma, California, where the great work of the movement is carried on. Many buildings are erected there for educational purposes, and one is in construction for a school for the revival of the lost mysteries of antiquity. The corner-stone was laid in February, 1897. A "Raja Yoga" school for children is actively at work showing practical results of great moment. The public works conducted by the present leader have been the great crusade around the world, the hospital at Montauk Point for our returning soldiers from the Spanish war, where she, with a few stout-hearted helpers, cared for nine thousand soldiers; and the Cuban crusade, in February, 1899, when she with six helpers and 175 cases of stores of every description, went to Santiago de Cuba to serve the people, the wretched, half-starved, fever-stricken, naked ones left as relics from the Spanish war. The history of that crusade has never been written. She is not claiming recognition from the world, but as one who witnessed her labors has stated, "when it shall be told the service of Katharine Tingley will illumine our history as Joan d'Arc lights the dark hour of the history of France." She is an American woman whose overflowing love for humanity called her to do and dare in the fearlessness and self-abnegation which found her face to face with fever, famine and leprosy; whose soul, dominating the body, made it all forgetful of twenty hours of service in the cause at a stretch—a service continued for weeks—of tender feet all caloused with the rough stone floors, where, day after day, and night after night, she stood and served, comforted and blessed. In April, 1897, she established the International Brotherhood League with seven most noble and far-reaching objects, the Lotus Homes for Children. Besides all this she is the editor of "The New Century," a weekly publication, and of "The Universal Brotherhood," a monthly magazine devoted to the cause. Mrs. Tingley has purchased Fisher Opera House, in San Diego, where the Sunday evening meetings of the Universal Brotherhood are held, and she has established free schools of art and music in San Diego. There are no paid teachers or officers connected with the Universal Brotherhood.

Officers of the Irish Brigade.

Transvaal War.

ALLEN SANGREE,
War Correspondent.
Author of "South Africa," "Cecil Rhodes; a King and His Country."

When a man is suspected of murder the prosecution first seeks a motive. When a nation declares war the world demands the provocation.

It is then a singular fact that, although every school child knows why the American colonies revolted from England, few persons of maturity can give a satisfactory explanation of the events that led to the Boer war.

This wide ignorance may be attributed to the cleverness of English statesmen, who were able to confuse the present generation by making a charge that was certain to evoke prejudice against Kruger and his people—a charge of "taxation without representation."

Anent this indictment, even the most loyal British admit that the taxes were not exorbitant since the Transvaal exacted a poll tax of but 18 shillings 9 pence, and a mining tax of 5 per cent upon the total net output of gold. The latter tax has, under British regime, been doubled.

What did appear unjust was the law that required a man to pay taxes fourteen years before he could become a citizen, and so the Transvaal Raad lessened this period by half.

When Sir Alfred Milner, at the Bloemfontein Convention insisted upon a five-year residence, the same that is exacted by the United States Government, President Kruger would not consent, pointing out that settlers who really intended making South Africa their home, having the country's welfare at heart, would not cavil at two years' more probation.

BORMAY & CO., N.Y.

But Sir Alfred Milner made this a point and demanded the concession within a certain date. Before the expiration of that time, Kruger relented, and the British High Chancellor was awakened from his bed at night and so informed. "Too late," was his reply.

"And I knew then," President Kruger told the writer in Holland, "that the taxation grievance was merely a pretext. It was to be a war of aggression."

There is hardly any doubt that historians, after reflectively consulting the annals, will arrive at the same conclusion.

The three men who controlled the destinies of England in this crisis were Joseph Chamberlain, Cecil Rhodes and Alfred Milner, all of them zealously bent on "painting the map of South Africa a British red." Gaining possession of the gold fields and avenging Majuba were details. The rapid growth of Germany and the United States made it imperative that England should strengthen herself colonially.

Where else was there such opportunity as in the southern part of the Dark Continent, where all that stood in the way of one unbroken English colony from "Lion's Head to Line" were the two Dutch Republics and Portuguese East Africa, which territory, its fatherland being mortgaged to Great Britain, was even then ready to fall.

But for England's land hungriness there had been no Boer war. That was the provocation.

This three years' struggle will be looked upon by history as epochal and fraught with ghastly mistakes. Epochal because it inaugurated many changes in warfare, namely, the doing away with garish uniforms, military pomp, bayonet charges and the fighting in close formation. It demonstrated that accurate marksmanship is of more value than headstrong bravery. The conquering army of the future will combine the two.

England's first mistake was made by Chamberlain, who thought that 15,000 troops were enough to conquer the Boers. At one time English generals were glad to have the services of 350,000 men.

The Boers were able to maintain a three-years' war against such odds because the British officers lacked

Lord Roberts.

Dr. W. J. Leyds.

in versatility and resource. From first to last they never changed their tactics, and the Dutch always knew exactly what was going to take place. I have heard Boer generals frequently declare that if officers from the ranks had been in charge England had triumphed earlier.

The Boers, on the other hand, fought as the occasion demanded, one time taking position on a kopje, each man sheltered by a rock, and again joining in a savage charge, in which manoeuvre they did not use a bayonet, but rode right among the enemy, dismounted, and poured in lead with a deadly aim. The Boer army used the latest models of rapid-fire, heavy and field guns. Those of the British were antiquated.

Estimating the efficiency of English generals from a Boer standpoint, the most able three were Buller, McDonald and French. Lord Roberts was too old, and Lord Kitchener, though an organizer, had little strategic ability.

Among the Boers Botha was regarded as a careful and brave leader, but not so prompt as Delarey or De Wet. The latter was too reckless. Delarey they looked upon as the best general in either army.

Those who best know South Africa predict that it will ever remain essentially a grazing country. It is unique in having no great rivers or forests; manufacturing, therefore, will develop slowly. South Africa will never be a rival to the United States.

At the present time a majority of the population would be content to live under the British flag, were home rule conceded, but to govern the new colony from Downing Street will prove a troublesome, and, perhaps, impossible task, such is the hatred for England that rankles in the heart of every Dutchman on the veld or in the town.

In contrast to the figures presented to Parliament by Secretary of War Broderick, it is interesting to note those of Boer statisticians, who estimate the number of British dead at something over 120,000, the Dutch loss under 8,000.

THE STORY OF THE TRANSVAAL WAR CHRONOLOGICALLY TOLD.

It was on October 11, 1899, that the ultimatum presented to Great Britain by the Government at Pretoria expired, and, as no satisfactory answer was received within the limit of time set, the order for the movement of the Boer forces was given. In this letter of ultimatum State Secretary Reitz had enumerated the grievances of the South African Republic against Her Majesty's Government, and had concluded by exacting the following conditions as the only ones under which a continuance of peace would be possible:

Digitized by Google

THE ULTIMATUM.

(a) That all points of mutual differences shall be regulated by the friendly course of arbitration or by whatever amicable way may be agreed upon by this Government with Her Majesty's Government.

(b) That the troops on the borders of this Republic shall be instantly withdrawn.

(c) That all reinforcements of troops which have arrived in South Africa since June 1, 1899, shall be removed from South Africa within a reasonable time to be agreed upon with this Government, and with the mutual assurance and guarantee on the part of this Government that no attack upon or hostilities against any portion of the possessions of the British Government shall be made by the Republic during further negotiations within the period of time to be subsequently agreed upon between the governments, and this Government will, on compliance therewith, be prepared to withdraw the armed burghers of this Republic from the borders.

(d) That Her Majesty's troops which are now on the high seas shall not be landed in any portion of South Africa.

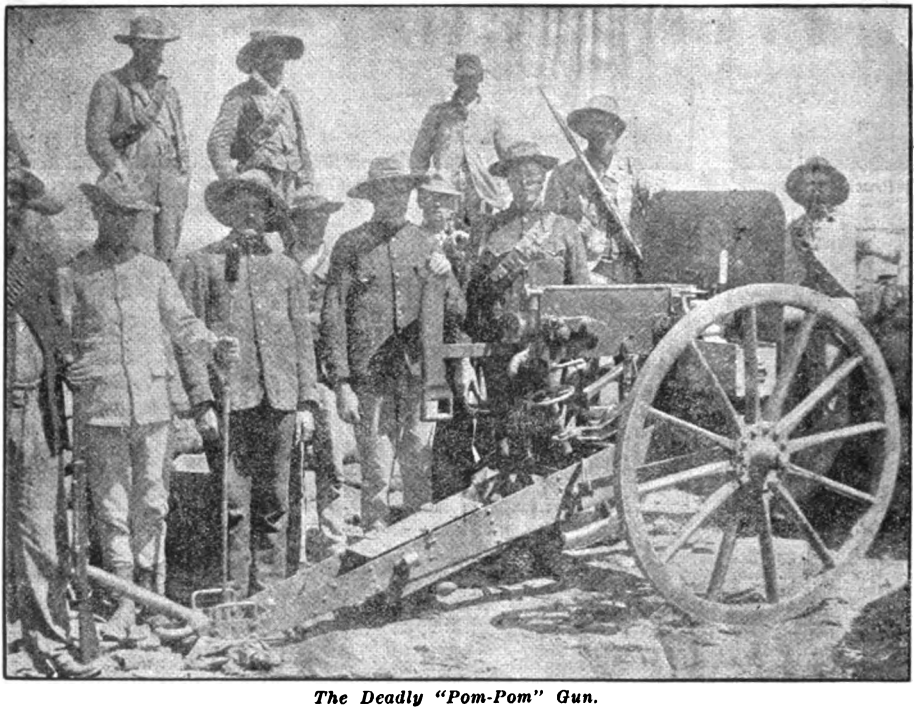
Great Britain's failure to accept these conditions left no alternative but the immediate declaration of war, and on October 10, 1899, the proclamation of martial law in both the South African Republic and the Orange Free State was issued. Hostilities began on the 11th, when the Boer forces invaded Natal, and the chief events of the war that followed were:

THE DIARY OF THE WAR.

1899.
Oct. 12. Great Britain replies to Boer ultimatum. Mr. Conyngham Greene leaves Pretoria. Mafeking isolated.
13. Mafeking armored train disaster. First reconnoissance from Ladysmith.
14. Newcastle abandoned.
18. Action near Acton Homes. Militia called out.
20. Battle of Glencoe.
21. Battle of Elandslaagte.
23. Sortie from Mafeking. Death of General Symons.

1899.
Dec. 10. General Gatacre's reverse at Stormberg. Disaster at Magersfontein. Death of General Wauchope.
15. General Sir Redvers Buller repulsed on the Tugela.
16. Lord Roberts appointed Commander-in-Chief in South Africa, with Lord Kitchener as Chief of Staff.

1900.
Jan. 2. Colonel Pilcher defeats Boers at Sunnyside.
6. Attack on Ladysmith repulsed.
23. Spion Kop captured.



The Deadly "Pom-Pom" Gun.

24. Boers defeated by General White at Rietfontein, near Ladysmith.
27. Sorties from Mafeking and Ladysmith.
30. Battle of Farquhar's Farm. Surrender at Nicholson's Nek.
31. General Sir Redvers Buller arrives at Cape Town.

Nov. 1. Fighting near Colenso. Boers invade Cape Colony.
2. Ladysmith besieged.
3. Colenso evacuated. Proclamation of martial law in Northern Cape Colony.
5. Boers destroy the bridges over the Orange River.
6. Bombardment of Ladysmith commences.
14. Burghersdorp occupied by the Boers.
23 Victory of Belmont.
25. Battle of Enslin.
28. Battle of Modder River.

25. Spion Kop abandoned.

Feb. 5. General Sir Redvers Buller crosses the Tugela.
7. Lord Roberts and Lord Kitchener leave Cape Town for Modder River.
11. Lord Roberts commences the Kimberley relief movement.
15. Magersfontein and Spytfontein evacuated. Boers capture a British convoy. Relief of Kimberley.
20. Lord Roberts defeats Boers at Paardeberg.
22. Severe fighting at Grobler's Kloof.
27. General Cronje surrenders to Lord Roberts. General Sir Redvers Buller captures Pieters Hill.
28. Relief of Ladysmith.

March 5. General Gatacre occupies Stormberg.
7. Lord Roberts defeats Boers at Poplar Grove.
10. Lord Roberts defeats Boers at Driefontein.
13. Lord Roberts occupies Bloemfontein.

Boer Sharpshooters at Work.

1900.
March 27. Death of General Joubert.
31. Koorn Spruit disaster.
May 17-18. Relief of Mafeking.
28. Orange Free State annexed.
30. Mr. Kruger leaves Pretoria.
June 5. Occupation of Pretoria.
12. Lord Roberts defeats General Botha at Diamond Hill.
July 4. Lord Roberts and General Buller meet at Vlakfontein.
11. Surrender of Scots Grays and Lincolns at Ultval's Nek.
Oct. 25. Formal annexation of the Transvaal.
Nov. 6. Defeat of De Wet at Bothaville.
23 Dewetsdorp garrison captured by De Wet.
29. Lord Kitchener becomes Commander-in-Chief in South Africa.
Dec. 11. Lord Roberts sails from Cape Town for England.
13. General De la Rey defeats General Clements at Nooitgedacht. Mishap at Zastron.
16. Boer raid into Cape Colony.
29. Surrender of Liverpools at Helvetia.

1901.
Jan. 3. Action with General Botha at Lindley
18. Defeat of General De la Rey near Ventersburg.
Feb. 28. Lord Kitchener confers with General Botha.
March 16. General Botha breaks off negotiations.
May 29. General De la Rey defeated by General Dixon at Vlakfontein.
July 20. Death of Mrs. Kruger at Pretoria.
Aug. 6. Lord Kitchener's Boer leader banishment proclamation.
Sept. 17. Major Gough's force surrenders near Utrecht.
Oct. 8. Martial law proclaimed throughout Cape Colony.
9. Commandant Scheepers's commando defeated by Colonel Atherton and Major Kavanagh.
11. Commandant Lotter sentenced to death and executed.
12. Commandant Scheepers captured.
16. Boers reach Saldanha Bay.
23. General Sir Redvers Buller relieved of his command
Dec. 10. General Bruce Hamilton defeats Boers at Trichardsfontein.

1901.
Dec. 16. Commandant Kritzinger captured.
25. Yeomanry rushed by Boers at Tweefontein under De Wet.

1902.
Jan. 8. General Elliott engages General De Wet near Heilbron.
17. Commandant Scheepers executed.
26. Commandant Ben Viljoen captured.
30. Colonel Price defeats Commandants Wessels and Beaters at Klaarfontein.
Feb. 3. Colonel Byng defeats Commandant De Wet near Reitz.
5. Major Leader defeats Boers near Klerksdorp.
10. Attack on convoy near Fraserburg.
16. Engagement with Commandant De Wet at Tronmel.
18. Scots Greys cut off near Heidelberg.
23. Engagement of Colonel Byng's outposts; New Zealanders' heavy loss.
26. Convoy captured by Boers near Klerksdorp.
27. Great Boer drive, Harrismith line; 600 killed or captured.
March 7. Lord Methuen's force and five guns captured by General De la Rey. Lord Methuen wounded.
13. Lord Methuen released and sent to Klerksdorp.
18. General Emmett and Commandant Celliers captured.
23. Mr. Schalk Burger, Mr. Reitz, Commandants Lucas Meyer and Krogh arrive at Pretoria as peace delegates.
31. General Kitchener defeats General De la Rey near the Hart River.
April 7. Commandant Kritzinger acquitted.
10. Boer leaders in conference at Klerksdorp.
12. Boer peace delegates arrive at Pretoria.
18. Peace delegates leave Pretoria to consult the commandoes.
30. Capture of Commandant Maurice Botha near Frankfort.
May 7. Ookiep relieved.
8. Armored train derailed near Pretoria.
16. Peace delegates confer at Vereeniging.
18. Boer delegates conclude conference at Vereeniging and go to Pretoria.

THE TERMS OF PEACE.

On May 31, 1902, the terms of peace were signed at Pretoria. They were as follows:

(1) The burgher forces in the field will forthwith lay down their arms, hand over all guns, army rifles and munitions of war in their possession or under their control, and desist from any further resistance to the authority of His Majesty King Edward VII., whom they recognise as their lawful sovereign.

(2) All burghers in the field outside the limits of the Transvaal and Orange River Colony and all prisoners of war at present outside South Africa will, on duly acclaiming their acceptance of the position

Austria-Hungary, Honduras, and Guatemala, in 1892. These continued in existence until the passage of the Wilson tariff act, August 27, 1894.

The reciprocity agreements now in existence, framed under the Dingley tariff of 1897, took effect on the following dates, respectively: France, June 1, 1898; Portugal, June 12, 1900; Germany, July 13, 1900; Italy, July 18, 1900. They may be summarized as follows:

France: The United States reduces the rate of duty on crude tartar from France to 5 per cent ad valorem; on brandies or other spirits to $1.75 per gallon; also a reduction on still wines and vermouth, and on paintings to 15 per cent ad valorem; while the French Government gives its minimum tariff rates to canned meats, table fruits, dried fruits, lard, manufactured and prepared pork meats, hops, paving blocks, staves and logs, and sawed or squared timber and lumber from the United States.

Germany: The United States gives the same tariff rates as those named in the treaty with France on tartar, brandies, still wines, and paintings, and the German Government gives to the United States the same tariff rates as those given to Belgium, Italy, Austria-Hungary, Roumania, Russia, and Switzerland during the existence of the present tariff treaties with them, and annuls its regulations regarding dried fruits from the United States, providing in their stead a system of inspection on account of the San Jose scale.

Portugal: The reductions on crude tartar, brandies, wines and paintings accorded to Germany and France are given by the United States to Portugal, and the Portuguese Government gives to the United States as low rates of duty as those accorded to any other country, except Spain and Brazil, on breadstuffs, lard, mineral oils, agricultural implements, and certain machinery for manufacturing.

Italy: The above-mentioned rates with reference to tartar, brandies, still wines and paintings are given by the United States, and a reduction is made by the Italian Government on imports of cottonseed oil, fish, machinery, scientific instruments, fertilizers and skins.

The following is a list of all the reciprocity treaties and agreements which have been in force between the United States and foreign countries since 1850, the table having been prepared by the Bureau of Statistics:

Countries with which reciprocity treaties and agreements have been made.	Signed.	Took effect.	Terminated.
British North American Possessions (treaty)	June 5, 1854	March 16, 1855	March 17, 1866
Hawaiian Islands (treaty)	Jan. 30, 1875	Sept. 9, 1876	April 30, 1900
Brazil (agreement)	Jan. 31, 1891	April 1, 1891	Aug. 27, 1891
Santo Domingo (agreement)	June 4, 1891	Sept. 1, 1891	do
Great Britain:			
Barbados (agreement)	Feb. 1, 1892	Feb. 1, 1892	do
Jamaica (agreement)	..do	..do	do
Leeward Islands (agreement)	..do	..do	do
Trinidad (including Tobago) (agreement)	..do	..do	do
Windward Islands (excepting Grenada) (agreement)	..do	..do	do
British Guiana (agreement)	..do	April 1, 1892	do
Salvador (agreement)	Dec. 30, 1891	Feb. 1, 1892 (provisional)	do
Nicaragua (agreement)	March 11, 1892	March 12, 1892	do
Honduras (agreement)	April 29, 1892	May 25, 1892 (provisional)	do
Guatemala (agreement)	Dec. 30, 1891	May 30, 1892 (provisional)	do
Spain, for Cuba and Porto Rico (agreement)	June 16, 1891		do
Austria-Hungary (agreement)	May 25, 1892	May 26, 1892	do
France (agreement)	May 28, 1898	June 1, 1898	Still in force.
Germany (agreement)	Jan. 30, 1892	Feb. 1, 1892	Aug. 24, 1894
do	July 10, 1900	July 13, 1900	Still in force.
Portugal and Azores and Madeira Islands (agreement)	May 22, 1900	June 12, 1900	do
Italy (agreement)	Feb. 8, 1900	July 18, 1900	do
Switzerland (treaty of 1850)		June 1, 1898†	March 23, 1900

*The matter relating to reciprocity treaties was prepared from a special report of the Bureau of Statistics.
†Under "most-favored-nation" clause of the treaty of 1850, proclaimed November 9, 1855.

The following treaties or agreements have been negotiated and signed, and now await the action of the United States Senate:

With Great Britain: For Jamaica, signed July 22, 1899; for Turks and Carcos Islands, signed July 21, 1899; for the Barbados, signed June 16, 1899; for Bermuda, signed July 24, 1899; for British Guiana, signed July 19, 1899. With France, signed July 24, 1899. With the Argentine Republic, signed July 10, 1899. There are also unratified agreements between the United States and the Dominican Republic, Nicaragua and Ecuador.

OTHER IMPORTANT TREATIES BETWEEN THE UNITED STATES AND FOREIGN GOVERNMENTS.

Country.	Character of Treaty.	Signed.	Proclaimed.
France	Alliance (first treaty signed)	February 6, 1778	May 4, 1778
France	Contract to repay loans made by King of France	February 6, 1778	May 4, 1778
Great Britain	Provisional peace	November 30, 1782	April 11, 1783
Great Britain	Definitive peace	September 3, 1783	January 14, 1784
France	Cession of Louisiana	April 30, 1803	October 21, 1803
Spain	Cession of the Floridas	February 22, 1819	February 22, 1821
Great Britain	Ship canal connecting Atlantic and Pacific Oceans (the Clayton-Bulwer treaty)	April 19, 1850	July 15, 1850
Mexico	Cession of territory (Gadsden treaty)	December 30, 1853	November 18, 1854
Russia	Cession of Alaska	March 30, 1867	June 20, 1867
China	Regulation of Chinese immigration	November 17, 1880	October 5, 1881
Great Britain & Germany	Neutrality and autonomous government of the Samoan Islands	July 14, 1889	May 21, 1890
Great Britain	Modus vivendi in Behring Sea controversy	February 29, 1892	May 9, 1892
Russia	do do do	May 4, 1894	May 12, 1894
Spain	Peace	December 10, 1898	April 11, 1899
Great Britain	Modus vivendi in Alaskan boundary controversy	October 20, 1899	
Great Britain	To facilitate the construction of a ship canal (the Hay-Pauncefote treaty)	November 18, 1901	February 22, 1902

Treaties of Extradition.—Although at the present time the United States has regular treaties of extradition with about thirty nations only, the sentiment of international courtesy which usually prevails in such matters makes it extremely difficult for a fugitive criminal to escape the punishment he deserves, for there are few nations that do not stand ready to comply with a diplomatic request for the delivery of any infamous law-breaker, even in instances where such delivery could not be demanded on a treaty right.

Extraditable Crimes, How Interpreted.—The extraditable crimes are usually defined as follows:

Murder, comprehending assassination, parricide, infanticide, and poisoning; attempt to commit murder; manslaughter, when voluntary.

Robbery, the act of feloniously and forcibly taking from the person of another money, goods, documents or other property by violence or putting him in fear.

Burglary, the act of breaking and entering into the house of another in the night time, with intent to commit a felony therein.

Digitized by Google

as subjects of His Majesty the King, be brought back to their homes as soon as transport can be provided and their means of subsistence assured.

(3) Burghers so surrendering or so returning will not be deprived of their personal liberty or their property.

(4) No proceedings, civil or criminal, will be taken against any of the burghers surrendering or so returning for any acts in connection with the prosecution of the war. The benefit of this clause will not extend to certain acts contrary to the usages of war.

(5) The Dutch language will be taught in schools when the parents of the children desire, and will be allowed in the courts of law when necessary.

(6) Possession of rifles will be allowed in the Transvaal and Orange River Colony to persons requiring them for their protection, on obtaining licenses according to law.

(7) The military administration of the two colonies will at the earliest possible date be succeeded by civil government, and as soon as circumstances admit representative institutions leading up to self-government will be introduced. The question of granting the franchise to rebels will not be decided until after the introduction of self-government.

(8) No special tax will be imposed on landed property in the Transvaal or Orange River Colony to pay the expenses of the war.

(9) As soon as circumstances permit a commission, on which the local inhabitants will be represented, will be appointed in each district in the Transvaal and Orange River Colony for the purposes of restoration of the people to their homes and supplying those who, owing to war losses, are unable to provide themselves with food, shelter and the necessary amount of seed, stock, implements, etc., indispensable to the resumption of their normal occupation.

(10) For this purpose the commissioners will be placed by His Majesty's Government in the possession of £3,000,000.

(11) In addition to the above-named grant of £3,000,000 His Majesty's Government will be prepared to make advances on loan for the same purpose, free of interest for two years, and afterward to be repayable over a period of years at 3 per cent. interest. No foreigner or rebel will be entitled to share in the benefits of this clause.

THE COST OF THE WAR.

The British losses were as follows:

	Officers.	Men.		Officers.	Men.
Killed in action	516	5,211	Missing and prisoners	1	131
Died of wounds	181	1,816	Invalids died at home	7	487
Prisoners, died in captivity	5	97	Invalids compelled to leave the service	—	5,531
Died of disease	328	12,664			
Accidental deaths	25	733	Totals	1,063	26,669

The total cost of the war in money to Great Britain was about £223,000,000, a sum equivalent to $1,115,000,000.

The Boer losses are more difficult to estimate as systematic records have not been kept. Up to January 1, 1902, however, their losses of all kinds were reported as being about 84,000. During 1902 there were 438 killed, 302 wounded and 4,764 captured. At the close of the war there were about 40,000 Boer prisoners at Ceylon, St. Helena, Bermuda and Cape Town.

GREAT BRITAIN'S WAR CHARITIES.

The following statement of the amounts subscribed, and their objects, between October 21, 1899, and December 31, 1901, gives some idea of the philanthropic work which was done by the people of Great Britain in connection with the South African war:

For widows and orphans, wives and families	£2,930,638	19	8	Subscribed in India and British dominions beyond the seas	£224,803	19	3
For sick and wounded, hospitals, etc.	750,000	0	0	For refugees in South Africa	309,288	2	1
Disabled officers and men, convalescent homes, etc	278,544	18	9	Miscellaneous	33,383	2	0
Extra comforts	219,385	11	10	Total	£5,126,994	16	5
Equipment and various funds	381,050	2	10				

Treaties of the United States.

The United States Government possesses a treaty of some kind with practically every nation in the world except the government of Uruguay. In some instances the treaty is merely the conventional one of amity, peace and freedom of commerce, while with other nations such friendly treaty relations have been established that every phase of daily intercourse is governed by conditions of reciprocity. The only nations with whom there is no treaty of amity are Roumania, Servia, Turkey, and, of course, Uruguay.

While many important treaties have been signed by the United States, however, those that are of the most vital consequence to the world are the international conventions which have been adopted in the interest of all nations, and to nearly all of which this Government has been a party, for it is by this means that the pacific settlement of international disputes has been provided for, the inhumanities of warfare minimized, the submarine cables protected and the cruelty of the African slave trade repressed.

Among the most important recent treaties have been those dealing with reciprocity in tariffs, between the United States and other powers. In general, reciprocity treaties have been made with countries near at hand, or with great powers where an interchange of products with reduced tariffs or without import duties has appeared to be advisable.

The most important international conventions are as follows:

INTERNATIONAL CONVENTIONS TO WHICH THE UNITED STATES HAVE BEEN A PARTY.

Character of Treaty.	Proclaimed.
Establishing International Bureau of Weights and Measures	Sept. 27, 1878
For the amelioration of the condition of the wounded in time of war	July 26, 1882
For the protection of submarine cables	May 22, 1885
For the international protection of industrial property	June 11, 1887
For the international and immediate exchange of official documents and scientific and literary publications	Jan. 15, 1889
For an International Union for the Publication of Customs Tariff	Dec. 17, 1890
General Act for the Repression of the African Slave Trade	April 2, 1892
Supplementary convention for the protection of industrial property	June 22, 1892
For the regulation of the importation of spirituous liquors into Africa	Feb. 6, 1901
For the pacific settlement of international disputes	Nov. 1, 1901
A declaration prohibiting (for five years) the launching of projectiles and explosives from balloons in time of war	Nov. 1, 1901
For the adaptation of the principles of the Geneva Convention to maritime warfare	Nov. 1, 1901
For the regulation of war on land	April 11, 1902

The Reciprocity Treaties.*—There have been three distinct tests of reciprocity in the trade relations of the United States: (1) The reciprocity treaty with Canada, existing from 1855 to 1866. (2) The reciprocity treaty with the Hawaiian Government, existing from 1876 to 1900. (3) The series of treaties framed under the McKinley tariff act of 1890 with Brazil, Dominican Republic, Spain, for Cuba and Porto Rico, in 1891; and with Germany, United Kingdom, for British West Indies and British Guiana, Nicaragua, Salvador,

Digitized by Google

Austria-Hungary, Honduras, and Guatemala, in 1892. These continued in existence until the passage of the Wilson tariff act, August 27, 1894.

The reciprocity agreements now in existence, framed under the Dingley tariff of 1897, took effect on the following dates, respectively: France, June 1, 1898; Portugal, June 12, 1900; Germany, July 13, 1900; Italy, July 18, 1900. They may be summarized as follows:

France: The United States reduces the rate of duty on crude tartar from France to 5 per cent ad valorem; on brandies or other spirits to $1.75 per gallon; also a reduction on still wines and vermouth, and on paintings to 15 per cent ad valorem; while the French Government gives its minimum tariff rates to canned meats, table fruits, dried fruits, lard, manufactured and prepared pork meats, hops, paving blocks, staves and logs, and sawed or squared timber and lumber from the United States.

Germany: The United States gives the same tariff rates as those named in the treaty with France on tartar, brandies, still wines, and paintings, and the German Government gives to the United States the same tariff rates as those given to Belgium, Italy, Austria-Hungary, Roumania, Russia, and Switzerland during the existence of the present tariff treaties with them, and annuls its regulations regarding dried fruits from the United States, providing in their stead a system of inspection on account of the San Jose scale.

Portugal: The reductions on crude tartar, brandies, wines and paintings accorded to Germany and France are given by the United States to Portugal, and the Portuguese Government gives to the United States as low rates of duty as those accorded to any other country, except Spain and Brazil, on breadstuffs, lard, mineral oils, agricultural implements, and certain machinery for manufacturing.

Italy: The above-mentioned rates with reference to tartar, brandies, still wines and paintings are given by the United States, and a reduction is made by the Italian Government on imports of cottonseed oil, fish, machinery, scientific instruments, fertilizers and skins.

The following is a list of all the reciprocity treaties and agreements which have been in force between the United States and foreign countries since 1850, the table having been prepared by the Bureau of Statistics:

Countries with which reciprocity treaties and agreements have been made.	Signed.	Took effect.	Terminated.
British North American Possessions (treaty)	June 5, 1854	March 16, 1855	March 17, 1866
Hawaiian Islands (treaty)	Jan. 30, 1875	Sept. 9, 1876	April 30, 1900
Brazil (agreement)	Jan. 31, 1891	April 1, 1891	Aug. 27, 1891
Santo Domingo (agreement)	June 4, 1891	Sept. 1, 1891	do
Great Britain:			
Barbados (agreement)	Feb. 1, 1892	Feb. 1, 1892	do
Jamaica (agreement)	..do	..do	do
Leeward Islands (agreement)	..do	..do	do
Trinidad (including Tobago) (agreement)	..do	..do	do
Windward Islands (excepting Grenada) (agreement)	..do	..do	do
British Guiana (agreement)	..do	April 1, 1892	do
Salvador (agreement)	Dec. 30, 1891	Feb. 1, 1892 (provisional)	do

Treaties of Extradition.—Although at the present time the United States has regular treaties of extradition with about thirty nations only, the sentiment of international courtesy which usually prevails in such matters makes it extremely difficult for a fugitive criminal to escape the punishment he deserves, for there are few nations that do not stand ready to comply with a diplomatic request for the delivery of any infamous law-breaker, even in instances where such delivery could not be demanded on a treaty right.

Extraditable Crimes, How Interpreted.—The extraditable crimes are usually defined as follows:

Murder, comprehending assassination, parricide, infanticide, and poisoning; attempt to commit murder; manslaughter, when voluntary.

Robbery, the act of feloniously and forcibly taking from the person of another money, goods, documents or other property by violence or putting him in fear.

Burglary, the act of breaking and entering into the house of another in the night time, with intent to commit a felony therein.

Digitized by Google

Larceny, the theft of effects, personal property, horses, cattle, or live stock, or money, of the value of twenty-five dollars or more.

Forgery, the utterance of forged papers; the forgery or falsification of official acts of government, of public authorities, or of courts of justice, or the utterance of the thing forged or falsified.

Counterfeiting, falsifying or altering of money, whether coin or paper, or of instruments of debt created by national, state, provincial or municipal governments, or of coupons thereof, or of blank notes, or the utterance or circulation of the same; or the counterfeiting, falsifying or altering of seals of state, or the fraudulent use of same.

Embezzlement by public officers, embezzlement by persons hired or salaried, to the detriment of their employers.

Fraud or breach of trust by a bailee, banker, agent, factor, trustee, or other person acting in a fiduciary capacity, or director or member or officer of any company.

Perjury; subornation of perjury.

Wilful and unlawful destruction or obstruction of railroads which endangers human life.

Crimes committed at sea: (a) Piracy, by statute or by the law of nations. (b) Revolt, or conspiracy to revolt, by two or more persons on board a ship on the high seas against the authority of the master. (c) Wrongfully sinking or destroying a vessel at sea, or attempting to do so. (d) Assaults on board a ship on the high seas with intent to do grievous bodily harm.

Crimes and offences against the laws of both countries for the suppression of slavery and slave trading.

SUMMARY OF TREATIES.

In the following tables the various extradition treaties now in force are summarized. It is impossible to record all of the minute differences between the various treaties. Many of them are made to conform in part to the laws of the countries with which the treaties are perfected, and as the various countries have different ways of looking at certain crimes, there must naturally be a wide difference in the general texts of the treaties.

Extradition treaties between the United States and those countries which touch the frontiers, such as Mexico, are more rigid than those with more distant nations, and cover a greater number of offences. Mexico is the only country in which the possession of counterfeiting tools is considered an extraditable offence. Counterfeiting is considered extraditable in all countries with which the United States has treaties. Murder or attempted murder are also considered grave enough to grant extradition in all the countries.

But three countries, Belgium, Mexico and the Netherlands grant extradition for obtaining money by deceit. Ecuador and Great Britain are the only two in which crimes at sea are not extraditable. Burglary is a grave crime in all but five countries, and most countries include shop or office breaking.

An accurate general idea of the character of each convention of the United States with a foreign country in regard to extradition may be obtained from the following tabulations:

THE EXTRADITION OF CRIMINALS.

(Compiled for The American Almanac from "Treaties in Force, 1899," and subsequent treaties provided for this purpose by the State Department.)

COUNTRY.	Murder and Attempts.	Arson.	Robbery.	Burglary. (f)	Larceny.	Obtaining Money by Deceit.	Embezzlement.	Counterfeiting.	Having Counterfeiters' Tools.	Forgery.	Fraud.	Criminal Assault or Abduction.	Bigamy.	Procuring Criminal Operation.	Mayhem.	Perjury.	Destruction or Obstruction of Railroads.	Crimes at Sea.	Crimes Against the Laws on Slavery.	Other Crimes.

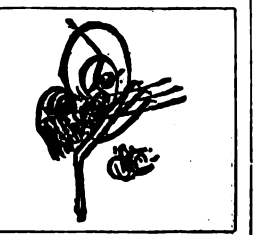
Turkey.

—

Capital.
CONSTANTINOPLE.



The earliest historical mention of the Turks was considerably prior to 850 A. D., but the position they occupied was one of little prominence until the time of Othman, the founder of the present dynasty, when, about 1030 A. D., the Othman Turks took possession of considerable Asiatic territory. By the beginning of the fourteenth century they had made themselves masters over many more provinces, and, having captured Nicea, had established their capital at Broussa. In 1080 they made their first appearance in Europe, at which time some 2,000 of their best warriors crossed the Bosphorus to assist Emperor Botoniates in one of the petty wars which were of such frequent occurrence at that time. Before the end of the century, however, their name was known throughout the world, for they had reduced such countries as Bulgaria, Macedonia and Thessaly to subjection, and had become rulers over all Western Asia. In 1392 they turned their attention to Europe, and in 1453 captured Constantinople, which has since been their capital. From that day their power was extended with rapidity until it threatened to spread from one end of Europe to the other, but in 1525 Solyman I. suffered his first serious defeat, and, ever since, the glory of the Empire has waned. Step by step they were driven out of their European territories. Upper Hungary and Transylvania were abandoned as early as 1595. In 1769 they were expelled from the Crimea, and in 1806 the Russian frontier was still further extended. The success of the Greek war for independence cost them that country, but the greatest blow to Turkish power was the war of 1876, which resulted in the loss of Bulgaria, Thessaly, Eastern Roumelia and a strip of Armenia, as well as the entire independence of Roumania, Servia and Montenegro, and the loss of administration over Bosnia and Herzegovina and Cyprus.

Abdul-Hamid II., who was born 15 Shaban, 1245 (September 22, 1842), is the thirty-fourth sovereign of the house of Ottoman. On the deposition of his brother, Sultan Murad V., who was said to be suffering from idiocy, he succeeded to the throne August 31, 1876.

It is not the custom for the Sultans of Turkey to contract regular marriages. The harem is a State institution and all children born within its walls are considered legitimate, whether the offspring of free women or of slaves. By the law of succession, which has long been established in Turkey, however, the throne does not descend to the eldest son of the Sultan, but to the senior male descendant of the first Ottoman, so that, while the present ruler has several sons, no one of them can inherit the throne if they have uncles or cousins of greater age.

The present heir apparent, therefore, is Prince Mohamed-Rechard Effendi, who was born November 3, 1844. He has three children—Prince Zia-Eddine, born 1876; Prince Nedjm, born 1881, and Princess Reji'a, born 1887.

The children of the Sultan are:

Name.	Born.	Died.	Married.	Born.	Date of Marriage.	Issue.
1. Prince Selim	1870	....				
2. Princess Zekie	1871	....	Noureddine Pacha	....	1889	....
3. Princess Naiyme	1876	....	Kemel-Eddine Pacha	....	1898	....
4. Prince Abdul-Kadir	1878	....				
5. Prince Ahmed	1878	....				
6. Princess Naile	1884	....				
7. Prince Burhan-Eddine	1885	....				
8. Princess Chadie	1886	....				
9. Princess Ayiche	1887	....				
10. Prince Abdour-Rahime	1892	....				

THE MINISTRY.—Grand Vizier, Said Pacha; Sheikh-ul-Islam, Djemal-Eddin Effendi; President of the Council of State, Said Pacha; Minister of Foreign Affairs, Teofik Pacha; Minister of Interior, Mem douh Pacha; Minister of Public Instruction, Djelal Bey; Minister of Public Works and Commerce, Riza Pacha; Minister of Marine, Zihny Pacha; Minister of War, Hassan Pacha; the Grand Master of Artillery, Zeky Pacha; Minister of Finances, Rechad Pacha; Minister of Justice and Worship, Abdul-culture, Mines and Forests, Selim Rahman Pacha; Minister of Agri (pious foundations), Ghalib Pacha. Melhame Pacha; Minister of Evkaf

THE NATION.—The sultan of Turkey is the absolute ruler of the Ottoman Empire, insomuch as his word is not in opposition to the precepts of the Koran. The legislative and executive rest in Sultan and are vested under him in the Grand Vizier and the Shiek-ul-Islam, the head of the church.

Sultan of Turkey.

Mohammedanism is the religion of the empire, and its adherents far outnumber all others. Seven other religions are given official recognition.

The budget (1898) shows a revenue of $81,893,462 and an expenditure of $81,153,341. The public debt at that time was $726,511,195.

Agriculture is little practised in Turkey. Coffee, opium, gums and madder are exported. Silk, wine, perfume, brass and copper ware, tapestry, crome, pigment and rare minerals are important products. The fisheries and pearl fish eries are valuable.

The Dependencies.—The principality of Bulgaria is one of the tributary States to the Ottoman Empire. It was created in 1878 by the Treaty of Berlin. By this document it is given a Christian government and a national militia, The Prince of Bulgaria is elected by the people and confirmed by the Sublime Porte, with the consent of the Powers. No member of a reigning house of one of the European Powers may be elected. The legislative power is vested in the Sobranje, or one-chambered National Assembly. The members are elected by universal male suffrage and hold for five years.

The Island of Crete is an autonomous state, subject to the suzerainty of the Porte, but not to tribute. It is under a High Commissioner of the Powers. Its Bule, or Assembly, consists of sixty-four ministers elected every two years. Questions of foreign relations are determined by the representatives of the four powers at Rome.

Somos is an island off the coast of Asia Minor, forming a principality under the sovereignty of Turkey, and under the guarantee of Russia, France and Great Britain, of December 11, 1832. It has an area of 180 square miles and a population of 54,800.

EVENTS IN 1902.—Turkey's foreign relations were at times strained during the last year. This happened in July, when the $4,200,000 instalment due Russia on the Lorando claim was not paid. Internal affairs were also in a bad shape. The capture of Miss Stone, an American missionary in Bulgaria, by Macedonian brigands, and the long period for which she was held for ransom, seemed to point, in the mind of the outside world, to government connivance, and as much was semi-officially charged. However, the

Digitized by Google

Government disclaimed any such connection, and after a few half-hearted attempts at chastisement of the lawless Bulgarians, finally dropped the matter upon Miss Stone's liberation. The kidnapping of Miss Stone created even more widespread indignation in view of the fact that there have been a large number of similar abductions in the Turkish provinces during the past few years. Although the following list is not complete, it gives some idea of the boldness with which the provincial bandits have been plying their trade since 1880:

1880. Colonel Singe ransomed for $50,000.
1881. Henry Suter ransomed for $60,000.
1884. Richard Dussl, $6,000 paid.
1885. Mrs. Glovenov, $35,000 demanded, $2,000 paid.
1885. Frits Charmand, $8,000 demanded, $1,500 paid.
1887. R. C. H. Wilkins, $30,000 demanded, $8,000 paid.
1890. Gray Hill, $100,000 demanded, amount paid unknown.
1891. M. Rayneud, $5,000 paid.
1891. M. Michele, $2,000 paid.
1894. M. Provost, $3,000 paid.
1896. Capt. Marriott, $15,000 demanded, $120 paid.
1896. M. Waligrski, $4,000 paid.
1896. Mme. Branzian, $50,000 demanded, $10,000 paid.
1898. James Whithall, $500 paid.
1899. M. Chevalier, $15,000 paid.
1901. M. Alphonse, $5,000 demanded, $1,000 paid.
1901. Miss Stone, $125,000 demanded, $62,000 paid.

Of European importance was the Sultan's irades issued in May, granting to Germany and Italy, in contravention of existing treaties, the right to protect missionaries of their nationalities, a privilege until that time enjoyed solely by France.

TURKISH TRIBUTARY STATES.

The condition of the tributary states in 1901 were as follows:

Tributary States.	Area, in Sq. M.	Population.	Revenues.	Expenditures.	Imports.	Exports.
Bulgaria	36,941	3,733,187	$16,765,570	$16,654,075	$13,518,506	$15,974,563
Crete	3,329	303,543	1,229,068	1,212,286	2,200,000	1,150,000
Samos	180	54,830	15,900	15,000	1,065,000	1,056,000
Egypt	412,972	9,734,405	56,424,345	54,437,259	75,355,729	77,753,825
Totals	453,419	13,825,965	$74,434,883	$72,318,620	$92,139,235	$95,933,388

In Turkey all Mussulmans over twenty years are subject to military duty, and this liability continues for twenty years. Non-Mohametans are not liable, but must pay an exemption tax, levied on males of all ages. Nomad Arabs, though liable, furnish no recruits, and many nomad Kurds evade service. The whole empire is divided into seven army districts, with as many army corps. The infantry is generally armed with Mauser rifles. The field artillery has been recently reorganized on a plan sanctioned in 1891. There has lately been a rumor that Turkey was about to rebuild her fleet and that propositions has been made to shipbuilding firms in Germany and Great Britain. There is no evidence of real progress, however, and the fleet as it is at present is not worth considering. The crews for the navy are raised partly by conscription and partly by volunteer enlistment.

The Turkish provinces, especially those in Asia, are rich in minerals, which are but little worked. Chrome is found in Kutaia; silver and lead ore in the Cilician Taurus and in Sivas; manganese ore at Saloniki; zinc at Karasu, on the Black Sea. Among other ores and minerals found in abundance are antimony, copper, borax, meerschaum, argentiferous pyrites, emery, asphalt, coal and lignite. The fisheries are important. The coast of the Mediterranean produces excellent sponges, the Red Sea mother-of-pearl and the Persian Gulf pearls. The fisheries of the Bosphorus alone represent a value of more than $1,250,000.

The whole of the Turkish Empire is divided into thirty vilayets, or governments, and sub-divided into sanjaks or provinces, districts, sub-districts and communities. A Governor-General, who is held to represent the Sultan, is placed at the head of each vilayet, and the provinces, districts, etc., are under inferior authorities. All subjects may fill the highest offices in the State, no matter what their birth may be. Foreigners residing in Turkey are under the laws of their own country and are amenable for trial, in cases in which Turkish subjects are not concerned, to a tribunal presided over by their own consul. Foreigners who own real property are amenable to the Ottoman civil courts in questions relative to their landed property. Cases between foreign and Turkish subjects are tried in Turkish courts, a dragoman of the foreign consulate being present to see that the trial is carried on according to law. The carrying out of sentence, if it be against the foreigner, is done through his consulate. Cases between two foreign subjects of different nationalities is done through the courts of the defendant.

Since the Summer of 1888 Turkey has been in direct railway communication with the rest of Europe, the main lines starting from Constantinople and Salonica. German railways are building from Konai to Mosul, Bagdad and Basrah. There are about 24,000 miles of telegraph in Turkey and about 750 telegraph offices.

Uruguay.

—

Capital:
MONTEVIDEO.

Uruguay is the smallest of the independent States of South America, but is one of the most favored in climate, soil and geographical situation. The Atlantic Ocean bounds it on the southeast and south, the Rio de la Plata on the south and southwest, and the River Uruguay, separating it from the Argentine Republic, forms its western boundary. It has an area of 72,210 square miles, and the population in 1900 was estimated at 930,680. The Atlantic coast is low and sandy, and possesses very few bays or natural harbors. The country in the south and southeast is diversified and picturesque. The land in the southwest is of exceeding fertility. The territory is watered by sixteen rivers, the chief of which are the Rio de la Plata and the Uruguay, which partly bound the country, and the Rio Negro, which flows through its centre. The last named is the only important river in the interior which is practically navigable for any distance, except by vessels of light draught for about fifty-five miles. The largest lakes are the Castillo Granda, with an area of 162 square miles, and the Rocha, covering twenty-seven square miles.

The first European to land on the shores of Uruguay was Don Diaz de Salis, a Spaniard, who made his first visit in 1508. On his second, in 1516, he was murdered by the natives. Two or three other attempts at exploration were made, but met with fierce and determined resistance from the savages, who resisted desperately every advance of the strangers. In 1522 Sebastian Cabot caused a fort to be constructed in the country east of the River Uruguay, which was held until 1580, when it was abandoned by its garrison. The Spanish conquerors renewed from time to time their efforts to gain a foothold in the rich regions east of the Uruguay, but the opposition of the natives was so fierce and so successful that little or no progress was made for a long time. It was not until 1624 that the first of the present centres of population was founded. This settlement was made about two leagues from the mouth of the Rio Negro, and was called Santo Domingo de Sarlano. The country remained in the hands of Spain until 1810, when the people, encouraged by a successful resistance of attacks by the British in the preceding four or five years, repudiated the authority of the Spanish Viceroy, and chose a council to which they intrusted the conduct of public affairs, and this step was the beginning of the struggle which ended with the extinction of Spanish dominion in South America. A revolutionary party was formed under the lead of Jose C. Artigas, which finally succeeded in expelling the Spaniards from the country, and a confederation of the provinces of Uruguay was formed. Attacked by Portugal and Brazil, however, the political situation was for a number of years in an unsettled condition. A long period of intestine strife followed, and there was a continued succession of revolutions, dictatorships, assassinations and insurrections until 1876, since when the country has enjoyed comparative quiet. The Presidents of later years have exhibited wisdom in government under difficult circumstances and a patriotic ambition to advance their country's welfare rather than their personal interests, and as the nation emerges from the cloud, which a great financial storm had gathered over it, it can look to a future bright with prosperity, and find in its promise the courage that is equal to the demands of modern civilization, and the energy that shall not falter in the work of building up a great republic on the banks of the Uruguay.

The form of government is republican, and the power of the nation is vested in three branches—the legislative, judicial and executive. The Cabinet is composed of Pedro Callardro, Minister of War and Marine; Ed. McEachan, Interior and Justice; Gregolo L. Rodriguez, Agriculture, Industry, Public Instruction and Public Travel; Diego Pons, Finance; Dr. German Roden, Foreign Affairs.

The religion established by the Constitution is the Apostolic Roman Catholic, but all other forms of worship are tolerated.

The army of the Republic, on a peace footing, consists of 3,200 private soldiers, with 21 superior and 211 inferior officers, but the Government could probably put a force of 35,000 men in the field in case of emergency. The navy consists of three gunboats and five small steamers, manned by 227 seamen, under fifteen officers, the entire navy being commanded by eleven superior officers.

Nature has been lavish of her favors to the Republic of Uruguay. On her fertile plains is the pasture for the vast herds which now constitute the chief national wealth; in her valleys and on her hills are mingled the vegetation of the tropics and the temperate zones, while in the mountains are great stores of mineral wealth. The total value of her flocks and herds is estimated at $73,038,000. The agricultural products are chiefly wheat, wine, tobacco and olives. In the northern department several gold mines are worked, and deposits of silver, copper, lead, magnesium and lignites coal are also found. The imports for 1901 were valued at $24,497,458, and the exports at $28,673,984.

Primary education is obligatory. By the last figures obtainable, those of 1900, there were 543 public elementary schools, with 1,069 teachers, of whom 831 were female, and 49,733 pupils. There were 344 private schools, with 890 teachers, and 22,509 pupils. The cost of primary education defrayed by the State is about $677,000. In 1900 there was one school, public or private, for every 897 inhabitants, one teacher for every 411 inhabitants, and one pupil for every 11 inhabitants. A university and other establishments for secondary and higher education are established at Montevideo. In 1900 the university had 150 professors and 2,665 students. There is a school of arts, supported by the State, and a normal school for males and females. The military college had, in 1900, 40 students, with 8 professors. There are also many religious seminaries throughout the Republic, with a considerable number of students. The national library contains over 105,000 volumes and more than 17,500 maps and manuscripts. There is also a national museum at Montevideo, with more than 33,500 objects.

Utah.

—

Capital:
SALT LAKE CITY.

The area of Utah was acquired by the United States from Mexico in 1848, under the provisions of the treaty of Guadalupe-Hidalgo. It was organized as a Territory in 1850, and at that time comprised all of the country lying between the eastern boundary of California and the Great Plains. The subsequent creation of Nevada, Colorado and Wyoming reduced it to its present limits. In 1847 the Mormons, under the leadership of Brigham Young, had commenced to make settlements in Salt Lake Valley, and they rapidly extended themselves over the fertile valleys of the Territory. Prior to the advent of railroads very few gentiles settled in Utah, but in recent years this element has increased, in spite of the efforts of the Mormons to keep the country for themselves. The question of the Mormons' rights to the Territory as their own, and to the moral status of their faith has given rise to countless controversies between State and Federal authorities, and is not yet settled.

Utah has an area of 84,970 square miles, and in 1901 the estimated population was 283,000. It was admitted as a State January 4, 1896.

Digitized by Google

Utah is primarily a mining and agricultural State, though manufacturing has now a large share in the wealth of that region. The smelting and refining of lead ore is the most important industry, the lead mined being about 13 per cent of the total production of the United States. The manufacture of salt from the concentrated brine of the Great Salt Lake also ranks high in the scale of important industries, ture and horticulture are flour and $139,488. Dependent upon agricul- and vegetables, the manufacture of grist milling, the canning of fruits butter and cheese. It should be beet sugar, malt liquors, and of ores, the value of silver obtained noted that in the refining of lead far exceeds that of the lead.

Gov. Heber M. Wells.

The Legislature of 1901 passed several laws of general interest. Among them was an act to amend a prior act which provided that no person or corporation should be indebted to a banking corporation for more than 15 per cent of the bank's paid up capital stock. The amendment prohibited any single person from being indebted to a bank for more than 15 per cent of the capital stock and surplus com- bined. An act making compulsory vaccination unlawful under all cir- cumstances, was passed and vetoed by the Governor, but repassed over his veto.

It was made a misdemeanor for any contractor or foreman engaged on public works to contract with or permit his employes to work more than eight hours a day, and it was also made a misdemeanor for any person to coerce, intimidate em- ployes into boarding at a particu- lar house or trading at a particular "company store." A State Bureau of Statistics was created, whose duty it should be to collect and systematize statistical details re- lating to agriculture, mining, manu facturing and other industries of the State, and to present an annual report thereon. A State Board of Labor Conciliation and Arbitration was appointed, to consist of three members, one of whom should be an employe, another an employer and the third to be neither an employe nor employer. In case of a threatened strike the board was directed to invite both sides to the controversy to present the facts of the dispute in writing, together with an agreement to abide by the decision of the Board, and the Board was then directed to arbitrate the difficulty.

On March 14, 1901, Governor Heber M. Wells vetoed a bill passed by the Legislature regulating prose- cutions for polygamy, and placing great obstructions in the way of such prosecutions. In his veto message the Governor said that if he were to approve the bill there would be at once a general demand upon Con- gress for a Constitutional amendment directed against certain conditions in Utah, and that this demand would most surely be complied with.

Bills were passed prohibiting the employment of children under fourteen years of age, or of females at all ages, in the mines or smelters. Proprietors of stores, shops, hotels and restaurants were required to provide seats for their women employes, and to permit them to use these seats when not actively engaged in their duties. Blacklisting was prohibited and made a misdemeanor.

At the Democratic State convention, held September 16, 1902, former Congressman William A. King was nominated for Congress and Richard W. Young, formerly of the American Supreme Court, at Manila, for the State Supreme Court.

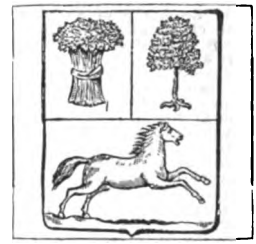
Venezuela.

—

Capital:
CARACAS.



The coast of Venezuela was the first part of the American mainland to be sighted by Columbus, who, during his third voyage in 1498, entered the Gulf of Paria and sailed along the coast of the Delta of the Orinoco. In the following year a much greater extent of the coast was traced by Alonzo de Ojeda, who was accompanied by Amerigo Vespucci. In 1550 the territory was erected into the captain-generalcy of Caracas, and remained under Spanish rule until the early part of the Nineteenth Century. Less attention was given by the Spaniards to this part of South America than to the regions more famous for deposits of gold and precious metals. In 1810 Venezuela rose against Spanish dominion and on the 14th of July of the year following the independence of the territory was proclaimed. A war ensued which lasted for nearly ten years. The leader of the revolt and one of the ablest generals South America has produced was Bolivar, a native of Caracas. It was not until 1845 that the independence of the country was recognized by Spain, in the Treaty of Madrid. In 1821 Venezuela formed part of the Federal State of Colombia, which embraced also the present Colombia and Ecuador. In 1829, however, Venezuela became a separate State. In 1846 the first of the many civil wars in the independent State of Venezuela took place, and these have continued, with short periods of rest, nearly ever since. The early wars were between the two political parties the country boasted, the Federalists and the Unionists, the former desiring to obtain a large measure of independence for separate States, and the Unionists aiming at securing a strong central government.

Within the last two or three years Venezuela has been the arena of revolt, political conspiracy and international embroilment. Early in 1901 several spasmodic revolts occurred against the rule of President Castro. One of these was led by General Porazo, and resulted in the defeat of the rebels, who, with their leader, were driven over the Colombian border. With the renewal of the Liberal revolt in Colombia the disorder in Western Venezuela along the border increased. There was more or less actual fighting between the troops of the two countries, and Castro's Government appeared so threatening as to draw a premonitory note from the State Department of the United States. By the close of 1901 disputes with Germany over unpaid claims, with France over the confiscation of the estates of a French subject, and with the United States over the arrest of Consular-Agent Baiz at Barcelona, remained unsettled, and the new year saw the Republic in a most chaotic condition.

The year just passed saw no improvement of affairs. Battle after battle was fought between the rebels and the national troops, the former apparently victorious. Under General Matos but little respect was shown for other nations, nominally neutral, and several attempts to seize foreign merchant vessels for rebel service were reported. The United States Government sent two cruisers, the Topeka and the Cincinnati, to look after American interests at the port of Caracas, and more than once marines were landed to prevent destruction of American owned property. In July and August President Castro's downfall was frequently predicted, but in October, early in the month, Castro made a determined stand against the rebels and succeeded in defeating them after a battle lasting seven days. The rebels, under General Mendoza, retired slowly from their position near Victoria, and were compelled to finally retreat only after they had lost 3,000 killed and wounded. Press dispatches report this battle as being one of the fiercest ever fought on South American soil since the first coming of the Spaniards. General Castro led the Government troops in person and charged with them against the enemy. Vice-President Gomez proved the Blucher for the Venezuelan Waterloo, arriving on the field at the critical moment with 800 men and a supply of ammunition. The final rout of the rebels for this engagement was on October 17.

In times of peace the chief executive of Venezuela is a President, who is assisted by a Cabinet and a Federal Council. The legislative power is vested in a Congress consisting of a Senate and a House of Representatives. The President is elected for a term of two years, by vote of the Federal Council, which in turn is chosen by the Congress. The President must be a member of the council. Neither the chief executive nor the members of the Federal Council can be re-elected for the following period. The President has no veto power. The Senate consists of three members from each of the eight States of the Republic, elected for four years by the Legislature of each State. The House of Representatives consists of fifty-two Representatives, chosen by direct vote of the people. The provinces, or States, of the Republic, have each their own legislative and executive, as well as their own budgets and executive officers, and the main purpose of their alliance is that of common defence. The administration of colonies and territories is entrusted to the government of the Federation.

In the latter part of October the Castro Government made the amende honorable to France for the illegal arrest of a French consular agent at Caracas, and by this quick action in apologizing the incident was closed without rupture, and Venezuela was placed again on friendly footing with France. In November the blockade of the Orinoco was declared by the Powers to be ineffectual, and foreign vessels were permitted passage.

President Castro made a triumphant entry into Caracas November 9, amid the ringing of bells and a display of fireworks. The revolutionary armies were in full flight and the rebellion was declared completely broken.

The area of the Republic, together with its territories, is 593,943 square miles, and in 1891, when the last census was taken, the population numbered 2,323,527. In 1894 it was estimated to be 2,444,816, of which the number of foreigners was put at 44,129. These figures include the inhabitants of the territory ceded to the British in 1899. There had been a long standing dispute between Venezuela and Great Britain over the boundary between the former country and British Guiana, which was finally settled by a Court of Arbitration, which upheld, in main, the claims of the British. The Roman Catholic is the state religion, but there is a toleration of all other forms of faith, though they are not permitted any external manifestations. In 1894 there were 3,575 Protestants, 411 Jews, 5,906 without profession, and the remainder were Catholics. In 1870 education was made free and compulsory. There were in 1901 about 1,450 Federal schools and 150 State schools, 9 barrack schools, 4 normal schools and 1 school of arts and trades. Higher education was given in two universities, 22 Federal colleges, 11 national colleges for girls, 1 school for fine arts, schools for music, 1 polytechnic school, 26 private colleges and 1 nautical school. A national library is maintained at Caracas, with 32,000 volumes, and the National Museum is also located in that city.

Justice is administered by the Supreme Federal Court and the Supreme Court of Appeals, by special local courts for civil and criminal cases separately and by district, borough and municipal judges.

Venezuela has practically no industries not dependent directly upon agriculture or occupations akin to it. The surface of the country is naturally divided into three distinct zones, the agricultural, the pastoral and the forest zone. In the first are grown sugar cane, coffee, cocoa, cereals, etc., while the second affords grazing ground for cattle. The forest zone provides tropical products, such as caoutchouc, tonka beans, copaiba and vanilla, growing wild, and worked by the inhabitants. In 1901 the area under coffee was estimated at from 180,000 to 200,000 acres, and about 52,000 tons were shipped abroad. The coffee estates then numbered about 33,000, while about 5,000 estates were devoted to cocoa. There were about 11,000 sugar estates, which flourished while sugar importation was prohibited, but the prohibition was removed in 1900. Efforts have been made to introduce improved methods and machinery in agriculture. All lands within the borders of the Republic, without a lawful owner, are considered public lands and are managed by the Federal executive, which has power to sell or to make grants for the purpose of agriculture or mining, or to properly certified immigrants in the proportion of two and one-half acres to every member of the family.

Venezuela is rich in metals and other minerals, gold, silver, copper and iron being abundant, while sulphur, coal, asphalt, lead, kaolin and tin are also found. Iron mines at Imatica, on the Lower Orinoco,

Digitized by Google

are in the hands of an American company. Salt mines are under Government administration. Round the island of Margarita and neighboring islets off the north coast of Venezuela, pearl fishing is carried on by natives. About 400 boats were engaged in this industry in 1901, and the annual product has been valued at about $100,000.

Hardly had the report of the defeat of the rebels been made public when President Castro found himself in a position worse than that he faced before. Germany and Great Britain, and later, Italy made demands for an immediate settlement of certain claims growing out of the revolution. On December 8 the demands of Great Britain and Germany took the form of an ultimatum. The British Minister at Caracas and the German Charge d'Affaires left the city without notice.

On the night of December 9, the terms of the ultimatum not having been fulfilled by Venezuela, all the Venezuelan war vessels at La Guira were seized by the allies and sunk. President Castro issued a call to his people and granted amnesty to those imprisoned on the charge of complicity in the revolution. Minister Bowen, of the United States, was invested with full power to act for Venezuela.

The force of allies was augmented by the arrival of Italian war vessels, and the ports of the Republic declared in a state of blockade, to take effect December 26. No attempt was made to land marines or soldiers, and at no time, up to January 1, was there evidence of intentions on the part of the allies to seize any territory.

President Roosevelt was requested by the allies to act as arbitrator in the affair of the claims against Venezuela, but, after consideration, the request was refused, and The Hague tribunal suggested as the proper court before which the case should be brought. The Hague tribunal was accepted conditionally by the allies, and on December 30 it was announced that President Castro had also agreed to this court.

The Ministry, organized in April, 1901, consisted of these: Minister of the Interior, J. A. Velutini; Minister of Foreign Affairs, Dr. Eduardo Blanco; Minister of War and Navy, Ramon Guerra; Minister of Public Instruction, Dr. Felix Quintero; Minister of Public Works, Juan Otanez; Minister of Agriculture, F. Arocha Quintero.

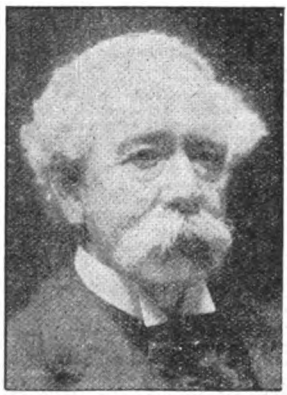
Vermont.

—

Capital:
MONTPELIER.

Vermont was first brought to the knowledge of Europeans in 1609, when Champlain explored the lake now known by that name. During the next century the lake and its borders was the thoroughfare for various military expeditions in the Indian and Colonial wars, and several points along the lake were occupied as military posts by both the French and English. The first permanent settlement was made in 1724 at Fort Dummer, within the limits of Brattleboro. Both New York and New Hampshire claimed jurisdiction over this territory, under grants given by the English sovereign. The claims of New York were resisted stoutly by the settlers. In 1776 Vermont sought admission to the Continental Congress, but was opposed by New York. In January, 1777, this territory proclaimed its independence, and in March, 1791, was admitted as the fourteenth State in the Union.

Vermont has an area of 9,565 square miles, and in 1901 its estimated population was 345,000. Compared with the increase in population there has been an astonishing increase in manufacturing in this State during the past decade. The manufacturing industries are dependent largely upon the natural resources, forests, quarries and grazing land. The manufacture of timber and lumber products ranks first in the State, and pine and oak are the most important woods cut. Burlington is the centre of this industry, and the railroad connections with Canada and Boston make the shipment of the products easy. Connected with the lumber trade is the making of paper and wood pulp, done chiefly at Bellows Falls, where the water power furnished by the Connecticut River makes manufacturing cheap. The extensive granite, marble and slate quarries give occupation to a large number of workmen, and in the production of monuments and tombstones Vermont ranks among the first in the United States. Roofing and roofing materials are furnished by the slate quarries in the southwestern part of the State, and most of the genuine maple sugar sold in the United States is obtained from its extensive "sugar orchards."



Gov. John G. McCullough.

In 1902 Vermont had the most sensational gubernatorial campaign in its history. In the Republican caucuses held June 14, there were three millionaire candidates for nomination for Governor, fighting on prohibition, local option and neutral platforms. It was claimed that two of the contestants used money and whiskey freely to influence votes, and one newspaper gave the recipe for the whiskey used. It was made from rye whiskey, raw alcohol, water and burnt sugar. It was claimed that in some precincts the voters were so intoxicated that they had to be supported at the polls before they could drop their ballots in the boxes. The three candidates before the caucuses were Fletcher Proctor, son of United States Senator Proctor, who ran on the Prohibition platform; General J. G. McCullough, who upheld the local option platform, and Percival W. Clement, who was committed to neither prohibition nor local option, but to high license. These three candidates all received sufficient votes to make their respective delegates factors in the State convention.

When the convention met General McCullough was nominated and Mr. Clement thereupon announced his intention of running as an independent candidate. The State election was held September 2, and resulted in no election for Governor or Lieutenant-Governor. The two Republican candidates and the Democratic candidate, F. W. McGettrick, were all popular men, and the vote stood so close that neither had a majority sufficient to elect. This left the matter with the Legislature, which met in the last week in September. A canvas of the vote for State officers had been made under a joint resolution October 1, and in the afternoon it was announced that J. G. McCullough had received 164 votes, F. W. McGettrick had 45 votes and Mr. Clement received 59. General McCullough was inaugurated October 3. The large majority of the Legislators elected were Republicans, and the only thing that prevented the elected Governor from receiving all the votes from his party was the high license principles of the "bolting" candidate, Mr. Clement.

The local option high license bill, introduced in the Vermont Legislature late in November, 1902, was favorably reported by the Temperance Committee, the first time in fifty years that a favorable report was given on a bill of this kind.

This action on the part of the Legislative Committee was not unexpected. Though Mr. Clement, the high license candidate for Governor, was defeated, it was assured that the majority of the Legislature was in favor of some change in the liquor laws, and, in spite of the meetings held throughout the State by clergymen and others, in opposition to any change from prohibition, the people generally seemed to favor high license as a remedy for evils that were shown to exist under the present law. It was claimed that the campaign in favor of Mr. Clement and his principles was carried through without the slightest scandal being attached to the leader or his lieutenants.

Virginia.

—

Capital:
RICHMOND.

The first known settlers of Virginia were the mound builders of the Mississippi Valley, who had outposts in the passes of the Appalachian Mountains. Cabot probably entered Chesapeake Bay in 1498, but no description of the country was given until Raleigh's ships brought glowing accounts of the new land to England, and the territory was named Virginia in honor of Queen Elizabeth. The first permanent English settlement in America was made at Jamestown in 1607. The first legislative body to meet on the new continent was at James City, in 1619. In the same year the first negro slaves were landed. In 1624 Virginia became a royal province and continued one of the most loyal of the colonies until the Revolutionary War. During the early history of the colony the people suffered much from Indian warfare, especially those in the western part of the region, near the Mississippi. In 1744 Virginia purchased from the Indians the right to make settlements along the Ohio River and built a fort at the site of the present city of Pittsburg. In 1781, in order to promote harmony in the Federal Government, Virginia ceded to the United States all her rights to the territory beyond the Ohio, and during the subsequent years was reduced to the present limits by frequent concessions of territory to the Government.

Virginia has an area of 42,450 square miles, and in 1901 its estimated population was 1,876,000. Although an agricultural State, it has also high rank in manufacturing, the most important industry being the preparing of tobacco for consumption. Since the State was first settled it has been noted for its output of tobacco, and it is still first in the United States. In 1900 the products were valued at $21,278,266. The production of wheat has long been more than sufficient for local consumption, and flour and grist mill products are second in importance. Large quantities of flour are transported to the West Indies, South America, Africa and Europe. The manufacture of lumber and timber products ranks third, though the pine and hard wood timber are becoming rapidly exhausted. In 1899 Virginia ranked fifth in the United States in the manufacture of iron ore, and there is a plentiful supply of coal in the State. Railroad construction and repair shops are located in 14 towns, and at Richmond a large ship-building yard was recently opened. The ship-building yards at Newport News are the largest in the United States, while the Government Navy Yard at Portsmouth has recently been put into the first rank.

Gov. A. J. Montague.

At a special session of the Legislature, held in January, 1901, the laws discriminating against negroes were made more severe. Separate carried by transportation companies made obligatory, notwithstanding apartments on steamboats were that under the Interstate Commerce law, negroes can claim the right to enter any saloon or cabin on a steamboat plying in waters within two States. The act of 1900 providing separate cars for the races was amended to exclude from the provisions of the law Pullman cars, and trains doing a through or interstate business. Proposals were made to compel street railway companies to furnish separate cars or divided cars for whites and blacks, but the expense this would entail upon the companies brought so much opposition as to defeat the proposition.

The Legislature of 1900 passed an act providing for a constitutional convention, to convene June 12, 1901, and to prepare a constitution to be presented to the voters in November of that year. The convention met in June, as directed, but did not finish framing a constitution until April, 1902, after a session of more than ten months. The convention re-convened May 22 to complete some minor business, and adjourned. Its duties ended the 1st of June.

The object of the convention was avowedly to make such changes in the State Constitution as would eliminate the danger of negro rule, and yet not interfere with the Federal Constitution. In the bill of rights, drafted by the convention, one of the sections states that "all elections ought to be free; and that all men, having sufficient evidence of permanent interest with, and attachment to, the community, have the right of suffrage." In Article II. of the Constitution framed, under elective franchises and qualifications for office, are given the requisites to be considered "sufficient evidence" of permanent interest with the community. After reciting the usual requirements for suffrage, as to residence and age and the payment of poll tax, the article states that these persons may register: Those who, prior to the adoption of this Constitution, had served in time of war in the army or navy of the United States, or of the Confederate States, or of any State; a son of any such person; a person who owns property upon which for the year next preceding that in which he offers to register, State taxes aggregating at least one dollar have been paid; a person able to read any section of this Constitution submitted to him by the officers of registration, and to give a reasonable explanation of the same, or, if unable to read such section, able to understand and give a reasonable explanation thereof when read to him by the officers.

After January 1, 1904, every male citizen of the United States having other qualifications shall be permitted to register, provided that he has paid State and poll taxes, and that unless physically unable, he make application for registration in his own handwriting, without aid, suggestion or memorandum from the election officers. These qualifications, it was thought, could be interpreted so as to throw out any undesirable negro vote, but permit the registration of illiterate white men. Other changes were made, dealing with matters of local rather than general interest.

Washington.

—

Capital:
OLYMPIA.

The first event in history relating to the State of Washington was the discovery of the strait of Juan de Fuca by a Greek pilot in the service of Spain. In 1775 Captain Hecata, a Spanish navigator, discovered the mouth of the Columbia River, but was unable to enter the stream. The first entrance of the Columbia River was made by Captain Gray, of the American ship "Columbia," and his explorations gave to the United States the principal claim to the territory watered by the river. In the same year an Englishman named Broughton sailed up the river about 100 miles from the mouth, and the explorations of these two men soon made the coast well known. The United States Government fitted out a number of expeditions to explore the region, but no settlements were attempted. In 1810 a fur company, of which John Jacob Astor was principal owner, established a trading post on the Columbia, and from that time up to the establishment of a Territorial government in 1853, settlers increased and considerable trade was carried on. Washington was admitted to Statehood November 11, 1889.

Washington has an area of 69,180 square miles, and in 1901 its population was estimated to be 535,000. There has been a steady increase in manufacturing during the past decade, though it has not compared favorably with the increase of population during the same length of time. The diversified and extensive natural resources, large navigable rivers and lakes, spacious harbors and a geographical position which furnishes great commercial advantages, have been great aids toward the advance in manufacturing and mechanical industries. The discovery of gold in Alaska and Yukon, and the expanding trade toward the west have stimulated the industries of the State, especially in the western portion. The manufacture of timber and lumber products ranks as the most important industry in the State, the character and cedar shingles. The manufacture of flour and grist mill products ranks second among the State's industries, while fish canning and preserving ranks third. Salmon and oysters were first shipped to San Francisco in 1850, almost coincident with the settlement of the territory. Copper smelting and refining, the manufacture of iron and steel products and the manufacture of paper and wood pulp have recently become important industries.

Gov. Henry G. McBride.

Among the laws passed by the Legislature of 1901, one provides that no woman be employed in any mercantile or manufacturing establishment, laundry, hotel or restaurant more than ten hours each day, and prescribed that every employer in such establishments provide seats for employes and permit employes to use them. An act for the prevention of accidents on street railways provides that all street railway companies shall henceforth, except in cases of a strike, employ as motormen, grip men or conductors, only those who have had at least three days' regular and personal instruction on the particular railway line upon which they are to be employed.

Two interesting corporation laws were enacted. The first, intended for the protection of small stockholders in mines, provided that any owner of stock to the amount of 1,000 shares in stock in any mining company or corporation should have the right fully to inspect the company's property either above or below ground. The exhibit of 1,000 shares in stock should be construed as an order on the company to permit such inspection at any time, and if it were not permitted, the charter might be vacated.

Another law, whose object was to prevent discrimination in freight rates so far as possible, enacted that railway companies should weigh all cars loaded with lumber, shingles or other forest products shipped in the State, and should make their freight charges in accordance with the weights ascertained. The use of the American flag for advertising purposes was prohibited. The penalty for kidnapping was raised from a maximum of three to a maximum of twenty-one years' imprisonment. Application was made to Congress to call a convention to propose an amendment to the Constitution for the direct election of United States Senators.

The State Republican convention was held September 10, 1902. The platform adopted indorsed the administration of President Roosevelt and of Governor McBride, of the State, favors a law governing safety appliances in mills and factories, the improvement of State roads and an eight-hour law for State work.

The ports of the State of Washington have been the gateway to the Klondike and the Alaskan gold field since the rush for wealth began to move toward that Territory, and Seattle took first place as outfitter to the Klondike early in 1898. From a small city of not more than 30,000 inhabitants, it sprang within a year or two to more than 70,000, and became the leading port of the Northwest, after Portland, Oregon. It is one of the most truly American of the American cities. The population is made up of people from all parts of the United States, and the admixture of ideas and manners has been one of the factors toward bringing the State of Washington into prominence in so few years. The movement toward the gold fields brought to this State as much wealth as did the finding of gold by those who went.

West Virginia.

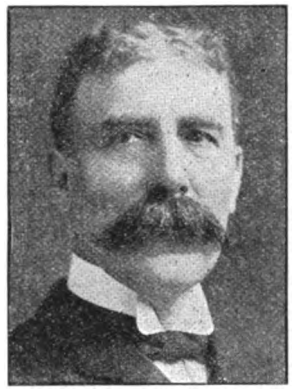
—

Capital:
CHARLESTON.

At the outbreak of the Civil War Virginia was divided in sentiment regarding the principles involved in that conflict. Long before the war the Alleghany Mountains had divided the State politically and commercially and in the settlement relating to her systems of taxation, revenue and public expenditure into a Virginia and a "Western" Virginia. The Civil conflict gave permanent results, and fixed an official definition to the line of demarcation between them. The people of the western section, separated from the coast by the mountains, found their markets to the west, and naturally adopted the principles of those with whom they came in closest contact. When Virginia passed the ordinance of secession in 1861 the unionist counties in the west met at Wheeling and adopted an ordinance for the reorganization of the State government and the formation of a new State, to be known as "Kanawha," to be comprised of 39 specified counties. The ordinance was presented to the voters and accepted by a large majority. A State constitution was then adopted, and in November, 1861, a government was formed for the new State of West Virginia. Congress ratified this constitution June 20, 1863.

Digitized by Google

West Virginia has an area of 24,780 square miles, and in 1901 its population was estimated to be 982,000. Although West Virginia is an agricultural State, her manufacturing industries have grown rapidly during the past decade, the in crease, according to the census of 1900, being 91.7 per cent. Ex treme localization is shown in the manufacturing twelve counties in the northern part, along the Ohio River, producing more than one- half of all the products of the State. This is due partly to the abundant supply of coal and nat ural gas, partly to the transpor tation facilities afforded by the Ohio River and partly to the prox imity of the Pennsylvania steel districts. The iron and steel in dustry of the State, confined almost entirely to Wheeling, is by far the most important. In 1900 the product of this industry was valued at $16,574,212. The man ufacture of lumber and timber pro ducts, chiefly in the eastern part of the State, with Charleston as shipping point, is second in im portance. In the production of coke West Virginia is second only to Pennsylvania.



Gov. A. B. White.

The Legislature of 1901 passed an act much like the law adopted in several other States, directing the Commissioner of Labor to es tablish in connection with the Bu reau of Labor a free employment bureau for the purpose of receiv ing applications from persons seek ing employment and persons seek ing laborers. Mercantile and man ufacturing establishments were re quired to use all possible precau tions against accidents and unsan itary conditions, and to provide seats for their women employes and permit them to use them when not actively engaged in their duties. Street railway companies were directed to provide vestibules on all cars from November 1 to April 1 to protect their em ployes.

The license tax for domestic corporations, which had previously been fixed at a uniform rate of $10, was placed on a sliding scale, as follows: Domestic corporations, with a capital of not more than $10,000, were required to pay a tax of $10, and corporations with larger capital were required to pay proportionately larger fees. For eign corporations and corporations who did the greater part of their business outside the State were re quired to pay a tax of from $20 on a capital stock of $25,000 to $410 for a capital stock of $1,000,000, and an additional amount for every additional million of capital stock.

Several constitutional amendments were directed to be submitted to the voters at the general election in 1902. One provides that the Secretary of State should thereafter be an elective officer instead of an ap pointee of the Governor. Another provides that the Legislature might increase the salaries of the prin cipal executive officers over the low rates as then allowed by the Constitution. The Legislature passed a resolution declining to take any action in regard to what is known as the Virginia Debt, incurred before the organization of West Virginia as a separate State.

Another constitutional amendment of general importance calls for the striking out of the sentence "The Legislature shall enact proper laws for the registration of all qualified voters in the State," and the in sertion of "No citizen shall be denied the right or privilege of voting at an election because his name is not or has not been registered or listed as a qualified voter." This amendment is nearly identical with a clause in Pennsylvania's constitution, which was annulled at the general election of 1901.

Wireless Telegraphy and Other Triumphs of Electricity.

THOMAS A. EDISON, JR.

Of all the forces which exist in nature there is none to which men can turn for more varied purposes than he is learning to serve by aid of electricity. He is making himself more its mas ter with every year, and the year 1902 has been no exception, although it has not been marked by any great new discovery, nor by any develop ment which, in the light of some of the dis coveries and inventions of recent years, can be regarded as extraordinary. In fact, we are pre pared to be not surprised at anything new which turns up in this wonderful field of human achievement. Meanwhile we watch with reason able patience the signs of progress as they are presented to us.

While statistics are dry reading to most peo ple, it will not prove uninteresting to introduce, parenthetically, a few to illustrate the progress which has been made in the untilization of electricity during little more than a decade past. These relate to the industrial aspect of the matter, and they are certainly extraordinary. The twelfth census of the United States, taken in the year 1900, is the first to give a de tailed report on the manufacture of electrical apparatus and supplies. Such a report, based upon data gath ered in that census, was prepared by Mr. Thomas Commerford Martin, of New York, as an expert special agent of the division of manufactures of the Census Office. The summary which follows is condensed there from: In 1890, the number of establishments in the United States occupied for the manufacture of electrical apparatus and supplies was 189; in 1900 the number was 580, an increase of nearly 207 per cent. The capital invested in this line of manufacture increased from $18,997,337 in 1890 to $83,130,943 in 1900, more than quadrupling in the ten years. Other increases during the decade, all showing a similarly large per centage, were as follows: Number of wage earners, from 8,802 to 40,890; aggregate of wages paid, from $4,517,050 to $20,190,344; aggregate cost of materials used, from $8,819,498 to $48,916,440; aggregate value of products, including custom work and repairing, from $19,114,714 to $91,348,889.

A conservative estimate would give the following as the aggregates, in round numbers, for the year 1902: Number of manufacturing establishments, 1,000; capital invested, $125,000,000; number of wage earn ers, 60,000; annual earnings of people employed, $30,000,000; cost of materials used, $75,000,000; value of products, $150,000,000.

The increase in the demand for electrical apparatus and supplies is likely to be of extraordinary magni tude for an extended period in the future, if only because of the constant extension of certain lines of business enterprise dependent upon the use of power, notably in the renewal of equipment on street rail ways and elevated railways, and the rapid multiplication of local and interurban systems of passenger traffic. The introduction of practical and economical methods of applying electricity to the propulsion of railway cars has led to the construction of lines in localities where it would have been impossible even at the present time to operate horse cars with profit, and the facilities for rapid transit with low fares which have thus been developed lead to a growing demand for the extension of the lines in every direction.

Another factor in the present aspect of progress in electricity, as related to industrial growth, is the growing number of enterprises connected with the transmission of hydro-electric power from points where it can be economically generated to points where it can be advantageously employed for manufacturing and other purposes. The utilization in this way of the immense force inhering in Niagara Falls was suc cessfully inaugurated several years ago, and the practicability of converting such force into electrical energy, to be again converted into mechanical power at some distant point, was so thoroughly established then that other enterprises of similar character have been inaugurated in various parts of the world, as well as in the United States and Canada. Russia adopted the idea during 1902, and a hydro-electric power plant is projected in that country to supply St. Petersburg with electric light and power from a water power

Digitized by Google

188 miles distant. In Switzerland, where the city of Geneva had already put such a plant in operation on the river Rhone, a plant for Lausanne was completed on the same river during the year 1902. In the United States the completion of the power canal at Sault Ste. Marie was one of the noteworthy events of the year.

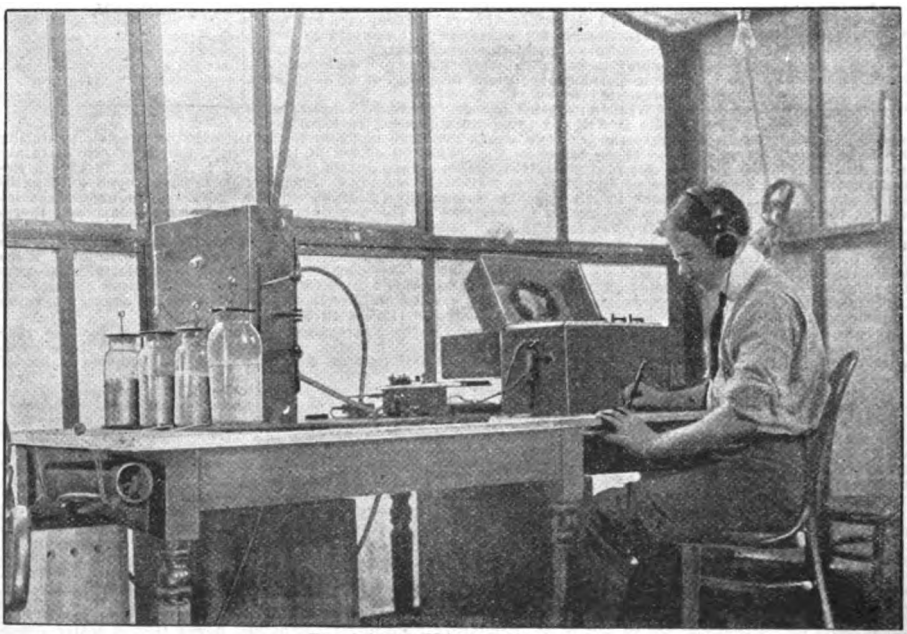
Thomas A. Edison.

William Marconi.

Prof. Michael I. Pupin.

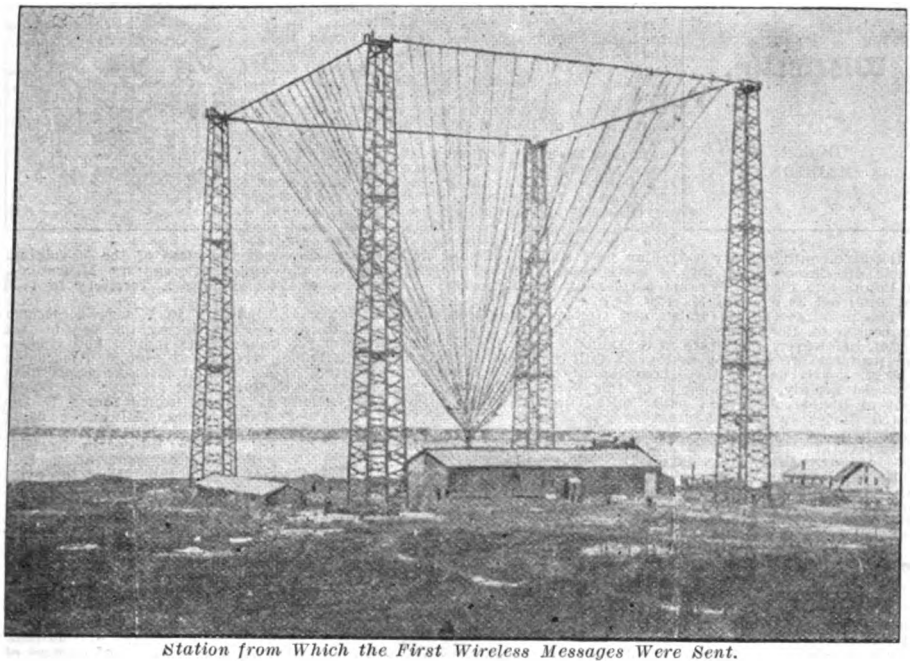
While the transmission of intelligence by the aid of electricity is a very old story, even the telephone having long ago lost every element of novelty, the interest of investigators and inventors in this field of usefulness for the wonderful element, which has become so valuable a servant within less than three-quarters of a century, was never greater than it is at present, and there was never a time when every new disclosure in connection with their work was more eagerly watched for by the world in general. Wireless telegraphy had become an accomplished fact prior to the year 1902, but much remained to be done in developing it, and much is yet to be accomplished. Wireless telephony also is an assured fact, although it requires even more of development than the other before it can be of any benefit, or can be brought into practical use.

William Marconi, whose wireless telegraph system is the most widely known, achieved a decided triumph on December 21, 1902, when the first complete messages were successfully transmitted from his station at Glace Bay, Cape Breton, to the station at Poldhu, Cornwall, on the coast of England. One of these was from the Governor-General of Canada to King Edward; a second was to the King of Italy from



Receiving a Wireless Message.

Digitized by Google



Station from Which the First Wireless Messages Were Sent.

the commander of the cruiser Carlo Alberto, and the third was the following, which appeared in the London Times of December 22:

"Ottawa, Dec. 21.—The Government of Canada, through the Times, desires to congratulate the British people on the accomplishment by Marconi of the greatest feat modern science has yet achieved.

(Signed) "CARTWRIGHT, Acting Premier."

The Marconi system, so far as it has been developed, has played an important part in the shipping world for quite an extended period, and largely facilitates the transmission of maritime intelligence, besides affording means for communication between ocean line steamships in mid-ocean.

The advantage which will be afforded by wireless telegraphy in warlike operations was successfully demonstrated by the army and navy manoeuvres of the Summer of 1902, representing an attack upon the eastern coast of the United States and the defence by naval and land forces. In these manoeuvres the De Forest system was installed at Fort Mansfield, on the Connecticut coast, and on board the scout boat Unique. Of all the messages transmitted ninety-five per cent were perfectly received.

Two forms of transmission by electricity which are certain to enter largely into ordinary usage are the reproduction of handwriting in facsimile at distant points, and the sending of pictures by the aid of electric currents. The former is termed telautography, and while little has been made known concerning it, the system has been so far perfected that the United States War Department, after satisfactory tests of it, made at Fort Wadsworth, N. Y., in 1902, adopted it for use early in the same year.

The transmission of pictures by means of an instrument called the electrograph, while not unknown earlier than 1902, attracted unusual attention during that year, and was successfully tested by the sending of perfect reproductions of personal likenesses from Chicago to New York, and their appearance, as thus sent, in various newspapers. The system is a simple one, and when perfected it will be of immense value, especially in police and newspaper work.

Next to its commercial uses, the most extensive and useful employment of electricity has been in the service of medicine and surgery. These two allied sciences have pressed each other close in their adaptation of electricity to their needs. On the side of medicine there has arisen a distinctive cult of electrical treatment, by which, under the broad term of electro-therapeutics, the Faradic, as well as the Voltaic and other recognized species of currents, are employed in the treatment and cure of many nervous diseases that were formerly beyond the reach of medical aid. Indeed, in the latter years of this science electro-therapy has come to be regarded as a legitimate and distinctive specialty.

Surgeons received their first great aid from electricity in the development of the electro-cautery. Before the general introduction of electricity cauterization was performed with instruments heated by alcohol vapor. Naturally the heat of the knife or wire was extinguished upon contact with live flesh. With the introduction of electricity came the platinum knife, which being heated to a white heat by the electric current, could never be chilled.

Next came the adaptation of the electric light to surgical instruments. By attaching tiny incandescent lamps to the exploratory instruments used by surgeons, darkness was turned into light. Up to that time the surgeon, operating in any of the lesser cavities of the body, had to work by sense of touch alone. Now he has the aid of sight. The throat, to its farthest depths, can be easily and painlessly examined, and, by the aid of the electric light, the stomach itself has been invaded by a tiny camera and has been made to yield photographic record of its processes.

Greater, however, than all these has been the aid given to both medicine and surgery by the X-ray. No longer is it possible for broken bones to be wrongly repaired, for, with the help of the X-ray, the surgeon can view every step of his work. Foreign substances in the body are detected instantly; the heart and the brain are made to yield their secrets and a positive diagnosis can be made of the presence of consumption in the lungs or of tumors in the body. The telephone, too, has been adapted to surgery, for there is now in constant use a form of probe which transmits to the ear of the surgeon the sound it makes when it encounters a bullet or other foreign body.

During the past year many notable electrical inventions have added to the armament of physicians and surgeons. The magneto-electric vitalizer of Edison presents a new curative force; the electrical audiphone of Tracy, by which deaf mutes can be instructed, is a step in a new direction, while the more recent production by Dr. Boise, of Calcutta University, of artificial sense organs, by means of which he has apparently been able to demonstrate the existence of life and electric pulsations in inorganic things, promises an advance in knowledge as great as that conferred by the X-ray.

Wisconsin.

Capital:
MADISON.

Wisconsin had its beginning in the fur trade. French explorers, ascending the Ottawa, crossed to Lake Huron and, then through Green Bay, the Fox River and the Wisconsin to the Mississippi. In 1634 an agent of Champlain, Jean Nacolet, was the first recorded European to reach Wisconsin soil. In 1658-59, Radisson and Groseilliers, two fur traders, passed along the south shore of Lake Superior and thence southward to the Mississippi. Radisson's journal described the river and the region through which they passed. A Jesuit mission was founded at La Pointe in 1665, and in 1669 the mission of St. Francis Xavier was established on the shores of Green Bay. Marquette, La Salle, Hennepin, Duluth, in various expeditions, traced most of the waterways of the State. About the middle of the eighteenth century a trading post was established at Green Bay and at the close of the Revolution Prarie du Chiene grew into a settlement, and by the beginning of the nineteenth century Milwaukee, La Pointe and Portage became permanent trading posts. Wisconsin was founded as a Territory in 1836 and admitted as a State May 29, 1848.

The manufacture of lumber and timber products is the most important industry in Wisconsin, though the census of 1900 showed that there had been a slight decrease in the product during the decade just passed. However, the State still stands first in the United States in the value of its lumber and timber. The manufacture of flour and grist mill products ranks second. Although the wheat crop of Wisconsin is large, nearly half of the wheat manufactured in 1900 was imported. Foundry and machine shops have increased rapidly, the products of this industry including machinery for motive power and for the equipment of lumber, flour and paper mills, breweries and mines. Wisconsin at present ranks fourth in the United States in the manufacture of malt liquors, Milwaukee being the principal centre of this industry in the State.

Gov. Robert M. La Follette.

Important labor laws were passed by the Wisconsin Legislature in 1901. Provision was made for the establishment of a free public employment bureau in every city of 30,000 inhabitants or over, and private employment bureaus in such cities were required to pay an annual license fee of $100. It was made the duty of the Labor Commissioner and the superintendents of the bureaus to put themselves in communication with the principal manufacturers, merchants and other employers of labor, to secure their co-operation. It was provided at the same time that no list of applicants should be given or shown to any employer whose employes were on strike or locked out.

Another law provided that no room in a tenement house should be used for manufacturing or industrial purposes without a certificate granted by the Commissioner of Labor, and such certificate should not be granted unless the rooms were in proper hygenic condition, and certificates might be revoked at any time. The Board of Control of the State Penitentiary was requested to investigate prison labor systems in vogue in other States and make experiments with some small industries in the State prison, and report to the Legislature upon some plan for diversifying the prison industries so as to do away with any unjust competition with honest labor.

A bill approved in May, 1901, made all the ice on surveyed lakes within the State, State property, and required a tax of 10 cents a ton upon all ice taken from these lakes to be sent out of the State. It was claimed that this was not of the nature of an export tax, but was a price charged for the sale of the ice. A divorce law passed decreed that no person divorced in the courts of Wisconsin should, within a year from the time of the divorce, marry again (except by permission of some court of record. The use of the United States flag for advertising purposes was prohibited. An attempt was made to pass a bill providing for the direct nomination of candidates for State offices. After a stubborn fight the bill, which provided for the abolition of caucuses and conventions, and for the establishment of a primary system, passed the House, but was killed in the Senate. Another bill, limiting the primaries to county nominations, was passed by both Houses, but vetoed by the Governor.

The State Democratic Convention was held September 4, and the platform adopted was devoted almost entirely to State issues and to an arraignment of the Republican Administration. The present tariff system was attacked as fostering trusts and enabling combinations to "rob American consumers." The Republican platform, adopted at the convention held July 16, besides paying a tribute to McKinley and Roosevelt, condemned some features of the State Government and attacked several of the State officers. The primary law was favored.

Woman Suffrage: Progress and Results.

HENRY B. BLACKWELL.

All over the world the influence of woman in the shaping of Municipal, State and National destiny has been steadily growing through the placing in her hands of the ballot. Women could not vote anywhere until seventy years ago. In 1838 Kentucky gave school suffrage to widows. Ontario made an advance upon this first step in 1850 by giving school suffrage to women, both married and single. Kansas followed in this broader concession in 1861.

Municipal suffrage was the next step upon which woman advanced toward equal political rights, and the way was opened by New South Wales in 1867. Two years later England gave municipal suffrage to single women and widows, and the colony of Victoria gave it to all women.

Wyoming was the first State to bestow full suffrage upon all women, and this was done in 1869. West Australia gave municipal suffrage to women in 1871. School suffrage was granted to women by Michigan and Minnesota in 1875; by Colorado in 1876; by New Zealand in 1877; by New Hampshire and Oregon in 1878; by Massachusetts in 1879; by New York and Vermont in 1880. In the year last mentioned South Australia gave municipal suffrage to women. Municipal suffrage was extended to the single women and widows of Scotland in 1881. Nebraska gave women school suffrage in 1883; Ontario and Tasmania gave them school suffrage in 1885. Municipal suffrage was given them by New Zealand and New Brunswick in 1886.

In 1887 municipal suffrage was granted in Kansas, Nova Scotia and Manitoba, and school suffrage in North and South Dakota, Montana, Arizona and New Jersey. In the same year Montana gave tax-paying women the right to vote upon all questions submitted to the taxpayers.

In 1888 England gave women county suffrage, and British Columbia and the Northwest Territory gave them municipal suffrage. In 1889 county suffrage was given to the women of Scotland and municipal suf-

Digitized by Google

frage to single women and widows in the Province of Quebec. In 1891 school suffrage was granted in Illinois. In 1893 school suffrage was granted in Connecticut and full suffrage in Colorado and New Zealand. In 1894 school suffrage was granted in Ohio, a limited municipal suffrage in Iowa and parish and district suffrage in England to women both married and single. In 1895 full suffrage was granted in South Australia to women both married and single. In 1896 full suffrage was granted in Utah and Idaho.

In 1898 the women of Ireland were given the right to vote for all officers except members of Parliament; Minnesota gave women the right to vote for Library Trustees; Delaware gave school suffrage to tax-paying women; France gave women engaged in commerce the right to vote for judges of the tribunals of commerce, and Louisiana gave tax-paying women the right to vote upon all questions submitted to the tax-payers. In 1900 West Australia granted full parliamentary suffrage to women both married and single.

In 1901 New York gave tax-paying women in all the towns and villages of the State the right to vote on questions of local taxation, Norway gave them municipal suffrage, and the Kansas Legislature voted down almost unanimously, and "amid a ripple of amusement," a proposal to repeal municipal suffrage.

In 1902 full national suffrage was granted to all the women of federated Australia.

A tree is to be judged by its fruit, and the wisdom of granting to woman that equality in political action which her interest in the community and her intelligent conception of it demand has been made amply evident. In Wyoming equal suffrage has caused the passage of a law that men and women in the employ of the State (including teachers) shall receive equal pay for equal work; has raised the age of protection for girls to eighteen, and has led to the repeal of the law that formerly licensed gambling. Child labor is forbidden, and cruelty to children is severely punished.

In Utah equal suffrage has caused the passage of a law that female teachers in the public schools shall receive the same pay as male teachers, provided they hold certificates of the same grade; also bills raising the age of protection for girls to eighteen, doubling the number of free scholarships in the State Normal School, establishing an art institute, and providing for improved sanitary arrangements in the schools, and for the better protection of the public health in various ways.

In Idaho equal suffrage has caused the passage of bills abolishing licensed gambling, raising the age of protection for girls to eighteen, authorizing city councils to levy a one-mill tax for free reading rooms and libraries, requiring three per cent of all school moneys to be set aside for the founding of school libraries, and establishing a State Library Commission, two members of which must be women and two others the president of the State University and the State Superintendent of Public Instruction.

Colorado owes to her women the laws establishing a State Industrial School for Girls and a State Home for Dependent Children; removing the emblems from the Australian ballot (the nearest approach to an educational qualification for suffrage), making fathers and mothers joint guardians of their children, enlarging women's property rights, raising the age of protection for girls to eighteen, introducing the indeterminate sentence, so much desired by the friends of prison reform; establishing parental schools, providing for the care of the feeble-minded, and for the preservation of forest trees; giving the Board of Charities and Correction power to investigate private eleemosynary institutions, and providing an annual appropriation to buy books for the State library; also in Denver ordinances placing drinking fountains in the streets, forbidding expectoration in public places, and requiring smoke-consuming chimneys on all public and business buildings.

Among other results of equal suffrage is a much better enforcement of the laws forbidding the employment in factories of children under fourteen, requiring merchants to furnish their saleswomen with seats, regulating the sale of liquor and tobacco to minors, and others of the same general character. Since equal suffrage was granted, the number of no-license towns in Colorado has been more than quadrupled.

In all the enfranchised States, equal suffrage has made elections more orderly, has improved the primaries, has made it harder to secure the nomination or election of candidates of notoriously bad character, has made it easier to secure adequate school appropriations, has broadened the minds of women and given them a greater interest and intelligence in regard to public affairs, and has largely increased the number of women serving on educational and charitable boards.

Throughout Australia, before the granting of equal suffrage, a married man could will all his property away from his wife, leaving her penniless. She had no right of dower unless he died intestate. In those Australian colonies where women have had a vote, and in those only, the law has now been changed so that part of a man's property must go to his wife and family. The divorce laws of Australia and New Zealand were modelled upon those of England, by which infidelity on the part of the wife entitles the husband to a divorce, but infidelity on the part of the husband does not entitle the wife to one. Since woman suffrage was granted, the divorce laws have been equalized, and a number of other beneficent changes have been made.

Wyoming.

Capital:
CHEYENNE.

The area of Wyoming was in the main included in the Territory of Louisiana, acquired from France by the purchase of 1803. The western part was acquired by prior settlement, as was the case with Washington, Oregon and Idaho. The progress of settlement was very slow until recent years, owing to the inhospitable character of the country along the southern border, now traversed by the Union Pacific Railroad, and to the occupation by the Indians of the more fertile districts. The few settlers in the region were harassed by the savages and the inducements to make homes were few. With the removal of the Indians, however, population increased rapidly. The Territory was organized in 1868, and Wyoming was admitted as a State July 10, 1890.

Wyoming has an area of 97,890 square miles, and in 1901 its estimated population was 96,000. The census of 1900 showed an increase in the manufacturing industries in Wyoming during the past decade, due chiefly to the increase in population and in the needs of the people of the State. This is primarily a stock-raising and mining section, and such manufactures as are carried on are limited to the production of articles necessary to home consumption. There are no large factories, but many small shops. Iron ore and petroleum are found in abundance, but transportation difficulties have prevented the development of the deposits, and, consequently, the development of the industries dependent upon their presence.

The State of Wyoming is a geological wonderland, for the reason that it is, geographically speaking, the newest land on the continent. The Mesozoic period has left rich fossil deposits in this State, the remains varying in size from the little invertebrate ammonites to the giant vertebrate dinosaurs of the Jurassic age. In 1889 a thoroughly organized scientific expedition, composed of eighty members, spent some forty days in exploring and examining the fossil exposures and gathering specimens.

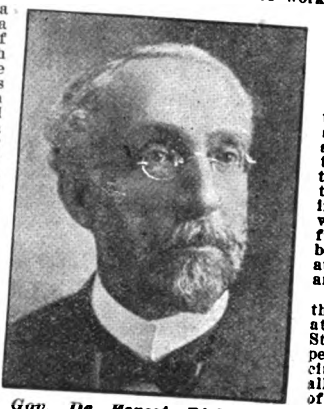
Several fossil quarries are in operation in the southwestern part of the State, where the slabs of shale and limestone are obtained from which many handsome specimens are extracted. All the quarrying is done by hand, without the use of blasting, and is conveyed, almost in the same way, by hand. After the slabs of shale are cut from the hillsides they are dried to about one-third their original weight and then the fossils they contain are cleaned of the surrounding stone. Knives and saws made especially for this purpose are used. The fossil fish of the "Green River Tertiary" are particularly beautiful, and when properly cleaned their bones are perfectly outlined.

Few States are richer in strange and attractive scenic curiosities than Wyoming. The famous Yellowstone Park has scarcely an equal for grandeur and interest in the world. The geysers there are the largest in the world and they burst forth everywhere, in the woods, along the lakes, on the mountain sides, and

Digitized by Google

even in the midst of ponds and streams. Within the park are the sources of the Missouri, Columbia and Yellowstone Rivers, the headwaters separated from each other by the massive wall of the Continental Divide.

The Union Pacific Railroad has been doing a large amount of work toward the bettering of conditions in the State during the last few years. Tracks have been straightened and grades reduced, and as a result it is expected that the industries of Wyoming will receive a strong stimulus. One of the most difficult and important pieces of engineering met in this work was the constructing of a tunnel through the Aspen Ridge. The quality of the soil and rock through which the tunnel passes interfered with the work to such an extent that it was nearly three years before it was possible for the engineers to reach the grade level of the line.



Gov. De Forest Richards.

The Legislature of 1901 passed several acts of importance. One act directed that any city or town should have power to construct or purchase plants of any nature for the furnishing of light, heat or power. To this end any city or town was authorized to issue special bonds, to be paid for in not more than twenty years, to be sold at not less than par, and to aggregate in amount not more than 2 per cent of the assessed value of property within the municipality. To pay the interest and to create a sinking fund for the payment of the bonds, special taxes were to be levied, and both taxes and bonds were to be in addition to any other taxes or bonds authorized by law. Bonds were not to be issued, however, except upon an affirmative vote of the electors of the municipality.

A law which seemed to show the principle of democrary carried to its ultimate limit provided that at the general election of 1904 the permanent location of the seat of State government, the State university, insane asylum, and the State penitentiary shall be determined upon by the popular vote. Any city, town or village was to be allowed to be a candidate for any or all of these honors, and the candidate receiving the highest number of votes would be declared the winner.

Another act provided that any person or corporation employing women in any manufacturing, mercantile or mechanical establishment should provide suitable seats for their employes and permit their use. Foreign insurance companies were required to file with the State Auditor an affidavit making him or his successor their lawful attorney, upon whom service might be taken and against whom legal proceedings might be instituted. The office of State Geologist was created, and the Governor was directed to appoint for a term of six years a State Geologist who should have no pecuniary interest in mining property in the State. This officer was directed to examine mining specimens, prospectuses and mines, charging proper fees therefor, and to collect and disseminate such information as to the mines and mineral wealth of the State as might advertise them and develop the mining resources. A Commission was appointed to look into the advisability of creating a State Board of Arbitration. The existing divorce laws were changed so as to make a residence of one year within the State necessary, instead of six months, as under the former law, and it was directed that instruction in the humane treatment of animals should be given in the public schools.

The Republicans elected the entire ticket at the State election held in November, with the exception of several members of the Legislature. Congressman F. W. Mondell was elected by a large majority and Governor Richards won again the place of Chief Executive of the State by a safe plurality.

Zanzibar.

—

Capital:
ZANZIBAR.

Zanzibar, an island lying off the east coast of Africa, has an area of 640 square miles, and a population of 150,000. Pemba, another island under the same rule, has an area of 380 square miles, and a population of 50,000. There is a considerable foreign population, mostly engaged in trading. There are about fifty Englishmen, forty Germans, a few Americans, Frenchmen, Italians, Greeks and Roumanians, the last two being under British protection. There are also about 7,000 British Indian subjects, through whose hands almost the whole trade of Zanzibar and of East Africa passes, directly or indirectly. The town of Zanzibar has a population estimated at from 50,000 to 60,000.

Hamid bin Thwin, the former Sultan, died August 25, 1902. He was forty years old and had been on the throne but three years. Immediately upon his death Said Khalid seized the palace, with a force of 700 armed askairs at his back, and proclaimed himself Sultan. He was soon reinforced, and within twenty-four hours had 2,500 well armed and well disciplined men under his command. He was ordered by the British to haul down his flag and surrender without delay under promise that his claims to the throne should be fairly adjudicated, but refused to do so, declaring that he would sooner die in defence of his alleged rights. Persisting in his refusal the British bombarded the city, the palace being destroyed and captured by them. Said Khalid escaped and took refuge in the German Consulate. Hamid, a cousin of the late Sultan, was proclaimed his successor. After a month Said Khalid was conveyed on board a German war sloop and was taken out of the reach of the British, who had repeatedly and vigorously demanded his surrender. The Germans took the ground, however, that his offense was political and he was therefore not extraditable, and refused to give him up.

Sultan of Zanzibar.

Since 1890 Zanzibar, while the Sultan was the titular sovereign, has been practically a protectorate under British administration. All accounts are always open to the inspection of the British Consul-General, without whose consent no new undertakings or additional expenditures can be incurred.

Mohammedanism is the religion of the country, most of the natives of the coast and island being Sunnis of the Shati school, although many are heathen. There are Christian missions on the island and far into the mainland, but the natives do not take kindly to this religion, and conversions are few.

There is a regular army of about 900 men, including the police.

The revenue is mainly derived from customs dues and taxes on produce, chiefly cloves.

The British have for years carried on a sharp contest against the slave trade, but without much success. The coast was so scantily guarded that it was easy for a trader to slip out with a boat load of slaves, and this was often done. The ever-increasing demand for them was supplied by raiding parties who visited the interior for that purpose. The treatment of those captured by these raiders was cruel in the extreme. They were often murdered when they objected to being taken from their homes. Many abandoned captives were left to die in their huts, and many more were killed rather than that they should fall into the hands of other dealers. The principal countries to which the slaves were sold were Turkey, Egypt, Persia, Tunis, Morocco and Madagascar. Under the new ruler England will have more control than ever over the island and the natives, and will probably succeed in entirely abolishing the slave trade.

Justice is administered among the Sultan's subjects by various Cadis, but power has been delegated the British Agent and the Consul General to try all cases in which a British subject is involved with a Zanzibar subject or the subject of a non-Christian nation without a treaty. The judges of the British court form an appeal court from the chief court of the East Africa Protectorate. The British court also has jurisdiction over all slaves freed by the British Agent and Consul-General, but as the legal status of slavery was abolished in 1897, the relations between masters and slaves are no longer recognized by the tribunals.

THEODORE ROOSEVELT.

Twenty-sixth President of the United States.

Digitized by Google

The American Year Book

The Government of the United States.

The Declaration of Independence was adopted by the First Congress of the United States, July 4, 1776. On November 30, 1782, Great Britain acknowledged the independence of the colonies, and on September 3, 1783, the treaty of peace was concluded. The form of government is based on the Constitution adopted September 17, 1787, to which ten amendments were added December 15, 1791, an eleventh amendment January 8, 1798, a twelfth amendment September 25, 1804, a thirteenth amendment December 18, 1865, a fourteenth July 28, 1868, and a fifteenth March 30, 1870.

The Government is entrusted to three separate authorities, the Executive, the Legislative and the Judicial. The Executive is vested in the President, who holds his office during the term of four years. He is commander-in-chief of the army and navy and of the militia in the service of the United States. The Vice-President is ex-officio President of the Senate, and, in case of the death or resignation of the President, he becomes President for the remainder of the term. Electors for President and Vice-President are chosen in all States the Tuesday after the first Monday in November of every fourth year (leap years), and the President is inaugurated on the 4th of March next following. The President has a salary of $50,000 a year and the Vice-President $8,000.

By an act which became a law January 19, 1886, in case of the removal, death, resignation or inability of both President and Vice-President, the Secretary of State, and after him other members of the Cabinet, in this order: Secretary of Treasury, Secretary of War, Secretary of Navy, Secretary of Interior, Postmaster-General, Attorney-General, shall act as President until the disability of the President is removed or a new President shall be elected. In case of the death or removal of the Vice-President the duties of the office shall fall upon the pro tempore President of the Senate, who receives the salary of Vice-President. Members of the Cabinet are appointed by the President, but are confirmed by the Senate.

The Legislative power is vested in a Congress, which consists of a Senate and a House of Representatives. The Judicial power is vested in a Supreme Court consisting of a Chief Justice and eight Associate Justices, appointed by the President and approved by the Senate.

The United States is composed of 13 original States, 7 States which were admitted without having been organized as Territories, and 25 States which have been Territories. States are admitted into the Union by special acts of Congress, either in the form of "enabling acts," providing for the drafting and ratification of a State Constitution, in which case the Territory becomes a State as soon as the conditions are fulfilled, or by accepting a Constitution already framed, and at once granting admission. In four of the six Territories, including Hawaii, there are local Legislatures, the form of which have been prescribed by the Federal Government. Acts made by the Legislatures may be modified or annulled by the Federal Congress. Territorial Governors are appointed by the President for terms of four years. Alaska and Indian Territory have no power of self-government, but are in charge of Governors who act without Legislatures. Civilized tribes in Indian Territory maintain local governments of their own, with elective Legislatures and executive officers, whose functions are strictly limited to the persons and personal property of the Indians.

The unit of local government in New England is the township governed directly by the voters. In large cities, the city government takes its place. Townships are united to form counties. In the South the unit is the county. In the Middle and Northwestern States the two systems of local government are mixed. In the West the township system is used and public lands are divided into townships 6 miles square.

Representatives to the Federal Congress must not be less than twenty-five years of age and must have been citizens of the United States for seven years, and residents of the State in which they are elected. In addition to the representatives from the States, each Territory is allowed a "delegate," who has a right to speak on any subject and to make motions, but not to vote. Senators must be thirty years of age, must have been citizens of the United States for nine years and residents of the State in which they are chosen.

The franchise is not absolutely universal. In most States residence for at least one year is necessary; in Kentucky and Rhode Island two years' residence is necessary, in Michigan and Maine three months is the minimum. In some of the Western States unnaturalized persons who have declared their intention of becoming citizens are admitted to the franchise. Four States admit women to the franchise on equal terms with men. Untaxed Indians are excluded from the right to vote, and in some States convicts, duellists and fradulent voters are debarred.

OFFICIALS OF THE UNITED STATES.

President.....THEODORE ROOSEVELT, of New York; salary..... $50,000
Vice-President.....Vacant; salary..... $8,000

Secretary to the President, George B. Cortelyou; Assistant Secretaries, William H. Loeb, Jr., and Benjamin F. Barnes; Executive Clerks, William H. Crook and Rudolph Forster.

THE CABINET OFFICERS.

Secretary of State....John Hay, District of Columbia | Postmaster-General.....Henry C. Payne, of Wisconsin
Secretary of the Treasury..Leslie M. Shaw, of Iowa | Secretary of the Navy..W. H. Moody, of Massachusetts
Secretary of War.....Elihu Root, of New York | Secretary of the Interior..E. A. Hitchcock, of Missouri
Attorney-General.Philander C. Knox, of Pennsylvania | Secretary of Agriculture.....James Wilson, of Iowa

The salary of each member of the Cabinet is $8,000.

COURT OF PRIVATE LAND CLAIMS.

According to the act of establishment, approved by Congress, March 3, 1891, this court is to cease and determine on June 30, 1903. The official address of the court is Santa Fe, New Mexico, and it is composed of the following members: Chief Justice, Joseph B. Reed, of Iowa; Associate Justices, Henry, C. Sluss, of Kansas; William W. Murray, of Tennessee; Wilbur F. Stone, of Colorado, and Frank I. Osborne, of North Carolina; United States Attorney, Matthew G. Reynolds, of Missouri.

UNITED STATES CIRCUIT COURT OF APPEALS.

According to an act passed March 3, 1891, "The Chief Justice and the Associate Justice of the Supreme Court assigned to each circuit, the Circuit Judges within each circuit and the several district judges within each circuit shall be competent to sit as judges of the Circuit Court of Appeals within their respective circuits." The assignment of United States Supreme Court Justices is as follows:

First Circuit, vacant; Second Circuit, Rufus W. Peckham; Third Circuit, George Shiras, Jr.; Fourth Circuit, Melville F. Fuller; Fifth Circuit, Edward D. White; Sixth Circuit, John M. Harlan; Seventh Circuit, Henry B. Brown; Eighth Circuit, David J. Brewer; Ninth Circuit, Joseph McKenna.

White House Rules.

(Prepared by George B. Cortelyou, Secretary, by direction of the President.)

The Cabinet will meet Tuesdays and Fridays from 11 a. m. until 1 p. m.

Senators and Representatives will be received from 10 a. m. to 12 m., excepting on Cabinet days.

Visitors having business with the President will be admitted from 12 to 1 o'clock daily, excepting Cabinet days, so far as public business will permit.

After the completion of the alterations in the White House, the East Room will be open daily, Sundays excepted, for the inspection of visitors, between the hours of 10 a. m. and 2 p. m.

United States Consular Reports.

Eminently an industrial and commercial nation the United States, more than any other nation, pays close attention to those conditions in other countries which affect its interests in this phase of its character. While this fact is very largely appreciated by the leading business men of the country, it is not so generally understood as it might be, and this is especially the case in the matter of those public documents known as consular reports. Consuls are officials whose work in foreign lands varies according to the policy and laws of the countries which they represent. Their duties relate chiefly to commercial matters, and to looking after certain interests of fellow citizens or fellow subjects appealing to them for advice, for information, or for such protection as their country's flag may afford to them under existing treaty arrangements. In the origin of the service it was a system of commercial agency altogether, and it is not, as many people suppose, a part of the diplomatic machinery, although a consul, acting under special instructions, may be at times a diplomatic representative of his country. A noteworthy case was that of General Fitzhugh Lee, who was vested with large diplomatic power while United States Consul-General at Havana, during the period immediately preceding the Spanish-American War.

Under the admirable consular system which the United States Government has developed there is benefit for nearly every branch of industrial and commercial enterprise, and the possibilities can be improved just so far as producers, manufacturers and merchants make themselves possessors of the advantage offered in the reports which United States consuls in every part of the world are obliged to make annually to the State Department. These reports cover the agriculture, the manufactures, the commerce and the labor statistics of every country. There is infinite variety in the information given, and it is all valuable. New methods for production of crops or for manufactures of every kind; improved systems in large industries; devices for facilitating any branch of labor; conditions affecting crop prospects; statistics of demand and supply in the markets; the development of new lines of industry or trade, and many other things, important to the farmer, the manufacturer, the importer or the exporter here, are faithfully reported upon, and the store of information thus gathered is at command of any citizen of the United States who chooses to ask for it.

The United States Government has about 750 consular representatives abroad, this number including all grades of the service. The gradations are consul-general, consul, vice-consul, deputy consul, commercial agent and agent. Salaries paid to these representatives range from $1,000 per annum up to $7,500, the sum last mentioned being the salary of the consul-general at Seoul, Korea. The next largest salary is paid to the consuls-general at London, Liverpool, Paris, Rio de Janeiro, Calcutta, Hong Kong, Shanghai, Bangkok, Cairo an Teheran, the amount being $5,000 per annum. Melbourne, Australia, is the next most important station, the consul-general there receiving $4,500. Next in order come Berlin, Yokohama, Montreal, and the City of Mexico, consulates-general paying $4,000 each. Some of the minor consular agents receive only such fees as they may be entitled to demand for official services rendered.

As gleaners of information of value to the home government and to the country at large, the consular representatives of the United States are restricted only by such laws of the countries to which they are accredited as may debar them from obtaining or imparting information of certain specified character. These restrictions are rarely encountered, however. The work is done as a rule, not only with fidelity, but with a degree of intelligence which seldom permits ground for serious criticism. Even as a means of studying the world's material progress the consular reports have immense educational value, and they could be as effectively used in the schools of business as in the active prosecution of agriculture, manufactures and commerce.

The office of consul, as it exists in modern times, is not to be confounded with that which the patricians of the ancient Roman Republic conferred upon those of their own number who were elected to exercise rule power, and which was revived in the French Republic overturned by Napoleon, who held the office and made it the stepping stone to imperial sway. Its name, which indicates that consuls are officials charged with taking care of something for others, was bestowed upon those commercial agents who were appointed by European nations during the twelfth century, after the crusades had opened to them a considerable intercourse with the East. These agents were sent by their respective governments to reside at sea ports and other important centres of trade, and semi-official recognition was obtained for them by Venice, Genoa, and other Italian states, which were the first to recognize the value of such service as these agents might be able to render. Other maritime peoples were quickly cognizant of the advantages of the system, which extended, and has developed to the extent that all commercial nations at the present time maintain consulates wherever their citizens have established trade. Some countries invest their consuls with judicial authority, to be exercised in the settlement of disputes between citizens of the country they represent who may happen to be within the jurisdiction of the consulate. This, of course, requires the consent of the foreign government within whose territory the consul is located. Neither the United States Government, nor that of Great Britain, confers authority of this kind upon its consular representatives, except that in semi-civilized countries, where the native laws are imperfect, or imperfectly administered, it is found necessary to make the consulate a means of affording to foreign residents that protection of property and life which otherwise would be lacking. Under the provisions of a consular convention between France and the United States, agreed to in 1788, American consuls were given judicial power for the settlement of disputes between masters of vessels and members of their crews in regard to wages. Subsequent treaties with several other European nations gave to consuls similar jurisdiction.

The Army of the United States.

The United States Army, as at present constituted, is organized under the act of Congress of February 2, 1901. It consists of fifteen regiments of cavalry, an artillery corps, 30 batteries of field artillery and 126 companies of coast artillery; 30 regiments of infantry, 3 battalions of engineers and an additional provisional force of more than 5,000 men. As now constituted, the total strength of the army is 65,971 men, 3,820 of whom are commissioned officers. It is provided by the act of 1901 that the army shall at no time exceed 100,000 men.

The organization of the army is as follows:

Station.	Privates.	Total Commissioned.	Total Enlisted.	Cadets.	Aggregate.
General officers	....	22	....	....	22
Aides de Camp to general officers	....	....	....	....	....
Adjutant-Gen.'s Dept	....	28	....	....	28

DIVISIONS AND DEPARTMENTS OF THE ARMY.

Division of the Philippines—Consisting of the Departments of Luzon, Visayas, and Mindanao, Commander, Major-General G. W. Davis.

Department of Luzon—Includes all that part of the Philippine Archipelago lying north of a line passing southeastwardly through the West Pass of Apo, or Mindoro Strait, to the twelfth parallel of north latitude; thence east along said parallel to the 124th degree 10 minutes east of Greenwich, but including the entire Island of Masbate; thence north to San Bernardino Straits; headquarters, Manila, P. I. Commander, Brigadier-General James F. Wade.

Department of the Visayas—To include all islands south of the southern line of the Department of Luzon and east of logitude 121 degrees 45 minutes east of Greenwich, and north of the 9th parallel of latitude, excepting the Islands of Mindanao, Paragua, and all islands east of the Straits of Surigao. Commander, Brigadier-General Frank D. Baldwin.

Department of Mindanao—Includes all the remaining islands of the Philippine Archipelago. Commander, Brigadier-General Samuel S. Sumner.

Department of California—States of California and Nevada, the Hawaiian Islands and their dependencies; headquarters, San Francisco, Ca. Major-General Robert P. Hughes, Commanding.

Department of the Colorado—States of Wyoming (except so much thereof as is embraced in the Yellowstone National Park), Colorado and Utah, and the Territories of Arizona and New Mexico; headquarters, Denver, Col. Brigadier-Geneal Frederick Funston, Commanding.

Department of the Columbia—States of Washington, Oregon, Idaho, and the Territory of Alaska (except so much of Idaho as is embraced in the Yellowstone National Park); headquarters, Vancouver Barracks, Wash. Brigadier-General George M. Randall, Commanding.

Department of Dakota—States of Minnesota, North Dakota, South Dakota, Montana, and so much of Wyoming and Idaho as is embraced in the Yellowstone National Park; headquarters, St. Paul, Minn. Brig.-Gen. William A. Kobbe, Commanding.

Department of the East—New England States, New York, New Jersey, Pennsylvania, Delaware, Maryland, District of Columbia, West Virginia, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, the Island of Porto Rico and the islands and keys adjacent thereto; headquarters, Governors Island, N. Y. Major-General Adna R. Chaffee, Commanding.

Department of the Lakes—States of Wisconsin, Michigan, Illinois, Indiana, Ohio, Kentucky and Tennessee; headquarters, Chicago, Ill. Major-General Arthur MacArthur, Commanding.

Department of the Missouri—States of Iowa, Nebraska, Missouri, Kansas and Arkansas, the Indian Territory and the Territory of Oklahoma; headquarters, Omaha, Neb. Maj.-Gen. John C. Bates, Commander.

Department of Texas—State of Texas; headquarters, San Antonio, Tex. Brig.-Gen. Frederick D. Grant, Commanding.

The field officers of the various regiments and corps are:

The pay of non-commissioned officers ranges from $15 to $46 per month; that of privates, from $13 to $23 per month, according to the years of actual service. Hospital stewards are paid from $45 to $55 per month; acting hospital stewards, $25 to $35 per month; cooks, $20 to $30 per month, and musicians from $17 to $70 per month. Clerks at military headquarters receive from $83.33 to $150 per month; nurses, $40 to $150 per month, while contract surgeons, dental surgeons and veterinarians are paid salaries that range from $125 to $210 per month.

Enlisted men who retire are entitled to three-fourths the monthly pay allowed in the grade they held at retirement, with commutation of clothing and rations at the rate of $0.50 per month. A certificate of merit entitles a soldier to $2 per month additional pay, continuing throughout all subsequent service.

ENLISTMENT CONDITIONS OF THE ARMY.

All persons applying for enlistment in the United States Army must be not less than eighteen nor more than thirty-five years of age. They must also be of good moral character, of temperate habits and be able to pass the necessary examinton to show that they can speak, read and write the English language, and are able-bodied and free from disease. Persons who are under eighteen years of age, but who can meet all other requirements of the service, are accepted for enlistment if they can produce the written consent of parent or guardian.

The height and weight requirements are as follows:

For infantry and coast artillery, height not less than 5 feet 4 inches; weight, not less than 120 and not more than 190 pounds.

For cavalry and field artillery service the height must not be under 5 feet 4 inches, nor in excess of 5 feet 10 inches, while the weight must not be more than 165 pounds.

United States Military Academy.

Cadets for the military service of the United States receive practical and theoretical training therefor at the United States Military Academy, located at West Point, N. Y. Upon satisfactory completion of its course cadets are eligible for promotion and commission as Second Lieutenants in any arm or corps of the army in which there may be a vacancy which they have been judged competent to fill.

Each Congressional District and each of the territories is entitled to have one cadet at the academy; each State is entitled, in addition, to two appointed at large, and forty are appointed from the country at large. In the case of those appointed from Congressional Districts the appointments are made on recommendation of the congressional representative or delegate; cadets at large from States are appointed on recommendation of the respective Senators from those States; and those from the country at large and the District of Columbia are selected by the President on his own responsibility. Each appointee, except in the case of the last class mentioned, must be an actual resident of the State, District or Territory from which the appointment is made.

APPOINTMENT TO WEST POINT.

Appointments must be made one year in advance of the date of admission, except when, through death or otherwise, a vacancy occurs which cannot be provided for by such appointment in advance. These vacancies are filled in time for the next examination. For each candidate appointed two alternates may be named.

The academic duties and exercises commence on the 1st of September and continue until the 1st of June following. Examinations of the classes are held in December and June; and from the termination of the examinations in June, until the end of August, the cadets live in camp, engaged in military duties and exercises, receiving military instruction only. Each cadet is allowed $500 per annum and one ration per day, or commutation therefor at 30 cents per day, making the total pay $609.50 per annum, commencing with admission to the academy. The actual and necessary travelling expenses of candidates from their homes to the academy are credited to their accounts, if they succeed in entering, after they become cadets. No cadet is permitted to receive money or any other supplies from parents or friends. Except in extreme cases cadets are allowed but one leave of absence during the four years' course, and as a rule this leave is granted at the end of the first two years' course of study.

GROWTH OF THE ACADEMY.

West Point has been occupied as a military port continuously since January 20, 1778. Prior to this, on October 1, 1776, Congress passed a resolution appointing a committee to prepare a plan for "A Military Academy at the Army." As a result a resolution was passed on June 20, 1777, providing for a Corps of Invalids "to serve as a military school for young gentlemen previous to their being appointed to marching regiments," and such a corps was organized in July following. At Washington's request in 1781 the corps was marched from Philadelphia to form part of the garrison at West Point. After the cessation of hostilities in 1783 Washington laid the matter of a military academy before his officers at Newburg, and it was referred to in his message of December 3, 1793. There were already at West Point an engineer school, a laboratory and a library occupying three separate buildings, these existing there when the Invalid Corps went thither in 1781. By a law approved May 9, 1794, the organization was authorized of a Corps of Engineers and Artillerists with two "cadets" to each company, this being the creation of the grade of "cadet" in the American army. A school for the new corps was established at West Point during the same year, but the destruction of its buildings by fire in 1796 caused its suspension. On July 20, 1801, the Secretary of War directed that all the cadets of the Corps of Artillerists should report at West Point for instruction, and on September 1, that year, a school was opened with four army officers and a civilian as administrators and instructors. Washington was indefatigable in his advocacy of a military academy and the Act of Congress authorizing its creation was approved March 16, 1802. West Point was designated for its location and the academy, with ten cadets present, was formally opened July 4, 1802. The institution underwent a number of vicissitudes, and in March, 1812, it was without a single instructor. Up to that time eighty-eight cadets had been graduated. They had entered without mental or physical examination, at all ages from 12 to 34, and at any time of the year. By Act of Congress of April 29, 1812, the academy was reorganized upon principles which underlie its present organization, and its progress has been steady and gratifying.

From 1802 until 1902 inclusive the academy graduated 4,121 men. The present authorized number of cadets is 481, and the number of instructors is 81. The next annual commencement will occur on June 11, 1903.

INSTRUCTION AT WEST POINT.

The course of instruction is largely mathematical and professional. The principal studies are mathematics, drawing, natural and experimental philosophy, chemistry, chemical physics, mineralogy, geology, electricity, history; international, constitutional and military law; the French and Spanish languages, drill regulations of all arms of the service, civil and military engineering, the art and science of war, and ordnance and gunnery. The academy is under the superintendency of Colonel Albert S. Mills, U. S. A., who has a military staff. The academic staff is composed entirely of army officers, and includes professors, assistant professors and instructors in each of the several departments into which the curriculum is divided.

Under new regulations, which placed the examinations for entrance to the Military Academy under the control of the Secretary of War, the institution entered upon the second century of its history with the promise of rendering more efficient service than ever in the preparation of young men for the discharge of duty as officers in the army. New requirements met candidates for admission in 1902, and one of the demands was for a higher standard of qualification. As now provided the examinations are limited to one in each year, to be held on the 1st of May. While entrance has thus been made more difficult, to the future advantage of the service, the way of aspiring young men has been made somewhat easier, in one respect, by the provision for holding the examinations at a largely increased number of military posts. In addition to this the generally higher standard of qualification does not increase the amount of mental work required of the new cadet before he has adapted himself thoroughly to the academy's methods. As a matter of fact a considerable reduction in this work is one of the benefits which is expected to result from the amended system.

CHANGE IN THE REGULATIONS.

Another change which went into effect during the year is intended to guard against the creation of vacancies caused by the failure of both the appointee and his alternate to pass the necessary examinations and secure admission. In the future two alternates, instead of one, will be named with each principal nominated by a representative in Congress. It is proposed now that candidates may be admitted to the academy on certificate of educational qualification, so far as the mental examination is concerned, such certificate to be based either upon their success in a competitive examination preceding the appointment, or upon graduation from a public high school of the proper standard, or upon the fact that the candidate is a regular college or university student. This plan is credited with possessing strong merit, especially in the benefit a candidate would derive from it in being able, from the date of his appointment, to devote his energies to preparing for the course he is to take up, without giving time to further pursuit of studies wherein he has been declared proficient. Another suggestion which has been officially made is that the course at West Point could be advantageously modified to allow cadets who expect to enter the infantry and cavalry to elect a course in their last year similar to that of the special service school at Fort Leavenworth.

The Navy of the United States.

The active list of the United States Navy comprises 1,945 commissioned and warrant officers and 25,228 enlisted men. There are 249 vessels in the regular navy, and 56 in the auxiliary navy, making a grand total of 305 vessels, only 17 of which are unfit for sea service.

Hydrographic office	Com. William H. H. Sutherland.
Bureau of Navigation	Rear Admiral Henry C. Taylor.
Bureau of Ordnance	Captain Charles D. Sigsbee.
Office of Naval Intelligence	Rear Admiral Charles O'Neil.
Inspection duty, Bureau of Ordnance	Rear Admiral John D. Ford.
Bureau of Construction and Repairs	Rear Admiral Francis T. Bowles.
Bureau of Steam Engineering	Rear Admiral George W. Melville.
Bureau of Supplies and Accounts	Rear Admiral Albert S. Kenny.
Bureau of Medicine and Surgery	Rear Admiral Presley M. Rixey.
Naval Academy, Annapolis, Md	Captain Willard H. Brownson.
Naval Station, Boston, Mass	Rear Admiral Mortimer L. Johnson.
Naval Station, Mare Island, Cal	Rear Admiral Merrill Miller.
Naval Station, New Orleans, La	Captain John P. Merrill.
Naval Station, Newport, R. I	Captain William W. Mead.
Naval War College, Newport, R. I	Captain French E. Chadwich.
Special duty at War College, R. I	Rear Admiral Stephen B. Luce.
Naval Station, Brooklyn, N. Y	Rear Admiral Albert S. Barker.
Naval Station, Norfolk, Va	Rear Admiral Charles S. Cotton.
Navy Yard, Pensacola, Fla	Rear Admiral William C. Wise.
Naval Station, Philadelphia, Pa	Rear Admiral James H. Sands.
Naval Home, Philadelphia, Pa	Rear Admiral Charles E. Clark.
Naval Station, Port Royal, S. C	Captain Edwin Longnecker.
Naval Station Portsmouth, N. H	Rear Admiral John J. Read.
Navy Yard Puget Sound, Wash	Rear Admiral Yates Stirling.
Training Station, San Francisco, Cal	Rear Admiral Henry Glass.
Naval Station, Washington, D. C	Rear Admiral Silas W. Terry.
Island of Guam	Com. William E. Sewell.
Naval Station, Hawaii	Rear Admiral John F. Merry.
Naval Station, Cavite, Philippine Islands	Captain Albert R. Couden.
Naval Station, San Juan, Porto Rico	Captain Andrew Dunlap.
Naval Station, Tutuila, Samoa	Captain Uriel Sebree.
Marine Barracks, Sitka, Alaska	Captain Joseph H. Pendleton.

THE EXAMINING AND RETIRING BOARD.

The members of the Naval Examining Board are: Rear Admiral William C. Wise, president; Captain Francis A. Cook, Captain Theodore F. Jewell, Captain Francis W. Dickins and Captain Charles W. Rae.

The members of the Naval Retiring Board are: Rear Admiral William C. Wise, president; Captain Francis A. Cook, Captain Theodore F. Jewell, Medical Director John C. Wise and Medical Inspector John C. Boyd.

NAVAL OBSERVATORY AND ALMANAC.

The staff at the Naval Observatory is composed as follows: Captain Charles H. Davis, superintendent; Commodore Charles E. Fox, Lieutenant-Commander Edward E. Hayden, Professor of Mathematics Aaron E. N. Skinner, Professor of Mathematics Thomas J. J. See, Professor of Mathematics Milton Updegraff, Professor of Mathematics William S. Eichelberger, and Professor of Mathematics Frank B. Littell.

Professor of Mathematics Walter S. Harshman is director of the Nautical Almanac.

THE NAVAL AND MARINE CORPS PAY TABLE.*

Rank.	On sea duty or shore duty beyond sea.	On shore	On leave or wait'g orders.
Admiral	$13,500	$13,500	.....
Rear Admirals:			
First nine	7,500	6,375	.....
Second nine	5,500	4,675	.....

*All wages and salaries quoted are for the period immediately succeeding enlistment. The increase in pay of each position is graded in accordance to the year of service.

The monthly pay of petty officers and enlisted men is as follows: Chief petty officers, $50 to $70; petty officers, first class, $36 to $60; petty officers, second class, $35 to $40; petty officers, third class, $30; seamen, first class, $21 to $35; seamen, second class, $15 to $30; seamen, third class, $9 to $22.

The monthly pay of stewards ranges from $25 to $45; of cooks, $20 to $55; and mess attendants, $16 to $24. The salary of the secretary to the Naval Academy is $1,800 per annum, and the salaries of the clerks at the various shore stations range from $1,000 to $1,800 per annum.

Non-commissioned officers in the Marine Corps receive from $15 to $35 monthly; musicians from $50 to $125 monthly, while the pay of privates is $13 a month.

ENLISTMENT IN THE NAVY.

Applicants for enlistment in the United States Navy must be over eighteen years of age, of American citizenship and capable of reading and writing English. The term of enlistment is four years, but no person will be accepted until he has first passed the medical examination prescribed by the regulations.

No minor under the age of eighteen years will be accepted without the consent of parent or guardian, and any such minor claiming to be more than eighteen years of age in order to secure enlistment is liable to punishment.

United States Naval Academy.

The United States had no school for the education of young men to serve as officers in the navy until 1845, when the naval school, planned by Hon. George Bancroft, Secretary of the Navy in the administration of President James K. Polk, was formally opened. It was located at Annapolis on land occupied by Fort Severn, which was given up by the War Department for the new purpose. The course was fixed at five years, of which only the first and last were spent at the school, the intervening three years being passed at sea. In the early years of the institution the exigencies of the service made it necessary in some cases to shorten the period of study. The date of the opening of the school was October 10, 1845. Four months after this event the students consisted of thirty-six midshipmen of the date of 1840, who were preparing for examination for promotion; thirteen of the date of 1841, who were to remain until drafted for service at sea, and seven acting midshipmen, appointed subsequent to September, 1845. The first class was graduated in 1846. A reorganization of the institution was made on July 1, 1850, its name being changed to the United States Naval Academy. It was placed under supervision of the Bureau of Ordnance and Hydrography. The course of study was extended to seven years, the added years being designed for extended residence at the school. A vessel for annual practice cruises was added to the equipment. In November, 1851, the three years' sea service was dispensed with, and the period of study was thus reduced to four years, as at present. When the Civil War began the academy, in May, 1861, was transferred to Newport, R. I., the three upper classes being detached and ordered to sea, the other class finding quarters at the Atlantic House and on the frigates Constitution and Santee. The return to Annapolis took place during the Summer of 1865. When the Bureau of Navigation was established, July 5, 1862, the academy was placed under its supervision; on March 1, 1867, it was placed under the direct care and supervision of the Navy Department, the administrative and financial routine being conducted by the bureau as before; on March 11, 1869, this connection with the bureau ceased, and on June 25, 1889, it was resumed by order of the department. By an Act of Congress, approved March 3, 1873, the course was changed from four to six years.

In the development of the institution there have been several interesting epochs. A class of acting third assistant engineers was ordered to the academy for instruction in 1866; a special course of instruction in physiology and hygiene was established by order of Congress in 1886, and in 1897 a post-graduate course in naval architecture was established. The students at the academy are styled naval cadets. Candidates for admission must not be under 15 nor over 20 years of age at the time of their examination. There are allowed at the academy one naval cadet for each member or delegate of the United States House of Representatives, one for the District of Columbia, and ten at large. The eleven last mentioned are appointed by the President; the others by the Secretary of the Navy on recommendation of the Representative or delegate for whose District or Territory a vacancy exists. Cadets enter the academy immediately after passing their examination, and are required to sign articles binding themselves to serve in the United States Navy eight years, including the six years of study and practice, unless sooner discharged. They are allowed $500 per annum each while they remain naval cadets. Of the present course of six years two years are spent at sea.

As at present arranged the curriculum includes seamanship, ordnance and gunnery, navigation, marine engineering and naval construction, mechanics, physics and chemistry, mathematics, English and law, modern languages and physiology and hygiene. The officers, professors and instructors attached to the academy number 71, not including 10 officers not attached to the academic staff, 8 attached to the Santee and ships, and 6 officers of the Marine Corps. Commander Richard Wainwright, U. S. N., is superintendent.

(r) Watertight deck.

FOREIGN NAVAL PROGRESS.

According to the United States reports on naval progress, issued by the Government in July, 1902, there has been unusual activity in building of war ships during the past two years, especially by foreign nations. New estimates show either an adherence to a well defined programme for a steady increase, or a desire to make such additions as the present financial conditions of the various countries warrant. While there has been no marked change in the design of ships, the tendency has been toward greater displacement in battleships and armored cruisers, better protection, massing of guns of the second calibre in a central citadel instead of separating them in casements. Italy has authorized three more ships of the Vittorio Emanuele type, which, with a displacement of 12,625 tons, will carry a main battery of two 12-inch guns and twelve 8-inch guns, and have a speed of 22 knots.

France continues to lead in the number of submarine and submersible torpedo boats laid down, and experiments are going on with those already launched. England has launched five submarines recently authorized, and experiments are now going on to determine the value of the design. Austria, Italy, Russia, Sweden and some of the South American States are experimenting with different types of submarines.

Digitized by Google

The vessels that are now unfit for service are put to other uses.

Wooden steam vessels—Fern, naval militia service; Franklin., receiving ship; Iroquois, marine hospital service; Marion, naval militia service; Minnesota, naval militia service; Nipsic, receiving ship; Omaha, marine hospital service; Pensacola, naval training ship; Richmond, receiving ship; Wabash, receiving ship, and Yantic, naval militia service.

Wooden sailing vessels—Constitution, built in 1797, preserved as a relic at the Boston Navy Yard; Dale, naval militia service; Independence, receiving ship; New Hampshire, naval militia service; St. Louis, naval militia service, and Vermont, receiving ship.

STEEL, IRON AND WOODEN STEAM TUGS.

The thirty-nine tugs in the United States Navy are—Accomac, Active, Alice, Apache, Chickasaw, Choctaw, Fortune, Hercules, Iroquois, Iwana, Leyden, Massasoit, Modoc, Mohawk, Narkeeta, Nezinscot, Nina, Osceola, Pawnee, Pawtucket, Penacook, Piscataqua, Pontiac, Potomac, Powhatan, Rapido, Samoset, Sebago, Sioux, Standish, Tecumseh, Traffic, Triton, Unadilla, Uncas, Vigilant, Waban, Wahneta and Wompatuck.

The standard boats in use in the regular navy of the United States are:

Type of boat.	Length, extreme.	Breadth, extreme.	Depth from top of gunwale to lower edge of rabbet.	Weight. Hull.	Weight. Total, including outfit.	Maximum number of men boat will carry.	Weight of provisions and water.	Corresponding freeboard.	Sail area.	Area of load water line plane of condition.

Naval Militia of the United States.

(Compiled by the Navy Department.)

The Naval Militia bodies of the various States and of the District of Columbia are composed as follows:

State.	Officers.	Petty Officers and Enlisted Men.	State.	Officers.	Petty Officers and Enlisted Men.
California	36	380	New Jersey	32	322
Connecticut	20	185	New York	57	585
District of Columbia	10	162	North Carolina	27	219
Florida	4	48	Ohio	22	234
Georgia	17	111	Oregon	9	115
Illinois	56	575	Pennsylvania	9	64
Louisiana	23	327	Rhode Island	12	181
Maine	3	46	South Carolina	24	224
Maryland	18	221			
Massachusetts	39	497	Total	435	4,679
Michigan	17	183			

The following table shows the allotment to each State, in conformity with the regulations of the Department.

State.	Allotment.	State.	Allotment.
California	$4,846.90	New Jersey	$4,107.11
Connecticut	2,359.68	New York	7,461.67
District of Columbia	2,066.31	North Carolina	2,793.34
Florida	612.24	Ohio	2,984.67
Georgia	1,415.81	Oregon	1,466.83
Illinois	7,334.12	Pennsylvania	816.32
Louisiana	4,170.88	Rhode Island	2,308.66
Maine	586.73	South Carolina	2,857.12
Maryland	2,818.85		
Massachusetts	6,339.23	Total	$59,680.64
Michigan	2,334.17

National and State Railroad Commissions.

The Interstate Commerce Commission, Washington, D. C.—Martin A. Knapp, of New York, Chairman; Judson C. Clements, of Georgia; James D. Yeomans, of Iowa; Charles A. Prouty, of Vermont; Joseph W. Fifer, of Illinois; Edward A. Moseley, Secretary; Martin S. Decker, Assistant Secretary.

State Railroad Commissons.—This list also includes the State boards and officers to whom railroad companies are required to make annual reports.

Alabama Railroad Commission, Montgomery, Ala.—John V. Smith, President, Montgomery, Ala.; A. E. Caffee, Birmingham, Ala.; W. C. Tunstall, Greensboro, Ala.; Virgil C. Griffin, Secretary, Montgomery, Ala.

Railroad Commission of Arkansas, Little Rock, Ark.—Jeremiah G. Wallace, Chairman, Little Rock, Ark.; Abner Gaines, Little Rock, Ark.; Felix M. Hanley, Little Rock, Ark.; Howard Robb, Secretary, Little Rock, Ark.

California Railroad Commission, San Francisco, Cal.—E. B. Edson, Chairman, Gazelle, Cal.; C. S. Laumeister, San Francisco, Cal.; N. Blackstock, Ventura, Cal.; Wm. T. Sesnon, Secretary, 70 and 71 Chronicle Bldg., San Francisco, Cal.

Connecticut Board of Railroad Commissioners, Hartford, Conn.—W. F. Willcox, Chairman, Chester, Conn.; William O. Seymour, Ridgefield, Conn.; O. R. Fyler, Torrington, Conn.; Henry F. Billings, Clerk, Hartford, Conn.

Colorado.—State Board of Equalization.—A. B. Gray, Secretary, Denver, Colo.

Delaware.—No reports required.

Railroad Commissioners for the State of Florida, Tallahassee, Fla.—Henry E. Day, Chairman, Gainesville, Fla.; John M. Bryan, Kissimmee, Fla.; John L. Morgan, White Springs, Fla.; Royal C. Dunn, Secretary, Tallahassee, Fla.

Railroad Commission of Georgia, Atlanta, Ga.—Spencer R. Atkinson, Chairman, Atlanta, Ga.; J. P. Brown, Hawkinsville, Ga.; G. Gunby Jordan, Columbus, Ga.; J. D. Massey, Secretary, Atlanta, Ga.

Idaho.—State Board of Equalization.—E. W. Jones, State Auditor and Secretary, Boise City, Idaho.

Railroad and Warehouse Commission of Illinois, Springfield, Ill.—James S. Neville, Chairman, Bloomington, Ill.; Arthur L. French, Chapin, Ill.; William Kilpatrick, Secretary, Springfield, Ill.; Chas. J. Smith, Assistant Secretary, Springfield, Ill.

Indiana.—Board of Tax Commissioners.—Winfield T. Durbin, Governor, Chairman, Indianapolis, Ind.; Union B. Hunt, Secretary of State, Indianapolis, Ind.; W. H. Hart, Auditor of State, Indianapolis, Ind.; Parks M. Martin, Commissioner, Spencer, Ind.; John C. Wingate, Commissioner, Wingate, Ind.

Iowa Board of Railroad Commissioners, Des Moines, Ia.—E. A. Dawson, Chairman, Waverly, Ia.; D. J. Palmer, Washington, Ia.; Ed. C. Brown, Sheldon, Ia.; Dwight N. Lewis, Secretary, Des Moines, Ia.

Kansas Railroad Commission, Topeka, Kan.—A. D Walker, Chairman; J. C. O. Morse, J. N. Fike, W. H. Smith, Secretary.

Kentucky Railroad Commission, Frankfort, Ky.—C C. McChord, Chairman, Springfield, Ky.; John C Wood, Mt. Sterling, Ky.; J. F. Dempsey, Madisonville, Ky.; Murray R. Hubbard, Secretary, Frankfort, Ky.

Railroad Commission of Louisiana, Baton Rouge, La.—C. L. de Fuentes, Chairman, New Orleans, La.; Overton Cade, Youngsville, La.; W. L. Foster, Shreveport, La.; W. M. Barrow, Secretary, Baton Rogue, La.

Railroad Commissioners of Maine, Augusta, Me.—Joseph B. Peaks, Chairman, Dover, Me.; B. F. Chadbourne, Biddeford, Me.; Parker Spofford, Bucksport, Me.; E. C. Farrington, Clerk, Augusta, Me.

Maryland.—Buchanan Schley, State Tax Commissioner, Annapolis, Md.

Massachusetts Board of Railroad Commissioners, 20 Beacon Street, Boston, Mass.—James F. Jackson, Chairman, Fall River, Mass.; George W. Bishop, Newtonville, Mass.; Clinton White, Melrose, Mass.; William A. Crafts, Clerk, Boston, Mass.; Fred E. Jones, Accountant, Brookline, Mass.; George F. Swain, Bridge Engineer, Boston, Mass.; William J. McCullough, Assistant Clerk, Boston, Mass. Railroad Inspectors—Daniel M. Wheeler, Worcester, Mass.; Grafton Upton, Everett, Mass.; John Q. Hennigan, East Milton, Mass.; Lewellyn H. McLain, Melrose, Mass.

Michigan Commissioner of Railroads, Lansing, Mich.—Chase S. Osborn, Commissioner of Railroads, Lansing, Mich.; Charles H. Chapman, Deputy Commissioner of Railroads, Lansing, Mich.; **James Bice,** Mechanical Engineer, Lansing, Mich.

Minnesota Railroad and Warehouse Commissioners, St. Paul, Minn.—Ira B. Mills, Chairman, St. Paul, Minn.; Jos. G. Miller, St. Paul, Minn.; C. F. Staples, St. Paul, Minn.; A. C. Clausen, Secretary, St. Paul, Minn.

Mississippi Railroad Commission, Jackson, Miss.—J. D. McInnis, President, Meridian, Miss.; J. C. Kincannon, Tupelo, Miss.; A. Q. May, Jackson, Miss.; Jno. A. Webb, Secretary, Jackson, Miss.

Missouri Railroad and Warehouse Commission, Jefferson City, Mo.—T. J. Hennessey, Chairman, Jefferson City, Mo.; Wm. E. McCully, Jefferson City, Mo.; Jos. P. Rice, Jefferson City, Mo.; T. M. Bradbury, Secretary, Jefferson City, Mo.

Montana.—J. H. Calderhead, State Auditor, Helena, Mont.

Nebraska Board of Equalization.—Vacant, State Auditor, Lincoln, Neb.

Nevada.—Eugene Howell, Secretary of State, Carson City, Nev.

New Hampshire Railroad Commission, Concord, N. H.—Henry M. Putney, Chairman, Manchester, N. H.; Francis C. Faulkner, Keene, N. H.; Edward B. S. Sanborn, Clerk, Franklin Falls, N. H.

New Jersey.—J. Willard Morgan, Comptroller, Trenton, N. J.

Board of Railroad Commissioners of the State of New York, Albany, N. Y.—Ashley W. Cole, Chairman; Frank M. Baker, George W. Dunn, ———, Secretary; E. C. McEntee, Assistant Secretary.

North Carolina Corporation Commission, Raleigh, N. C.—Franklin McNeill, Chairman, Raleigh, N. C.; Sam. L. Rogers, Raleigh, N. C.; Dr. D. H. Abbott, Raleigh, N. C.; H. C. Brown, Secretary, Raleigh, N. C.; E. G. Riddick, Stenographer, Raleigh, N. C.

North Dakota Commissioners of Railroads, Bismarck, N. D.—C. J. Lord, President, Cando, N. D.; J. J. Youngblood, Fessenden, N. D.; J. F. Shea, Wahpeton, N. D.; C. C. Hammond, Secretary, Ashley, N. D.

Ohio Commissioner of Railroads and Telegraphs, Columbus, O.—J. C. Morris, Commissioner, Columbus, O.; Harry E. King, Chief Clerk, Columbus, O.; E. H. Hanna, Statistical Clerk, Columbus, O.; W. O. Jackson, Chief Inspector, Springfield, O.; O. F. McJunkin, Deputy Inspector, Dayton, O.; D. S. Archer, Stenographer, Columbus, O.; R. L. Williams, Messenger, Columbus, O.

Oregon Railroad Commission.—Abolished by the Legislature, October, 1898.

Pennsylvania.—Department of Internal Affairs, Harrisburg, Pa.—Isaac B. Brown, Superintendent Bureau of Railways, Harrisburg, Pa.

Rhode Island Railroad Commission, Room 121, State House, Providence, R. I.—E. L. Freeman, Commissioner, Providence, R. I.; J. W. Freeman, Deputy, Central Falls, R. I.

South Carolina Railroad Commissioners, Columbia, S. C.—J. C. Wilborn, Chairman, Old Point, S. C.; C. W. Garris, Bamburg, S. C.; J. H. Wharton, Waterloo, S. C.; D. P. Duncan, Secretary, Columbia, S. C.

South Dakota Railroad Commissioners, Sioux Falls, S. D.—W. G. Smith, Chairman, Sturgis, S. D.; Alex. Kirkpatrick, Wessington, S. D.; Frank Le Cocq, Jr., Harrison, S. D.; Wm. H. Stanley, Secretary, Sioux Falls, S. D.; D. C. Ricker, Scale and Warehouse Inspector, Sioux Falls, S. D.; T. B. McMartin, Legal Counsel, Sioux Falls, S. D.

Tennessee Railroad Commissioners, Nashville, Tenn.—N. W. Baptist, Chairman; J. N. McKenzie, Thos. L. Williams, Frank Avent, Secretary.

Railroad Commission of Texas, Austin, Tex.—John H. Reagan, Chairman, Austin, Tex.; L. J. Storey, Austin, Tex.; Allison Mayfield, Austin, Tex.; E. R. McLean, Secretary, Austin, Tex.

Vermont State Railroad Commissioners, Montpelier, Vt.—Jonathan Ross, Chairman, St. Johnsbury, Vt.; James M. Boutwell, Montpelier, Vt.; Henry S. Bingham, Bennington, Vt.; E. M. Harvey, Clerk, Montpelier, Vt.

Virginia Railroad Commission, Richmond, Va.—James C. Hill, Chairman, Richmond, Va.; B. G. Akers, Secretary, Richmond, Va.

Washington.—No reports required.

West Virginia.—Arnold C. Scherr, State Auditor, Charleston, W. Va.

Wisconsin Railroad Commissioner, Madison, Wis.—Graham L. Rice, Commissioner, Madison, Wis.; James S. Stack, Deputy Commissioner, Madison, Wis.

Wyoming Board of Equalization.—George E. Abbott, State Treasurer, President, Cheyenne, Wyo.; Le Roy Grant, State Auditor, Secretary, Cheyenne, Wyo.; Fenimore Chatterton, Secretary of State, Member, Cheyenne, Wyo.; F. J. Niswander, Clerk, Cheyenne, Wyo.

Statistics of Railroads.

RAILROAD MILEAGE IN THE UNITED STATES.

The railway mileage of the United States, according to the Railway Age, of Chicago, has at last passed the 200,000 mile mark. The figures at the close of 1901 were approximately 199,525 miles, and the construction for the first six months of 1902 brought the total up to 201,839 miles, the track laid during the first half of this year on 155 lines aggregating 2,314 miles. This is nearly 500 miles in excess of the new mileage for the first six months of 1901, when 1,817 miles were built. The total for the twelve months of 1901 was 5,222 miles, and if the same ratio is maintained this year it is believed that the construction for the year 1902 will easily exceed 6,000 miles.

The following table of railroad mileage in the United States is from the latest report of the Interstate Commerce Commission:

Year.	Official.	Unofficial.	Total.	Proportion to total mileage.	Increase over June 30, 1899.	Number of miles of line per 100 square miles of territory.	Number of miles of line per 10,000 inhabitants.
1901	196,075.07	1,162.37	197,237.44	100	3,891.66	6.64	25.52
1900	192,940.67	405.11	193,345.78	100.	4,051.12	6.51	25.44
1899	188,277.49	1,017.17	189,294.66	100.	2,898.34	6.37	25.34
1898	185,370.77	1,025.55	186,396.32	100.	1,967.85	6.28	25.40
1897	182,919.82	1,508.65	184,428.47	100.	1,651.84	6.21	25.59
1896	181,153.77	1,622.86	182,776.63	100.	2,119.16	6.15	25.82
1895	179,175.51	1,481.96	180,657.47	100.	1,948.92	6.08	26.00
1894	176,602.61	2,105.94	178,708.55	100.	2,247.48	6.02	26.22
1893	170,332.30	6,128.77	176,461.07	100.	4,897.55	5.94	26.39

OPERATION OF RAILROADS.

The following tables show the capitalization of the country's principal railroad systems and give also the operating expenses per year. A large proportion of this capital is obtained from small investors, whose money is invested in these enterprises. The prosperity of the railroads is thus a matter of vital interest to a large proportion of the country's population, who have invested their savings in their working capital:

Company.	Miles operated.	Operating Expenses.	Net Earnings.	Passengers Carried.	Tons of Freight.	Name of President.
Ann Arbor	292	$1,222,622	$187,857	436,544	1,539,270	W. R. Burt.

RAILWAYS OF THE WORLD.

The following statement, showing the length of railways open in the various countries of the world in each of the years 1870, 1880, 1890 and 1900, was extracted by the Bureau of Statistics from a return prepared by the French Ministry of Public Works and published in the Journal Official of May 25, 1902:

(Kilometer=0.621 mile.)

Total all classes	187	1,362	701	11,145	2,516	33,711

Comparisons of the principal totals with those for the two years preceding and with 1893 (years ending June 30) may be made from the following table, the figures for 1901, 1900, and 1893 being taken from the statistician's tables, made up from the railroad companies' annual reports. It is to be borne in mind that the number of men employed by the railroads has been constantly increasing. It is much larger in 1902 than in 1893; but precise figures for the later year have not yet been compiled. On the other hand, a comparison of the coupling accidents, recorded in the table for 1902, with the same for 1893 shows the remarkable and gratifying results of the safety-appliance act of 1893, which requires the use of automatic couplers and which went into full effect on August 1, 1900. The number of employes killed shows a diminution of sixty-eight per cent, and this notwithstanding the fact that there is now engaged in this work a much larger number of men than in 1893. The diminution in the number injured is still greater, being no less than 81 per cent. The summary is as follows:

	1902.		1901.		1900.		1893.	
	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
Passengers in train accidents	167	3,586	110	2,338	93	1,990	100	1,703
Other causes	136	2,503	172	2,650	156	2,129	199	1,526
Total	303	6,089	282	4,988	249	4,128	299	3,229
Employes in train accidents	697	5,046	586	3,773	539	3,288	525	3,008
Falling from cars, etc	537	6,867	599	6,371	529	4,425	644	3,780
Overhead Obstructions, etc	104	1,070	56	509	56	436	73	444
In coupling accidents	143	2,113	198	2,768	282	5,229	433	11,277
Other causes	1,035	18,615	1,236	27,721	1,144	26,265	1,052	13,220
Total	2,516	33,711	2,675	41,142	2,550	39,643	2,727	31,729
Total passengers and employes	2,819	39,800	2,957	46,130	2,799	43,771	3,026	34,958

The tables given below show the fastest recorded runs made by railway trains. Many of these runs were speed tests, made under the best possible conditions, while others, which averaged as high, were accomplished by trains on regular runs when there was time to be made up or emergencies to be met. One notable fast record, made in 1899, had for its incentive a big Government mail contract. This was when the Chicago, Burlington & Quincy Railroad and the Chicago & Northwestern Railroad raced their trains for a week between Chicago and Omaha, the C., B. & Q. surpassing all previous American records, and winning the contract. On the second day of the race the C., B. & Q. train ran 2.4 miles in 1 minute and 20 seconds, or at 110 miles an hour.

On November 2, 1902, a new fast schedule was inaugurated between Los Angeles, Cal., and Chicago, to connect with a new fast train from Chicago to New York. This Western train is known as the Golden State Limited and is run over the Southern Pacific and the Rock Island routes. It is scheduled to make the trip between Los Angeles and Chicago in thirty-six hours, and, with a two-hour lay-over in Chicago, the trip from the Pacific to the Atlantic in eighty-eight hours.

The tables do not take into consideration speeds made by "freak trains" or by trains using electric power. A number of these have been tested at various places and in some parts of Europe, notably at Brussels, "mono-rail" trains in actual service have made a speed of 90 miles an hour on every regular run. The Brussels railway is but three miles long and there is but one car, which weighs sixty-eight tons, is fifty-nine feet long and eleven feet wide. The carriage is so designed that its pointed ends diminish wind resistance. The cost of construction was about $200,000. Other mono-rail systems on which fast schedules are kept are at Listowel, Ireland, and between Feurs and Pamiseres in Russia.

Experimental mono-rail roads have been built in America, one at Coney Island, New York, some years ago attracting considerable attention, but nothing has yet been done that will admit of a safe prediction of future practicability.

In 1900 the Baltimore & Ohio Railroad Company made some experiments with a "wind-splitting" train, an ordinary train so sheathed as to offer a minimum of resistance to the air. The run was made from Baltimore to Washington, a section of the road on which there are some sharp curves and many stations. The distance is 40 miles, and the entire trip, from station to station, was made in 37 minutes and 30 seconds. At no time did the speed equal the records made on some other roads at other times, but it surpassed any speed made on this road.

It was reported last Summer that an electric locomotive and train were being built for an experimental road in Illinois, which is expected to revolutionize railroad traffic. The road is to be about 150 miles long and will be of the third rail system. As far as possible grades and curves have been eliminated. A train of three cars is being built for the first trial. This train will be equipped with twelve motors of 120 horse power, and an average speed of from ninety to one hundred miles an hour is expected.

An offer was made last Summer by the German Society of Mechanical Engineers of a series of prizes for the best design and specifications for a steam locomotive and group of cars which would collectively form an express train capable of carrying 100 passengers and their baggage with personal comfort and at a speed of seventy-five miles an hour. The purpose of this competition, it was then stated, was to provide a unit of the equipment of and attainment of greatly accelerated speed in railway travel, which can be adapted to the present State railroads of Prussia without tearing up and relaying of tracks with heavier ties and rails that would be required for rapid electrical service.

A description of a train which will probably be entered in this competition was given in a German trade journal. The engine and train will be enveloped in a shell of sheet steel, jointed so as to secure flexibility in passing curves. The front of the engine will be pointed or wedge-shaped, and even the wheels will be closed discs of metal, instead of being made with spokes.

The problem of overcoming air resistance and of eliminating grades, curves and "grade crossings" are awaiting solution before the "200 miles an hour" train will be in use generally. Travellers are constantly demanding greater speed and more comfortable equipment, and inventors are continually trying to satisfy the demand.

SPEED OF TRAINS.

The fastest time for a short distance was made by the N. Y. C. & H. R. R., which ran a mile from Grimesville, May 9, 1893, in35 seconds, being at the rate of 102.8 miles an hour. The same road runs a train from New York to Chicago, 964 miles, in 19 hours and 57 minutes, which is at the rate of 48.2 miles an hour.

The following is a list of all the notably fast runs made by the different railroads within the last twenty-two years.

(Prepared expressly for The American Almanac by the Railroad Gazette.)

Date.	Railroad.	From	To	Distance, Miles.	Time. H. M. S.	Speed. Miles per hour.	No. cars.	No. stops.

Building and Loan Associations.

The following statistics in regard to the condition of building and loan associations in the United States was submitted at the tenth annual convention of the United States League of Local Building and Loan Associations, held at Put-in Bay, Ohio, on July 23 and 24. The statistics, given in detail, are for such States as maintain building and loan association departments, and are, therefore, known to be accurate. All other States are shown in a single item and the figures are necessarily estimated:

State.	1900-01. No. of Assns.	1900-01. Total Membership.	1900-01. Total Assets	1901-02. No. of Assns.	1901-02. Total Membership.	1901-02. Total Assets
1 Pennsylvania	1,115	281,980	$110,493,510	1,168	299,573	$110,817,281
2 Ohio	763	203,717	105,502,111	757	300,315	105,374,306

Statistics of Banking.

Banking was introduced in the United States during the War of the Revolution, a resolution being adopted in Congress, on May 26, 1781, approving a plan for a national bank, proposed by Robert Morris, of Philadelphia. As a result the Bank of North America was incorporated on December 31, following, with a capital of $400,000, of which $254,000 had been subscribed by the United States Government. This bank, rechartered from time to time, continues in existence in Philadelphia, and is one of the national banks of the present. Another bank, known as the Bank of the United States, as projected by Alexander Hamilton when the Government had been organized under the Constitution. It was duly established and continued in existence until 1811, when it went out of existence owing to the failure to obtain a renewal of its charter. A second Bank of the United States was incorporated on April 3, 1816, and went into operation January 7, 1817. Meanwhile other banks had been established in various parts of the country, and these, driven to suspension of specie payments by the War of 1812, were aided by the operation of the new bank to an extent which enabled them to resume. This bank itself, however, was driven to the wall in 1840 by legislation which compelled it to resume specie payments, which it had suspended. The present system of national banks was inaugurated in 1864, under exigencies created by the civil war. The banks in the United States now number 16,933, including State and private banks; their aggregate capital is $1,488,819,167; and the deposits aggregate $10,557,087,725. Savings banks are not included in this summary. In 1852 they numbered 141, and had more than a quarter of a million depositors. At the present time they number about 1,000 and have nearly six and one-half millions of depositors.

Missouri	Walter P. Fulkerson	Carthage, Mo.
Cincinnati	Elmer E. Galbreath	Ripley, O.
Eastern Kentucky and Tennessee	Robert D. Garrett	Princeton, Ky.
North Dakota	William A. Gordon	Grand Forks, N. D.
Albany and Northern New York	Edward J. Graham	Albany, N. Y.
New York City, Brooklyn and Jersey City	Charles A. Hanna	New York, N. Y.
Philadelphia and Camden, N. J	Wm. M. Hardt	Philadelphia, Pa.
Maine	Chas. P. Hatch	Portland, Me.
	Francis Heermans	Kingwood, W. Va.
North Carolina and South Carolina	Walter R. Henry	Charlotte, N. C.
Texas	J. W. Hertford	Ft. Worth, Tex.
Montana, Idaho, Oregon and Washington	Archie J. Johnson	Scio, Ore.
	E. I. Johnson	New Orleans, La.
San Francisco, California, Nevada and Oregon	C. E. Knight	Parrott Bldg., San Francisco.
Delaware, Philadelphia	W. A. Lamson	Philadelphia, Pa.
Texas	Jos. Morton Logan	Ft. Worth, Tex.
Colorado	James B. Lazear	Denver, Col.
Baltimore and Maryland	W. A. Mason	Springfield, Ill.
Iowa	David B. Miller	Red Oak, Iowa.
Montana, Idaho, Oregon and Washington	J. W. Maxwell	Tacoma, Wash.
Eastern Pennsylvania	James B. McDougal	Media, Pa.
Indiana and Western Kentucky	J. M. McIntosh	Connersville, Ind.
Michigan	Wm. B. McLaughlin	Muskegon, Mich.
Massachusetts	Daniel C. Miles	Westminster, Mass.
Northern Ohio	Levi L. Miller	Canton, O.
Western Pennsylvania	Robt. J. Moorhead	Northeast, Pa.
Baltimore and Maryland	John C. Markell	Frederick, Md.
Southern Ohio and West Virginia	C. L. McCune	Athens, Ohio.
Boston and Massachusetts	Wm. E. Neal	Lynn, Mass.
Chicago	William C. Oakley	Chicago, Ill.
Northern Pennsylvania	Frank E. Patterson	Wilkesbarre, Pa.
Connecticut and Rhode Island	Charles S. Perkins	Meriden, Conn.
New York City, Jersey City and Brooklyn	Forrest Raynor	New York, N. Y.
West Virginia and Virginia	Chas. W. Robinson	Fairmount, W. Va.
Omaha and Lincoln, Neb	John Rush	Omaha, Neb.
Hawaiian Islands	J. Castle Ridgway	Hilo, Hawaii.
Massachusetts	Irving B. Sayles	Millbury, Mass.
Michigan	Joseph W. Selden	Niles, Mich.
Illinois	J. Mack Shell	Carthage, Ill.
Oklahoma, Ind. Ter	Myron R. Sturtevant	Oklahoma City, O. T.
South Dakota	George A. Sutsy	Mitchell, S. D.
Iowa	E. B. Sharp	West Union, Iowa.
Southern New York	Chas. E. Van Brocklin	Carlisle, N. Y.
Albany and Northern New York	Josiah Van Vranken	Schenectady, N. Y.
Western Ohio and Cincinnati	Edgar J. Vaughan	Carthage, O.
New Mexico, Arizona, N. W. Texas	Miller Weir	El Paso, Tex.
California, Nevada, San Francisco and Oregon	John W. Wilson	Redlands, Cal.
Missouri	Arthur Orville Wilson	Trenton, Mo.
Pittsburg and Allegheny County	Hugh Young	Pittsburg, Pa.
East Kentucky and Tennessee	W. L. Yerkes	Paris, Ky.

HOSPITAL FOR POOR CONSUMPTIVES.

The Free Hospital for Poor Consumptives at Philadelphia is an institution which has accomplished much good, and is destined to do more. They have 90 beds at the White Haven Sanatorium and are supporting 40 to 50 beds in Philadelphia for dying cases. It costs about $3,000 a month to keep the good work going, and they appeal to the public for assistance in sums no matter how small. A bed can be endowed by the payment of $5,000 at one time, or a memorial cottage by the payment of $10,000 at one time. They say in their appeal that the dollars of the many are worth more to the consumptive poor than the dollars of the few, hence their appeal for small subscriptions. The treasurer of the association is Edward A. Miller, No. 404 Walnut street, Philadelphia, Pa., to whom money may be sent.

FREIGHT ON THE GREAT LAKES.

(Compiled by the Bureau of Statistics.)

The calendar year 1901 is the first complete year in the history of commerce on the Great Lakes for which statistics of receipts and shipments of traffic between practically all domestic ports in these waters have been systematically collected. The following is a recapitulation, by months, of the principal commodities entering into lake traffic:

Atlantic Ocean Records.

The record for fast trips across the Atlantic has been steadily lowered from year to year. It is only a comparatively short time since six days was considered remarkably fast time, while now there are about a dozen steamers which have made the trip in less time than that. The fastest time from Queenstown to New York was made by the steamship Lucania, of the Cunard Line, which sailed it in 5 days, 7 hours and 23 minutes in 1894. This distance is about 2,800 miles, which shows that the steamer made nearly 23 miles an hour for the whole distance. The time of the Kaiser Wilhelm, Cherbourg to New York, 3,184 miles, in 5 days and 16 hours, was even faster than this, being a little over 23 miles an hour, and was made in 1901.

Steamer.	Line.	Route.	D.	H.	M.	Date.
Lucania	Cunard	Queenstown to N. Y.	5	7	23	Oct. 21-26, 1894.
Lucania	Cunard	New York to Queenstown.	5	8	38	Sept. 8-14, 1894.
Deutschland	Hamburg-American.	Cherbourg to New York.	5	12	5	Aug. 23-29, 1901.
Kaiser Wilhelm der Grosse	N. German Lloyd.	Southampton to N. Y.	5	17	38	Oct. 22-29, 1899.
Kaiser Wilhelm der Grosse	N. German Lloyd.	N. Y. to Southampton.	5	15	10	Nov. 23-29, 1897.
La Savoie	French	Havre to N. Y.	6	9	35	March 22-28, 1902.
La Lorraine	French	N. Y. to Havre.	6	11	..	Oct. 16-23, 1902.
Deutschland	Hamburg-American.	Plymouth to N. Y.	5	12	29	Jan. 4-10, 1900.
Deutschland	Hamburg-American.	N. Y. to Plymouth.	5	7	38	Sept. 5-10, 1900.
Kaiser Wilhelm der Grosse	N. German Lloyd.	N. Y. to Cherboug.	5	16	..	Aug. 26-Sept. 1, 1901.

FAST TRIPS OF VARIOUS LINES.

Steamer.	Line.	Route.	D.	H.	M.	Date.
Paris	American	Queenstown to N. Y.	5	14	24	Oct. 14-19, 1892.
St. Paul	American	Southampton to N. Y.	6	..	31	Aug. 8-14, 1896.
St. Louis	American	N. Y. to Southampton.	6	10	14	Sept. 1-8, 1897.
Furst Bismarck	Hamburg-American.	N. Y. to Southampton.	6	10	15	Oct. 20-27, 1898.
Alaska	Guion	N. Y. to Queenstown.	6	18	37	Sept. 12-19, 1882.
Alaska	Guion	Queenstown to N. Y.	6	21	40	Sept. 16-22, 1883.
Oceanic	White Star	N. Y. to Queenstown.	5	18	30	Aug. 27-Sept. 2, 1902
Teutonic	White Star	Queenstown to N. Y.	5	16	31	Aug. 13-19, 1891.
La Savoie	French	Havre to N. Y.	6	12	10	Sept. 6-12, 1902.
Friesland	Red Star	N. Y. to Antwerp.	8	22	13	Aug. 1894.

Fastest day's run made by Deutschland, July-August, 1901, 601 knots, or 24.19 knots per hour.

APPROXIMATE DISTANCES.

Sandy Hook (Lightship), New York, to Queenstown (Daunt's Rock)..... 2,800 Miles
Sandy Hook (Lightship), New York, to Plymouth..... 2,978 Miles

Sandy Hook (Lightship), New York, to Havre..... 3,170 Miles
Sandy Hook (Lightship), New York, to Cherbourg..... 3,184 Knots

HOW THE RECORD HAS BEEN REDUCED.

The following is a list of steamships which have broken the records between New York and Queenstown since 1852. Before that time the Acadia, of the Cunard line, held the blue ribbon, the Acadia being the first ship to make the trip in less than ten days.

Vessel.	Line.	Year.	D.	H.	M.
Baltic	Collins	1852	9	13	42
Persia	Cunard	1856	9	1	45
Scotia	Cunard	1863	8	2	48
City of Brussels	Inman	1869	7	22	3
Baltic	White Star	1873	7	20	9
City of Berlin	Inman	1875	7	18	2
Britannic	White Star	1876	7	13	11
Britannic	White Star	1877	7	10	53
Arizona	Guion	1879	7	8	11
Alaska	Guion	1882	6	22	..
America	National Line	1884	6	14	8
Oregon	Cunard	1884	6	9	42
Etruria	Cunard	1885	6	5	31
Umbria	Cunard	1887	6	4	42
Etruria	Cunard	1888	6	1	55

United States Steamboat Inspection.

The annual report of Supervising Inspector-General James A. Dumont gives the following interesting data concerning the work of the steamboat inspection service for the fiscal year 1902:

Number of annual certificates of inspection issued to domestic steam, sail and motor vessels		8,894
Number of certificates to foreign passenger steamers		367
Total number of annual certificates of inspection issued—domestic and foreign		9,261
Increase in number of certificates to domestic vessels from previous year		62
Increase in number of certificates to foreign vessels from previous year		26
Total increase in number of certificates to domestic and foreign vessels from previous year		88
As against a decrease of 76 domestic and 4 foreign the previous year, or total of		80
Gross tonnage of domestic vessels inspected		3,706,450
Gross tonnage of foreign steam vessels inspected		1,587,076
A grand total of	(tons)	5,293,526
An increase over 1901 of	(tons)	450,299
Number of officers' licenses issued		20,108
Number of officers' licenses issued for year ending June 30, 1901		5,096
Increase from previous year		15,012

(Above increase occurs through renewal of five-year licenses issued during last half of fiscal year ending June 30, 1897.)

Total number of persons now holding licenses (about)	40,000

Steamboat Accidents in the United States During the Fiscal Year Ended June 30, 1902.

Cause.	No. of accidents.	No. of lives lost.	Cause.	No. of accidents.	No. of lives lost.
Fire	2	68	Accidental drownings	....	129
Collision	21	78	Miscellaneous causes	....	25
Breaking of steam pipes, mud drums, etc.	3	4			
Explosions	4	35	Total	55	445
Snags, wrecks and sinking	18	104			
Accidents to machinery	7	....	Increase over 1901	8	105

Of the number reported accidentally drowned, 25 are thought to be suicides.

Of the total lives lost, 193 were passengers and 252 belonged to crews of the vessels.

Of the 35 lives lost by explosion of boilers, 26 were lost on the new steamer City of Trenton, August 28, 1901.

Disasters to American Shipping, 1885-1902.

ATLANTIC, GULF AND PACIFIC COASTS.

(Corrected to date by Sumner J. Kimball, General Superintendent of the United States Life Saving Service.)

Year.	No. Vessels.	Wrecks, Total Loss.	Wrecks, Partial Loss.	Loss to Vessels.	Loss to Cargoes.	Passengers.	Crews.	Lives Lost.

THE NOBEL PRIZES.

By the will of Alfred B. Nobel, the inventor of dynamite left his entire estate of about $9,000,000 for the encouragement of men who work for the interests of humanity. The interest on this money was to be divided into five equal parts, to be distributed every year as rewards to the persons who had deserved best of mankind in five departments of human activity. The clauses in his will which govern the distribution of these prizes are as follows:

"The entire sum will be divided into five equal parts, one to go to the man who shall have made the most important discovery or invention in the domain of physical science; another to the man who shall have made the most important discovery or introduced the greatest improvement in chemistry; the third to the author of the most important discovery in the domain of physiology or medicine; the fourth to the man who shall have produced the most remarkable work of an idealistic nature; and, finally, the fifth to the man who shall have done the most or best work for the fraternity of nations, the suppression or reduction of standing armies, and the formation and propagation of peace congresses.

"The prizes shall be awarded as follows: For physical science and chemistry, by the Swedish Academy of Sciences; for physiological or medical work, by the Caroline Institute at Stockholm; for literature, by the Stockholm Academy, and for peace work, by a committee of five members elected by the Norwegian Storthing.

Alfred B. Nobel.

"It is my express desire that, in awarding the prizes, no account shall be taken of nationality, but that the prize may fall to the lot of the most deserving, whether he be Scandinavian or not."

The award of the Nobel prizes for 1901 was officially announced on December 10. The committee on the prize for the encouragement of peace and arbitration reported that the prize had been equally divided between Dr. Henry Dunant, a Swiss physician, whose name had been presented by the Swiss Rigsdag, and Frederick Passy, founder of the Universal Peace Union. At the time of the announcement of the awards, Dr. Dunant, who was to receive $20,212, was ill and destitute in a Swiss hospital. Dr. Passy was 79 years old.

The medical prize went to Dr. Emil Behring, professor at Marburg, Germany. Prof. Behring is the discoverer of antitoxin for diphtheria. Dr. J. H. Van't Hoff, of the University of Berlin, and a native of Holland, received the prize in the department of chemistry. He contributed largely to the world's knowledge of molecular physics and is regarded as the founder of a new system of stereochemistry.

Dr. William Roentgen was selected to be the recipient of the prize in physics. He has been a professor at Marburg, Germany, for more than twenty-five years and is famous the world over as the discoverer of the Roentgen or "X" rays.

The prize in literature was conferred upon the French poet, Armand Sully-Prudhomme. For the past twenty years M. Sully-Prudhomme has had a seat in the French Academy and his published verses have been considered the best of modern French literature.

Alfred Bernhard Nobel was the son of Emmanuel Nobel, a manufacturer of torpedoes and a manager of shipbuilding and engineering works. His work kept him in Russia until the close of the Crimean war, when the resources of that country became so enfeebled that the Government could no longer offer him sufficient business to make it worth his while to remain in the Neva. In 1859 he returned to Stockholm and took up the study of explosives.

Between 1861 and 1862 Emmanuel Nobel discovered a method of preparing nitro-glycerine which rendered it possible to make practical use of it. In 1867 Alfred Nobel invented dynamite, a compound of nitro-glycerine with a finely powdered silicious substance composed of the shells of fossilized infusoria. In 1876 he patented gelatinous nitro-glycerine and thirteen years later he invented ballisite, the first of the high explosives which inaugurated the era of smokeless powder.

Statistics of Insurance.

INSURANCE OFFICIALS OF THE VARIOUS STATES.

The following officials have authority over insurance matters in the various States and Territories:

States.	Name of Official.	Title of Office.	Address.
Alabama	Robert P. McDavid	Secretary of State	Montgomery.
Arizona	Isaac T. Stoddard	Secretary of the Territory	Phœnix.
Arkansas	T. C. Monroe	State Auditor and Insurance Commissioner	Little Rock.
California	E. M. Wolf	Insurance Commissioner	San Francisco.
Colorado	C. W. Crouter	Auditor of State	Denver.
Connecticut	Theron Upson	Insurance Commissioner	Hartford.
Delaware	George W. Marshall	Insurance Commissioner	Milford.
District of Columbia	Thomas E. Drake	Superintendent of Insurance	Washington.
Florida	J. B. Whitfield	State Treasurer	Tallahassee.
Georgia	W. A. Wright	Insurance Commissioner	Atlanta.
Hawaii	W. H. Wright	Treasurer	Honolulu.
Idaho	P. M. Davis	Insurance Commissioner	Boise.
Illinois	Henry Yates	Superintendent of Insurance	Springfield.
Indiana	W. H. Hart	State Auditor	Indianapolis.
Iowa	Frank F. Merriam	State Auditor	Des Moines.
Kansas	W. V. Church	Superintendent of Insurance	Topeka.
Kentucky	John B. Chenault	Insurance Commissioner	Frankfort.
Louisiana	E. J. McGivney	Assistant Secretary of State	Baton Rouge.
Maine	S. W. Carr	Insurance Commissioner	Augusta.
Maryland	Lloyd Wilkinson	Insurance Commissioner	Baltimore.
Massachusetts	Frederick L. Cutting	Commissioner of Insurance	Boston.
Michigan	James V. Barry	Commissioner of Insurance	Lansing.
Minnesota	E. H. Dearth	Insurance Commissioner	St. Paul.
Mississippi	W. Q. Cole	Auditor of Public Accounts	Jackson.
Missouri	E. E. Yates	Superintendent of Insurance	Jefferson City.
Montana	J. H. Calderhead	State Auditor	Helena.
Nebraska	Charles Weston	Auditor of Public Accounts	Lincoln.
Nevada	S. P. Davis	State Comptroller	Carson City.
New Hampshire	J. C. Linehan	Insurance Commissioner	Concord.
New Jersey	William Bettle	Insurance Commissioner	Trenton.
New Mexico	W. G. Sargent	Territorial Auditors	Santa Fe.
New York	Francis Hendricks	Superintendent of Insurance	Albany.
North Carolina	J. R. Young	Insurance Commissioner	Raleigh.
North Dakota	Fred. Leutz	Commissioner of Insurance	Bismarck.
Ohio	A. I. Vorys	Superintendent of Insurance	Columbus.
Oklahoma	William Grimes	Insurance Commissioner	Guthrie.
Oregon	F. I. Dunbar	Secretary of State	Salem.
Pennsylvania	I. W. Dunham	Insurance Commissioner	Harrisburg.
Porto Rico	Charles Hertzell	Secretary of Insurance	San Juan.
Rhode Island	Charles C. Gray	Insurance Commissioner	Providence.
South Carolina	J. P. Derham	Comptroller of Insurance	Columbia.
South Dakota	H. C. Shober	Insurance Commissioner	Pierre.
Tennessee	R. E. Folk	Commissioner of Insurance	Nashville.
Texas	Jefferson Johnson	Insurance Commissioner	Austin.
Utah	J. T. Hammond	Secretary of State	Salt Lake City.
Vermont	F. A. Howland	Secretary of State	Montpelier.
Virginia	Morton Marye	Auditor of Public Accounts	Richmond.
Washington	S. H. Nichols	Insurance Commissioner	Olympia.
West Virginia	Albert C. Scherr	State Auditor	Charleston.
Wisconsin	Emil Giljohann	Commissioner of Insurance	Madison.
Wyoming	Le Roy Grant	State Auditor	Cheyenne.
